GENTLEMEN: On November 18 we forwarded to you our first estimates on nonagricultural employment for manufacturing industries in North Dakota, based on figures obtained from cooperating employers. At that time, we stated that in the near future we would be able to release estimates on total nonagricultural employment. We are enclosing our estimates on total nonagricultural employment for the years 1947, 1948 and the first 11 months of 1949.

Please note that estimates of employment in the construction industry for 1949 are not available. These estimates have been included for the years of 1947 and 1948, and we hope to be able to provide current estimates for this industry in a short time.

Month-to-month estimates of nonagricultural employment will be forwarded to you on a regular monthly basis.

Very truly yours,

WILLIAM R. WAIND,
Cooperating Representative.

[North Dakota State Employment Service and North Dakota Unemployment Compensation Division, Bismarck, N. Dak., in cooperation with U. S. Bureau of Labor Statistics, November 1949]

An analysis of nonagricultural employment (excluding construction) in North Dakota shows that in 1949 average employment during the first 11 months has come within 0.3 percent of that obtained in the peak year of 1948. Specifically for the first 11 months of the year nonagricultural employment (excluding construction) has averaged 100,047 per month, while averaging 100,380 per month during 1948.

Month to month figures show that we exceeded 1948 employment during the period March through September, but have fallen below 1948 during the months January, February, October, and November. Current estimates put November employment at 102,120, a decline of 1,000 from November of 1948.

The principle contributing factor to the over-all decline in employment in 1948 was the decline in the number employed in the railroad industry. This industry employed an average of 1,433 less per month in 1949 than in 1948 due largely to the completion of the construction program carried on in the State by the railroads in 1948.

Industries reporting major gains over 1948 were Government, with an average monthly increase of 858 (due to such projects as Garrison Dam, Reclamation projects, etc.); communication and other public utilities up 334 per month; and wholesale and retail trade up 313.

Manufacturing employment recorded a decline (average 258 per month) from 1948. This decline was centered entirely in the nondurable group and was largely due a decline in employment in the manufacture of food and kindred products. The durable goods group reported an over-all gain largely as a result of increased employment in the stone, clay, and glass industry.

The 1949 employment averaged 6.1 percent more than the 1947 average monthly employment of 94,310. Here, too, major increases were reported in the Government, wholesale, and retail trade, and communication and other public utilities groups. These gains were offset somewhat by declines in manufacturing and in railroad employment.

In the period under consideration (1947–49) the largest increase in nonagricultural employment (including construction) came between 1947 and 1948. The 1948 employment averaged 8,113 more per month than it did in 1947. Increases in construction (up 2,042 per month), railroads (up 1,238 per month), wholesale and retail trade (up 2,783 per month), and Government (up 1,442 per month) were the principal factors behind the over-all increase. During this period the only industries recording declines were mining, down 29 per month, and manufacturing, down 36.

Estimated nonagricultural employment

[1] Figures rounded to nearest 10.
[2] Estimates not available for construction workers.

Definition of employment: Data include all full- and part-time wage and salary workers who were employed during the pay period nearest the 15th of the month. Proprietors, self-employed, and members of the armed forces are excluded. Government employment excludes fourth-class postmasters and substitute rural mail carriers. State and local government data excludes those who receive only nominal amounts of pay. Regular teachers on unpaid as well as paid vacations are included. These estimates are based on employers' reports to the North Dakota unemployment compensation division and the State employment service in cooperation with the Bureau of Labor Statistics.

A World in Which Right Will Be the Master of Might, and Peace Will Reign in the Hearts of Men

EXTENSION OF REMARKS
OF

HON. ARTHUR G. KLEIN
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. KLEIN. Mr. Speaker, last night I had the very great pleasure of listening to the recently elected junior Senator from my own beloved State of New York, the Honorable HERBERT H. LEHMAN, as he addressed the 600 guests present at the dinner given by the Men's Club of the Adas Israel Congregation of Washington.

It was a remarkable gathering, Mr. Speaker, and it was a remarkable speech, which I am proud and happy to insert in the RECORD, under leave, as part of my remarks.

The Adas Israel Temple is, I believe, the largest congregation of Judaism in Washington, and the largest conservative Jewish congregation in the southeastern part of the United States.

I am sure that many of those present reflected, as I did, on the fact that only in the English-speaking democracies of the Western World would this gathering have been possible; and that, of course, is the reason that those of us who love and honor America for its hospitality to all minorities oppose, with all our strength and courage, any deliberate incitation of bigotry or discrimination, and work equally hard to make sure that where discrimination exists it is destroyed, as a surgeon might cut out and destroy a diseased organ to save the whole.

It seems to me especially significant that it was in the victory of Senator LEHMAN that President Truman's Fair Deal administration—a philosophy of government stemming straight from Jefferson and Jackson by way of Wilson and Roosevelt—was vindicated and confirmed as the choice of the people of the United States.

As you read the words of his address you will understand why the people of New York, who twice chose him governor, chose him last fall as their Senator.

Senator LEHMAN's speech follows, Mr. Speaker; and I am sure that you will agree with me that it is an expression of democratic philosophy worthy of the late Franklin D. Roosevelt's successor as Governor of the great State of New York.

It is not too hopeful, I am sure, to believe that the day will come when we will have built a world in which men will seek to help their neighbors, and not to harm them; a world in which right will be the master of might, and peace will reign in the hearts of men; and a world in which there will be no hatred or prejudice as to race, creed, or nationality.

No, I do not think that this is too visionary. I do not think that it is impossible or impractical to build a world in which the basic principle of the brotherhood of man—the oneness of the human race under God—will be recognized and accepted as the first law and the Gospel of all humankind. Yet, for the construction of this bright but not impossible world, certain rules must be observed, certain conditions must be accepted by those of us who would build and who would lay the stones for this shining future.

If we are to build a world of security and lasting peace, we must fashion the structure on the immortal words of the prophet Micah: "What doth the Lord require of thee, but to do justly, to love mercy, and to walk humbly with thy God." The very hope of lasting peace is destroyed if we permit injustice to any group, or any individual, or any nation. Spiritual freedom, as well as social and economic security, can survive only where there is exact and even-handed justice to all. There can be no security for one unless there is justice for all.

NEED NOT YIELD

In spite of obvious disappointments and discouragements, I still believe with all my heart that a world of security and lasting peace can be built, providing we show enough patience, good will, and understanding. We need not yield any of our fundamental principles to do so. On my many trips to war-ravaged countries both during and since the war I met and talked to peoples as well as to governments. I found that peoples generally wherever they lived, deep in their hearts, want just about the same things that we want—freedom, security, and lasting peace. It is the solemn duty of all of us, regardless of creed or race, to give the utmost of our strength and faith to the secure building of a world society in which peoples and nations will work together for their common welfare and for lasting security. Men must be freed from fear and blind hatreds. Hatred and fear can tear down but cannot create.

In this country, the well-being of the individual is the concern of all. This is our chief advantage, our blessing, in contrast to many other great areas of the earth. This is the most precious heritage we received from the founding fathers. But this heritage, wrung from centuries of inspiration and struggle in the old world, was not lightly preserved here. It took vigilance and courage, pain and suffering, and heroism and sacrifice to protect this heritage, to enhance it and to adapt it to an everchanging nation.

In other parts of the world this ideal of individualism and the national concern for the individual have never taken root. And because of this fact, evil men have been able to seize power in some of those areas and crush the individual under the heavy heel of oppression and tyranny.

Thus we must never take for granted those rights which we call inalienable. We can never afford to be supine or complacent in the enjoyment of these rights. We must win them anew each year, and again each generation. We must extend them and protect them against onslaught from without or decay from within.

THE URGENT QUESTION

Nor is that all. We can never really have these rights, and certainly not retain them, if the opportunity to enjoy them is not shared by all the people, equally, without regard to economic, social, or racial origin. "No one can be perfectly free until all are free", said Herbert Spencer, the philosopher. And those of us who do not wage unremitting war to free all men, and to extend equal rights to all our neighbors, will end by losing our rights too.

The urgent question for us is how we can solve our social and economic problems upon a reasonable basis, and by the application of truly democratic principles. We must prove that democracy is not an insensible machine of Government, but a living thing; that its soul is the soul of its people and that it grows and develops to meet the needs and ideals of its citizens. Only so long as democracy remains alive to the needs and aspirations of its people, will it continue to retain its strength. It is our duty and our responsibility to see that it does so. Any other course leads to stagnation, and ultimate decay.

Perhaps these words sound a trifle unreal, perhaps even empty and hollow in a world convulsed by fear, and overshadowed by the atom bomb and the hydrogen bomb, and in an atmosphere heavy with hate and foreboding. Yet we must not, we cannot, lose faith in the truths by which we live, even in the valley of the shadow through which we now walk. We must believe and practice the truths of a living faith, although we are beset on every side by the dangers and temptations of apostasy.

Recently we emerged, or thought we had emerged, from a trial of strength with the forces of evil and darkness. We had vanquished fascism, or so we thought, and now the world could bind up its wounds and return to the ways of peace, to the unsolved problems of everyday living. But almost immediately our dream of peace and quiet was rudely disturbed. A new assault upon our civilization, upon our values, and our truths gathered and struck.

SPIRITUALLY IDEOLOGICAL RESOURCES

We are in the midst of that crisis today. We have, I hope, successfully passed through a major part of it. We have built up the bulwarks of other nations against aggression from without and have helped strengthen their internal fiber against subversion from within. But while we have done much, and must continue to do much in this material way, we are, I fear, inclined to neglect our own defenses and to neglect some of our most important resources for this great struggle.

No; I do not refer to our military defenses or to our physical resources. We are doing as well as can be expected with those. I refer instead to our spiritual defenses and our ideological resources.

Today the battle of ideas precedes the battle of arms. The initial assault is by infiltration of sinister philosophies and concepts. The method of attack is subtle. In many countries it has been effective. Its object is to weaken morale, to sabotage loyalty, to divide the nation into groups which can be played one against the other. Our best defense against such attacks is to rededicate ourselves to the democratic and religious principles by which we live and which our enemies hate and seek to destroy. Attempts to weaken morale must be answered by a crusading faith. Attempts to divide us must be answered by complete unity and by a militant devotion to the principles of religious freedom and civil equality. Injustice to any group or any individual will eventually tear down the structure of democracy itself. Democracy can survive only where there is exact and even-handed justice to all.

A FULL DEMOCRACY

Should we let down our defenses in our democratic practices, should we permit the rights of some of our people to be denied or withheld, for any reason, should we deny equal justice to any in our midst—even to those who would deny it to us—should we do any of these things, we invite defeat and disaster. The fortress is only as strong as its weakest point. Our Nation is weakest where its democracy is weakest—in the partial denial of rights and privileges to racial minorities, and in the withholding of full

social justice from vast numbers of the underprivileged. Democracy, like religion, is an expression of faith, a call to duty from which no man may draw back. Democracy must be supported by a militant faith, and by a willingness to crusade for that faith, and to abide by it in all ways and in all relationships. Democracy is not a faith to be held only when it is pleasant and convenient. Democracy is not a habit to be worn only on fair days. Sometimes democracy is awkward, and uncomfortable. Sometimes it involves danger. But if it is good at all, it is good all the time.

But even democracy is mere form without content, unless it bears at its center an inner faith in the goodness of God. In the sanctity of the human soul, and in the brotherhood of man under God. First we must be loyal to these concepts, or our devotion to democracy is tinsel and dross. If our spiritual faith is weakened, we will not prevail in the struggles ahead.

So let us proceed, let us go forward, arm in arm and shoulder to shoulder, full in our faith, full in our devotion to each other and to all our countrymen, resolved to combat evil from whatever source, and to shout in chorus, so that all the world will hear, "freedom is for every man." As we would not be slaves, so we do not wish to be masters.

Rise up with us, look up with us. Join us. See how, just over the horizon, lie the green valleys, of peace, and brotherhood and understanding.

Bills Endanger Farm Radios

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Thursday, January 19 (legislative day of Wednesday, January 4), 1950

Mr. ANDERSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Bills Endanger Farm Radios," published in the December issue of the National Live Stock Producer.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BILLS ENDANGER FARM RADIOS

When Congress convenes next January renewed efforts will probably be made to pass legislation which well-informed opponents declare would seriously affect radio service to a large part of the Nation's farm population.

Adequate service to rural and sparsely populated parts of the country is a major problem of national broadcasting and Federal regulation. Most radio listeners do not realize that there is any distinction between service in city areas and that available to the farm population. Not only is there a great difference in favor of the city listener, but pending legislation which the average city radio fan knows nothing about would move him in on the already inadequate farm service according to evidence placed before the Federal Communications Commission. This agency has been hearing about the matter for 3 years. Incidentally, national farm organizations have taken note of the situation. While the result so far has been to postpone passage of pending bills, the threat is still present.

Radio listeners in metropolitan areas have a wide choice of programs and strong, clear reception, due to being served by several or as many as 20 stations in their immediate vicinity. Millions of farm listeners, however, must put up with weak signals, much static, and a limited number of stations. The only way they can get anything approaching adequate service is through what are termed "clear channel" stations. Broadly speaking, these are stations which do not share their frequency at night.

These clear-channel stations, it is estimated, furnish the only night-time broadcast service available to people in more than 75 percent of the country's area. In behalf of this bloc of radio listeners, the Federal Commission has been told that they do not now receive adequate night-time broadcast service in terms of signal strength. This is due to the presence of static and other interference. Some areas receive no broadcast service during the day.

Instead of curtailing clear-channel service, it is argued that the only way to properly serve a large part of the Nation's population in rural areas is to not only maintain clear-channel broadcasting but also to increase their power. Where they now have only 50-kilowatt power it is believed that the present signal strength of such stations should be greatly increased.

This is where pending legislation comes in. Two bills, S. 491 and H. R. 4004, it is charged by farm opponents as well as by the clear-channel stations affected, would limit the Federal Commission's authority by forbidding the licensing of clear-channel stations with power in excess of 50 kilowatts. The bills also would require "duplication" on clear channels; in short, the placing of other stations, each operating with power up to 50 kilowatts on each clear channel.

It is considered virtually certain that the effect would be to increase the number of stations serving city listeners, at the expense of cutting in on the reception strength of the rural listener. While some farm organizations have taken a stand opposing these bills, many farm listeners are not sufficiently aware of the situation.

Federal Spending Facts

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Thursday, January 19 (legislative day of Wednesday, January 4), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD a review of the President's budget for fiscal year 1951, under the heading "Federal spending facts," prepared by Mr. Alvin A. Burger, director of research, Council of State Chambers of Commerce.

An estimate from the Government Printing Office indicates that the manuscript will make in the CONGRESSIONAL RECORD one-fourth of a page more than the two printed pages allowed under the rule without a statement of cost, and that the cost will be $184.50.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

[Federal spending facts, Council of State Chambers of Commerce]

A REVIEW OF THE PRESIDENT'S BUDGET FOR FISCAL YEAR 1951

The 1951 budget at a glance—Estimated expenditures

Function:	
International affairs and finance	$4,711,000,000
National defense	13,545,000,000
Veterans' services and benefits	6,080,000,000
Social welfare, health, and security	2,714,000,000
Housing and community development	1,329,000,000
Education and general research	434,000,000
Agriculture and agricultural resources	2,406,000,000
Natural resources	2,218,000,000
Transportation and communication	1,682,000,000
Finance, commerce, and industry	212,000,000
Labor	243,000,000
General government	1,267,000,000
Interest on the public debt	5,625,000,000
Reserve for contingencies	175,000,000
Total expenditures	42,439,000,000
Estimated receipts	[1] 37,306,000,000
Estimated deficit	5,133,000,000

[1] The President will shortly recommend to Congress "certain adjustments" in the tax laws which, if approved, would produce some net additional revenue in 1951.

Here are some of the salient facts which stand out in a review of the President's 1951 budget message as submitted to Congress on January 9:

1. For the fourth successive year since the end of World War II President Truman has presented to Congress a Federal spending budget higher in amount than the one submitted by him the year before. Each successive request has set a new all-time record for Government spending in peacetime.

2. By requesting authority to spend some $5,000,000,000 in excess of anticipated revenues in 1951, the President beckons us to take another long step in the deficit-financing abyss down which this Nation has traveled for 18 out of the last 20 years.

3. According to the President, $12,100,000,000 or 29 percent of the $42,400,000,000 budget total for 1951 will go to meet obligations incurred in 1950 or earlier. This illustrates the costly effect of "foot-in-the-door" commitments made in previous years for the starting of new spending programs and new public works projects financed at the outset by small initial appropriations or by contract authorizations.

4. The proposed budget contains $956,300,000 to initiate 34 new spending programs proposed by the President, many of which are continuing. This would represent the first year's cost only, for we estimate that these continuing programs would eventually add as much as $3,900,000,000 annually to future Federal budgets, to be financed out of general tax revenues.

5. In addition to the above, the President proposes new and expanded social-security programs to be financed by pay-roll taxes. We estimate that these proposals, if adopted, would eventually add between seventeen and twenty-four and one-half billion dollars annually to the pay-roll taxes exacted from workers and from employers. This would mean an increase over present employment taxes of between 12 and 17 percent on wages and salaries up to $4,800.

6. The budget message reflects a commendable determination by the President to carry out numerous recommendations made by the bipartisan Hoover Commission to improve administrative efficiency. This is noted particularly in the improvements made in the form of the budget itself, and in proposals relating to the military establishment, veterans' services, the postal service, and certain other functions.

7. On the other hand, other important findings and recommendations in the Hoover report are ignored or flouted. This pertains particularly to the Commission's recommendations aimed at circumscribing Federal expansion into the fields of banking, electric power and other forms of business enterprise, and at curbing the growth of the Federal grant-in-aid evil.

8. Despite efforts by the President to hold public works spending at a minimum in 1951, the budget provides for a record-breaking expenditure of $3,500,000,000 for public works next year. (This sum includes $419,000,000 of expenditures for rural-electrification programs.) Most of this amount is accounted for by outlays for projects already authorized or under way. While the President appears to have succeeded fairly well in keeping the lid on appropriations for new projects, it remains to be seen whether special interest pressure groups can persuade Congress to blow the lid off again.

RECORD PEACETIME BUDGET REQUEST

In elaborating on some of the above observations, let us begin with the first one.

In January 1946 the President requested authority to spend in fiscal 1947 the sum of $35,900,000,000.

In January 1947 he requested for fiscal 1948, $37,500,000,000.

In January 1948 he requested for fiscal 1949, $39,700,000,000.

In January 1949 he requested for fiscal 1950, $41,900,000,000.

On January 9, 1950, he requested for fiscal 1951, $42,400,000,000.

It should be pointed out that actual expenditures for each of the above fiscal years differed in amount from the President's original budget estimate because of three things which happened subsequent to the submission of his January messages: (1) His original recommendations were followed each year by a steady stream of supplemental and deficiency appropriation requests, the effect of which was to increase the January estimates; (2) congressional action on appropriation and new spending measures further altered the total amount of spending authority, either increasing or reducing it; and (3) some departments spent less than the sums allotted them, while others overspent their original appropriations.

Thus, while the President's budget message of a year ago estimated 1950 expenditures at $41,900,000,000, subsequent supplemental and deficiency requests are expected to bring actual 1950 spending up to an estimated $43,300,000,000.

Whether and to what extent the President's 1951 budget estimate of $42,400,000,000 may be increased by supplemental appropriations and by congressional enactment of new spending measures not listed in the budget message is up to the Congress.

FOOT-IN-THE-DOOR SPENDING

One of the chief reasons why the proposed 1951 budget has swelled to the size it has is the increasing tendency of both Congress and the executive branch to resort to foot-in-the-door financing devices to speed approval of new spending legislation which would otherwise encounter rough sledding on Capitol Hill.

For instance, passage of new spending programs of a continuing nature is often made easy because the legislators are told that a very modest appropriation will suffice to get them under way the first year. The extent to which the annual cost will rise in succeeding years is a matter which is seldom explored or divulged. The 1951 budget is full of large expenditures for items which once began modestly enough but have grown steadily through the years. This should provide a warning to Congress, then, to look carefully at the price tags on the many new spending measures advocated by the President or initiated by congressional committees.

Three examples of projected programs bearing a low down-payment tag but destined ultimately to require huge annual appropriations include: (1) The bill creating a National Science Foundation, which would spend only $400,000 the first year but would eventually entail annual outlays of $100,000,000 and up; (2) the St. Lawrence seaway, which would involve the expenditure of only $4,000,000 the first year but would eventually shoot up to a minimum of $82,000,000 annually for the next 7 years; and (3) Federal aid to education, which contemplates a $290,000,000 expenditure at the start but would reach $2,000,000,000 or more annually as soon as possible, according to the commitments of its sponsors. So on down a long list.

Another foot-in-the-door device to get new projects started is the contract authorization, which is a grant of authority to a Federal agency to contract for construction or other services in a given amount. This is a sound and even necessary procedure when properly used, but in recent years it has been much abused. For instance, Congress has frequently replaced part or all of a requested appropriation with a grant of contract authority in order to show a budget cut. The taxpaying public, we believe, would rather see Congress make bona fide reductions in appropriations and put an end to such subterfuges as this.

The President's 1951 budget message asks Congress to approve $3,363,000,000 in contract authorizations, of which $1,280,000,000 is for programs requiring new legislation. These sums for the most part are not included in the $42,400,000,000 spending total proposed for 1951. They are in addition to this total, and their cost would be reflected in increased expenditures for 1952 and thereafter.

PAY ROLL TAX-SUPPORTED SOCIAL WELFARE PROGRAMS

The budget message also proposes important new legislation for social welfare programs financed by pay-roll taxes. The large expenditures which would be required by these measures are outside of, and in addition to, the $42,400,000,000 of regular 1951 budget expenditures financed out of general tax revenues.

There is now before the Senate Finance Committee a bill already passed by the House (H. R. 6000) which would expand considerably various social security benefits provided under existing legislation. For instance, liberalization of the old-age and survivors insurance program under H. R. 6000 would immediately add some $600,000,000 to present costs. The additional cost of H. R. 6000 would eventually increase to $3,250,000,000 annually for this generation and to about $5,000,000,000 for the next. The President's proposals for liberalizing this program would result in costs far exceeding the cost of H. R. 6000. They would add to the costs of benefits under existing statutes over $6,000,000,000 annually for this generation and about $10,000,000,000 for the next—all to be supported by taxes on pay rolls.

Administration estimates of the cost of the pay roll tax-supported socialized medicine program advocated by the President are about $6,000,000,000 annually. Independent authorities place the cost much higher, from at least $11,000,000,000 to $14,500,000,000 annually.

Taking both these programs together, they would impose an additional tax load upon the present pay rolls of the Nation's wage and salary earners amounting to a minimum of $12,000,000,000 annually. Ultimately this additional tax load would increase to as much as seventeen to twenty-four and five-tenths billion dollars annually, or between 12 and 17 percent on wages and salaries up to $4,800.

THE PORK BARREL AT A RECORD HIGH

Despite efforts by the President to hold 1951 outlays for public-works construction to a minimum, we find that the total amount requested for such projects would set a new all-time record. Here is the way these expenditures have skyrocketed in the postwar period:

1947 actual expenditures	$1,422,000,000
1948 actual expenditures	1,620,000,000
1949 actual expenditures	1,998,000,000
1950 estimated expenditures	2,907,000,000
1951 requested expenditures	3,530,000,000

(NOTE.—Funds for rural electrification projects are included in all the above figures.)

Although the President has tried to hold the lid down on the starting of new public works programs, it is noted that new projects call for first-year expenditures of $156,100,000 in 1951 and a total of $919,800,000 additional in later years. The largest of these is the St. Lawrence River power and navigation project, which calls for an initial expenditure of only $4,000,000 in 1951, but will require a total of at least $569,000,000 later to complete it. In the light of past experience it is certain that the final costs of all these new projects will be much larger than presently estimated. Some Federal public works programs when completed have been found to cost several times the original estimate.

These pork-barrel expenditures offer Congress one of its best opportunities to do some effective budget-cutting, particularly by rejecting new starts. What usually happens, however, is that spending interests in Washington go to work to generate pressure from allied interests back in the home districts in behalf of larger pork-barrel outlays, often defeating efforts by responsible Members of Congress to whittle down unnecessary spending in the interest of a balanced budget.

FOREIGN AID AND NATIONAL DEFENSE

The largest item in the proposed $4,700,000,000 estimated expenditure for International Affairs, including foreign aid, is the $3,250,000,000 estimated to carry the European recovery program through its third year. This represents a reduction of $812,000,000 below the estimated 1950 expenditure. If the original schedule for this aid program is adhered to, the Federal budget for 1952 should contain the fourth and last annual appropriation for it.

The budget message asks a $648,000,000 appropriation and a $500,000,000 grant of contract authority for the mutual defense assistance program for European nations which was initiated last year. The program's sponsors last year would not admit at congressional hearings that this program would require funds beyond 1 year, but this is now clarified by the budget message, which makes it plain that further appropriations for this purpose will be sought in 1952 and thereafter, and that the amount of these future requests may rise somewhat further.

National defense expenditures for 1951 are estimated at $13,545,000,000 as against $13,148,000,000 to be spent this year. But what counts here is the fact that new defense spending authority sought for 1951 totals $12,800,000,000 as against $14,576,000,000 approved by Congress last year for fiscal 1950, or a reduction of $1,776,000,000. These figures reflect the first results of efforts by Defense

Secretary Louis Johnson to reduce unnecessary civilian personnel in the armed forces and to effect other economies made possible by the recent integration of these services. While there is undoubtedly much more room for economies, at least a good start has been made in squeezing the huge waste out of military expenditures.

THE 1951 BUDGET AND THE HOOVER COMMISSION PROGRAM

As we pointed out earlier, the budget message gives evidence of commendable efforts by the President to carry out some of the administrative reforms proposed last year by the Commission on Organization of the Executive Branch (known as the Hoover Commission). First steps have been taken to provide a performance budget in line with the Commission's recommendations. Passages in the message relating to veterans' services and benefits also reflect much of the sound thinking expressed in the Commission's reports.

The President gives attention to Hoover Commission proposals in tackling the problem of the $555,000,000 deficit of the postal service. He points out that the Postmaster General "is exploring fully all opportunities for reducing the cost of the postal operation"—an activity which, if diligently pursued, should result in a very substantial reduction in operating costs. The President recommends legislation to increase certain postal rates "so as to bring them into line with postwar costs"—this also being in line with Hoover Commission suggestions.

IMPORTANT HOOVER COMMISSION PROPOSALS IGNORED

The Hoover Commission recommendations on business functions conducted by the Government sought to establish a clearer demarcation between the fields of taxpaying private enterprise and Government enterprise. This was particularly true with respect to commercial banking and lending activities, electric power utilities, and certain other forms of business enterprise. Many of the Hoover recommendations were aimed at restricting Federal expansion in these fields. Of direct Government lending, for instance, the Commission said: "It opens up dangerous possibilities of waste and favoritism. * * * It invites political and private pressure or even corruption. * * * Direct lending should be absolutely avoided except for emergencies."

The President's budget message, however, advocates large Federal expansion in these various fields. It seeks additional lending powers for the RFC, an agency whose operations the Hoover Commission roundly criticized. It calls for further expansion of Federal electric power activities, including the creation of a Columbia Valley Administration in the Northwest, and it suggests similar authorities in other parts of the country. As we have pointed out in previous bulletins, such a program adds up to nothing less than the eventual nationalization of the electric power industry—an objective certainly not entertained by the Hoover Commission.

The message also backs legislation to enlarge the Government's part in the Nation's home-building industry by launching a program to provide housing for middle-income groups. Other proposals for new ventures into business fields are indicated in competition with taxpaying private enterprise—all adding up to more bureaucracies, more waste, and more tax demands upon the people's pocketbooks.

FEDERAL GRANTS-IN-AID BOOSTED

The Hoover task-force committee on Federal-State relations expressed concern about "the trend toward National Government encroachment on the fields traditionally reserved for State and local governments." It called for Federal withdrawal from tax fields properly belonging to State and local governments and for an overhauling of the Federal grant-in-aid structure.

The budget message virtually ignores these proposals. Instead it asks Congress to approve grants-in-aid for 1951 totaling $2,999,000,000—an increase of $738,000,000 over 1950 outlays and an all-time high figure. This increase would include $290,000,000 to initiate the controversial Federal-aid-to-education measure now before Congress, which is opposed by most Governors and State legislatures and by many leading educators as an unwarranted attempt by the Federal Government to intrude upon a public service which is constitutionally and traditionally a State responsibility.

CONCLUSION

It is significant that this is the first budget submitted by President Truman in which he has failed to offer proposals for balancing expenditures with revenues, at least by increasing the latter through new taxes. His tax proposals for 1951 are admittedly not expected to raise enough new money to come close to meeting the anticipated $5,100,000,000 deficit.

The President expresses a belief that deficit financing will come to an end a few years hence when foreign aid and national defense outlays are reduced, and when a hoped-for higher national income will yield greater tax revenues for Federal spending.

The budget message takes no account of the fact that State and local government taxation is also on the increase, thus adding to the Nation's over-all tax burdens. Nor does it recognize the fact that future outlays for all the new spending programs advocated by the President, including social-welfare measures financed by pay-roll taxes, would eventually impose new tax burdens of such staggering size as to dwarf any possible reductions in national defense and foreign aid, however substantial these might be.

So we had better face up to the deficit situation now and solve it. To this end Congress should take advantage of a blueprint for a $36,000,000,000 budget for 1951 recently made public by Senator HARRY F. BYRD, of Virginia, an acknowledged expert on Federal fiscal affairs. In this, Senator BYRD throws in the very teeth of the spending pressure groups and their adherents in Congress the answer to the cynical question often shot at economy advocates, Where would you cut the budget? Senator BYRD shows that the Federal establishment can live within its income and provide services essential to the Nation's welfare and economic well-being. The chief difference between the President's budget for 1951 and the budget of progress of Senator BYRD is $6,400,000,000 of wasteful and unnecessary spending.

ALVIN A. BURGER,
Director of Research.

Truman's Budget

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, January 19 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Truman's Budget," published in the Uniontown (Pa.) Evening Standard of January 10, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRUMAN'S BUDGET

We're afraid the millennium for the American people of which President Truman has spoken with so much optimism will never be reached through plunging the Nation deeper into debt.

The President on the one hand talks of bigger and better prosperity and on the other recommends the very character of unprincipled Federal spending sure to represent a serious block on the road to that prosperity.

His budget for the 1951 fiscal year, handed to Congress yesterday, figures up close to $42,500,000,000. That is $5,000,000,000 more than the anticipated revenue for the year. It means continued deficit spending, deficit financing, and, we're convinced, very apparent danger to the national economy.

We think it's time this country starts living within its income. There would be nothing complicated about the start. Merely a simple matter of keeping the outgo within limits of anticipated tax revenue. A lot of Government hand-outs and synthetic services might have to be suspended, and real economy in the executive branch of the Government might have to be inaugurated, but the result would be more than worth the effort.

If prosperity is to be as far as we can see into the future, then the Government's going to have to represent one of the prime contributing factors. It can command neither confidence nor respect as long as it continues its unlimited spending binge.

Farm Renters

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 19 (legislative day of Wednesday, January 4), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to me by Mrs. Frank Bohn, of Hannah, N. Dak., under date of January 2, 1950, dealing with the situation in which farm renters now find themselves.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HANNAH, N. DAK., *January 2, 1950.*

DEAR SENATOR LANGER: Perhaps you can bring our problem, and that of many other farm renters, before this session of Congress. We are farm renters; my husband has farmed since 1941 with his own machinery. Before that he worked on farms—he was born and reared on a farm. He is a good worker and knows how to manage a farm. He has a full line of power machinery. Our problem is this: We can't find a place to rent that has decent buildings. Yes, we can find farms with buildings. The houses are livable—but no shops, no granaries, poor barns, and even no wells. How can a family man live on a place like that? The landlords want to rent on a one-third, two-thirds basis, but they are unwilling to spend any money on their buildings. Here in this section of North Dakota, and we believe it is true in the rest of the State as well, there are too many big farmers—men who are farming 10, 12, or more quarters of land. Consequently the man who wants and needs three or four quarters can't find them. If we don't find a farm by spring, we will have to sell out, and my husband will have to learn a completely new method of earning a living. Is it fair? This would be my solution to the problem: Let any man own as much land as he wishes to. But let's limit him to the amount of land he can actually operate. Possibly we could tax him double on each quarter he operates above three or four quarters. Any one man can make a good living on that amount of land.

This would divide the land more evenly—would perhaps draw men back to farming—thus easing the growing unemployment problem. Of course, some will say that my solution is undemocratic—it is taking away their freedom to farm the amount of land they want to. Granted, it is. But the condition as it exists now is taking away our freedom to farm. Whose freedom is more important? The United States has always been known as a country where the little man has an equal chance with the big man. It is a land of opportunity. What is happening to that equality? I know we aren't the only ones facing this problem. There are many others like us. People ask, "Why don't you buy a farm of your own and get away from this moving?" We aren't financially able to buy a farm at current land prices. Someone else suggests a loan. We investigated the FHA loans. Twelve thousand dollars is the maximum amount they will loan, and with this they expect one to buy three quarters—almost an impossibility. Prices around here range from $15,000 to $20,000 for three quarters.

If we had no children, we probably could rent land with no buildings, living in a house trailer. We think too much of our three children to expect them to grow up in such an environment. My sister and her husband, who are vacationing in the South for the winter, have opened their home to us. Had it not been for their generosity, we would have been among the homeless.

We're hoping that you can do something to ease this situation. Perhaps my solution isn't too practical. You can, no doubt, work out a better one.

Thank you for taking time to read my letter. And thank you, too, for any help you may give.

Yours sincerely,

MRS. FRANK BOHN.

Making Democracy Work Is a Basic Ingredient of National Security

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. KLEIN. Mr. Speaker, there is a vast difference of meaning between the national unity of idealism which most of us advocate, and the dead level of conformity which is too often enforced by economic and political sanctions.

The glory of democratic living lies in the freedom of the individual—an equality of freedom, in which the limitation on my freedom is the point at which my freedom interferes with yours or another of my neighbors.

The indivisibility of American citizenship is one of the precious heritages which we must preserve and strengthen in spite of that small minority in the screwball fringe who continue to preach religious intolerance and racial discrimination. In consonance with my general policies, I was one of those who were shocked into protest by the attempt to turn Jefferson Military College, an ancient institution with an honorable history and tradition, into a citadel of racism. My protest found its way to the desk of the Honorable Louis Johnson, Secretary of National Defense; and in reply I received a letter which I shall long treasure because of its succinct statement of the fundamentals of democratic living. Under consent, I am inserting Secretary Johnson's letter in the CONGRESSIONAL RECORD to extend its influence and give it the immortality of the published word:

MY DEAR MR. KLEIN: The President has requested me to reply to your telegram to him of October 28 concerning early press reports that Jefferson Military College had accepted a $50,000,000 gift on condition that the school exclude persons of African or Asiatic origin, and that it teach the superiority of the Anglo-Saxon and Latin-American races. In your telegram you urged that the President, "as Commander in Chief, take the only act which appears to be open under existing law to express the deep disapprobation of all true Americans by ordering the removal of Jefferson College from the list of recognized accredited schools of the Naval and Military Academies."

As you know, since your telegram was received at the White House trustees of Jefferson Military College announced that "superiority of one race over another has never been taught in Jefferson College. No such study is anticipated." With this announcement, it was reported in the news that the five- to fifty-million-dollar offer had been withdrawn. I think, therefore, it is reasonable to assume that the matter has come to a satisfactory close—not only to the credit of Jefferson Military College but also to the cause of education in a free society.

For your promptness in denouncing bigotry when it arises, I wish to offer my congratulations, as well as to all like-minded citizens who pay the price of liberty by their eternal vigilance.

Racial and religious prejudice are inimical to freedom and democracy, just as the proponents of the extreme right and left who foment intolerance are saboteurs of our way of life. Making democracy work is a basic ingredient of the national security, and, therefore, of world peace and freedom. It is the No. 1 job of all Americans, as well as all citizens of the democratic countries of the world.

With warm personal regards, I am,

Sincerely yours,

LOUIS JOHNSON.

Should Farmers Get Federal Pensions?

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, January 19 (legislative day of Wednesday, January 4), 1950

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Should Farmers Get Federal Pensions?" published in the Des Moines Sunday Register of January 8, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHOULD FARMERS GET FEDERAL PENSIONS?

Do farmers and farm workers want to be included in the expansion of the Federal Social Security Old-Age and Survivors Insurance System? They are the one big group conspicuously left out of the bill which passed the House and is now up for consideration by the Senate. They were left out because they didn't put up a fuss to be included. Several Congressmen said so plainly for the record in October.

But, since then, some of them are kicking up a fuss. The Idaho State Grange passed a resolution in December favoring inclusion of farm people, and circulated arguments for it to local granges.

The arguments point out that the impact of our two supplementary systems of old-age pensions under the Federal social-security law is very different in agricultural and industrial States.

In industrial States, the contributory system (old-age and survivors insurance—OASI) is bearing a large and increasing part of the load—roughly half now, and more if the benefits are raised. In agricultural States, the relief system of pensions (old-age assistance—OAA) carries an overwhelming part of the load, because agricultural workers are not eligible for the contributory system.

Is this an injustice to farmers? To farm States? The Idaho folks are thinking this over, and Iowans will confront it soon.

On this lofty statistical level, the question is not a simple one. The arguments being circulated in Idaho assume that the contributory system (OASI) pensions are paid out of the stored-up contributions of the contributors, which is good, whereas the relief pensions (OAA) are paid out of taxes, which is bad.

This is an optical illusion. Both are paid for out of taxes: OAA out of general State and Federal taxes, chiefly sales and income; OASI out of a special payroll tax on "covered" individuals and their employers.

Both sorts of taxes are in some degree shifted (through prices of goods and services sold by those taxed to the general consuming public), and no one can be at all certain where the burden ends up ultimately.

The big difference between OASI and OAA is not the source of funds, but the way they are paid out.

OAA pensions are paid out only to the needy, in amounts based on individual needs as determined by local welfare departments, within the limits of State appropriations and State and Federal regulations. OASI pensions are paid out to everybody in covered industries, regardless of need, in amounts based on what the individual has paid in as pay-roll deductions.

So the real question for farmers is: Would they like to be taxed on their current earnings for the sake of survivors insurance or a pension, based on how long they have paid in and how much they were making?

As long as the rates remain away below cost (as they are now, and have been since 1935), this is a tremendous bargain for individuals—at the expense of those who are paying taxes when this generation retires.

Commercial and industrial employees have been getting the benefit of this bargain since 1935, and the Federal House of Representatives has passed a bill to extend it to public employees and to the nonfarm self-employed.

Well-to-do farmers might take it or leave it. Farm laborers, sharecroppers, and the like, however, need it worse than most industrial and commercial employees. But they won't get it unless somebody—preferably among farm organizations—speaks up for them.

A broader question remains for all of us. Should we go ahead and expand the contributory system until it all but replaces the relief system of old-age pensions?

Under the present hybrid system, we have ridiculous duplication. Many who are getting OASI pensions cannot live on them and must get supplementary grants from OAA.

But if we increase benefits under the contributory system to levels which make this unnecessary, and if we extend coverage till nearly everybody comes in on it, that will mean a perfectly terrific cost which will have to be met by much higher pay-roll taxes, general taxes, or both.

Can we afford pensions for everybody, regardless of need, on a level so that everybody could live on them if necessary?

Bonneville Power Is an Investment, Not an Expense

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. MACK of Washington. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD a very fine and most informative editorial from the Longview (Wash.) Daily News, on the fine performance of the Bonneville Administration.

It is my hope that all Members of Congress will read this editorial because the subject is one that will soon be discussed on the House floor. We are properly concerned over the increasing amounts we are asked to appropriate each year. The justification for these requests should be carefully studied.

Congress has and should continue to appropriate the necessary funds for the development of hydroelectric power in the Northwest. The record shows that these projects are actually a sound investment of Government funds. They are not only paying back the entire amount appropriated, with interest, but have already increased national income and production many times their cost.

The editorial follows:

BONNEVILLE FIGURES PROVE ITS WORTH TO PACIFIC NORTHWEST

One of the troubles with publicly owned enterprises, we often hear, is that they are monopolies and therefore don't have competition keeping them on their toes to provide the best possible service to the public. In the case of one of the biggest public enterprises in the Northwest—the Bonneville Power Administration—there is something of a substitute for competition that keeps that vast business striving for a good record. That something is the necessity for congressional approval of its annual budget and the expenditures it makes for improvements and extensions to the power-distribution system.

As a result Bonneville is not above tooting its own horn when it has something to toot about and we do not blame it in the least. Bonneville points with some pride to the fact that it recently paid a $2,000,000 surplus into the Treasury, thereby advancing repayments on its indebtedness about 10 years ahead of date due.

Bonneville Dam itself cost $27,500,000 and $59,000,000 of that was to be repaid from power revenues. Already power has paid back on that indebtedness $31,208,000 including interest and operating expenses. The huge network of transmission lines cost $133,000,000. And power revenues have paid back on that indebtedness $27,400,000.

Keeping ahead of its debt payments has been possible for Bonneville despite the fact that its wholesale rate of $17.50 per kilowatt year—the lowest in the Nation—has not been increased.

Bonneville also has cause to boast about the wealth it has brought to the Northwest in terms of pay rolls and the addition of property to tax rolls of various counties.

It reports that 11 plants built in the Northwest because of Bonneville represents an investment of about $200,000,000. This compares with the Federal investment in power facilities of $340,000,000. Through December 31, 1948, the 11 factories produced more than $750,000,000 worth of aluminum ingots, aluminum sheets, and other rolled products, ferrosilicon, chlorates, calcium carbide, and other chemicals. These firms have paid $35,000,000 in Federal income and excess-profits taxes on their production at these plants and $4,400,000 in local property taxes.

These 11 plants include the two Permanente Metals Co. mills at Spokane; two ferrosilicon plants, one at Spokane and one at Rock Island; aluminum plants at Tacoma, Troutdale, Vancouver, and Longview; two calcium carbide plants in Portland and a chlorate DDT manufacturing establishment in Portland.

The contribution of Reynolds to Cowlitz County, attributable directly to the advent of cheap hydroelectric power in the Northwest, is considerable. Bonneville reports that Reynolds Metals property in the county accounts for 4.6 percent of the total assessed valuation of $34,519,740 in 1949. The taxes it paid came to more than $188,000. In addition the Reynolds plant has provided jobs for nearly 500 workers since 1941.

All these figures, of course, are meaningful to us in the Northwest and we appreciate their significance. The problem each year is to get Congress to appreciate their meaning. For the Bonneville Administration still must go begging to Congress each year for its operating expenses and any money it needs to improve its system. It makes a profit but it is not allowed to keep that profit, having to turn all of its revenues into the Treasury.

It might be further noted that when there is talk about the creation of a CVA in the Northwest to take over various Federal functions, it is never pointed out that the Bonneville operation is such that it requires consolidation with some new Federal agency. About the only criticism about Bonneville we ever heard comes from those who oppose its efforts to extend transmission lines into territory now served exclusively by private power companies. And that is a matter of ideology and not operations. All in all, the region has many reasons to be proud of and well satisfied with this agency, which has proved its worth many times over.

Christmas Is a Challenge

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks I am inserting in the CONGRESSIONAL RECORD an article written by one of my constituents, Mr. Harry Karp, of 156 Second Avenue, New York, and printed in the December 17 issue of The Flash, a house organ of the Radio-Keith-Orpheum Corp.

I am sure, Mr. Speaker, that you will agree that Mr. Karp has presented a challenge of good will to the contemporary world. Another world war will destroy our civilization, our democracy, our material and spiritual heritage of past generations. In organized religion, teaching the kinship of all men, lies one of the great hopes of peace.

CHRISTMAS IS A CHALLENGE

What is Christmas? Perhaps one of the most challenging answers comes from the national commander of the American Legion, who, unwittingly, may have given it to a query from a young boy, mercilessly beaten for his religion. The lad, whose father had perished during the Battle of the Bulge, was on his way home from a Scout meeting when the attack occurred. Embittered and angered at the injustice, he asked just why his father had to die. The commander's response to the question was that as long as evil men seek to destroy the dignity of freemen, the world will engage in wars and tribulations will persist. Until man learns to adopt a code of morals that outlaw injustice, attacks of the sort will continue. Almost two thousand years ago a teacher stood at the gates of Gethsemane preaching the very same doctrine, that all men are in reality brothers; that the greatest blessing the Lord could bestow upon them was that of living in peace together. What wonderful words they were and yet for Him too there was scorn, derision, hatred, utter cruelty, and finally crucifixion. But the words could not be forgotten. They have stood the test of time. They have not been dimmed by the years and at His birthday, people, everywhere, see almost too clearly the need and meaning of the teachings. Christmas is a children's holiday. It is then that we try to instill in them the beauties of laughter and of home. It is also a world holiday if it reminds us that man does not have to destroy himself by hates and envies. The air is free and the earth is large; man can share in its beauties and in its harvest, acting as brothers and respecting the views of each other. On the 25th day of December we celebrate the birth of the child who was destined to bring eternal hope of peace on earth and to all mankind good will. Despite the wars and threats of wars, His theme has stood its ground. If man can sing the glories of peace and God with his tongue may he yet learn to live the glories of peace and God with his heart and mind. Christmas opens the challenge. Can man accept that challenge before it is too late?

HARRY KARP.

A Pioneer Aviator

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to insert the following article from the Daily Evening Item, Lynn, Mass., of Tuesday, January 17, 1950:

GEN. "HAP" ARNOLD

Gen. Henry H. "Hap" Arnold, who led the mightiest air armada of all time to victory in World War II, was a soldier's soldier in the strictest sense of the word. Outspoken, courageous, and patriotic enough to put his country's needs above his personal health, Arnold has been ill of a heart condition since 1944, but refused to retire until June 1946. He preferred to take his chances with the rest of the Nation's fighting men and went back to duty.

A pioneer aviator—he was taught to fly by the Wright brothers—General Arnold was a lifelong battler for the development of a strong air arm in the Nation's defenses and his sound judgment was vindicated by our overwhelming success in the air in the recent conflict. Even in retirement he continued to urge the maintenance of an unrivaled air force, declaring that Russia fears neither armies nor nations, but only a far-reaching bomber strength. In his death the country has lost a great patriot and a distinguished soldier.

The Welfare State—What It Means to Business

EXTENSION OF REMARKS
OF

HON. ANDREW J. BIEMILLER
OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1950

Mr. BIEMILLER. Mr. Speaker, on December 1 I had the pleasure of addressing the Luncheon Club of the Fraternal Order of Eagles in my home city of Milwaukee. This splendid organization has long served a most useful purpose in bringing discussion of current problems before its members. The club's programs are broadcast, thus greatly widening its audience. I desire to insert my speech, the Welfare State—What It Means to Business, in the RECORD, as follows:

THE WELFARE STATE—WHAT IT MEANS TO BUSINESS

How frightened would you be if someone hissed in your ear, "Beware the Jabberwock." Maybe the panicky tone might scare you, but I think you'd wonder what on earth they were talking about.

And yet that's just about what's been going on for the last few months—a kind of panic campaign, lifted right out of Alice's Adventures Through the Looking Glass. The only difference is that when Lewis Carroll wrote that famous story, he intended it to be nonsense. But in this case, people—a few people—have been moaning "Danger! Here comes statism!" or else, "Look out! look out! It's the welfare state!" Then they expect you to run in all directions.

Now it really can't be the terms themselves that are scaring Mr. Dulles and Mr. Dewey. The dictionary defines welfare as "prosperity" and "exemption from pain and discomfort." And it defines statism as "belief in a state government, as in a republic, in contrast with belief in communism or a Soviet government."

Obviously, it can't be the words that are worrying them. In fact it seems much more likely that these gentlemen's terror is induced by having followed Alice through the looking glass into that land where everything goes backward and no one thinks it necessary to use words that make sense. So, since it's apparently impossible to understand this jabberwocky, we can only go over all the possible reasons that might be causing this hysteria.

WELFARE STATE GOOD AMERICANISM

Do you suppose they think a government concerned with the welfare of its people is un-American? To some of their exponents, Stalin has long dominated the policies of the present administration. Mr. Steinkraus, president of the United States Chamber of Commerce, recently claimed the present Government was completely discarding the American system.

Well, let's go back to the days of the inception of our country and see whether Mr. Steinkraus' fears are justified. I suppose we could consider the signing of the Constitution as perhaps the very first official act taken by the Government of the United States. And in it, the new Government is specifically charged with the responsibility of promoting the general welfare.

This clause in our Constitution is well known to the wanderers through the looking glass. A confidential big-business news service goes so far as to advise its members that the only way left to prevent the Government from promoting the welfare of its people is by constitutional amendment. Then, in typical mirror language, they go on to mention casually that the concept of the welfare state is so well liked by the American people that Mr. Dewey himself warned Republicans it would be political suicide to deny it. This leaves me as puzzled as I was at their original outcry. How, I wonder, do these gentlemen then propose to amend the Constitution?

SUBSIDIES OLD AS THE COUNTRY

But the general welfare is not only our constitutional concern. Historically, it has always been considered our primary responsibility—by Federalists, Democrats, and Republicans alike. Jefferson assumed that Federal subsidies for education were the definite and specific responsibility of the Government. Lincoln's Congress passed the Homestead Act, distributing vast areas of land to individual families in family-size units, and thus establishing what was the equivalent to an employment and social-security program. As early as 1887, under Cleveland, Congress provided grants for agriculture—and long before the New Deal the Government was already giving subsidies to the States for 15 major welfare purposes.

So I can hardly think that even the looking-glass boys, on their nostalgic progress backward, can be finding a concern for welfare un-American.

Perhaps they think that statism is a great plot on the part of the Government to undermine business.

Even looking backward, that can hardly be proven. Under that same dreadful clause in the Constitution, Alexander Hamilton established the national bank, which was certainly clearly designed for the business and property interests of the country.

And ever since then the Government has shown a great concern for business. In the first days of our Republic, subsidies were given to shipowners and manufacturers, and land was donated for all sorts of private purposes, including not less than 179,000,000 acres to the railroads. But, strangely enough, it was not until the United States was taken over by this wicked and dangerous Jabberwock—first under the New Deal and then under the Fair Deal—that our Government really went into the business of saving business.

If you will recall, when President Roosevelt closed the banks, it was to save the banks, not abolish them. When the RFC was established, it was to enable business to carry on and expand, not to close down factories. When the FHA was set up, it was to make it possible for private builders to continue, not for Government construction.

GOVERNMENT HELP PREVENTS DEPRESSION

In fact, so conservative a periodical as the U. S. News and World Report recently listed some of the many ways in which the Government is at present supporting business. In their opinion, it is this very support that makes it impossible for the kind of calamity to overcome us that occurred under that looking-glass President, Mr. Hoover.

First, they point out, in 1929 there was wild stock-market speculation. In 1949, this is protected by that very subversive agency, the Securities and Exchange Commission.

Second, 20 years ago, the building boom was over, and there was of course almost no public construction. Today, the private building cycle is in its early stages, and there is a $5,000,000 public building program under this administration that is one of the important reasons that business' position is so secure right now.

Next, under Herbert Hoover, there were widespread bank failures. Now, that tool of the welfare state, the Federal Deposit Insurance Corporation, insures deposits, and keeps banks sound.

Fourth, in the "good old days" when prosperity disappeared around the corner, mortgage loans were unprotected, and there were thousands of foreclosures. Now, again the doing of that wicked welfare state, mortgage loans are insured.

PURCHASING POWER MAINTAINED

But let's go on. The U. S. News comments on the fact that in Hoover days personal incomes and puchasing power were helped by only $1,000,000,000 in Government benefits. When the factories shut down, when businesses had to cut their staffs, the people who were thrown out of work had no way to keep going—or, incidentally, to keep business going. Now, the monster of the welfare state supports personal incomes by $12,000,000,000 in Government insurance schemes, such as social security, unemployment insurance, and old-age benefits.

Another of the reverberations of the great crash was the drop—with a thud—of farm prices. Now, the Government supports farm prices and keeps us from having a large portion of our population completely stranded, with the inevitable repercussions on the business firms with which they deal.

Also, in the aftermath of the roaring twenties, unions were weak, and wages spiraled down. Thanks to the Wagner Act, unionism is strong, and the combination of healthy unions and the minimum-wage law protect wage income—and therefore protect purchasing power. After all, it doesn't matter how much you have to sell, if no one can afford to buy it.

So I simply cannot see how these Lewis Carroll characters see a menace to business in their jabberwock. Let's try another tack.

I've been talking about business. But I haven't been referring to business that is so big it becomes monopoly. One of the firm foundations of our Government and of our way of life is free enterprise. Our forefathers believed in it—and our present administration believes in it.

However, in spite of the looking glass protestations of the moguls and mouthpieces of big business, I'm not at all sure that they really want free enterprise at all. I haven't seen any of the mammoth trusts encouraging competition. But the welfare state does want free enterprise. It cannot be interested in helping to increase the profits of a few arrogant men, who at the end of the nineteenth century practically owned the country. On the other hand, there was not anyone so upsetting to monopolies as President Truman, or so shocking as the Fair Deal that first recognized the dangers of the growth of trusts. By the beginning of the twentieth century the power of the barons of Wall Street was already so well recognized that Bryan answered John Pierpont Morgan's smug comment that "America is good enough for me," with the retort, "Whenever he doesn't like it, he can give it back to us." And it was Theodore, not Franklin, Roosevelt who first prosecuted monopolies.

I think we are getting closer to the real meaning of the Alices walking through the looking glass. They are truly afraid of a government who might want to put some restraints on big business to prevent it from swallowing the rest of the economy. But more than that, there is another thing they are afraid of.

WELFARE FOR ALL THE PEOPLE

The present government is legitimately concerned about business, and has shown this concern through many concrete actions. But it does not limit its concern to business. It recognizes its responsibility to all its citizens. It recognizes the need of all citizens to live free from the fears of poverty and serfdom. In this richest of all countries in the world, the Government has thought it proper to share its wealth with all its people, not in the way of totalitarian states which offer the lure of bread at the price of liberty, but by helping people to help themselves, by protecting them from

dangers beyond their control, by allowing them to grow strong enough to protect their own interests against exploiters.

So the Fair Deal has insisted on public housing, in order that everyone may have a chance to live decently, not only the rich. And we've fought for repeal of the Taft-Hartley Act so that labor will not be forced back into the position of accepting whatever scraps are offered by what a notorious company spokesman once called "the Christian men to whom God in his infinite wisdom has given control of the property interests of this country."

And the welfare state is concerned about the economic security of its workers, and with that of its citizens who are out of work. We have increased the minimum-wage law so that it is more in keeping with present-day living costs—and, may I add, present-day business profits. We still consider it imperative to keep up farm prices—and we would like to see it done in such a way that the consumer will also reap the benefits, as Secretary Brannan has proposed. We are pressing for a decent increase in old-age benefits. This is an amendment to the Social Security Act which I am sure all of you will support since, as members of our great lodge, the Fraternal Order of Eagles, you worked so hard to obtain the original act. We are striving to obtain a good education for all American children. We are working for equal rights and opportunities to all Americans. And as members of a state deeply interested in the welfare of its people, we are going to do everything we can to provide adequate health services for everyone.

WHO WANTS TO GO BACKWARD?

Ah! Now I think we have the answer. This is what jabberwock means, at last. It means fear of a government which takes its responsibilities seriously. It means horror of a state that can and does recognize that its obligations are not primarily to a few industrial giants or to a handful of their bootlickers.

And to that definition, we proudly plead guilty. We gladly agree that the Government's responsibility is to the farmers—not to the cotton kings; to the storekeepers and shopowners—not to the president of the A & P or United States Steel; to the workingmen—not to Wall Street.

And if these travelers in looking-glass land want to go forever backward, do you think what they want reflects the will of the people? Do you think their program of cuts in relief, abolition of social security, withdrawal of farm-price supports, breaking of labor unions, and reincarnation of slums—do you think their program would ever have a chance so long as we are a democracy?

Have the election returns in 1948 and in 1949 suggested that the people of this country want a government by millionaires? Or legislation for private privilege? Do you really believe that anyone wishes to change the word welfare to farewell?

Traffic Director

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to insert the following excellent article from the Boston Herald, Boston, Mass., January 18, 1950:

BACKTRACKING ON RULES

There is nothing particularly surprising about the current effort of the House Rules Committee to recapture its former life-and-death power over legislation in the lower House. But it is both surprising and shocking to find this effort abetted by responsible persons outside the committee.

The function of the Rules Committee is to serve as "traffic director" for bills previously reported by other standing committees of the House. The committee is not set up to review bills on their merits, but merely to arrange for their orderly presentation to the House.

When, as frequently happened prior to the last session, the committee refused to grant a rule to a properly reported bill, or made the rule conditional on substantive changes in the bill, it was unsurping a function which never belonged to it. It was making a joke of majority rule in the lower Chamber.

This Congress performed one of its most constructive acts by finally curbing these activities last January. It would be criminal to backtrack now.

But one hears again all the old slippery arguments for Rules Committee control. Before the new discharge arrangement, it is recalled, the committee held up a lot of bad bills as well as good ones. Sometimes the Members of the House didn't want to record themselves on a measure, as was the case with the universal military training bill, and counted on the committee to kill it. Sometimes, as in veterans' legislation, the committee was less vulnerable to minority pressures than the House as a whole.

Currently the leading advocates of restoration are the economizers. The President, it is said, has abandoned hope of a balanced budget and is off on a spending spree. His supporters are in a majority in Congress. Those who would save the country must therefore resort to extreme measures. A restored Rules Committee would now certainly sabotage and obstruct for a worthy purpose.

Alas, democracy is not that simple. Of course, it is desirable to curb spending. Of course, it is desirable that Congress be prevented from swallowing any more political welfarism. But we cannot be saved by hiding behind the skirts of a Rules Committee. We can't have economy until the people want it and their elected Representatives in Congress vote for it. We can't have democracy by avoiding its responsibilities.

The House of Representatives is the popular branch of Congress. It must act according to majority rule and face the consequences. No amount of quibbling can justify a voluntary resubmission to the old Rules Committee shackles.

We hope the Representatives stick by their guns.

Heritage and Destiny in Advertising

EXTENSION OF REMARKS
OF
HON. SAMUEL K. McCONNELL, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. McCONNELL. Mr. Speaker, Mr. Walter D. Fuller, president of the Curtis Publishing Co., recently made a very interesting and informative address dedicating the Advertising Hall of Fame of the Advertising Club of New York. He has pointed out the tremendous effect which advertising has had on the people of the United States and upon American business methods. Very important from the point of view of Congress, the speech demonstrates the extent to which our national prosperity parallels a high volume of advertising.

It has been stated recently that a 20-percent drop in business turn-over would reduce Federal revenue by sixteen to eighteen billion dollars a year. Turnover could easily be reduced by that amount if the volume of advertising were substantially reduced by the businessmen in this country.

I feel sure that Mr. Fuller's address will give Members of Congress a greater appreciation of advertising and its importance to national income. I am therefore having the entire speech inserted in the RECORD, as follows:

HERITAGE AND DESTINY IN ADVERTISING

(By Walter D. Fuller)

Some fourscore years ago modern advertising was born. There had been faint stirrings before the War Between the States, but in the flood of energy and ideas released by the ending of that war came the first glimpses of advertising as we know it today.

With and through the coming of modern advertising came a great increase in sales and distribution volume, which ultimately made possible the miracles of American mass-manufacturing production. There also gradually developed very wide dissemination of general information among Americans from coast to coast at little or no cost to them. This was probably the most remarkable development of widespread mass adult education in the history of the world.

Advertising and advertising media—magazines, newspapers, direct mail, outdoor, and, more recently, radio and television—have literally tied America together. Through advertising the women of New York, Hollywood, and Dallas, of the farm, the small town and the large city, know and wear the same styles in clothes, discuss the same subjects in their clubs and equally share in their responsibilities of citizenship. The mass education brought about through advertising has had an even more direct effect upon the men of America and upon American business methods and operation. All these things and much more, advertising has brought to our country.

Modern advertising as we know it, is essentially American and it is no accident that the terrific progress of the United States of America toward world leadership parallels our advances in advertising. Other nations have no form of mass communication which can compare with our advertising.

So much to set the picture.

Now let us look back over these fourscore years and see the names of the men who were the pioneers and leaders in advertising during this time. Someone has said that progress is the lengthening shadow of a man, and this can be plural as well as singular.

THERE WILL BE OTHER PIONEERS

Tonight we have listened to the citations prepared by your committee for 10 of the great men of advertising during this 80-year period. To 4 of the 10, in order of birth dates, Wanamaker, Curtis, Jones, and Johns, your committee has applied the word "pioneer." I mention the point only to make clear that some great men in any field may, by their ability and their opportunity, fill the role of pioneers—all honor to them, yet other great men will follow, in service, in the establishment of integrity, and in vision for the ever-expanding future. I think we will agree that all who lead and whose deeds become keystones of progress should merit the honors which rightfully come to them. Certainly, these 10 men whom your committee has so carefully selected will receive equal niches

in the Hall of Fame. Washington was a great national pioneer, but that fact does not diminish the luster of Lincoln as a great American.

I shall not attempt to review the magnificent history of John Wanamaker or of Cyrus Curtis, both of whom are now almost legendary in the advertising, mercantile, and publishng world. I knew Mr. Wanamaker slightly, but, peculiarly, I always see him in memory from the early prints of John Wanamaker, a very young man, wheeling his handcart full of goods for his pioneer store on lower Market Street in Philadelphia. While there was over 150 years' difference in time, somehow I always class Mr. Wanamaker's pioneer beginning with another pioneer American who strolled up Market Street in Philadelphia one autumn day in 1723, munching buns and hoping that Philadelphia would show him opportunity. Which brings me naturally to Cyrus Curtis, who rebuilt in his lifetime the publication which this last young man originated in 1728.

Of course, I knew Mr. Curtis very well indeed. I saw many examples of his great courage, his ability to reach into every problem for its nucleus, and to brush aside the secondary details. I saw him making brilliant innovations and I also saw him make mistakes, but the mistakes were few and the successes were many. He was, indeed, a pioneer in publishing and in advertising. His life is an epic of free enterprise, of the wise realization of opportunities, of high honesty in all things, no matter how it hurt, and of the development of careers for able and diligent associates.

These two men, Mr. Curtis and Mr. Wanamaker, are of an earlier generation than the other eight men you are honoring.

Mr. Jones of Eastman was instrumental in building a new industry and in spreading Kodaks throughout the world to a point where the name is as familiar in Hindustan or China as it is in the United States of America. Mr. Johns was all the things listed in the citation. In addition, he had a sympathy and a depth of conviction which made his influence in advertising unique and unusual.

These four are the men your committee mentions as "pioneers." If I may insert a personal word, I believe I would support the right of Edwin Meredith to a similar designation, although in a different way and at a later date. The citation tells you why.

Likewise I personally believe that T. F. MacManus also deserves the term for his brave and unusual handling of advertising in the early days of the automobile industry. Certainly if he were not a pioneer, he was indeed close to it.

I knew all these men personally except Messrs. Strong and Ayers. Some I knew much better than others and of course I knew all by the great reputations they acquired during their lifetimes.

MANY HAVE CONTRIBUTED TO ADVERTISING

Messrs. Romer, Erickson, Ayers, and Strong each exerted a great beneficial influence upon the advance of advertising. All were its strong proponents and each in his own way was among the great of our profession.

After careful study and much consideration, these ten were the selections of your committee, but I am sure that your committee would agree that during these fourscore years there have been hundreds of other men of advertising who have given greatly to the growth, accomplishments, and success of advertising. To the memory of all such people, men or women, who have passed on to their eternal reward, I am sure we tonight give our homage, and honor them for what they have done.

Let us now survey the results of those years as they are disclosed by the provable facts. I shall start with the year 1900, when the tempo of advertising progress really began to become national and to hit its stride.

If you will take the record for the years since the beginning of the twentieth century, you will find that from 1900 to 1930, with only one yearly exception, the total annual expenditures for advertising in America have been over 3 percent of national income. During the 1920's this ratio at times almost reached 4 percent. I repeat that for 29 of those growing prosperous years, advertising expenditures reached or exceeded 3 percent of national income. And please note that during this whole period there were only two periods of serious unemployment and both were relatively brief in duration.

The years of preparation up to 1900 and of realization and expansion from 1900 to 1930 were the years in which the men we honor tonight were most active.

I think I can show you that their accomplishments and that of the other men of advertising during those hectic and resultful years up to 1930 are far more than merely a matter of pride for us tonight.

EXAMINE OUR RECENT RECORD

It seems to me that the things they did, the obstacles they overcame and the magnificent results they achieved, when compared with the record of our generation since 1930, is a challenge to us and to those who will follow us.

Because, gentlemen of advertising, our record in recent years is not so good. Listen.

In 1930 the depression came. Both advertising expenditures and national income fell abruptly during the early 1930's. All through the latter 1930's our ratio of advertising expenditures never rose as high as 3 percent of national income and all through this period we had heavy unemployment. During the 1930's, except for 2 years, average unemployment was in excess of 8,000,000 persons until we came to the period of war preparation in the early 1940's. Then during the war we experienced a strong sellers' market and advertising promotion dropped to as low as 1.5 percent of national income.

We are now completing the year 1949. We are almost wholly back in a buyers' market. Many of our businessmen have become accustomed to the standards of, either the sellers' market of the postwar period, or of the depression period. Many younger men have had no experience with the prosperous predepression days. It has been almost 20 years since we have been building soundly prosperous times.

For 30 years, from 1900 to 1930, America experienced an almost unbroken buyers' market. During that time the ratio of advertising expenditures to national income was well over 3 percent. In 1948 advertising investments were but 2.2 percent of national income. In 1949 they will probably be slightly lower. This must be a matter of very grave concern for us men of advertising. It should be a matter of grave concern to Congress. It is of grave concern to manufacturers and to merchants. Regardless of actual dollar increases, advertising expenditures when compared to national income are 1 percent less than they were during the first 30 years of this century, and remember 1 percent of current national income, my friends, is over $2,000,000,000.

A PICTURE OF OUR INADEQUACY

We all need to look at these figures of current advertising inadequacy in order to get a clear impression of the situation. Here are the gory details:

Over 3 percent of national income was spent for advertising during every year from 1900 to 1930 except for 1918; a peak of 3.9 percent was spent for advertising during the 1920's.

A steady drop in this percentage during the depression, down to 2.6 percent by 1940.

Never over 1.6 percent during the war; 1.9 percent in 1946; 2.1 percent in 1947; 2.2 percent in 1948; probably not much over 2 percent in 1949.

Here we are 5 years after the war, and only about two-thirds as much advertising as 30 years of successful experience have shown to be needed to move America ahead to real progress and prosperity.

The following figures are even more embarrassing to us men of advertising than the figures I have just quoted.

Through the period from 1900 up to 1930, total national selling expenditure for all kinds of selling, averaged a little over 36 percent of national income. This included advertising, of course. During the depression years, the percentage of total selling expense held up far better than did the percentage of advertising. In 1940, when the ratio of advertising to national income had dropped nearly one-quarter below the 1900 to 1930 average, the ratio of total selling cost showed an almost negligible drop from the 30-year average. Through the war, of course, the selling percentage dropped sharply, but in 1946 this total selling ratio, even in a buyers' market, was back to 35.4 percent and in 1948 it was 37 percent, or higher than the average of the 1900 to 1930 period.

WHAT IS THE MATTER?

Don't ask me what this means, but it certainly is a sorry showing for advertising. We have new and unique advertising methods and media. We can prove the power of the impact of advertising, but volume—by ratio—is way off, about 33⅓ percent off as I see it. What is the matter? Can you be proud of these figures? I certainly cannot.

Let us take a common-sense look at the situation.

Business today is on a see-saw. Will it turn up or down? If it is going to turn upward, it will need power to climb the hill and that power is advertising. You know what happens if it turns downward—there will be unemployment, inventories will mount, and that will mean less sales, still more unemployment, closing factories and stores and all the rest of the dismal downward spiral.

We are here tonight to do honor to great advertising men of the past. They did their job magnificently and left us a great heritage. Through the mists and fogs of their futures, they dreamed great dreams and they saw colossal mirages of progress. They made the dreams and the mirages come true—far more true than they could possibly have imagined.

Are we so dreaming today, have we the vision, the energy, the conviction, and the courage to do our duty to our future as they did to theirs? That is the question we face tonight, my friends, we in this room and thousands of other advertising men throughout America.

Let us dream just a little in our turn. Let me give you a taste of my dreams for advertising's future.

I believe advertising is the surest way to bring prosperity to America and to the world, the most certain road to true security, and the real solution to the problems of almost universal happiness. I think advertising can lower the cost of government, and that is the only way to greatly reduce taxes. I believe it can pay off the national debt. I believe that through advertising lies the best hope of the world for universal peace. I believe all these wonderful results are possible if the men of advertising have the vision, courage, and honesty possessed by the men we are honoring tonight. We shall need help, of course.

A few weeks ago, Mr. David F. Austin, vice president of Big Steel in charge of sales, said that the half million salesmen of America must save the world if it is to be saved. I would only add my conviction that the several thousand influential men of advertising who naturally are a part of Mr. Austin's half million have got pretty much to be the leaders in the job.

PROSPERITY IS ESSENTIAL

How can this ambitious program be accomplished? First, we certainly must have prosperity in America.

Sumner Slichter, in an article in the November Atlantic, predicts that by 1980 the annual national income will be at least $416,000,000,000, and is more likely to be in excess of $550,000,000,000. Figure 3 percent of that amount you agency and media men. The $550,000,000,000 figure will be easy if the trends of the last 50 years are continued. There will be more people in America by 1980, probably at least an extra 25,000,000. There are already seven or eight million more children than was anticipated 10 years ago. In addition, there is the steadily increasing unit production per man-hour which on the average and for many years has moved ahead at about 2 percent a year. This is the result of invention, of the developments of machinery and power, of the increasing efficiency of management, and of the dexterity and intelligence of American men and women.

In addition, in many directions there has been an increase in the buying power of the dollar. A surprisingly large number of products are today priced far below the prices for which they sold in past years, and when this has happened, it has been principally because of the enormous increases in demand brought about through advertising.

Look also at the record of increasing individual income—in 1914, the year the First World War was started, the average per capita income in this country, adjusted for changes in cost of living, was $472. In 1948 it was $825—these figures are adjusted so that they are comparable. This tendency has followed a continuous pattern in America almost from the beginning. There is no evidence that it will change.

The whole trend of events indicates that we probably will have continuing prosperity in America. At least for the long run, that seems likely.

TWO DANGERS CITED

Now what could prevent such a to-be-desired development? There are twin dangers: First, the development of a completely Socialist state in the United States of America. Such a development, through its destruction of initiative, incentive and competition, could stop American and probably world progress for centuries. The second danger is war with its terrific destruction of property and human life and with the probability that it would leave us with a military or police state and with an utterly ruinous national debt. Remember, Einstein said recently, "I do not know all the weapons which would be used in a third world war, but I do know that if there is a third world war, then the weapon for the fourth world war will be clubs."

How can advertising keep America away from these desperately dangerous trends?

Continuing prosperity is the sure way to combat socialism and communism.

Americans are strong free enterprisers today. We must keep them so. And by that statement I do not mean that we can safely live in a world that favors either end of the spectrum. Neutral tints have always been the natural colors of nature.

Federal old-age pensions, for example, within reason and on a subsistence level are not socialistic, they are just plain common sense. This is equally true of other forms of well-managed public operations such as the maintenance of adequate Federal defense, our public schools, police and fire departments, etc. Common sense and local conditions are the judge, not arbitrary rule. In the town in which I grew up, the cemeteries were owned by the city. Was this socialistic? I do not think so. If we could persuade some of our well-intentioned but mentally blind friends to view current events with common sense and not with choler and utterly fixed convictions, that the future can be built entirely from the past, we businessmen would travel faster and leave less ammunition for our opponents. I think it was Louis XIV of France to whom his prime minister once said, "Sire, if you would but once concede that you could be wrong—" We need some of that sort of realization in certain high places today.

Common sense says that we must have competition, keen competition. Where monopoly is desirable for public reasons as, for example, with public utilities, we need reasonable and intelligent regulation. We want competition because it breeds incentive and invention and adventure. We must have no limits upon size where size is beneficial to the public. These are the things that manufacture prosperity. America has found the way. We must develop and improve it, and you know that advertising and publicity are principal tools by which the desired results can be achieved.

Almost everyone agrees that production of goods and services is essential if people are to have more things and better living. But there seems to be a blind spot with many people about the difference between the actual manufacturing production and the use of the materials produced. It is neither good economics nor profitable to produce any sort of material if it does not move off the shipping platforms. It is only as customers take goods that the goods become of value. The production of customers and of sales is as important as the production of goods, and the process, stimulus, and speed with which the products of the factory or the farm or the mine reach the consumer is of paramount importance to prosperity.

During 1948, American manufacturers and merchants spent over a billion dollars for national advertising in magazines, newspapers, and radio. These were practical businessmen who know the value of an advertising dollar. They did not spend this money because they loved the publishers or the radio stations. Rather they spent it to stimulate the sale and turn-over of their goods in our country's market places. These businessmen backed their choices to the extent of a billion dollars in 1 year because they knew, from experience, that this was the best way to accomplish the results they sought. You will agree, I know, that this expenditure must have provided a great stimulus to the turn-over of goods. In addition hundreds of thousands of dollars were spent in other forms of advertising.

SPEED OF TURN-OVER IMPORTANT

Speed in the turn-over of goods and services is one of the principal forces which is instrumental in creating national income. The best estimates indicate that the inventories of American manufacturers had an average turnover of slightly more than seven times in 1948. Suppose expenditures for national advertising were reduced to a point where the net effect of the reduced advertising volume and the subsequent reduced sale was to slow the manufacturing turnover from seven to six times. This would result in serious unemployment and in a cut in Federal tax revenues of many billions of dollars a year. That is just how important national advertising is to the national turnover rate and to Federal tax revenues. Advertising not only creates a market for a product, but it also adds dollars to Federal income.[1]

[1] The following quotation is from a speech made by Dr. Harold G. Moulton, president of Brookings Institution, in New York on December 8, 1949, before the Congress of American Industry:

"Because of the highly sensitive character of our tax system, even a moderate recession, such as a 20-percent decline, would involve a drop in tax receipts of something like sixteen to eighteen billions of dollars."

A few moments ago I said that advertising can lower the cost of government and thus greatly reduce taxes. The figures indicate strongly that we people of advertising have an economic value to the Nation considerably broader than merely the selling of goods and services.

On the average each time an extra dollar of advertising is expended, it means that more goods are being sold, greater employment is being provided, and the revenue of the Federal Government is being increased by—I think—several dollars for each dollar spent for advertising.

Obviously, if advertising can do these things, it can reduce taxes and in time pay off the national debt. The debt can never be paid by saving—it is too big—our one hope is a greater volume of sales, ever growing and steadily prosperous. The answer is all in the cards, my friends; it is just a question of how well we play them.

ADVERTISING AN AID TO PEACE

I said earlier that advertising can be a major factor in bringing peace to the world. I meant just that. I think our country has been missing a perfectly enormous opportunity. We are spending tens of billions of dollars each year to arm ourselves and we expect to spend a good many more billions to arm our allies. We expect to continue such expenditures indefinitely into the future. I do not quarrel with these expenditures today, but I ask what are we doing to make such mammoth expenditures unnecessary in the future? It is not true that the major cause of war is lack of understanding between the peoples of different nations? Isn't the danger and the expense of today's defense preparation due to the fact that leaders of a certain country have been propagandizing their people and much of the rest of the world with completely false doctrines and with vicious lies about America?

We certainly know that most of the troubles of the world have their foundations in mass movements. People are lead into things en bloc. The farewell state in England is an example. Have we not drifted a considerable distance down such false lanes in America? Does not the correction of such a drift and the insurance against its reoccurrence lie in the education of the individual to his personal responsibilities as a citizen? The men you honor tonight were individuals with one thing in common and that was a crusader's zeal to promote and sustain the integrity and development of advertising. The same opportunity is open to all of us. We may never occupy the same broad stage, but we can each be effective in our own field of activity no matter how limited it may be. All of us in this room tonight have strong convictions as to the importance and efficiency of advertising. Most of us have assumed I think that Americans are the premier advertisers of the world? But are we? Are we the great salesmen we used to be? Advertising today must be viewed not alone from the economic angle but also from political and social angles. America has been built on a selling foundation since the days of the fur traders and the Yankee clippers, yet we are letting a group of relatively rank amateurs from behind the iron curtain successfully sell their political doctrines throughout the world. Isn't it about time we did a better job in that connection? I have no doubt that our international propaganda has been well done, but obviously we, as a Nation, have been doing a boy's job in this regard rather than a man's—else 5 years after the end of the war we would not be facing the defense expenditures that we do face today. If a commercial advertising campaign was still inadequate at the end of 5 years, what would happen to the advertising manager or to the advertising agent?

Surely more convincing propaganda internationally about our American way of life—and floods of it—could bring long-lasting peace. If we remove the cause for the need for extreme defense, then we save untold billions.

NATIONAL ADVERTISING EXPENDITURES DIP

Anybody or anything that puts an obstacle in the way of advertising today is doing our Nation a great disservice. That is what I have been telling Congressmen this year in Washington because at this time of all times it would be terrible to unnecessarily increase the burdens upon advertising, when we need its unlimited expansion so desperately.

There is today a decrease in the ratios of expenditures for national advertising. All business history in this country points to the fact that as a Nation we have been prosperous and have had full employment when business turnover was high, and we have usually had depression when the reverse was the case. The speed of the turnover of goods in American markets is influenced to a substantial degree by advertising—in fact the stimulation of the speed of turnover is a principal reason for advertising.

The high employment which has existed since the end of the war is the result of wartime shortages and a sellers' market. In 1950 we will be completely in a buyers' market. Conditions will then be different—coming problems of unemployment must be met by hard selling, lead by advertising.

We people in the advertising field have done a remarkable job in stimulating the sale of goods to customers. Equally we have done a very poor job in selling the importance of our own business to the American public. We have hardly scratched the surface in developing or transmitting effective political and social advertising. Isn't it about time that we people of today's generation of advertising men go to work and do a lot better job in this connection? Incidentally, it seems to me that success in this sort of mission would be the best sort of way for us to earn for advertising eternal appreciation of its merit; and for everyone, happiness and security. These problems we have before us are both an opportunity and an obligation. They mean harder work in the days ahead for each one of us.

That is my story tonight, gentlemen. We have honored ten great men of advertising history. Where shall we stand when the advertising men of the future call the roll of our accomplishments? That is the challenge you and I must answer. If we have the sales ability and the energy, we can carry advertising's banners to far greater heights than they have ever reached before. Let me wish you success in our forward march.

Gag Procedure

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to insert the following article from the Christian Science Monitor, January 17, 1950:

BACK TO GAG RULE

The vote of the Rules Committee in the House of Representatives to try to restore to itself the power to hold back legislation favored by other responsible House committees reflects little credit on that group.

Gag rule is no respectable rule in a democracy. It may appear to make the handling of some situations easier, as Republicans and conservative southern Democrats seem to think with reference to the proposed fair-employment-practices bill in President Truman's civil-rights program.

This newspaper, as it has indicated before, does not believe it is wise to try to change suddenly by Nation-wide legislation the social and industrial customs of large sections of the population. But it does believe the subject is entitled to debate in Congress and should be decided by a vote, not by subterfuge or the dictatorship of a clique.

Frank discussion would throw light on the subject and might make for more political honesty in the writing of party platforms.

A change in the rules such as the committee seeks would affect all legislation and might hinder various proposals of genuine merit. Ordinarily, bills recommended by legislative committees of the House in their respective fields must wait for the Rules Committee to give them a place on the calendar. A year ago the Administration obtained adoption of a rule under which, if the Rules Committee ignores a reported bill for 21 days, the chairman of the committee sponsoring the bill may call it up for consideration.

To repeal this rule would be a backward step. The Rules Committee in the Eightieth Congress usurped its powers by bottling up the selective-service bill, the Taft-Wagner-Ellender housing bill, and other legislation. To retain a right to vote on legislation which properly should come before it, the House should repudiate the present proposal of its Rules Committee.

Communists and American Ships

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. WEICHEL. Mr. Speaker, in the press today it is stated that the State Department has taken action to get back 42 merchant ships sold to China, saying it does not want them falling into Communist hands. Surely we do not want to give aid and encouragement to the communists by leaving our ships where they can be easily taken. However, the same personnel in the State Department since 1945, did little to get back the nearly 100 American merchant ships that the Russian Communists have belonging to the United States Government. The State Department announced that it has instructed American representatives to ask local authorities in Far East ports to prevent the sailing of any of the ships, which may be there. Presuming that they might fall in Communist hands.

Yet these American merchant ships in the possession of Russia have been to our shores on hundreds of occasions since the ending of the war. They have carried free goods to Russia in the way of tractors, trucks, and heavy machinery, all usable in war. Yet the same Department of State did nothing to keep them on the American shores. Surely the State Department is doing a lip service in taking away the ships from Chinese Nationalists while for years past it has been loading American ships belonging to the taxpayers of this country and permitting the Russians to keep the ships. Only a few have been returned and when these American-owned ships in the hands of Russia were loaded with gasoline and fuel oils and tied up on the Pacific coast in 1948 they were ordered released so that the Communists could continue to have these American-owned ships.

In addition to all of this the Russians had in their possession a great number of naval ships some of which have been returned from time to time. If the same State Department would have given even lip service to returning the American ships they would not be of use for the march of communism to the east. Russian communism has thrived and moved to the east with the aid of American trucks, tractors, and heavy machinery taken to Russia by American-owned merchant ships still in possession of Russia of which the State Department did nothing to apprehend when they were tied to the docks on American shores. If the State Department had done something since the ending of the war in 1945 by keeping from Russia the American-owned ships and the billion dollars of heavy goods and materials we would not be fearing the march of communism in the east.

Where a Reserve Fund Becomes Meaningless

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. MORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Louisville Courier-Journal:

WHERE A RESERVE FUND BECOMES MEANINGLESS

On January 1, 1950, social-security taxes for old-age benefits will be increased from the present rate of 1 percent to 1½ percent, and the increase will bring an additional $667,000,000 into the fund which now totals $11,600,000,000. This huge fund is now invested in obligations of the United States Government.

Since there is mounting pressure for increasing the amount of old-age benefits—and this pressure has been greatly heightened by the recent pension settlements made in the steel and automobile industries—it is worth while to try to take an objective view of the whole Federal old-age-benefit scheme.

The first aspect of the situation which is readily apparent is that pensions are and must be paid from current production at the time paid. That which a pensioner wears, eats, or otherwise consumes is not something stored up as Joseph stored grain in ancient Egypt, but is rather the wool, the corn, and the fuel produced at the time of consumption. The source of the funds used to pay for the items consumed does not alter the fact at all just as the source of the funds used in the recent war to pay for war material did not alter the fact that the material which we consumed during the war was in

general the result of production during the war. Consequently, pensions, however paid for, are charges against current production.

The idea of funding pensions, that is, providing sufficient money and investing it so as to produce a total fund of principal and interest sufficient to meet liabilities as they accrue, is essentially a private industry idea. It is the principle upon which all life-insurance companies operate and upon which private pension funds and annuities are set up. There is a certain plausibility in transferring this idea to Federal pensions and creating a fund sufficient to meet all liabilities. That is what has been done and the funds are invested in United States Government bonds, which are admittedly the safest investments available. However, in this assumption that such a fund can be set up is a very basic fallacy. The security of the fund is based upon the taxing power of the Government because it is only that which can make the bonds good. If there were no fund, the taxing power of the Government would still be the basis of security of the pensions.

In any one year any drafts upon the fund can be paid only from (1) interest on the bonds held in the fund which comes from taxation, (2) from bonds paid off, which comes from taxation, (3) from additional social-security taxes collected, which is taxation, or (4) sale of bonds to private investors, which is merely postponed taxation, in that the bond will ultimately have to be paid. If this analysis is correct, it seems to us that the creation of a Federal pension fund serves no purpose that could not be served by direct taxation and appropriation each year.

There are, however, certain undesirable features of the present scheme. The amassing of bonds in the Federal pension fund tends to create a sense of financial security independent of Government which does not exist. It gives a distorted picture of the Federal debt in the absurdity of one branch of Government owning obligations of another branch. It distorts annual budgets in that the true cost of pensions paid in any year is what is paid out in that year, whereas under the funding system these costs may be concealed in interest paid, bonds sold, or other transactions. It is perfectly true that Federal pensions, even at present levels, will constitute an ever-increasing cost each year as more and more people arrive at pension age and as life expectancy increases. But to think that in an insurance scheme covering the whole population a financial fund can be set up in anticipation of those requirements is an illusion. Such a fund can be only a claim against future taxation.

Let's get rid of the illusion and face up to the facts. If we are to pay Federal pensions to everyone eligible, we should tax and appropriate the sums required each year. Then we will have some accurate idea of what we are doing. The insurance concept on a national basis is self-contradictory in that by embracing the whole population the distribution of risk becomes meaningless.

Address Before Daughters of the Confederacy

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the Daughters of the Confederacy at Confederate Memorial Hall, Washington, D. C., Wednesday evening, January 18, 1950:

We are highly honored in the privilege to join with you descendants of the brave Confederate soldiers who followed the matchless leaders of the Confederacy, Robert E. Lee, Thomas J. Jackson, and Matthew Fontaine Maury, whose memory we now honor.

On first thought it may seem rather strange and at the same time gratifying that in this Capital City we are permitted to thus unfurl the Confederate flag and observe the birthday anniversaries of these great leaders. But when we look into the lives of those men and calculate their true greatness, then we must conclude that it would be strange indeed if Americans anywhere were reluctant to pay them honor.

It is remarkable indeed that a nation which endured only a few short years should produce military leaders of such matchless ability, integrity, and enduring fame. The events which led to the formation of the Confederacy and its ultimate defeat on the field of battle may be forgotten, or buried within the history of our now united Nation, but the names of Robert E. Lee, Stonewall Jackson, and Matthew Fontaine Maury will never be forgotten. Those names will live in the hearts and minds of our people as long as mankind recognizes the merit of true heroism and nobility of thought and deed, which qualities of character were so truly exemplified in the lives of those Confederate leaders.

It is a happy coincidence that the birthdays of Lee, Jackson, and Maury fall so nearly on the same day—Lee's on the 19th, Jackson's on the 21st, and Maury's on the 24th of January—for because of their inseparable ties in the history of the Confederacy we can hardly honor one without at the same time honoring the others. They lived and died for the same cause.

First of all let us have a closer look at General Lee and inquire what makes his life appear so immeasurably grand.

It must be the fact that he went beyond the heights of greatness and on to peaks of nobility.

"His life was gentle, and the elements so mix'd in him that nature might stand up and say to all the world: 'This was a man.'"

We have only to witness the degree of fortitude and courage with which Lee accepted adversity as well as the gracious manner in which he bore pain, suffering, and even defeat to appreciate the true stature of his greatness. Everything about Lee, the loftiness of his ideals, manliness of his actions, and the unselfishness of his deeds, seemed firmly anchored in the bedrock of Christian faith, hope, and charity.

Both by nature and necessity General Lee was a lover of hard work; he cared little for the social or lighter pursuits of life. He liked the soldier's hardships, the soldier's toil, even the soldier's fare, as well as the soldier's glory.

General Lee was born in Virginia January 19, 1807. In 1825 through the generosity of that great South Carolinian, my own predecessor in Congress, then Secretary of War, John C. Calhoun, young Lee was admitted to West Point, graduating therefrom 4 years later without a demerit, second in his class.

Probably the most unusual experience ever coming to an individual came to Lee in March 1861, when at the Blair House here in Washington, where the President now lives, he was confronted with the decision as to whether he should command the Federal forces or the poorly organized, scantily clad troops of Virginia. He assumed command of the Confederate forces in 1861 with the rank of General which he held until his surrender at Appomattox on April 9, 1865.

Someone has said that the presence of Napoleon in battle line was equal to the presence of 100,000 troops. If that be true, how could we estimate the value of the presence of the matchless Lee as he recklessly rode among his troops in his modest uniform of grey, bearing only the stars to indicate his rank?

The late Benjamin H. Hill, of Georgia, has described the character of Lee in these beautiful and striking words: "He was a foe without hate; a friend without treachery; a soldier without cruelty; a victor without oppression, and a victim without murmuring. He was a public officer without vice; a private citizen without wrong; a neighbor without reproach; a Christian without hypocrisy; and a man without guile. He was a Caesar without his ambition; Frederick without his tyranny; Napoleon without his selfishness; and Washington without his reward. He was as obedient to authority as a servant, and royal in authority as a true king. He was gentle as a woman in life, and modest and pure as a virgin in thought; watchful as a Roman vestal in duty; submissive to law as Socrates, and grand in battle as Achilles."

So, like the varicolored threads of a rich tapestry which combine to produce one perfect, balanced design of beauty, the attributes of Lee's greatness, that is, his outstanding ability and talent, his sterling character, his high moral caliber, his Christian faith and devotion, together without the nameless other qualitative attainments and representations of his life were joined, it seemed, to create the world's grandest and most enduring design for noble living.

Theodore Roosevelt once said: "The world has never seen better soldiers than those who followed Lee; and their leader will undoubtedly rank, without any exception, as the very greatest of all the great captains that the English-speaking people have brought forth."

British Field Marshal Wolseley said of Lee: "He was the ablest general, and to me seemed the greatest man I have ever conversed with. * * * General Lee was one of the few men who ever seriously impressed and awed me with their natural and inherent greatness."

Turning now to Gen. Thomas J. (Stonewall) Jackson, we find that he, too, was a military leader of rare genius. It would be entirely pointless to attempt to draw a comparison between Lee and Jackson. Historians and military experts agree that those two southern generals are unexcelled in leadership and strategy as they carried out their respective assignments in the Confederate Army. John Warwick Daniel says of Lee and Jackson: "They were complements of each other, and like David and Jonathan, their souls were knit together."

Jackson has been quoted as saying of his chief: "Lee is a phenomenon. I would follow him blindfold," and Lee, upon learning that his chief lieutenant had been mortally wounded, exclaimed: "Jackson has lost his left arm; I have lost my right arm."

Both Lee and Jackson were Christian gentlemen of the highest order, temperate in all things and total abstainers from intoxicants.

Jackson's strength was in his simplicity of life and an almost childlike humility; his brilliance was in his unwavering devotion to duty and concentration on the task at hand.

A devoutly religious man, Jackson gave thanks to divine providence for every victory in battle. He once told a friend that he prayed constantly.

From his boyhood onward, the life of this fearless warrior was the very model of a Christian gentleman. Fearless and strong, self-dependent and ambitious, he had within him the making of a Napoleon, and yet his name is without spot or blemish.

He was daring and brilliant in leading his troops, but for success in battle he gave God the praise; he was bold, aggressive, and un-

relenting in attack, but was the humblest of men, and his own will was always submissive to the will of God.

As would be expected of a man of such unwavering Christian devotion, Stonewall Jackson, although one of the greatest military leaders of all time, prayed and longed constantly for peace. In almost every letter he dispatched to his wife during the Virginia campaign, Jackson expressed his fervent prayer for speedy peace.

Field Marshal Wolseley has described Jackson in the following words:

"Shy as a lad, reserved as a man, speaking little but thinking much, he led his own life, devouring the experiences of great men, as recorded in military history, in order that when his time came he should be capable of handling his troops as they did. A man of very simple tastes and habits, but of strong religious principles, drawing directly from the Bible; a child in purity; a child in faith; the Almighty always in his thoughts, his stay in trouble, his guide in every difficulty, Jackson's individuality was more striking and more complete than that of all others who played leading parts in the great tragedy of secession. * * * With that innate love of virtue and real worth which has always distinguished the American people, there has long been growing up, even among those who were the fiercest foes of the South, a feeling of love and reverence for the memory of this great and true-hearted man of war, who fell in what he firmly believed to be a sacred cause. The fame of Stonewall Jackson is no longer the exclusive property of Virginia and the South; it has become the birthright of every man privileged to call himself an American."

G. F. R. Henderson, the British military historian, concludes his outstanding book, "Stonewall Jackson and the American Civil War," with the following words which are particularly appropriate today as we wage a relentless struggle against the enemies of freedom:

"The hero who lies buried at Lexington, in the Valley of Virginia, belongs to a race that is not confined to a single continent; and to those who speak the same tongue, and in whose veins the same blood flows, his words come home like an echo of all that is noblest in their history: 'What is life without honour? Degradation is worse than death. We must think of the living and of those who are to come after us, and see that by God's blessing we transmit to them the freedom we have ourselves inherited.' "

Matthew Fontaine Maury, though not so generally known for his contribution to the southern cause, is nonetheless outstanding. He came from a family of distinction, having been born in Spottsylvania County, Va., January 24, 1806, and died in Lexington, Va., February 1, 1873. Like other great men who were physically handicapped, his accomplishments and services to mankind were without limit. His philosophy of life is expressed in the following sentence: "I don't think that so much depends upon intellect as is generally supposed; but industry and steadiness of purpose, they are the things."

The work of Maury in compiling charts of the seas has never been improved upon. His observations and findings even to this day are held to be the most dependable authorities in the world on naval shipping. Though less conspicuous in his service than Generals Lee and Jackson, his, too, was most outstanding.

To be sure, there is no longer any feeling of sectionalism, no South, no North, no East, no West—all of us are now sons and brothers of our great common country. It is with a feeling of pride, however, that those of us from the South extol the virtues of our heroes and count their contributions to history. At the top of the great roster of our southern heroes will forever be found the names of Robert E. Lee, Stonewall Jackson, and Matthew Fontaine Maury.

The Tempted Republicans

EXTENSION OF REMARKS
OF
HON. F. D. ROOSEVELT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. ROOSEVELT. Mr. Speaker, yesterday I issued a statement pointing to the likelihood that some Republican Members would use back-alley techniques to restore the Rules Committee's powers as a way of killing FEPC, the whole civil-rights program, and all Fair Deal legislation. I wish to bring to the attention of these same Republican Members this editorial from this morning's edition of the country's leading Republican newspaper, the New York Herold Tribune. It properly recalls to the Republican Members their obligations to their party, to the Congress, and to the people of our country. One more Republican finagle on civil rights will prove once and for all the hypocrisy in all Republican protestations in favor of civil rights.

THE TEMPTED REPUBLICANS

Mr. Truman likes to make large statements. Sounding off on the durable issue of civil rights, he promises that a Senate vote will be forced if it takes all summer. Such a bugle blast makes a snappy headline, but we doubt that the President is really quite that much of an optimist. Nothing has appeared to indicate any great change of temper in the Senate. With a congressional election coming up, there is less taste than ever for sitting out the summer in Washington. The filibuster is still the southerners' effective weapon, as Mr. Truman knows. One can only assume that the White House cry was intended for external consumption, with civil rights intended again for the purposes of vote getting in November.

A far more immediate test of civil rights rests in the House, where the Rules Committee is on a rampage to regain its autocratic powers over legislation. Southern Democrats and Republicans are in coalition to put the Rules Committee back in control, able to pigeonhole not only civil rights but every other bill which meets their common opposition. The vote is imminent, and the prospect for the Truman Democrats is scarcely comforting.

What concerns us is the Republican danger. For the sake of putting the majority party in a hole, a considerable number of Republicans appear willing to go along with the ultraconservative southerners who are consecrated to the one purpose of defeating civil rights. This is an alliance that violates principle and purpose. The Republican position on civil rights is historic and forthright, even stronger than that which Mr. Truman so fondly trumpets. But when Representative Cox, of Georgia, suddenly proposes restoring the Rules Committee's life-or-death authority over the legislative stream (and this by neat coincidence in the midst of hearings on fair employment practices), the Republicans on the committee wheel right into line. It is not an inspiring picture.

There has been a lot of pious talk that the Rules Committee is a private conscience, an enlightened combination of old heads, that saves an unruly House from much bad and costly legislation. If such a device is required to balk Mr. RANKIN's pension schemes, it is a sad commentary on congressional intellect and courage. This contradiction of majority will, the ability to sit on bills and keep them from coming to vote, cuts in both directions. The House is directly responsible to all the people, and why should the encrusted Rules Committee, operating by its own set of prejudices, be allowed a superior authority? Legislative traffic controls we need; effective party policy committees are required. But having clipped the Rules Committee's wings only last year, let us hold to the gains of open responsibility. The Senate has its entrenched filibuster; spare the return to the House Rules Committee. That is the challenge to Republicans in the coming House vote, to stick up for party principle and shun the Dixiecrat tempters.

Communist Approach

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Observer, of Kearny, N. J., published under date of January 12, 1950.

Under the title, "Communist Approach," the editor has written a revealing article on the technique employed by agents of the Kremlin—the wolves in sheep's clothing. It is well that we acquaint ourselves so that we be equipped to stand guard.

COMMUNIST APPROACH

Many Americans must still wonder if the Soviet Union actually calls the tune within the satellite states or if these states, as the Kremlin claims, are actually independent "people's democracies." They must wonder, too, just how communism manages to overrun a state—Czechoslovakia, for example—which had always had a high degree of individual freedom.

The October issue of Foreign Affairs carried a revealing answer to these questions. It was written by Jozsef Reval, whom the magazine terms "the leading theorist of Hungarian communism," and was published in a Hungarian Marxist journal.

The gist of Reval's remarkable article is found in this paragraph: "We were a minority in parliament * * * but at the same time we represented the leading force. We had decisive control over the police forces. Our force * * * was multiplied by the fact that the Soviet Union, and the Soviet Army, were always there to support us with their assistance. * * * When we struggled directly and apparently only for steadfast achievement of bourgeois-democratic tasks, we fought as well for the establishment and assurance of the conditions which made possible the socialistic transformation. The change in the development of our people's democracy into the dictatorship of the proletariat began with the destruction of the right wing of the Smallholders' Party, with the liquidation of the conspiracy and the fall of Ferenc Nagy (Nagy headed a Hungarian coalition government). Then the kulak (the more prosperous class of farmer) became an enemy, then the leading role of our party and the working class was strengthened. * * * This development, our development into a dictatorship of the proletariat, was crowned and definitely assured * * * by the destruction of the right wing of the Socialist Party and the establishment of the unified Workers' Party."

That is a frank and accurate description of the standard Communist technique, written from the inside. It applies in principle to every country which has adopted the Marxist religion. The Kremlin actively aids and abets the movement, and the threat of Red Army action always exists. The wolf-in-sheep's-clothing device is always employed to disarm the people. And, once power is seized, all opposition is liquidated—including even the more moderate elements within the Socialist ranks.

Reval's article implies one more fact of the highest importance. The Communists must win an election or any form of political struggle only once—then they are in for good, unless war or revolution unseats them. Those who believe in free, representative government must win every time if they are to survive.

Gerald J. Doyle Wins Speaking Contest

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. HELLER. Mr. Speaker, Gerald J. Doyle is a modest youngster, 18 years of age, who is a senior at Bishop McDonnell Memorial High School. He resides with his parents, Mr. and Mrs. Leo J. Doyle, at 196 Clinton Avenue, Brooklyn, which is located in my congressional district.

Gerald's ambition is to become a radio announcer. He works after school hours as a switchboard operator in Kings County Medical Society, but finds time to write on timely subjects, showing a keen grasp of problems which confront our Nation.

On May 22, 1949 he was awarded first prize in a public speaking contest conducted at his high school. I have read some of his writings, and I am happy to have the opportunity to commend to the reading of my colleagues one of his speeches entitled "I Speak for Democracy."

I SPEAK FOR DEMOCRACY

I speak for democracy because the democratic way of life gives me the assurance that I will be considered as an individual, a person—instead of a cog in the machinery of an all-embracing state. We, the high-school students of this country, are fortunate in that we are in the United States, where democracy means what it should mean—liberty to one's own life without government interference. We may prepare ourselves for and enter upon any walk of life we may choose, without let or hindrance from any bureaucratic or Government agency. All over this country, young men and women are finishing high school and seeking to enter college, so that they may be prepared to shoulder the burden that will preserve real democracy for themselves and those that come after them. Why? Because only in a true democracy, such as the United States, can a man achieve success and happiness.

Democracy gives me freedom of conscience, my right to worship my Creator as and when I see fit, to live my life according to the moral code sanctioned by my religion and to be educated in the faith of my fathers. I am guaranteed this by the basic law of my country. We have no state religion, but may render unto Caesar the things that belong to Caesar and to God the things that are God's, according to our religious concepts.

I hope to go to college—I want to gain all the knowledge I can, because free enterprise calls for the person with training. My training will help me to succeed in business; it should help me to safeguard that democracy which gives me all these opportunities.

Democracy can only exist and grow when the citizenry of a country is interested in government, and in those who run the government. My representatives, to whom I and my fellows have given the task of running my Government, should be helped by me in every way, so that the ship of state may safely sail the seas and weather the storms that beset her, be these storms national or international.

When things go wrong, I must be capable of voicing my dissatisfaction with those responsible; my criticism, however, should be constructive. Only a trained citizenry can give constructive suggestions to those who have been placed in power. All over this land, my fellows and our elders are taking keen interest in governmental affairs. The radio, newspapers, commentators, by voice or in writing, are enlightening us. Both sides of public questions are presented for our information, so that when our fathers, and later when we exercise our power of franchise, knowledge, and good judgment, will be called in to play when we choose those who will stand in our places in the legislative halls of our Government.

We, who speak for democracy, realize that there will always be a struggle to set on the right track those who lose faith in our system of government. Knowing that it is not perfect, we must be prepared to better it; but, in our attempt to better it, we must not lose the fundamental principle of our freedom. We must keep before us the true democratic ideal, that man, without regard to race, creed, or color, must be given the dignity which belongs to a rational being. I am the voice of youth. I believe in true democracy. I believe in my United States of America—may it always be the land of the free and the haven of the oppressed.

The Rules Committee

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times for Saturday, January 14, 1950:

THE RULES COMMITTEE

A curious item of news originating in Washington yesterday was that the House Rules Committee had voted 9 to 2 to regain its old power of holding up legislation indefinitely. Readers may recall that the House deprived the committee of this regal prerogative a year ago. The vote in that case was 275 to 142. All that the committee can do now is to hold up bills approved by standing committees for 21 calendar days. After that the chairman of any standing committee so involved may call the measure up on the floor of the House on the second or fourth Monday of any month during a session. To the older-fashioned members of the committee this situation apparently seems cruel and unusual. Chairman SABATH, who made the announcement, stated that he himself had voted "no." This was consistent, since Mr. SABATH last year was the author of the motion to curtail the committee powers.

This particular action at this particular time must have some connection with the bill to establish a Federal Fair Employment Practices Commission, which was approved by the House Labor Committee last year and is now before the Rules Committee. The Rules Committee has delayed action on this measure until it can hear some more opponents. Practically speaking, we need not expect this or any other civil-rights measure to become law at this session. The FEPC might pass the House but if it did it would be killed by the filibuster in the Senate. Just as the Rules Committee is fighting for the dictatorship of a minority in the House, the opponents of effective cloture in the Senate have always fought for and won—as they did last March—the dictatorship of a minority in the Senate. It is odd that 6 members of the House Rules Committee or 20 Senators should be able to veto measures possibly desired by a majority of the Senate, a majority of the House of Representatives and a majority of the 48,489,217 voters who went to the polls in November, 1948. Such, however, may sometimes be the case. This is a point at which our democracy is still imperfect and needs attention.

Asia Out of Control

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I am inserting an article written by William Henry Chamberlin for the Wall Street Journal of Thursday, January 19, 1950:

ASIA OUT OF CONTROL—MOST OF CONTINENT IS NOW RULED BY NATIONALIST REGIMES OVER WHICH UNITED STATES CAN EXERT VERY LITTLE INFLUENCE

(By William Henry Chamberlin)

The gist of Secretary of State Acheson's long speech at the National Press Club on America's Far Eastern policy could be summed up in two short sentences. Asia is out of control. And there is little we can do about it.

In discussing what has happened in China Mr. Acheson argued like a lawyer with a case to prove, not like a dispassionate historian. He very much exaggerated the strength of Chiang Kai-shek and the weakness of the Communists at the end of the war. He passed over in silence two substantial contributions which the Roosevelt administration made to the Chinese debacle.

One was the obsession of the terrible-tempered Gen. Joseph Stilwell, highest American military authority in China until 1944, with the idea of fighting a campaign in the jungles of Burma. This led to the diversion and withholding of supplies which might have made it possible to save large areas of southern China from Japanese conquest in 1944. And wherever the Japanese went the foundations of Chinese administration and social order were destroyed and a vacuum was created which the Communists were quick to fill as soon as the Japanese were eliminated.

SELL-OUT AT YALTA

The other contribution was the discreditable and stupid sell-out of China's eco-

nomic rights and interests in Manchuria to Stalin at Yalta. Mr. Acheson denounced the Soviet Union for detaching the northern provinces of China, Manchuria, Outer Mongolia, Sinkiang and Inner Mongolia, and attaching these regions to the Soviet Union. He failed to mention the relevant if embarrassing fact that the late President Roosevelt at Yalta gave a considerable impetus to this process of encroachment on China's territorial integrity.

Nor did the Secretary explain how we got into the confused and contradictory position of being so eager to bribe Stalin to take part in a war, which wild horses couldn't have kept him out of, that we offered Russia on a silver platter the things which we had pronounced it utterly inadmissible that Japan should take.

Mr. Acheson derived some consolation from predicting for the Russians the righteous anger and the wrath and the hatred of the Chinese people. But this is largely guesswork. There has been nothing in the record of the Chinese Communists thus far to prove that they will not subordinate the interests of their own country to those of the Soviet Union.

The Soviet Union inflicted upon Poland about every cruelty and indignity that one nation could inflict upon another. It annexed almost half of Poland's prewar territory. It deported hundreds of thousands of Poles to slave labor concentration camps. It massacred thousands of Polish officers in the Katyn Forest. Yet it has been possible to maintain in Warsaw a Moscow-oriented government and to compensate the Poles to some extent by giving them territory and natural resources which rightfully belong to Germany.

Who can be sure that Stalin will not be able to offer Mao Tse-tung attractive prospects of expansion southward, into Indochina, Siam, Malaya, Burma, to say nothing of Formosa and Hong Kong, and thereby reconcile him to the idea of Russian domination of the northern Chinese provinces? Communists do have a way of making life uncomfortable for those who build great expectations on their good behavior.

THE OLD ORDER IS GONE

Although Mr. Acheson is deficient as a historian of what has happened in China and is indulging in wishful guessing about the possibility of the Chinese Communists turning against Moscow, there is no reason to dispute his main conclusions about other parts of Asia. That continent has broken loose from its old moorings.

Before the war the British, Dutch, and French Empires maintained stability over a wide area of southern and southeastern Asia. Now the old-fashioned colonialism symbolized by Kipling's phrase, "the white man's burden," is dead and nothing very firm has taken its place.

India and Pakistan, Burma and Ceylon are independent states. After years of fighting and negotiation the Dutch have recognized the independence and sovereignty of their former vast imperial possessions in Indonesia. The Philippines had been freed by the United States before the war and have taken up where they left off before the Japanese invasion. The French are fighting a costly, wasting, no-decision war in their big colony, Indochina.

Asiatic nationalism had been gaining strength before the war and gained irresistible impetus during the war, when the Japanese for a time overran almost all southeastern Asia. The Japanese carried on much propaganda against white imperialism. And the speed with which the French, British, and Dutch possessions fell before the first sweep on the Japanese onslaught certainly helped to destroy native belief in the invincibility of their foreign rulers.

It has been American policy to favor the emergence of moderate nationalist regimes as the most hopeful barriers against communism. It was largely under American pressure that the Dutch Government, to the dissatisfaction of a considerable section of Dutch public opinion, came to terms with the Indonesian nationalists.

NEW NATIONALIST REGIMES ARE UNTRIED

The French experience in Indo-China certainly shows the difficulty, perhaps the impossibility, of trying to restore old-fashioned colonial relations. But we do not have and cannot have any assurance that non-communist national regimes will be able to function smoothly and efficiently. The masses in these Asiatic lands are poor and illiterate; the new governing classes are inexperienced and doctrinaire. Burma has fallen into complete chaos and there are occasional ominous earthquake rumblings in India and Indonesia. The British have been fighting a hit-and-run guerilla war in Malaya, although they have been more successful there than the French have been in Indo-China.

Obviously it is not in America's power to take over and run countries where the old forms of foreign rule have broken down or are breaking down. Nor is our economic power so strong a weapon in Asia as it was in Europe. For, even if the new nationalist governments appreciate the advantages of American trade and investment, their hold on their peoples is precarious and uncertain.

There may be a suggestion of wholesome humility in recognizing that Asia is out of control, that we cannot run the whole world. If we had acted on that principle 10 years ago we would probably have saved ourselves many lives, a vast amount of treasure and innumerable frustrations and disillusionments.

Kenosha's Civic Spirit

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, one of my progressive cities—Kenosha, Wis.—has done an outstanding piece of work in civic betterment. On Sunday, December 25, the Hearst newspapers in this country featured Kenosha and pointed out that the Kenosha Manufacturers' Association and other civic organizations had made a significant contribution to civic life by coordinating important elements in that community to the end that industry, labor, and business had a common goal, namely, the good of all its citizens. As part of my remarks, I am enclosing an editorial that appeared in the Kenosha Evening News on December 20, 1949:

KENOSHA'S CIVIC SPIRIT GETS NATIONAL RECOGNITION

"Kenosha, the City Where People All Work Together" is the title of an article by Rev. Paul Mitchell which is being presented Sunday, December 25, in Hearst papers. A number of pictures were taken of Kenosha's institutions and of the individuals connected with them. Because of the extensive distribution of this article, which will appear in 22 city editions and in special editions in 36 States, various combinations of the pictures taken will be used in different localities; thus pictures not used in the Chicago-Milwaukee area will be used in other sections of the country.

This article is the result of attention attracted to Kenosha by the booklet, The Story of an Industrial Association, recently issued by the Kenosha Manufacturers Association. Rev. Mitchell, who is pastor of Kenosha's Peniel Tabernacle Church, became interested in the civic activities of the Kenosha manufacturers through contacts made with the KMA in his capacity as president of the Kenosha Ministerial Association.

Early this year the booklet won a top national award for its description of programs and activities carried on by the manufacturers of the community through the KMA and in cooperation with individuals and groups throughout Kenosha. This award created a widespread demand for the book.

CAN WORK TOGETHER

Many of the letters subsequently received from top management and industrial and public relations men, as well as from labor leaders, clergymen, and educators who had received the book, expressed the belief that Kenosha's accomplishment was evidence that all citizens in a manufacturing city can work together in harmony and understanding to solve industrial and community problems.

Commenting on the article, J. C. Stump, executive director of the manufacturers association, said: "The manufacturers of Kenosha recognize the importance of industry to the community, as well as the tremendous responsibility that industry has to the community. As individuals, as corporations and as a group through their association, they are constantly striving to fulfill and meet that responsibility.

"The association is carrying forward the manufacturer's proven ideal: The final solution to any problem, product, or program must be for the best interests of the public, the stockholders, the employees, management, and the community."

Stump further poined out that, "The association in its regular daily work and services for industry and the community has had the outstanding cooperation and support of all manufacturers, members of their staffs, industrial employees, and every other individual and segment of the community. Without their cooperation and support the programs could not have been successful. This is fully appreciated and it is the constant goal of the association that it will always prove worthy of that highly regarded confidence, cooperation, and support."

The Coal Shortage

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

WATERTOWN, MASS., *January 19, 1950.*

Hon. EDITH NOURSE ROGERS,
House of Representatives:

We have been notified by St. Josephs Lead Co. they will suspend shipments zinc oxide because Duquesne Power Co. will cut off power January 20 on account of coal shortage. Our other supplier New Jersey Zinc Co. has been closed by strikes for 5 months. Zinc oxide being essential ingredient in our process we face shut-down of our plant employing 250 people. Can anything be done?

MASON, INC.,
J. H. MASON HAARTZ.

Everyday Miracle at Fishersville, Va.: The Lame Learn To Walk

EXTENSION OF REMARKS
OF

HON. JOHN KEE
OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the pen of Hamilton Crockford, published in the Sunday, January 8, 1950, edition of the Richmond (Va.) Times-Dispatch, and also an editorial from the same paper on the subject of rehabilitation.

Within the past 3 months I have, upon two occasions, taken advantage of opportunities to visit the Woodrow Wilson Rehabilitation Center at Fishersville. What I witnessed there was something not only surprising in the methods employed in the rehabilitation of the handicapped, but the evidence on every hand of successful accomplishment was nothing less than astounding. I feel that the story of this rehabilitation center and its achievements in the work of restoring to handicapped persons both the will and ability to take their rightful places in the world of effort, will be of interest to all who may read it. The article and the editorial follow:

[From the Richmond (Va.) Times-Dispatch of January 8, 1950]

EVERYDAY MIRACLE AT FISHERSVILLE: THE LAME LEARN TO WALK

(By Hamilton Crockford)

Fishersville: The man on crutches moved slowly down the corridor. He slipped and fell.

The physical therapist standing nearby didn't make a move to help him. She simply looked at him and laughed.

"Did you hurt your knees?" she said.

As though he'd never expected anything else from her, the man picked himself and his crutches up unaided. Then he laughed, too. He was a double amputee, and the knees were artificial.

"You'd think we're the most brutal people in the world," said Dr. Josephine Buchanan, supervisor of medical services at the Woodrow Wilson Rehabilitation Center, recalling the incident later. "But it's all calculated."

The man, you learned, had been taught how to fall, and how to get up, too. He wasn't hurt. It was all in his daily curriculum.

"You see, we teach them independence first of all," Dr. Buchanan elaborated, "and they love it. Some of them have been so pampered at home it's pathetic. We have to rehabilitate their families as well as the students."

An elderly man moved through the room with the aid of a pair of canes, strange noises emanating from his artificial legs, as the doctor was talking. She took time out to observe, "You're squeaking."

"Yes, I need oil," he said, and grinned broadly.

A UNIQUE VENTURE

This kind of banter between staff and students sets the pace for Virginia's unique venture in the rehabilitation of handicapped civilians here.

The treatment combines complete physical therapy with vocational training in a rounded program, with the specific objective of putting ultimately employable men and women back in shape to hold a job.

And a high heart plays a high role in it. When you're a paraplegic, or have lost your legs, had polio, or speech or hearing defects, severe asthma, arrested tuberculosis, or epilepsy, it takes that.

The "ultimately employable" category might not seem to include all those. But with modern techniques, the center has handled each of those types of cases since it started up in September 1947, and many others. In its first 2 years it served 394 men and women whose cases fell under 45 different diagnoses.

And a mental lift was the first thing on the program for them. Countless seemingly casual little factors contribute to create it.

There are no "patients," for instance, at Woodrow Wilson, and indeed the term wouldn't fit. They're students. And nothing is simpler than the short wooden handbars on walls next to beds and showers by which the students can lift themselves. But the devices enable people to dress and bathe themselves who never could before. It's a long first step to independence.

[Economy-minded folk will note it also eliminates the need for a number of attendants the State would have to pay.]

LEARNING TO WALK

The results of all this are as obvious as the thick black beard on William Yancha's face. Yancha, a Pennsylvania miner who lost one leg below the knee and another above in an accident on the job a few months ago, started growing that bushy ornament soon after he reached the center. He won't shave, he declared, until he walks again without canes. The beard, he figures, is coming off early in the New Year.

It's the kind of extra something that crops up here in addition to the treatment.

The initiative for the over-all program here came from within the State, according to Supervisor Frank O. Birdsall, who succeeded W. K. Barnett, the first director, as head of the staff at the center. Plans for such a center were refined and expanded in the summer and fall of 1945 through cooperation from the Baruch Committee on Physical Medicine, he noted.

Then after long negotiations the former Woodrow Wilson Army General Hospital was deeded to the State and Augusta County July 25, 1947, for educational purposes. The 150-building, 400-acre installation was valued at more than $6,000,000. Along with its utilities, and furnishings and equipment worth $350,000, it was transferred at no cost by the Government.

Making the most of the opportunity, the county opened a consolidated high school for some 1,000 students in its part, and the State also established a regional vocational school, the sixth in Virginia.

The rehabilitation center, utilizing 50 of the one-story brick buildings, completed the three-way integrated set-up. With training as well as treatment available on the spot, it thus afforded a complete program such as no other State has yet provided.

Some have medical centers for the handicapped, but none offer the combined facilities. Even Texas, Birdsall noted with a smile, admitted at last fall's national meeting of rehabilitation workers that Virginia was ahead of it.

STATES COOPERATE

Representatives of several States and a half dozen foreign countries have visited the center to take notes. Some 12 States have entered a few of their own handicapped students here, and the experience has led Birdsall to conclude that centers should be planned to serve several States rather than a single one. A pooling of cases and resources, he explained, assures better and more varied services at lower cost.

Under the State rehabilitation program, created following the enactment of State and Federal laws in 1920, the Federal Government matches on a 50–50 basis the case service funds appropriated by the general assembly for such work.

Rehabilitation is not limited to Fishersville. Across the State 22 field supervisors carry the guidance and training program to disabled persons in their home localities—those who qualify as being old enough to work, but not too old to hold a job, and having some ability left which can be used to make a living.

The State board of education, which administers the program, estimates there are 30,000 such persons in Virginia, between the extremes of the helpless and the nonhandicapped, though many are not reported. In fiscal 1947–48, those enrolled in the projects numbered 2,004. The board reported that the 982 who completed their training that year were supporting not only themselves but 1,415 dependents the next. It noted the cost of rehabilitating them averaged $393 each, and the next year they averaged earnings $1,699 each.

The center here now accommodates about 200 students at a time—the severely disabled—for an average 6-month stay Some 65 of them are from other States.

Those who come here pay all their maintenance and medical fees if able, or whatever portion they or their families can meet, with public funds making up only what is left. Public funds cover tuition costs. The State provides any capital outlay funds for the others.

CHARGES VARY

Virginia students pay $45 per month for maintenance, out-of-State students $60, based on cost analyses worked out by auditors. Some people injured in industry are admitted under the sponsorship of insurance companies, and others financed by such sources as the United Mine Workers or the National Polio Foundation also are accepted in limited numbers.

The total budget of the center for all purposes figures to about $4 per capita per day, and Birdsall, noting that the costs during the first years will be high, expects this to drop when more students are entered.

For that kind of money, 19-year-old Iris Dove, who never walked in her life, is going to walk. She'll need crutches, but life will be far different from what she knew before. And she'll be equipped to become an alteration seamstress.

A spastic paraplegic from birth, the Roanoke girl had had numerous operations in past years. She never attended public school. Home bound instruction provided by the Roanoke school system and other instruction in hospitals gave her the equivalent of an eighth grade education.

Now, while the technical school teaches her a vocation, the physical medicine department of the center is reeducating her unused muscles. First the therapists exercised her legs, a slow, methodical process, and now she exercises them herself, walking alone with the aid of hand rails.

LEARN TO WALK

But Iris Dove's case is no more striking than many another. Paraplegics and double above-knee amputees are, however, the most difficult cases that come to the center, according to Dr. Buchanan. And these individuals, who seldom ever got back on their legs before, are getting back on them here.

It's the first time, the doctor said, that civilians generally have had a chance to get this kind of rebuilding, which heretofore has been pretty much limited to veterans in Government hospitals.

The techniques, she explained, are largely the result of knowledge gained in the Government's program for rehabilitating war casualties. It's a new specialty in medicine which did not exist 2 years ago, she noted, and numbers of doctors just now are entering it.

Hard work by a cheerful group of skilled physical therapists, exercising the student's

leg stumps or paralyzed limbs, starts off the treatment. Then the student takes over, walking, falling, climbing hand rails, climbing steps like those on a bus or in front of buildings. Before he "graduates," Dr. Buchanan explained, he has to walk around the building on crutches, cross a ditch, fall and get up, and do numerous other stunts, all unaided.

There are other courses for other handicaps. A speech therapy department is one of the recent additions. Consultants on all medical services visit the center and advise on treatments.

But students spend only part of their day in physical rehabilitation. They've selected, with the help of Guidance Counselor J. Paul Glick, the kind of vocational training they want. They get it in the adjoining technical school, headed by W. T. Sinclair. The lay-out of the corridors is such that they can travel to class in their wheel chairs or on foot without going outdoors.

EDUCATION, TOO

The school, with an enrollment of 283, including those from the center, offers them choices of business courses, watch repairing, cabinet making, laundering, shoe repair, sewing, and numerous other subjects.

After hours a social center is available for recreation.

Students admitted to the rehabilitation program are those with disabilities remaining after surgical or medical treatment is done. For some 50 percent of these, physical therapy and rehabilitation can reduce and sometimes eliminate the disability, Dr. Buchanan explained.

But the others, for whom no further treatment is feasible, still benefit by getting training in the technical school which they couldn't get elsewhere because of the pace they'd have to keep or the physical surroundings. Here the program is paced to their need and the equipment is adjusted in every conceivable way so that they can work at it.

Thus, an undermanned center staff, conscious of the need for saving taxpayers' dollars, is able to say that there are none who come here whom it is unable to help.

Assistant Supervisor W. G. Chrisman pointed out this fact is pretty well assured beforehand by the screening work done in home localities. No applicant is admitted direct to the center.

Students are accepted only after the field supervisors in their territory, backed by expert medical opinion, certify they can be improved by the program here. The plan, Chrisman noted, saves the State many dollars it might otherwise spend on cases which couldn't be helped.

The center, Dr. Buchanan reiterated, "is not a haven for the chronically disabled or unemployed." Its program, she stressed, "is an active program, and when the students are sufficiently improved, they are sent on their way to make way for others."

"The amount of money you spend rehabilitating a man," she added, "is far less than you spend just to maintain him in helpless condition. Eventually he gets a job and starts paying taxes back to the State."

URGES MORE FUNDS

Meanwhile, it's the kind of program on which the State could afford to spend more money, in the opinion of one interested observer from Hawaii, M. O. Ekern, director of the vocational rehabilitation service in Honolulu's department of public instruction. Mr. Ekern declared he found the project is a 24-hour job for Birdsall and his assistants. They badly need more help, he said, if the job is to be done most efficiently.

A 65-year-old student amputee, who walked out recently with the aid of a pair of canes after being graduated in 6 months, had his own comment. George H. Caperton, a Beckley, W. Va., coal purchasing agent, who lost a foot when gangrene set in because of diabetes, was leaving to get married.

"I'd been off my legs since July 1948," he said, "and doctors told me I wouldn't walk again. I never would have if I hadn't gotten here."

Said Caperton's brother, William, of Washington, who came for him, "It's a darned shame more people don't know about the place."

[From the Richmond (Va.) Times-Dispatch of January 8, 1950]

TAX MONEY WELL SPENT

From both a humanitarian and a dollars-and-cents standpoint, expenditures of tax money for vocational rehabilitation seem to be among the most fruitful made by the Federal and State governments.

During the last 5 years, 222,000 disabled civilians have been restored to a self-supporting status at a cost to the Federal Treasury of $76,000,000, according to figures announced by the Office of Vocational Rehabilitation of the Federal Security Agency. The FSA says these rehabilitated people already have returned $70,000,000 to the Treasury in Federal income taxes and eventually, it is estimated, will pay $10 in such taxes for each $1 of taxpayers' money spent on them.

The Federal Government pays about 70 percent of the cost of the over-all rehabilitation program, with the States putting up the other 30 percent. Just as they return money to the Federal Treasury, so do the rehabilitated persons pay taxes to the State.

Virginia has been accused of being a backward State in the matter of per capita expenditures for public education and for other purposes considered by some analysts in determining relative progressiveness among the States. In the matter of vocational rehabilitation, however, Virginia is in the forefront. Its Woodrow Wilson Rehabilitation Center near Staunton is the only State-owned facility of its kind. The valuable work done there, with the aid of Federal funds, is described by Hamilton Crockford in an interesting article in this section of today's Times-Dispatch.

About 2,000 disabled Virginians now are actively engaged in some phases of the rehabilitation program, receiving either medical treatment or vocational training. Another 2,000 are in the active file, in that they are being given counselling service and ultimately will go into the medical or vocational phases of the program, which is administered in Virginia through the State department of education. Cases are referred from the State industrial commission, the department of public welfare, the State employment service, schools, hospitals, physicians, and other sources.

The vocational rehabilitation program began nearly 30 years ago, and the system was greatly enlarged 5 years ago. Since its inception, more than 30,000 persons have been aided in Virginia and approximately 430,000 in the Nation as a whole. But the FSA says that only one in five disabled persons is receiving the training needed and that many more are being disabled each year than are being rehabilitated.

Welcome Thrifty Fifty

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a poem, Welcome Thrifty Fifty, by James Lewis, one of my constituents from Bradford, Pa.:

WELCOME THRIFTY FIFTY

We managed to muddle through
The years right up to date,
But now the babe called '50
Is coming t' rough the gate.

He has a happy Truman smile
But no ribbon round his axis,
Instead he totes a sign
Announcing forty-three billion taxes.

"Living costs too much," sez he,
"I'm going to give you, all for free,
Education, insurance, security
From woes and foes, immunity."

"Labor must have much more pay
For working less and shorter day.
The farmer much more for his crop,
We'll tax-support them if they drop."

"Billions overseas we'll send,
Billions more we'll spend and lend
For steel mills, dams, and various plants,
You gave your shirts—here go your pants."

—*James Lewis.*

While His Naval Critics Assail Unification, the Committee for the Hoover Report Presents Secretary Louis Johnson "a Citation of Merit for Encouragingly Applying to His Department the Recommendations of the Report of the Hoover Commission and Thereby Achieving Notable Economies While Maintaining the Effectiveness of Our National Defense"

EXTENSION OF REMARKS

OF

HON. HAROLD A. PATTEN

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. PATTEN. Mr. Speaker, under the extension of remarks as recited in the Appendix of the RECORD on last Friday I read an address headed "The problem of unification of the armed forces." The article could well have been entitled "Creating Disunity in the Armed Service Forces of the United States."

Certainly, in his approach to the problem of unifying our armed services, Admiral H. E. Yarnell, United States Navy, retired, made no effort whatever to indicate what should be accomplished by those charged with administering the National Security Act nor did he suggest what benefits could be had under that law as it was passed by this Congress.

Admiral Yarnell exhibited personal opposition to the act as it was passed by this Congress in starting out by saying in part, "The passage of the National Security Act was a serious blunder," this he said despite the fact that under the act and through Secretary Louis Johnson, President Truman has already saved the taxpayers of the country not hundreds but, I might say, thousands of millions of dollars.

Stressing all points of difference—the admiral made no mention of the many

points of agreement that have long since been reached between the official heads of various armed services and other bodies charged with the defense of this country.

It seems no happenstance that his speech preceded another outburst by Navy Captain Crommelin and was followed by an article written in the same vein which was headed "If This Be Treason" and published in Collier magazine this week.

Altogether they add up to what I sincerely hope will prove a futile endeavor to continue to spread discord, misunderstanding, and dissension among the armed services, and spread it at a time when our country needs nothing more in the world than to close ranks and address every last talent of its citizenship to the solution of the vexatious problems now at hand and which lie ahead.

What a contrast exists between the words spoken by Admiral Yarnell and the motive that prompted the little heralded or publicized presentation of a simple but eloquent testimonial and citation bestowed upon our great Secretary of Defense, Louis Johnson, a few short weeks ago.

The idea of making the bestowal of that testimonial did not stem from some prejudiced source nor was it the expression of some opinionated individual. It was, on the other hand, the grateful recognition of a tremendous group of representative citizens from all over these United States. It was, moreover, the expression of men who, without regard to their political affiliations or their pride in our Army, Navy, or Air Force, expressed publicly their acknowledgment of the things already accomplished by the Secretary of Defense in achieving—

First. The declared purpose and the objectives of a Republican Congress which passed the National Security Act of 1947.

Second. The objectives and purposes of a Democratic controlled Congress which amended that act as of August 10 last year in order to insure the attainment of the objectives previously expressed.

Mr. Speaker, the year of 1949, insofar as the administration of government is concerned, saw no greater tribute given to any man in public life than was the recognition given to my good and longtime friend and the friend of every man in Congress, the Hon. Louis Johnson, Secretary of Defense, by the National Committee on the Hoover Commission.

You will recall that the Commission itself was set up by a Republican Congress. You will recall, moreover, that it was given several million dollars to report back to the Congress the ways and means by which we could achieve greater efficiency, economy, and businesslike administration of the Executive Departments of the Federal Government, with a minimum expenditure of the taxpayers' dollar.

The proposal, although it was sponsored by the Republicans, met the warmhearted support of the Democratic delegation and President Harry Truman signed the bill that gave birth to the Hoover Commission.

Mr. Speaker, nowhere but in a true democracy can I vision leaders of diametrically opposed political forces, and meeting in an election year at that, and dispensing with partisan politics, paying tribute to a great Democratic public official for the deeds which he has already accomplished in the performance of his duties.

Mr. Speaker, that is in fact what happened on Tuesday, December 13 last. On that occasion a Nation-wide committee representative of American citizens in every State of the Union and made up of men concerned solely with advancing the well-being of these United States expressed their faith in and their recognition of the abilities of the Hon. Louis Johnson to coordinate, perfect, and administer the most sacred trust outside of the Presidency of the United States that could be given to any man—the security and peace of these United States.

The chief spokesman on that occasion was the Hon. Frank Pace, Jr., Director, Bureau of the Budget. Second to him on the program was the Hon. Dr. Robert L. Johnson, president of Temple University, chairman of the Citizens Committee on the Hoover Report of the Commission for Reorganization of Government, and who personally presented the committee's award to Louis Johnson.

Mr. Speaker, the words spoken on that occasion need no embellishment of mine. They are of such great interest to the Members of this House that I am inserting them into our proceedings today with the sincere hope that every Member on both sides of the aisle will read and learn of the tribute paid by a great group of fellow Americans to one who is doing his job as his God and conscience dictate that it should be done in behalf of our country.

Centuries ago it was written that "By their fruits ye shall know them."

Despite the critics of unification, in and out of service, who, in this election year, and on the eve of the political "dog days" which lie ahead, are snapping at the heels of our great Secretary of Defense, Louis Johnson continues on his way of translating planned economies into actual action programs in behalf of national economy, security, and the American taxpayers.

Mr. Speaker, may God preserve Louis Johnson to continue his work knowing that the President and Americans everywhere are behind him to a man.

The presentation of the award was made by Dr. Robert L. Johnson, president of Temple University, Philadelphia, Pa., chairman of the Citizens Committee.

Dr. Johnson spoke as follows:

Mr. Secretary, Under Secretary, Mr. Colts, other distinguished guests, ladies and gentlemen, some 9 months ago when we first started to think in terms of establishing a citizens committee that would carry on a program to implement the recommendations made by the Hoover Commission on the Reorganization of the Executive Departments of Government, I discussed the same with Mr. Herbert Hoover. It seemed to Mr. Hoover, as it also seemed to me, that one of the first steps taken should be to visit with President Truman—tell him what we had in mind and to receive his blessing and approval for the project. I would have you believe that the President was most generous in giving his approval.

It then occurred to me that it would be a good thing also for me to talk to some top-flight governmental officials and get their viewpoints and support. One of the first men whom I had an opportunity to meet was our great Secretary of Defense, the Honorable Louis Johnson. I met him first in Philadelphia and at the time he was there to christen the *Roanoke*, the ship named after his home town in Virginia.

I shall never forget the observations and the statements which he made that day. There was a something about the quality of his speech, his spirit, his devotion and affection for his mother, for his home town and, above all else, the sensatory thrill he exhibited of being of service to his country and cooperating with all of those working with him in his new job bespoke his great sincerity.

I then, for the first time, realized that we had in Mr. Louis Johnson a truly great public servant and as I got to know him better we discussed intimately the difficulties and hurdles that would have to be taken before he could effectuate the recommendations of the Hoover Commission. I found solace and comfort in his remarkable perception and complete understanding of the importance of the findings of the Hoover Commission and I knew that we could count on him for advice, counsel, and forthright action on his part.

So, my friends, it gives me great pleasure today to hand over to one of the finest public officials that I have ever had the pleasure of knowing and whose personal support of our objectives has meant so much to all of us on the Committee, an award for distinguished service in line with the recommendations of the Hoover report.

Now my friends I would like, if I may, to read this memorial:

"The Citizens Committee for the Hoover Report presents this citation of merit to the Honorable Louis Johnson in recognition of distinguished service to the American people in encouragingly applying to the Department of Defense the recommendations of the report of the Commission on Reorganization of the Executive Branch of Government and thereby achieving notable economies while maintaining the effectiveness and efficiency of the Defense Establishment."

Now Mr. Secretary Louis Johnson it gives me great pleasure to present you with this citation.

Secretary Johnson's response was as follows:

Mr. Chairman, Dr. Johnson, my colleague, Steve Early, Frank Pace, ladies and gentlemen of the Hoover Commission.

Dr. Johnson, I particularly want to thank you for the kind reference you made with respect to both my mother and my home town.

I told Steve Early about an hour ago that I could speak all that I had to tell you in about 2 minutes and, frankly, now I don't remember what it was that I was going to say.

Dr. Johnson, someone once wrote that there are some who collect old pictures, some old china, others old linen and, as I recall it, the writer went on to say that while all were precious and worth while, that all of these things were fragile and that the only imperishables of life are the memories.

Mr. Chairman, when the going was rough, and I would have you know it was rough at the time we first started on unification—there was the memory of the yesteryear in the War Department and my knowledge of the things that then needed to be done that spurred me on to the doing of those things.

Additionally thereto I have enjoyed the wholehearted support of our President, Harry

Truman. But the one thing above all others that made it possible, in addition to our President's support of unification, was the understanding memory and sympathetic support and cooperation of the Honorable Herbert Hoover and your committee—and now Mr. Chairman I want publicly to express my appreciation of that support.

But a short time ago I saw on the wall of the home of a friend an original letter written and signed by Gen. Robert E. Lee in 1867. I thought as I read that letter how eloquently it expressed the philosophy of ex-President Herbert Hoover. The thought impinged itself upon my mind that in our generation there was probably none other than Herbert Hoover himself who could have written such a letter as that great American, Robert E. Lee wrote to Col. Charles Marshall in the distant year of 1867.

May I ask the indulgence of you, my friends, to read that letter to you? I do so because it makes me better understand why Herbert Hoover, treasured then by his friends, while he was railed at by those who worked for and under him, is now treasured and respected by good Americans everywhere throughout our land.

That letter of Gen. Robert E. Lee read in part as follows:

"My experience with men has newly disposed me to think worse of them nor indisposed me to serve them, nor in spite of failures, which I lament, of errors I now see and acknowledge, or of the present aspect of affairs do I despair of the future. The truth is this. The march of providence is so slow and our desire so impatient, the work of progress so immense, and our means of aiding it so feeble, the life of humanity is so long and that of the individual so brief that we often see only the ebb of the advancing waves and are thus discouraged. It is history that teaches us to hope."

Therein, Mr. Chairman, is to me the philosophy that makes Herbert Hoover tick, and inspire people like you to work with him.

I accept, sir, this citation of merit with humility and with full appreciation that it comes not to Louis Johnson but that it comes to all of those on a team that is now on fire with the zeal of doing a good job in behalf of our Nation.

Men like Steve Early, Secretary of Army; Gordon Gray, the Secretary of the Navy; Frank Matthews, the Secretary of the Air Force, Stu Symington, General Bradley, and the three grand Chiefs of Staff who serve on the War Council advising me as Secretary of Defense on all matters relating to the armed services. The Joint Chiefs of Staff, as you know, act as the principal military advisers to the President and the Secretary of Defense with specific responsibility for preparing strategic plans and providing for the strategic direction of the military forces.

All of these splendid men, I am happy to say, are of one mind with me in realizing that the defense dollar is a sacred dollar. Moreover, they realize that the taxpayers' dollar that is entrusted to the Secretary of Defense by the Congress is being spent more economically and without waste and extravagance in producing greater results than the same dollars produced before we went to work to cut out waste and extravagance.

The spirit that recognizes that economy is now actually effecting efficiency in operations is strikingly illustrated, as you well know, Steve, by the splendid work being done by the congressionally established War Council.

While the proceedings of the War Council are usually secret, I can tell you this much. A few days ago one of the departments reported that where they had cut civilian strength in that department by about 30 percent they were turning out more and better work than they did before they made the cut in their personnel.

Dr. Johnson, it is to these splendid officials from the highest and operating down to the lowest echelons to whom this citation should be awarded; it is on their behalf that I accept it from the Hoover Commission.

Mr. Chairman, this is the first time since I have been Secretary of Defense where I did not have to sing for my supper and make a speech. I am indeed glad that on this first occasion where I was not billed as a speaker I heard one of the most factually sound and inspiring speeches I have ever heard. The speech was delivered by my good friend, Frank Pace, Director, Bureau of the Budget.

May I say that, in my opinion, there is no man in this country that has a more comprehensive view of the fiscal problems of all branches of Government than does your own good self. The speech made here this evening, coming as it did from one charged by Congress to assist the President in the preparation of the budget and the formulation of the fiscal program of the Government, was a speech that should make all of us sit up, take notice, and go forward despite all obstacles or criticism to do an even better job.

Believe me when I say, Frank, that that talk has inspired Steve, myself, and the rest of us all to do a better job.

Moreover, we will do our best to serve America as you, Dr. Johnson, President Hoover, those of the Hoover Commission, and fellow Americans everywhere, would have America served.

High Spots in the Budget

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. KUNKEL. Mr. Speaker, under permission to extend my remarks, I include a radio speech which was delivered originally over radio station WHP in Harrisburg and WLBR in Lebanon, Pa., discussing some of the major trends outlined in the President's message on the budget for the fiscal year 1950:

SUMMARY

Nothing whatever was done in the House this week. It convened merely as a formality—to meet the rule that it cannot adjourn for more than 3 days unless the Senate gives permission for a longer recess. The flood of new legislation is just working its way into committee sessions. None of it is ready for floor debate. However, the Senate is more active. A great deal of legislation passed by the House last fall had not been acted upon by the Senate. Included in these bills are those on displaced persons, extension of social security, abolition of the poll tax and repeal of oleomargarine taxes, and a number of others. The order of business in the Senate is the oleomargarine bill. This week only the Korean aid bill is scheduled for House action. It is due to come up on Thursday.

HIGH SPOTS IN THE 1951 BUDGET

The budget of the United States Government for the fiscal year ending June 30, 1951, is a 6-pound volume of 1,402 closely printed pages. It contains literally hundreds of tables giving in detail the costs of government, even down to items such as $150 for snow removal in front of the Supreme Court Building. When outlining how the budget was prepared last week, I neglected to mention that prior to September 15, when Mr. Pace, the head of the Budget Bureau, called for formal budget estimates, there had been a long series of preliminary conferences with the various departments and agencies. These had lasted for at least 6 months previous. Obviously, I have not been able to go through this massive book in detail. Already it has been analyzed by many. There are some striking facts which stand out from it clearly. There can be no dispute about them.

First. This is the fourth year in a row in which President Truman has sent to Congress a Federal spending budget higher in amount than the one submitted the year before. Each one has established a new all-time high for Government spending in peacetime. In January 1946, he asked for $35,900,000,000 to spend in fiscal year 1947. Each year since then, he has sought and secured more.

Actually, the final figures for Presidential spending for the present fiscal year ending June 30, 1950, are now estimated at $43,300,000,000 or more than the $42,400,000,000 he asked last January for fiscal 1951. However, the President's original budget request made for that same period was for slightly under $42,000,000,000. This increase during the year over the preliminary figures is customary and will probably happen again this year. Each year the original recommendations were followed by a steady stream of supplementary and deficiency appropriation requests which had to be added to the original figures so that the final total was always much higher than the first.

Secondly, over $12,000,000,000—or 29 percent of the new $42,400,000,000 budget—goes to pay for debts or obligations incurred in this present fiscal year or earlier. Nearly every one of these prior obligations began in bygone days, with a small—even tiny—initial appropriation or by a contract authorization. Then these programs grew and grew and grew. As I pointed out last week, new programs, such as the low-cost housing subsidy one passed by the Eighty-first Congress in its first session in 1949, have not yet begun to "take"—that is, to require the outlay which we know for a mathematical certainty they must ultimately demand. All this shows the grave danger to the solvency and credit of the Federal Government from these opening wedges, these camel's-nose-under-the-tent, or foot-in-the-door methods. Nearly all of the past and the new spending proposals are of a continuing nature. They will last for years and years. The odds are 10 to 1—or greater—that they will grow more costly each succeeding year.

Thirdly. In view of what I have just said about the foot-in-the-door method, it is startling indeed—and a matter of grave concern—to find that this new budget asks for nearly $1,000,000,000 to start 34 new spending programs. Many of these are continuing ones. But this $1,000,000,000 is only the cost for the first year for these new ideas. It is reliably estimated that in time—and in not so long a time—these continuing projects will require an outlay each year of about $4,000,000,000 (to be financed almost entirely out of general tax revenues).

Fourthly. The next fact to hit us in the face is this: Mr. Truman wants Congress to give him the power and authority to enter into contracts, placing on you and your pocketbook the duty and obligation to pay out at some future time, nearly $3,500,000,000 additional. Of this $3,500,000,000, $1,250,000,000 is for projects on which new legislation is required. In general, these sums are pure contract authorizations. They are not appropriations and, therefore, are not included in the $42,400,000,000 spending total called for by the budget. They are on top and over and above that total. Their costs will not begin to be part of the national budget until 1952 and following years.

As a matter of fact, the average yearly rate of Federal spending during President Truman's 4 years in office in peacetime, is

$14,000,000,000 per year higher already than the annual average during President Roosevelt's three terms in office, although the average for President Roosevelt's 12 years in the Presidency, included the cost of World War II. Did you ever stop to realize that?

What I am driving home is a double-edged argument. First, this is the largest peacetice budget in history. And secondly, it definitely plans, and lays the ground work for, far larger budgets in 1952 and succeeding years. Indeed, you can truthfully say that the approval of this budget by Congress, in whole or in major part, will force higher outgo in 1952 and following years.

I should mention here that the budget total does not include the large expenditures needed for social-welfare programs, which either are now covered or might be covered, if and when enacted, by pay-roll taxes. Those would be outside of and in addition to the $42,400,000,000 to be met out of general tax revenues—as distinguished from pay-roll-tax revenues.

The railroad-retirement taxes, on the other hand, are included in the total budget receipts and are transferred to its accounts as a budget expenditure.

Representative JOHN TABER, of New York, the ranking minority member of the Appropriations Committee, in a statement released shortly after the budget message was issued, said this: "If you add the new appropriations that he is asking for, including the contract authorizations, the deficiency which this Congress is asked to provide, the new authorizations which this Congress is asked to provide, and the items provided for in new legislation carrying an over-all picture of what the President is asking the Congress to give him in this session, you get a total of $50,833,000,000."

Let me give you an illustration of how these little acorns grow into large oaks. Last session $3,500,000 was provided to start a steam-generating plant in the Tennessee Valley Authority. This is certainly a tiny fraction of the budget. However, before this project gets through, it is admitted that it will cost at least $89,000,000, and in all probability, it will cost much more than that. Later, other steam plants to generate electricity will be pushed through in like manner and with small beginnings. All this will pyramid this cost further.

The President asks for the development of the St. Lawrence seaway. This would involve the expenditure of only $4,000,000 the first year. But thereafter it would rise up to a minimum expenditure of $82,000,000 annually for 7 years. Even the proponents agree that this project would cost at least $570,000,000 to complete. Past history shows that all similar projects have cost double or more than the original estimates of the proponents. So my guess is that the St. Lawrence seaway would end up by costing close to $1,500,000,000. Of course, I have always been opposed to the St. Lawrence project on principle. I am against it also because of the disastrous effect it would have on our section of the country and on Pennsylvania to institute subsidized transportation down the St. Lawrence to compete with transportation now available in this section and to give lower rates through Government subsidy to Canadian and northwestern commerce. That gives those areas an unfair competitive advantage against you. That is taking your money in taxes and spending it to put you out of business. The mouth of the St. Lawrence is in Canada and our northern neighbor would reap the major benefit of any good results which might accrue. However, my point in mentioning it here is to show how great oaks from little acorns grow. And to show how the $4,000,000 for the St. Lawrence in this budget, if approved, would force far larger annual appropriations each year thereafter for many years.

This is the first budget submitted by President Truman in which he has failed to pay at least lip service to the theory of balancing expenditures with revenue. In the past, he has demanded new taxes for the purpose of bringing the two into balance, thereby admitting the necessity for budget balancing and the wisdom of so doing. But he has already stated that his tax proposals for 1951 will not raise enough new money to come even close to meeting the anticipated $5,000,000,000 deficit.

Past history proves, beyond the shadow of a doubt, that governments will never restrain their spending without some compulsion. One of the greatest brakes is the inability to impose new taxes, or the promise to reduce existing taxes. If new taxes are granted at this time, then it seems almost inevitable that Government spending will automatically go higher and higher, to be followed in due course by new demands for more and more taxes. The President's economists, in their recent review of economic conditions, stated at one point: "The principle of annual budget balancing is difficult in practice and unsound in principle." President Truman apparently adopts this theory. While he did not say so in so many words, the general tenor of all three of his messages and the figures in the budget, indicate his endorsement of this idea. No one is more ready to admit that budget balancing is difficult in practice. It is tough for the ordinary citizen to do it in respect to his family expense account. It is even tougher for the Government. But I disagree emphatically with the proposition that it is unsound in practice. On the contrary, I believe it is absolutely essential, if we are to retain national solvency and our form of government. It is most important to do it today—when taxation is near its peak, when employment is at its peak, when national income and national production are at or near their all-time highs. If we can't live within our income under these conditions, when can we ever hope or expect to do so?

How About the Alleged Coal Shortage?

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. O'SULLIVAN. Mr. Speaker, for a number of days now, "Old Southern King Coal," the merry old soul, instead of calling for his bowl and calling for his pipe and calling for his fiddlers three, has boldly and brazenly, in a single spaced, seven-paged harangue, via special messenger, if you please, ordered the President of the United States to—

1. Proceed immediately under the national emergency provisions of the Labor Management Relations Act, 1947, in an effort to put an end to the coal crisis and to restore the genuine collective bargaining which must be the cornerstone of any equitable and enduring agreement between employers and their employees.

2. Direct the Attorney General to consider proceedings immediately against the United Mine Workers of America for violation of the antitrust laws, and if he finds there is no basis under existing law for prosecution of the union, that you send a message to the Congress upon its return in January, requesting amendment of the statutes to make labor unions properly subject to the antitrust laws.

This ill-advised, impudent, unauthorized directive reminded me of a great piece of literature because it was so darned different.

All of us, I am sure, are interested in ascertaining just what the true national coal situation is at this time. We hear of complaints from various parts of the country about impending coal shortages, factory shut-downs, black-outs, and discontinuance of railroad-train service and diverse other emergency curtailments of home and business efforts.

When I want to know the truth about some general news matter, I have learned to turn to a great daily newspaper which to my observation has always fairly reported the true facts, uncolored by bias or prejudice. I refer to the Christian Science Monitor. This is what that splendid newspaper said about the alleged coal shortage on January 16 last:

TRUMAN STILL SEES NO COAL SHORTAGE

(By Harlan Trott)

WASHINGTON.—Is there a critical Nation-wide coal shortage or isn't there?

Is there mutiny in the ranks of John L. Lewis' miners or isn't there?

Controversy over these two questions is increasing as Mr. Lewis' "40-percent strike," which his 3-day workweek is called, continues to spread into 100-percent strikes in mines throughout Pennsylvania and West Virginia.

The administration's answer to the first question is "No."

President Truman is sticking by his guns. He has told his congressional leaders again that the coal situation does not warrant declaring a national emergency and using the Taft-Hartley law to restore full production in the coal mines.

Mr. Truman's attitude was reported by Senator SCOTT W. LUCAS, of Illinois, Senate Democratic leader, who told the White House for the second time in 10 days that a serious coal shortage exists in Illinois because of the 3-day week being enforced by the United Mine Workers.

WEEKLY CONFERENCE

Senator LUCAS was at the White House with other Democratic congressional leaders for their weekly legislative conference with the President.

The Senate leader told a reporter he had shown Mr. Truman "a brief case full of letters, telegrams, and newspaper clippings" about the coal situation in Illinois.

The President replied that he was aware of the situation and has his top advisers reporting to him daily, Senator Lucas reported.

However, Mr. Truman was said to have described coal stocks above ground as the key factor and that while there were "spotty situations that were bad," he did not believe the facts warranted declaring an emergency under the Taft-Hartley law now.

Senator LUCAS said Mr. Truman noted that the use of the Taft-Hartley emergency weapons would require him to substantiate a finding in court that the coal dispute had created a national emergency.

BUREAU BACKS TRUMAN

The administration is backed up by Dr. James Boyd, director of the United States Bureau of Mines. Dr. Boyd says the Bureau has been trying its best to find out how the Nation's coal stocks stand.

The Bureau reports that there is more coal above ground than at any time in a long time. Dr. Boyd is a Republican, by the way, and Republican leaders in Congress have been insisting there is a critical coal short-

age and that the President should invoke the Taft-Hartley Act to restrain Mr. Lewis from holding down production by his arbitrary campaign for stabilizing employment by letting his men dig coal only 3 days a week instead of 5.

While Dr. Boyd might have political reasons for upholding the crisis claims of Republican leaders, nevertheless he asserts he cannot honestly say there is any serious soft-coal shortage.

Unfortunately, this impartial Government report on the real state of the Nation's coal stocks lends weight to charges published by the weekly newspaper, Labor, that big United States and Canadian railroads are using a trumped-up coal crisis to justify drastic curtailment of passenger train service.

The article in the January 14 issue of Labor says in part:

"Protests swept the dominion this week as the big Canadian National Railways, apparently following the lead of carriers in the States, also slashed passenger trains, blaming the move on the coal shortage.

"The Halifax Chronicle-Herald in Nova Scotia ran a front-page editorial blasting the Canadian National. In Nova Scotia, the paper said, the mines had huge stock piles of unsold coal—at the very time the CNR claimed a shortage. It raised the question of whether lack of coal was the real reason for the slash in service, or just an alibi.

"By contrast, the Canadian Pacific Railway did not cut off any trains. It declared it had ample coal on hand.

"What is the issue in the dispute between the United Mine Workers and the coal operators? The question is supremely important, because the newspapers, the mine owners, and reactionary lawmakers are using it to stir up hysteria."

LEWIS STRATEGY

Many observers here believe the situation is in no way near so critical as the industry is trying to make out or as Mr. Lewis wishes it were.

They think the mutiny among the miners, their refusal to work 3 days a week, linking their refusal to a demand for a contract calling for production 5 days or none is not a revolt against their union leader but a Lewis-inspired stratagem—a foxy one at that—to tighten the screws on management in his effort to force a new contract out of the industry.

It should be noticed that the latest 100 percent walk-outs of rebellious miners are aimed at Mr. Lewis' chief protagonists, the big works of Pittsburgh Consolidation Coal and the Frick interests in the Pittsburgh seam.

Pittsburgh Consolidation is said to be the largest commercial coal company in the world. Frick is the coal-producing branch of the United States Steel Corp.

Mr. Speaker, there seems to be a serious question as to whether or not there is a real shortage in the coal supplies of the Nation. I have heard it stated in the House of Representatives, and have read in some newspapers, that in many communities, the reserve coal on hand has dwindled down, in some instances, to a few coalscuttlesful.

Other people and newspapers have contended that President Truman was correct in claiming that no such national emergency exists, as yet, which would warrant the use of the injunctive provisions of the Taft-Hartley law.

In reading the Christian Science Monitor of January 18, 1950, it is stated by its Mr. Joseph C. Harsch, the chief of its Washington News Bureau in a front page article, that although the coal piles of the Nation are shrinking daily, no real national emergency presently exists which would be compelling upon President Truman to apply for an injunction under the Taft-Hartley Act. In discussing the coal supply, he had the following to say:

They are shrinking now. December production is estimated at 35,000,000 tons. (Final figures for the month are not in yet.) This compares to a November consumption of 43,737,000 tons. That is, the mines produced about 9,000,000 tons less in December than was consumed in November. The December shrinkage in coal piles might run as high as 10,000,000 tons. But on December 1, total stocks on hand amounted to 45,264,000 tons, meaning that there is today about 35,000,000 tons on hand—which is about a 30-day reserve."

In conclusion I wish to say that this whole vocal uproar about acute coal shortages reminds me of the remarks of the man who had just finished shearing the scabby sheep that had kept up a continuous bleat, " 'Twas a great cry indeed for such little wool."

The Upset Down Under—No. 4

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Morley Cassidy, from the Washington Evening Star:

THE UPSET DOWN UNDER—No. 4—AUSTRALIAN LABORITES WATCHING TO SEE HOW FOES WIPE OUT REDS

(By Morley Cassidy)

CANBERRA, AUSTRALIA, January 19.—And now comes the big question: How do you unscramble a Socialist omelette?

How do you take a socialized or partly socialized state, dedicate it to free enterprise and make it work?

Australia, which has voted to do exactly that, knows part of the answer. It begins: "First you get rid of your Communists—"

But how?

No one is waiting with more grim anticipation than members of the late labor government who first tried to kill Communists with kindness, finally tried toughness, and failed with both.

One day when Sydney's latest dock strike was getting well under way, and seemed to be shaping up as the Communists' challenge to the new Liberal-Country party government of Prime Minister Robert G. Menzies, I was in the Sydney office of a leading figure in the late labor government.

On his desk was a newspaper with black banner lines reading "56 Ships Now Idle Here—40,000,000 Pounds Cargo Tied Up—Strike Spreading."

PROSPERITY MASKS PROBLEMS

This man, who was tearing his hair 6 months ago trying to end Australia's big Communist-led coal strike, rapped his knuckles on the headlines.

"Menzies thinks it's going to be so simple to stop these strikes," he snorted. "He'll just outlaw Communists, and make it illegal for them to hold union office. That will stop the trouble.

"Well—that's his baby. Now let's see him wash it."

Many of Australia's gravest problems have been masked, temporarily, behind the surface appearance of prosperity created by the post-war boom in wool and wheat prices.

Everybody has a job, and every factory, office, and farm is crying for more help. Wages are the best in Australia's history, and hours the shortest.

But Australia's voters have discovered, their votes seem to show, that full employment and good wages do not necessarily add up to real prosperity.

It's not hard to see why, talking to Australian people.

"What kind of prosperity is this, anyway?" says a young ex-service man, clerk in a Sydney hardware store, who lives with his wife and 2-year-old daughter in a four-room flat with her parents.

"We've all got jobs, and we haven't got houses. We get more money but it doesn't buy the things we want."

UNABLE TO GET BRICKS

"If we try to build a house, we can't get bricks because there isn't enough coal to make them. The farmer can't buy a plow because there's not enough steel. If you get a car, you can't get gasoline because the the labor government thought we shouldn't have it.

"And how long will we have money when the bubble goes out of the wool market?"

His views, apparently shared by a majority of Australia's voters, brought the downfall of the labor government of Prime Minister Joseph B. Chifley. And they point directly at the deep-seated problems which the new free-enterprise regime inherits.

Australia's socialization of industry has not approached the sweeping scale of Britain's nationalizations. Labor's efforts to set up government monopolies of banks, air lines, shipping, and coal mining have been frustrated by the constitution and the high court.

But the new government must unscramble the affairs of the Australian Shipping Board, which had lost £10,188,720 (about $22,000,000) in the last 4 years, trying to run shipping lines.

AIR LINES SETS SUBSIDY

It must deal with Trans-Australian Airlines, created to take over all air lines, but now limited to competing with private lines with the advantage of an annual subsidy of £700,000 (about $1,500,000).

It must take over management of the government's huge collective farm in northern Queensland, designed to boost the production of sorghum as a food for pigs. With the help of a fleet of 30 tractors, 30 headers, and 30 combines that private growers cannot buy, it has managed to raise 300,000 bushels of sorghum where 400,000 grew before.

There is also the problem of the government pay roll, which has grown until the government now employs 635,400 people, more than one-fourth of all employed workers in the Commonwealth. There is a maze and restrictions and controls through which the state has sought to effect its planned economy.

There is a sticky problem of state's rights. Australia's six states, as jealous of their right as Georgia ever was, have seen more and more of their powers gather into the central hand of Conberra, the federal capital.

They boil, especially, because the labor government took over the right to levy income taxes, and then bargained with each state over the amount to be remitted for state purposes.

DECENTRALIZATION IS ISSUE

Decentralization is a burning issue, and the new government favors it; but because of the social-benefits program it will not be easy to turn back the taxing power.

All these problems are minor, however, compared with the one fundamental task of putting value back into the pound.

This campaign slogan is a short way of saying that the new government intends to turn back inflation and the high prices that hit every household.

It can do it only by making it possible for private enterprise to step up production—a field in which the Labor government failed conspicuously.

Take housing, for instance: Four years ago the Australian Housing Commission found that the nation was short 300,000 homes.

It mapped a plan to wipe this out in 4 years at the rate of 80,000 homes a year, in addition to providing 40,000 new homes yearly to meet the normal growth in population.

Four years have now gone and home building has not even kept up with normal requirements, so the shortage now is greater than ever.

BUILDING WORKERS LACKING

Part of the difficulty is a shortage of building workers. Despite the crying need for more skilled hands, the Building Workers' Industrial Union, Communist controlled, has firmly closed its ranks to new members.

A Labor government program for training ex-servicemen for these trades has been frustrated. At the moment 4,000 veterans are awaiting training as plumbers. The union is permitting the training of 16. No training classes for bricklayers or carpenters have been authorized for a year.

The housing problem and many others run into the problem of coal and steel shortages. So take coal:

Despite the Labor government's desperate efforts to woo the miners' Communist leaders, strikes have blocked every effort to raise production.

Since the war strikes have taken a heavier toll each year of coal production, rising to 2,000,000 tons in both 1948 and 1949. So production from the deep pits is now just about equal to prewar.

For lack of coal the steel production, on which Australia's rosy hopes of great industrial development were built, has dropped steadily since the war.

In 1940 and 1941, with smaller manpower, the mills were producing 1,000,000 tons of ingots yearly. In the last 3 years they have been able to turn out only 75 percent of that. Today the biggest mill, Broken Hill Proprietary, is down to 64 percent of capacity for lack of coking coal.

GREAT HOPES FOR FARMS

Finally, take food and the farms. Australia had great postwar hopes there.

In the 8 years of the Labor Government, with prices high and world demand at its peak, the crop area has dropped from 23,500,000 acres to 22,200,000. The sheep on the ranges have declined from 111,000,000 to 102,000,000. Exports of food of all kinds have dropped from 886,730 tons to 591,685.

So how is production to be achieved? Obviously, the new prime minister thinks, there must be a new spirit of cooperation between employers and organized labor.

He has promised to put an end to the spirit of class warfare, through strengthening the arbitration courts—extensively weakened by the Labor Government as a concession to Communist union leaders—and through restoring trade-union democracy.

The first step toward industrial peace, Menzies is convinced, must be the elimination of Communists from control of Australian labor.

But communism's hold is strong. It was broken temporarily in 1940 and 1941 when Menzies, then in power, outlawed the party. It went underground, but when labor returned and lifted the ban in 1941, to win unity during the war, the party instantly sprang to life.

Labor Party appeasement has helped to strengthen the Communist hold since the war. Militant avowed Communists were appointed to the stevedoring and shipping boards and to other government agencies.

REDS CONTROL MANY UNIONS

Today admitted Communists hold either complete or effective control of the unions of ironworkers, blacksmiths, boilermakers, sheetmetal workers, miners, building workers, dockers, seamen, and clerks, and are influential in the unions of teachers, scientific workers and many others.

How is their grip to be broken? Menzies and all Liberal and Country Party candidates—now the majority in the House of Representatives—promised drastic action in their campaign speeches.

They promised to declare the party subversive and unlawful, and to dissolve it. They promised that the attorney general, subject to appeal, would be given the power to declare other organizations substantially Communist, and to follow the party into whatever new form it may attempt to take.

They promised a law banning Communists from any paid post in government, or any office in a registered industrial organization.

"These are far-reaching proposals," says Menzies, "but half-measures are no good."

Leaders of the late Labor Government are grimly waiting to see if Menzies can do what they could not. They doubt it.

"He may get a surprise," says one of them sourly, echoing many others. The toughest Communists we have are Jim Healy, secretary of the waterside workers, and E. V. Eliott, secretary of the seamen.

They are also among our most efficient union executives. The Communists didn't have to rig their election. They got elected for the same reason your John L. Lewis gets elected—because they get results.

Bureaucrats Die Hard

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. LeFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial appearing in yesterday's New York World-Telegram. There is certainly more truth than poetry in this statement and for those of us who can see where centralizing government from Washington is leading us, we would do well to heed this advice.

BUREAUCRATS DIE HARD

Rent Director Tighe E. Woods is asking the public and the Congress to swallow his story that it's necessary to extend Federal rent control for another year. To support his stand, Woods has dug up a set of figures that are supposed to show, but don't, that dire things happen to rents that have gotten out from under the fist of the Great White Father in Washington.

The Rent Director has announced that rents in six big cities increased 16 to 41 percent when Federal controls went off. Now this does make a case for some system of rent control. But it is by no means proof that the Federal plan is the one to do the job.

Woods failed to point out that the various States still do have legislative power that could be used to control rents. If the people of these six States feel that the rent increases granted were excessive and unjustified, let the various legislatures pass their own control laws to handle the separate situations according to their own individual needs.

The Federal rent law has been proven to be unfair, too complicated, and unnecessary. The Rent Director's fight to extend it can only be taken as a bureaucratic attempt to perpetuate centralized governmental control where there is not the slightest need for it. Congress would do well to recognize the Woods extension campaign for what it is and let this measure die.

Is There Poorhouse Space for 149,000,000 People?

EXTENSION OF REMARKS

OF

HON. F. H. LICHTENWALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. LICHTENWALTER. Mr. Speaker, there is a great concern today throughout America because of vast Government expenditures and that a continuation of the policy of deficit financing and extravagance in Government will lead us to national bankruptcy. Under leave to extend my remarks in the RECORD, therefore, I submit the following editorial which appeared in a recent issue of the Allentown Evening Chronicle:

IS THERE POORHOUSE SPACE FOR 149,000,000 PEOPLE?

Is there room in the poorhouse for 149,000,000 people?

In 1932, Franklin D. Roosevelt, then a Presidential candidate, had this to say about Government spending:

"Any government, like any family, can for a year spend a little more than it earns. But you and I know that a continuance of that habit means the poorhouse."

Those words, important 17 years ago, have even greater significance today. Why? Because in every year since 1932 (with the exception of the two fiscal years immediately following the war) our Federal Government has spent more than it has collected.

Surely the time has come to make our present administration realize that a government which continually spends more than it collects cannot long remain strong and healthy.

In 1932, our Federal Government spent $4,500,000,000. For the fiscal year of 1950, it is estimated that our Federal Government will spend 10 times that amount—$45,000,000,000.

To give you an idea of just how much money this is, consider these facts:

1. If everyone in the United States cashed in all of his life-insurance policies, the total would amount to $44,000,000,000. This would not be enough money to run the Government for 1 year.

2. About 11,000,000 urban families own the homes they occupy, valued at $30,000,000,000. If converted into cash, this amount would run the Government for only 8 months.

3. About 3,900,000 farmers farm their own land, valued at $17,000,000,000. Besides this, they own tools and livestock valued at $8,000,000,000. If converted into cash, the total of $25,000,000,000 would operate our Government for less than 7 months.

4. If every manufacturing corporation converted its net working capital into cash, the total would amount to $39,000,000,000. That's hardly enough to run the Government for 11 months.

These facts put a new light on the staggering size of our Federal Government's planned $45,000,000,000 expenditure for the fiscal year of 1950. And remember, this excessive spending is in the face of a national debt of more than $250,000,000,000.

Isn't it as true today, as it was in 1932, that "a continuance of that habit means the poorhouse?"

Just what are you doing to end excessive spending by our Federal Government? Have you written your Congressman? Have you appealed to your Senators? Have you discussed the problem with your business associates, with other businessmen, with your friends, with your employees?

Let's make sure our Representatives in Government know how we at home feel about the continuance of a habit that "means the poorhouse."

The time for action is now.

Concerning the Reactionary Prophets of Gloom and Doom

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. O'SULLIVAN. Mr. Speaker, since coming to the House of Representatives as a Member from the Second Nebraska Congressional District 1 year ago, I have sat day in and day out listening to some of the most dire and outlandish predictions of national doom ever heretofore told perhaps outside of the comical house.

I have heard the reactionary Republicans bewail and fairly keen, that we were heading for national bankruptcy, socialism, the welfare state, inflation, recession, national unemployment, regimentation, economic slavery, spend-thrift-ism, going busted-ism, and lastly, going-to-freeze-to-death-ism, and every other conceivable awful, terrible thing which could happen to a great Nation, yet not one of these frightful and frightening things have come true, yet the prophets of gloom are still going strong and sometimes even predicting that two diametrically opposite things were going to happen to the Republic at one and the same time.

Methinks, old Gloomy and Doomy Gus was just a piker after all.

The foregoing conduct, however, is not confined to Congress. An old friend of mine was wont to say "some people would kick if you hanged them with a new rope."

I know an old Irish farmer who lived at O'Neill, Nebr., who was reported to have complained about the bumper crops he raised because they were so hard on the ground.

Instead of appealing to my fears, this conduct of some of my reactionary colleagues made great contributions to my sense of humor, and I was reminded often of the poem, Said Hanrahan, written by Father John O'Brien, of Australia, and contained in the book, Witness to the Stars, edited by Paul L. Grano, LL. B. So that you may become also a member of The O'Sullivan Share-the-Laughter Club, I herein set it forth at length:

SAID HANRAHAN

"We'll all be rooned," said Hanrahan,
In accents most forlorn,
Outside the church, ere Mass began,
One frosty Sunday morn.

The congregation stood about,
Coat collars to the ears,
And talked of stock, and crops, and drought,
As it had done for years.

"It's lookin' crook," said Daniel Croke;
"Bedad, it's cruke, me lad,
For never since the banks went broke
Has seasons been so bad."

"It's dry, all right," said young O'Neil,
With which astute remark
He squatted down upon his heel
And chewed a piece of bark.

And so around the chorus ran
"It's keepin' dry, no doubt."
"We'll all be rooned," said Hanrahan,
"Before the year is out.

"The crops are done; ye'll have your work
To save one bag of grain;
From here way out to Back-o'-Bourke
They're singin' out for rain.

"They're singin' out for rain," he said,
"And all the tanks are dry."
The congregation scratched its head,
And gazed around the sky.

"There won't be grass, in any case,
Enough to feed an ass;
There's not a blade on Casey's place
As I came down to mass."

"If rain don't come this month," said Dan,
And cleared his throat to speak—
"We'll all be rooned," said Hanrahan,
"If rain don't come this week."

A heavy silence seemed to steal
On all at this remark;
And each man squatted on his heel,
And chewed a piece of bark.

"We want an inch of rain, we do,"
O'Neil observed at last;
But Croke 'maintained' we wanted two
To put the danger past.

"If we don't get three inches, man,
Or four to break this drought,
We'll all be rooned," said Hanrahan,
"Before the year is out."

In God's good time down came the rain;
And all the afternoon
On iron roof and windowpane
It drummed a homely tune.

And through the night it pattered still,
And lightsome, gladsome elves
On dripping spout and window-sill
Kept talking to themselves.

It pelted, pelted all day long,
A-singing at its work,
Till every heart took up the song
Way out to Back-o'-Bourke.

And every creek a banker ran,
And dams filled overtop;
"We'll all be rooned," said Hanrahan,
"If this rain doesn't stop."

And stop it did, in God's good time;
And spring came in to fold
A mantle o'er the hill sublime
Of green and pink and gold.

And days went by on dancing feet,
With harvest-hopes immense,
And laughing eyes beheld the wheat
Nid-nodding o'er the fence.

And, oh, the smiles on every face,
As happy lad and lass
Through grass knee-deep on Casey's place
Went riding down to Mass.

While round the church in clothes genteel
Discoursed the men of mark,
And each man squatted on his heel,
And chewed his piece of bark.

"There'll be bush-fires for sure, me man,
There will, without a doubt;
We'll all be rooned," said Hanrahan,
"Before the year is out."

In conclusion, I wish to observe that poor old Hanrahan surely must have quite a few mental kinfolks and blood brothers in our branch of the Congress.

Empire Builder

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. O'HARA of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column, The Federal Diary, edited by Jerry Kluttz in the Washington Post, in which there appeared on January 19, 1950, the poem, Empire Builder:

THE FEDERAL DIARY
(By Jerry Kluttz)

If you'd like to start off today with a chuckle, I recommend the reading of the delightful poem below. The Federal worker author prefers to remain anonymous.

EMPIRE BUILDER

This is the way, I'm telling you
A large percent of our Government grew.
There was once a man, who with good intent,
Gave his friend a job in the Government.
"With nothing to do, he won't stay long,"
He told an assistant, but was he wrong?

They found an office as it was bare,
They moved in a desk and a chair.
And so the friend wouldn't feel alone
In this office they put a telephone.
For several weeks the new man stayed
And in doing nothing, progress made.

For several months our friend sat there
With never a worry and never a care.
With nothing to do, he was on his own,
Till they gave him a girl to answer the phone.
But now our hero was in a stew
To find a task for the girl to do.

After some thinking he solved his plight,
By dictating letters for her to write.
She wrote so much, that after a while,
She had to have help for she couldn't file.
So that is how it came to be
The group in her office grew to three.

Another was added, for number three,
As good a filer as she could be.
Seemed to have something on her mind,
For though she could file, she couldn't find.
Adding this finder made one more,
And they got more space as they numbered four.

After a while three and four fell out,
Though it was comic to see them pout.
While looking for letters they couldn't find,
A rather bright idea came to mind.

So now no one is ever vexed—
Five keeps the letters all indexed.

Everything now was going strong,
When a wave of economy happened along.
When the big boss checked on his worthy friend
To find that the force had grown to 10.
The big boss' big boss said, said he:
"How in the hell has this come to be?"

Economy pruned both left and right,
And everyone grew pale with fright.
As reduction in force now was the rule,
But the clerks of our friend kept calm and cool.
And after all of the stir was through,
Instead of one unit, our friend had two.

And the one who gave his friend a start,
And did his best to take his part;
Yes, you have guessed it without a doubt,
He was the one who was left out.
And the friend was promoted up instead,
Until he became division head.

Still doing the same thing as at first,
He wasn't the best, he wasn't the worst.
What little he did he did with vim,
As all above thought well of him.
Knowing naught of worry or grief,
Our friend was made a bureau chief.

As bureau chief he got a break,
In a good assistant, made no mistake.
Lost at poker to prominent men
Held everyone as his good friend
Was very careful of what he said
Became at last, department head.

The Civil-Rights Program

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times for Wednesday, January 18, 1950:

THE CIVIL-RIGHTS PROGRAM

President Truman disclosed yesterday that the administration intends to get a vote in Congress on its civil-rights program even if it takes all summer to do so. The principal items in this program are repeal of the poll tax, an antilynching law, and a Federal Fair Employment Practices Act. The President's continued willingness to do battle for these measures is commendable, but it has long since been made evident that on each of these issues his own party is deeply, and at least for the time being, irreconcilably, divided.

What is puzzling is the failure of the Republican Party to take advantage of this Democratic split, in order to assert more actively Republican initiative and leadership in these matters. The Republican Party itself is pledged (by its 1948 Republican platform) to the enactment of each of these three measures—anti-poll-tax, antilynching, FEPC. Yet Republicans helped last year to make it more difficult to apply cloture in the Senate to end a threatened filibuster, and Republicans are now lending support in the House to a proposed revival of the power of the Rules Committee to keep measures of this kind from coming to the floor.

There are, of course, individual Republicans who favor action on these bills. But the party as a whole is letting an opportunity for leadership go by default.

A Young Woman Going Places

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks, I wish to insert an article from the Michigan Voter in its issue of December 1949:

A YOUNG WOMAN GOING PLACES

(By Phil Williams, member, Wayne County Republican executive committee)

She's a young woman going places—a Republican who one day will hold high office in her party and her government. Perhaps she will be Michigan's first woman member of the administrative board, for it is high time that we had a woman as secretary of state or as State treasurer.

She is Blanche Parent Wise, mother of five children, successful automobile and truck saleswoman, Detroit's woman of the year for 1946, and recent nominee for common council.

Mrs. Wise's race for the council was one of the most astonishing developments in the city's political history. For membership on that body is a most difficult attainment and can be achieved usually only by one of two types of politicians. Most successful in the past like John C. Lodge, former Gov. William A. Comstock, or former Mayor Edward J. Jeffries, Jr. But the city also has turned at times to name candidates like former Councilman Fred Castator and Councilman-elect William Rogell, whose popularity results from his baseball career.

Nine were elected this November, and Mrs. Wise finished eleventh.

For a woman running for office the first time and having a name that is not known to the voters, that accomplishment is sensational, to say the least. It could be called a miracle, for if she had found another 12,000 votes in this city of 816,000 registered voters, she would have been elected.

Billy Rogell, famed ball player and former councilman, was ninth with 192,000. Mrs. Wise, who staged a brilliant campaign almost alone, had 180,000.

True, the city elected its first woman council member in Miss Mary Beck. But Miss Beck has been active in city politics for many years, has been identified with the probate court, and has run for office unsuccessfully in the past, including the council. Finishing in sixth place, Miss Beck had only 38,000 votes more than Mrs. Wise, and it was a near-record turn-out.

Politics is an inexorable taskmaster, and so mysterious in its values even veteran office holders are frequently confused by the course the voters follow. But the charm of Mrs. Wise is so potent, and captivating, the voters seemed to discover early in the campaign that this woman was no ordinary candidate. It was something they sensed, and they were right.

Mrs. Wise was no glory seeker or publicity seeker. She was running for common council only because she was convinced she could add to the city government a value that it has not had. She knows the intricate and baffling problems of government, and she is equipped by sound background and understanding.

As a saleswoman for John Hettche's Ford agency, Mrs. Wise is near the top of her profession and has sold more cars and trucks than any woman in the world. It was because of her professional career, and her keen interest in government, that she was chosen "Woman of the Year."

But there were other reasons for this honor—five of them to be exact. There is Penny, who is 15; Kay, 14; John, Jr., 12; Mark, 9; and Rick, 7.

How can a woman become successful in business, maintain an interest in government, and yet be equally successful as a mother and homemaker? Mrs. Wise was asked that once by the Detroit Federation of Women's Clubs, and she answered:

"I was trained by my own mother to be a competent housekeeper. I have continued her teachings in my own home.

"The work is organized and each of my five children has a definte job. Remember, that from 8:30 a. m. until 4 p. m., from September until June, my children are under the supervision of school teachers. When they are not in school, I am with them a large part of the time. Our interests—music, reading, play—are parallel. I couldn't have the kind of children I have if they didn't have supervision. But I believe in freedom with responsibility."

Mrs. Wise was born in Detroit. Her ancestors came to Michigan with Cadillac. She will be running for office again, but not because she needs a job.

"It was a wonderful experience," she said. "Like any candidate, I was disappointed when I did not win, but the vote I received was certainly a compliment I will not soon forget.

"I think the community conscience should be represented more effectively in the local, State, and national governments. Men in many ways are better organizers than women, and are probably keener in handling the practical politics of public office. But, left to their own devises, men are inclined to be just a little too practical and too often the community's interests take second place.

"I think a woman, if equipped to serve, can bring to government a tremendous force toward good."

Mrs. Wise, whose husband, John Wise, is an architect, was a school teacher in Detroit early in her life. Her long career of quiet public service includes activities with the Detroit Girl Scout Council; the governing board of the Community Chest and a divisional chairman; legislative and public affairs chairman of the League of Catholic Women, member of the women's committee of the Detroit Round Table of Catholic, Protestants, and Jews; a first vice president of the Inter-Group Council for Woman as Public Policymakers, and a member of the League of Women Voters.

She made the owl famous during her campaign, using a picture of the bird on her advertising and cards.

"Just remember the owl and you'll remember the name when you reach the polling booth," she preached, "the wise old owl—remember it."

A lot more voters will before she is through.

Pennsylvania Counts the Cost

EXTENSION OF REMARKS
OF
HON. BENJAMIN F. JAMES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. JAMES. Mr. Speaker, under leave to extend my remarks, I am inserting the following article which appeared in the Chester Times of Chester, Pa., on January 16, 1950. This article makes particular reference to the administration's proposed budget cost to the people of Delaware County, which county I have the honor to represent.

The sum of $104,453,000, our share of the $4,400,000,000 budget, is almost one-half of the total capital invested in the 305 industrial enterprises in Delaware County—$213,641,000—in the year 1949. It is nearly 70 percent of all salaries and wages, combined, paid to the 50,611 persons employed by those industries in the same year—$152,165,000.

It is nearly 15½ percent of the total value of all products produced by those industries—$677,818,800—and it is over seven times the value of all farms in Delaware County—land and buildings—$14,653,600.

Where is Delaware County, Pa., going to get the money? They still have to pay modest county and local taxes.

TRUMAN BUDGET TO COST PENNSYLVANIANS $3,000,000,000

HARRISBURG.—Pennsylvanians could finance their government for the next six years on the amount they would have to pay in Federal taxes under President Truman's proposed 1951 budget, the State Chamber of Commerce claimed today.

If Congress approves Truman's $42,000,000,000 budget the chamber said, residents of this State will have to pay $3,233,852,000 in direct and hidden taxes for Federal coffers.

Based on the current all-time-high State budget of $1,028,000,000 for the 1949–51 biennium, this sum would be sufficient to finance normal operations of Pennsylvania's State government for the next 6 years, the chamber estimated.

"The $3,233,852,000 cost to Pennsylvanians is more than one-third of the total assessed value of taxable real estate in this State in 1948," the chamber asserted.

"It is equal to 14.4 percent of the $22,381,745,000 market value of taxable real estate in Pennsylvania as determined by the State tax equalization board," it continued.

The State chamber's general secretary, Leonard P. Fox, called upon Congress to slash "a staggering budget under which the Federal Government would continue to live beyond its income and beyond the reasonable ability of the people to pay."

"Congress should thoroughly explore all possibilities for reducing nonessential expenditures just as every farm and business and household has had to do in these days of high taxes and high prices," Fox said.

An estimate of the cost to the people in each of the State's 67 counties also was made. The estimates were based on each county's population, buying income and taxable payrolls under the Federal social security program. Philadelphia's share, under these figures, was put at $813,961,000.

The cost to Delaware County was put at $104,453,000.

Peanut Acreage Changes Sought

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hertford County Herald, Ahoskie, N. C.:

PEANUT ACREAGE CHANGES SOUGHT

SCOTLAND NECK.—Growers of what is called the Virginia type of peanut, the producing area of which is confined principally to Virginia, North Carolina, and a small area in South Carolina, decided here Thursday to attempt to secure amendments to national peanut quota legislation which will permit the allocation of peanut acreage quotas on the basis of need and demand for peanuts by types rather than the present method of national consideration of all types together.

The decision was made at a meeting of the peanut commodity committee of the North Carolina Farm Bureau jointly with a representative group of Virginia peanut producers, members of the Virginia peanut and Hog Growers Association.

The conference was presided over by R. V. Knight, Tarboro, chairman of the North Carolina Farm Bureau peanut commodity committee, with Parker Brinkley, executive secretary of the Virginia Peanut and Hog Growers Association, and R. Flake Shaw, executive vice president of the North Carolina Farm Bureau, taking a prominent part in the discussions. J. B. Blalock, president of the Virginia Farm Bureau, was among those present and took part in the discussions also.

The action of the North Carolina and Virginia farmers was prompted by the fact that there is a shortage at present time of the better grades of Virginia-type peanuts, notwithstanding the reported oversupply of other types of peanuts and the announced intention of the Secretary of Agriculture to further reduce peanut-acreage quotas this year.

Under the present quota law and its application, North Carolina and Virginia farmers face a further reduction in peanut quotas while not hving sufficient acreage in production under quotas last year to meet the demand for their product, it was pointed out by Brinkley, Mayon Parker, president of the Growers' Peanut Cooperative, Inc., and others who took part in the discussions.

In North Carolina it is proposed to reduce peanut acreage approximately 7 percent from last year's acreages.

A committee of seven North Carolina and seven Virginia farmers was named to press forward the effort to secure passage through Congress of the amendments to the law necessary to make the decision of the group effective. Parker Brinkley and R. Flake Shaw were named joint chairmen of the committee and instructed to proceed immediately with preliminary contacts to secure the support of legislators and other farm groups.

If the proposed change in the law is accepted and passed by Congress, peanut-acreage quotas in the producing area for the Virginia-type peanut will be allocated solely upon the basis of supply and demand for the Virginia type.

The Virginia type is known generally for its larger size, oblong type of kernel, and nutty flavor, with lower oil content than the runner and Spanish types produced in the Southeast and Southwest peanut areas.

For purposes of sale in the shell, for salting, and many other edible uses, the Virginia-type peanut carries a premium in demand and in price, it was pointed out during the conference here.

Because of the demand for and preference of consumers for Virginia-type peanuts for edible purposes, it is believed that acreage allotments in the Virginia-Carolina area can be protected against further decreases and possibly increased, if the change advocated by the group can be brought about.

Acreage quotas for tobacco are allocated under a similar program, with quotas fixed by the Secretary of Agriculture according to the need for and supplies of tobacco according to the various types, such as flue cured, burley, air cured, Maryland, shade-grown, and others.

The group present here also discussed changes in the Government's price-support program that would be desirable to encourage the production of Virginia-type peanuts of the larger and more distinctly Virginia types but took no definite action on them. It was decided that the committee appointed to work for the legislative changes sought by the group should also confer with Department of Agriculture officials as to changes in the price-support schedules as applied to Virginia-type peanuts.

LOCAL PEOPLE

Attending the conference from this area were: Bertie County, W. L. Powell, and C. W. Spruill; Northampton County, J. F. Turner and P. H. Jamieson; Hertford County, Davis Spiers, C. Gordon Maddrey, and Mayon Parker.

Planes to Rome

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I include therein an editorial from the Washington Post of January 19. I think perhaps it is time the Congress paid a little attention to some of the current maneuverings of the Civil Aeronautics Board and perhaps to some of the apparent connections between certain high officials in the Government and Pan American Air Lines. I shall have more to say about this matter at a later date.

PLANES TO ROME

Pan American Airways has received a nice little windfall from the Civil Aeronautics Board in the form of preliminary sanction to conduct charter flights to Rome during the Catholic Holy Year. The only scheduled United States airline operating to Rome is Trans World. In view of the current recommendation of a CAB examiner that Pan American be permitted to purchase American Overseas Airlines—which would remove the third competitor from the field and place Trans World at a disadvantage—the sanction will look like favoritism. It is no wonder that a TWA protest has led the board to defer final action.

Actually there may be a good deal of point to the board's feeling that the Holy Year traffic will be large enough to support all the flights American lines can provide. Also it may be that Trans World was slow to appreciate the potential, and that Pan American merely showed more initiative in completing an arrangement with Felix Roma, the Catholic travel agency promoting Holy Year tours. Certainly Pan Am has demonstrated initiative in circularizing American Catholics.

Nonetheless, the CAB has played fast and easy with someone else's market. This is especially true in light of the fact that Pan Am's charter flights actually would amount to regular service. Yet, the special excursion rate authorized for Pan American tours is considerably below the fare TWA is compelled to charge on regular flights. Moreover, TWA still has a considerable number of vacant seats on flights to Rome, and it is augmenting its capacity by 30 percent. TWA's grievances have been fanned by Pan Am's undaunted ambition for the chosen instrument—or single American airline abroad in which Pan Am would play a dominant role—and by the curious lack of publicity preceding the CAB's sudden approval.

Now the CAB has remedied the outright favoritism by opening charter flights to Europe to all regular and large irregular carriers. This removes some of the discrimination; but the proper time to have announced such a policy would be if and after Trans World found itself unable to accommodate the traffic to Rome. It is of course important to promote American travel to Europe. But it is no less important to maintain the integrity of the certificates of convenience and necessity which are the law of regular air transportation. On the Rome run the certificate is in danger of being reduced to a point where it does not mean very much.

Keep Draft Registration Machinery

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. CLEMENTE. Mr. Speaker, our most able and most conservative chairman of the Armed Services Committee recently stated that one of the all important bills to come before the House at this session of Congress was a bill to provide for the extension of the Selective Service Act's registration machinery.

I am not unmindful of the fact that the original bill which included the draft phase met with quite some opposition when it passed the House 2 years ago—and certainly there is no member who would like to see the reason for its enactment come to an end any more than I would myself.

I am myself satisfied that there is no man in America who would like to see it terminated more than would my good friend, Louis Johnson, Secretary of Defense, but, yet, it is Louis Johnson who will have to come before the Armed Services Committee to urge that it be again extended even though it is not now made effective with respect to the induction of new men and new manpower in any of our armed services forces.

Mr. Speaker, no living man can foretell what lies ahead. All thoughtful men are convinced that if and when war again comes to us it will come out of the clear blue and without warning. There will be no time to waste in organizing the thousands of draft boards that would have to be implemented in order to get the manpower immediately needed to defend the country against continued enemy attack. The thing to do is to have the registration mechanism kept functioning at all times in order that it can be ready for immediate use when Congress presses the button by enacting a new draft law.

All the machinery of war is costly. To continue to register, give physical examinations, to classify and set the youth of America in readiness for mobilization against that fateful hour will cost money.

It costs money—plenty of money—to build tanks, ships, and planes in order to have them stand by and in readiness for use when needed.

If we appropriate money for weapons why not for manpower? The records clearly disclose that the Selective Service Act, while not made effective with respect to the induction of men into our armed services for some time past, has been of inestimable value in providing men in the various Reserve components of our Army, Navy, and Air Force, to say nothing of what it has done to help recruit new men to maintain the established strength of our Regular forces.

The machinery of selective service, which is an essential insurance policy, necessitates the payment of a premium on a policy which this Congress can ill afford to drop.

We can all take comfort in knowing that selective service, as administered by Secretary Louis Johnson, whatever the cost, will be kept at an irreducible minimum.

Mr. Speaker, may I now ask the indulgence of this House to insert into the RECORD as of this day a very short editorial on this subject clipped from the New York Times, which cites the necessity of keeping the registration machinery in operation, and which reads as follows:

KEEPING THE DRAFT

A bill to maintain the machinery of selective service has been introduced in the Senate by the chairman of the Armed Services Committee, Senator TYDINGS. It should be enacted. It is an unpleasant thing to have even the machinery of a draft in peacetime. It is a necessary thing, because many factors in the world situation are themselves unpleasant. This would be a much happier world if we didn't have to think about armies and navies and weapons of destruction. But it wouldn't be the world in which we happen to live at this moment. The draft machinery is essentially an insurance policy and at this time the premiums must be kept up.

Additional weight is given to the argument for the draft machinery on grounds of security by the fact that abandonment of the machinery at this time would be widely interpreted as a sign of indecision if not outright defeatism. We need, at the moment, not only to be strong ourselves but also to inspire the confidence of others. Any step that would weaken that confidence should be avoided.

It's Our Own Congress

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. O'HARA of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Morning Tribune, Minneapolis, Minn., of January 17, 1950:

IT'S OUR OWN CONGRESS

As the new session gets under way, it is well to remember that Congress, for all its frailties and faults, consists largely of conscientious Americans who are trying to do a good job according to their lights. The tendency to hold Congress up to ridicule, and to impugn its sincerity and good faith at every opportunity is not a wholesome one, in our opinion.

There are, to be sure, charlatans and demagogues in every legislative body, but we should be careful not to judge the whole by its least admirable parts. Congress is a product of the American system of representative government, and the chronic scoffers at Congress are in effect belittling and deriding that system.

Selective criticism of Congress is proper and desirable, but steady sniping for the sake of sniping is a bad habit. In the last analysis, the American people are responsible for Congress, and regardless of the party controlling it, it remains a symbol of some of our best American traditions.

Seventeen-Year-Old Delaware Girl Speaks for Democracy

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. BOGGS of Delaware. Mr. Speaker, 2 days ago a 17-year-old Wilmington, Del., high-school senior stood up before distinguished State and city officials, her teachers and her fellow students and said, "I thank America; her kindness and hospitality are so wonderful.

The girl who made that statement was Gloria Chomiak. The occasion was a special high school assembly in her honor, because she had just been selected as one of four national winners in a "I Speak for Democracy" contest, in which there were more than 1,000,000 entries. The competition was sponsored by the National Junior Chamber of Commerce and the National Association of Broadcasters.

Mr. Speaker, I hope every Member of this distinguished body will read with care Miss Chomiak's statement on democracy. It is as fine an expression of faith in democracy as it has been my pleasure at any time to read. And, Mr. Speaker, an unusual and important feature of this matter is that Miss Chomiak has been in the United States only since September 1948. She came here at that time from an extremely remote section of Canada.

Mr. Speaker, all Delawareans are proud of Gloria Chomiak and the honor which she has brought to the first State. I am confident that all Americans who read her statement will feel the same sense of pride and realize the responsibility which each of us as individuals has to protect the democracy of which Miss Chomiak spoke.

The following is a complete text of Miss Chomiak's statement—I Speak for Democracy:

I speak for democracy, because two generations back my ancestors could not; because if I do not speak of it—if many more do not speak of it, there may come a time when we, too, will not have the right to do so. For today more than at any other time governing powers are pitted one against another. It seems a crisis has been reached, and must be broken. We who believe in democracy cannot trust to our living it alone.

We must stand up and speak and be heard in its cause.

And what is this thing called democracy? It is a thought discovered in ancient Greece; a thing a Slavic serf dreamed of too much and paid for with his life; an ideal, started in its practice by a model Parliament of England; and bitterly struggled for in Louis' France. It is a leavening of revolutions, a stepchild of Utopia; a system, first defined as a government for and by the people in our own country, where it has grown to what we know and love today.

It is a government that has been developing for hundreds of years, and shall develop for hundreds more; a government that has outgrown an initial stage wherein it served the citizens of Greece; citizens who did not include the underprivileged and the captive, and who constituted but a fraction of the population. It is a government that has weathered the time when a land-laden Polish baron frowned upon it, thinking of his foreign serfs, tilling their foreign fields for his benefit alone. He worried little for he could dispose of them at his pleasure if he found one who thought in their number.

It is a government that has grown great since that medieval year when England's people first had representatives before their King—the first representatives before authority a people ever had.

It won a place for itself during the bitter civil war of France, when people were hungry, and angered with the extravagant caprices of those who ruled through heritage and it found a home in the New World when honest colonists learned to demand a rule by their own choice.

It has grown from a privilege of the few to a right of the common, risen from a persecuted idea to a mighty ideal upheld in safety by millions. It has developed into a system whose imperfections can be remedied, and whose virtues are a God-given right.

For this democracy is a natural system. Men were created equal in their rights and their responsibilities. And is not intelligent participation in governing among them? Men were given individual minds and desires. Ought not they have a right to voice them?

Democracy is a system with flaws, because through the ages men have erred and do err, and a democracy is only as right as its people. Democracy is able to abolish its principles by its own excess.

A cynic spoke the truth about it when he said that democracy can make each man his own oppressor. Yet, I believe that greater men have said a truer thing about democracy: That the people's government cannot—shall not perish from the earth.

A Mission of Good Will

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an editorial from El Imparcial, Santiago, Chile, of November 17, 1949.

Such friendly and sincere expressions of mutual concern are appreciated and will add to the many reasons why the friendship between the American Republics should grow stronger as the years go by.

The editorial follows:

A MISSION OF GOOD WILL

In fulfillment of a carefully planned program, three distinguished Members of the House of Representatives of the United States Congress are our guests since yesterday. They are Mr. A. S. J. CARNAHAN, Representative from Missouri, a former teacher and an influential public official; Mr. OMAR BURLESON, Representative from Texas, a lawyer and former head of the housing department of the District of Columbia, and OLIN E. TEAGUE, Representative from Texas. These distinguished Members of Congress were accompanied by Mr. George Millikan, adviser to the Committee on Foreign Affairs of the House of Representatives; Mr. Donald William Smith, representative of the State Department; Capt. Charles Lutz of the Air Force, and the delegation's secretary, Mr. Charles Schneider.

Their high office and their neighborly determination to further friendly relations between their country and the Spanish-American peoples, endow this visit with a special significance. The press of Mexico City, Panama, and Lima, where they received a warm welcome from the governments and social institutions, agreed on this point.

This cordial reception has been well deserved since the guests have shown keen interest in acquainting themselves with the work carried on by the Institute of Inter-American Affairs, which recently received additional funds from the United States Congress to continue its program for another 5-year period.

To accomplish this end, the American Congressmen and members of their delegation will study the work done in this city by the Health Center and Trudeau Hospital; will visit the construction of the sewerage system in North Santiago and other projects of this Institute.

Furthermore, they will hold private conferences with high officials of the government agencies of this country regarding problems which are common to Chile and the United States.

We appreciate the coming of these American Congressmen and in saying so, wish to leave on record our approval of these tours of good will, since the increase in mutual understanding which is already to be seen, indicates practical trends which will result in common benefits, notwithstanding the base intentions of the Muscovite sect, which are directed against the White House accusing it of an arbitrary and selfish imperialism.

Mr. Millikan, as consultant for the Foreign Relations Committee of the House of Representatives, will be in a position to inform his colleagues of the friendly attitude prevailing toward the United States on the part of the governments and peoples of Latin America. His own experience in diplomatic work will permit him to discover the basic reasons for the attacks from those who, calling themselves partisans of the democratic regime, conspire against it and attempt to destroy it by weakening the power of the United States.

American Legion Legislative Program

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am including the splendid statement of Hon. George N. Craig, national commander of the American Legion, made before the Committee on Veterans' Affairs, of which I am chairman, on Tuesday, January 17.

Commander Craig's statement follows:

Mr. Chairman, Mrs. Rogers, members of the committee. As National Commander of the American Legion, I would feel honored to appear before this committee under any circumstances. I am conscious of a particular honor and pride today, however, for the reason that here in your chamber and through your courtesy, we are marking a memorable event in the history of organized veterans. For the first time, the elected leaders of the major veterans organizations appear before you as a group to present their respective programs for the current legislative year.

I speak for the American Legion. I neither have nor profess the right to represent another organization. But let me assure you, ladies and gentlemen, that the unity expressed by our joint appearance is a unity of fundamentals, not merely of front.

It is because the principle and the entire structure of veterans' services built upon it are in imminent danger of destruction that the American Legion stands side by side with our brother organizations represented here today.

The threat to which I refer is contained in legislation pending or proposed in the report of the Hoover Commission having to do with the Veterans' Administration and the veterans' program. My remarks this morning will be directed solely to that subject.

The American Legion is for real economy in the Government's discharge of the Nation's obligations to its 19,000,000 veterans. The American Legion has always abhorred waste in Government effort. It realizes that improvements can be achieved in the operations of the present Veterans' Administration. But it believes very strongly that such improvements in services and savings in costs can best be made within the existing framework of the Veterans' Administration.

The framework of this agency is sound. It has successfully resisted for years all political pressure and all pork-barrel raids. Today, the VA handling all veteran affairs exclusively, is a one-stop service station for all veterans.

For the stated purpose of promoting greater efficiency and economy in the Veterans' Administration, the Hoover Commission asks that the VA be stripped of the following major functions:

1. Hospital and medical services: Under Hoover Commission plans, these duties would be the part-time concern of a colossal new Federal medical bureau to be called the united medical administration.

2. Hospital construction: The Hoover Commission would farm out this job to the Department of the Interior.

3. Veterans' insurance: Another brand new creation, the Veterans' Insurance Corporation, would inherit all matters pertaining to United States Government and National Service Life Insurance.

4. Home loans: The Hoover Commission believes that the loan guaranty program set up under the GI bill of rights should be relocated somewhere in the Housing and Home Finance Agency.

Other services would be left to the remnants of the Veterans' Administration.

I say to you that these proposals would bring about the dismemberment of the Veterans' Administration and, eventually, of the veterans' program. They would mass produce red tape of such quantity and quality that the intended beneficiaries of legislation generously providad by this committee and the Congress would be denied their rights. The eventual consequence will be that the

veteran will be trimmed but that costs will not.

Let's look at this proposed amputation, limb by limb.

The Veterans' Administration has been 20 years building and refining what is now universally hailed by civilian medical leaders as an outstanding hospital system. Veterans' Administration hospitals and medical personnel are among the finest in America, and they got that way because experience and devoted individuals, in and out of Government, were willing to contribute their time and skills at great personal sacrifice. You are now asked by the Hoover Commission to scrap this system with all of its accumulated advantages and bury it in the new proposed United Medical Administration along with three other adjuncts of Government medicine whose standards are not so high and whose services are not related.

Veterans' Administration hospitals even today cannot accommodate all of the eligible patients. The last Veterans' Administration report shows 20,319 disabled and sick veterans on the waiting list unable to get a hospital bed. This is the situation with only veterans competing for hospitalization. Under the United Medical Administration set-up the veteran would have to compete with the merchant mariner, the civil-service employee, and the personnel of the armed forces and their dependents—and his admission would hinge on the availability of beds not occupied by nonveterans.

The establishment of a new United Medical Administration would involve the creation of thousands of new jobs. It would mean the training of many new officials. It would entail many duplicating functions and, worse still, many specialized functions, with special case files for each of the numerous classes of patients. It would result in more costs, more red tape, and more grief—for the veterans and all other taxpayers.

The Hoover plan would transfer hospital construction from the Veterans' Administration to the Department of the Interior, notwithstanding the fact that the Hoover Commission itself scored that Department for its apparent inability to properly estimate the cost of proposed construction.

On page 6 of its report on the Department of the Interior, it charged that the Department was guilty of inadequate evaluation and underestimation on such vast jobs as the Colorado-Big Thompson project in which its estimate was $44,000,000 and actual cost was $131,800,000. It estimated $6,300,000 as the cost of the Hungry Horse project in Montana which actually cost taxpayers $93,500,000.

I am sure your committee appreciates, as we do, the importance of a close working relationship between the builders and designers of medical structures on the one hand, and those who are responsible for maintenance and additions. Such a relationship now exists within the Veterans' Administration. It would be shattered by the Hoover plan. In the American Legion's judgment, transfer of Veterans' Administration hospital construction to any other Federal agency would bring on serious repercussions—and economy and efficiency would not be among them.

By still another Hoover dismemberment plan, the Veterans' Administration would lose the veterans' insurance business. We are told that a new Federal creature, the Government Insurance Corporation, must be introduced to handle the servicing of some eight million national service life and United States Government insurance policies. We challenge this process on two counts. In the first place, the proposal comes up for action at a time when the peak insurance burden on the Government has long since passed; the VA finally has perfected its insurance operation to the point where the job is now getting done in reasonably good time and order. Secondly, in recommending an insurance corporation, the Hoover Commission turned down the advice of its own task force of experts who investigated this matter. The task force, men who were nearest the problem, reported that shortcomings of the agency should and could be corrected administratively within the VA.

Under the loan guaranty provisions of the GI bill of rights, 1,625,329 young veterans have been enabled to purchase their own homes. There has been only 1.3 percent of defaults among all home loans approved by the Veterans' Administration. If any one phase of the veterans' program were to be singled out as a model of efficiency, loan guaranty would merit priority consideration.

In spite of this record, the Hoover Commission proposes to carve up this smoothly functioning activity by turning over the actual lending operation to another Government agency while leaving the certification for home loans with the Veterans' Administration. The Commission fails to specify what will be done with the two corollary features of the program—farm and business loan guarantees. Apparently the idea is to strip away only the best third of the loan-guaranty operation.

The American Legion condemns this move as violating the principle and jeopardizing the administration of the GI bill. The loan-guaranty program was designed to give preferential treatment to veterans. That objective can be best fulfilled through administration by an agency primarily interested in the welfare of veterans. But the Hoover plan would take the job away from that agency—the Veterans' Administration—and give it to another—the Housing and Home Finance Agency—which provides sundry services for the general population and has no specific interest in veterans.

In addition to dismembering the Veterans' Administration, the effect of the Hoover plan would be to do away with the present system of processing veterans' legislation through the Congress. Many of you will recall that in the early 1920's legislation pertaining to veterans was handled in the House by a number of different committees. It was to relieve the resulting confusion and bottlenecks that the Committee on Veterans' Affairs was created in 1924. Since that time your group has served—and served superbly—as the monitor and author of all the important bills having to do with the veterans' program.

Whether there is an implied criticism of this committee in proposals of the Hoover Commission that would virtually nullify the need for the committee I leave to your judgment. The American Legion believes you have done and are doing a job that is indispensable to the veteran and Congress alike. We want no turning back of the legislative clock that would see veterans' legislation again miscarry for lack of interested and experienced champions.

President Hoover himself in 1929 told the Nation that efficiency, economy, and more uniform administration required consolidation of the three separate agencies then handling veterans' matters. The Congress responded by replacing the Veterans' Bureau, the Pension Bureau, and the National Home for Volunteer Soldiers with the new Veterans' Administration. Now, 20 years later, we are told that for the same reasons of economy and efficiency the VA must be carved up into not just three agencies but five. Was Mr. Hoover wrong in 1929, or is his commission wrong now?

There is absolutely nothing in the Hoover recommendations on veterans' affairs that cannot be accomplished administratively by the Veterans' Administration. There is no existing defect that cannot and should not be corrected within the four walls of the Veterans' Administration. The American Legion is never satisfied with the VA, just as we are never satisfied with the performance of our own rehabilitation forces. We have criticized the Veterans' Administration whenever we believed criticism was warranted, and we will continue to do so. But we do not intend to see real or imagined weaknesses of the agency used as an excuse for destroying the veterans' program.

The Hoover task force on veterans' affairs completely ignored the American Legion in reaching its findings. For 2 years, these people went about their work in offices four doors removed from our headquarters in Washington. Four times we asked to be heard to present the side of the veteran, and the request went unanswered. It might be pertinent to ask of this committee how many of you were invited to give your views on the agency and the program you deal with so effectively from day to day.

The practice of according deserving preferences and services to veterans is as old as America. There are those who contend that the tradition is fictitious—that it came into being as a concession to sentiment and endured only because responsible authorities dared not challenge it.

The members of this committee have reason to resent that charge, as we do. There is just one reason why the veteran over the years has commanded the special attention of his Government, and that is because the American people have always been convinced in their own minds that he is entitled to it. Only once, and then at a time of great stress, have the people speaking through Congress permitted a violation of this trust. In 1933 there was an Economy Act, and veterans' hospitals were purged, compensations whittled, and claims rejected in wholesale lots. Did that Economy Act bring about savings? Sure it did, at the expense of battle casualties and war widows who saw their means of livelihood wiped out even as they were being assured that the law would not touch them.

There are striking similarities between the antiveteran trends in 1933 and in 1950. Then, as now, the movement marched under the holy banner of economy. Then, as now, it attracted the zealous support of a small but well-organized and financially potent group of individuals who were able to give an exaggerated impression of numerical strength. Then, as now, they relied upon the apathy and forgetfulness of the people to put across their grand design.

Mr. Chairman and members of the committee, the Hoover Commissioners have no corner in the economy market. The veteran of this Nation has a very personal interest in economy. He and his family represent approximately one-half of all the taxpayers in the country. To a greater extent than any other group, he feels the high cost of government and wants to bring it down. But he is not going to accept just any road to economy, and he will fight to the finish to forestall an economy move that spells the betrayal of his Government's obligation to his disabled and sick comrades, and the widows and orphans of his fighting friends who did not come back.

As national commander of the American Legion, and as one of the millions who are receiving no benefits, and ask none for themselves, I appeal to you to help the American Legion win this fight by defeating the Hoover Commission legislation that comes up for consideration by your committee. And may I say in conclusion that the American Legion is proud to close ranks with the Veterans of Foreign Wars, the Disabled American Veterans, and AMVETS, in a united effort to protect, for those who are unable to speak for themselves, the benefits and rights provided by a grateful people.

Basing-Point Bill, S. 1008, Makes for Higher Prices in West and South—Eminent Northwest Educator Urges Defeat of S. 1008—West Subjected to Price Discrimination Through Operation of Basing-Point System

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1950

Mr. PATMAN. Mr. Speaker, Prof. Vernon A. Mund, of the department of economics, University of Washington, has forwarded me a copy of the letter which he wrote to one of his colleagues at Washington State College, Pullman, Wash. Dr. Mund pointed out that S. 1008 was due for consideration on January 20, and, in the interests of the West, should be defeated. He said:

I am convinced that, if this bill * * * becomes law, it will prove injurious to the economic freedom of the West and South.

NOTED STUDENT OF PRICING SYSTEMS

Dr. Mund is known throughout the country as an authority on artificial pricing systems and has often given testimony to congressional committees on the economics of such systems. Dr. Mund's opinion is worthy of consideration by all Members of Congress from the West and far West who have any lingering doubt as to what should be the fate of S. 1008. Dr. Mund thinks the bill should be killed, and in that thought I am happy to say he is joined by many Members of the Congress. Dr. Mund's letter, in part, follows:

In my own opinion, basing-point and zone-delivered pricing systems operate not only to eliminate price competition, but also to prevent a decentralization of industry. The use of an eastern base price makes for high-cost prices in the West and South and discourages the development of local fabricating industries. Local fabricators which do develop, moreover, cannot ship eastward to any significant extent in competition with fabricators located near an eastern basing point, for the delivered costs of their basic supplies are higher.

When basic products (such as aluminum) are produced in the West and South and sold "freight allowed," the development of local fabricators is likewise restricted. Local prices are high—as high as elsewhere in the country—and fabricators find no cost advantage in building plants near the sources of supply. The sale of fabricated products (such as copper wire, cable, and tubing) by eastern mills at freight-allowed prices (based upon an average freight item) also serves to discourage the development of distant fabricators, for the established mills, in effect, are able to dump into the distant areas by absorbing some or all of the freight—at the expense of their nearby customers.

Congressional leaders who are actively opposing S. 1008 include Senators PAUL DOUGLAS, ESTES KEFAUVER, WAYNE MORSE, WILLIAM LANGER, RUSSELL B. LONG, and Congressman WRIGHT PATMAN. I am sure that each of these men would appreciate any word of encouragement which you might give them before January 20.

Our Nation's Capital, Washington, D. C.

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. TEAGUE. Mr. Speaker, Americans can be justly proud of the beauty and simplicity of Washington, D. C., and my wish is that all of our citizens could visit here.

Holiday magazine has devoted its February issue to pictures and articles on Washington and the following article was written by Walter Winchell which has emphasized the fact that Washington belongs to all Americans and is not just the city of its residents.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include Mr. Winchell's statement as it appeared in the Washington Post on January 18, 1950:

WASHINGTON—A TALE OF THREE CITIES

(By Walter Winchell)

All solid objects including cities have three dimensions, except Washington, D. C., which has four. The extra one is in time. Washington, D. C., is a city located in the middle of twentieth-century history at the exact center of its political forces. Nothing in the twentieth-century world can be done without a calculation of its effect on Washington; and very few things are done in Washington without careful appraisal of the effect on the rest of the world. Washington is really three cities: Washington the world capital; Washington the capital of the United States; and Washington the city of nearly a million people solely engaged in the serious business of government and who, ironically, have no vote.

This, in itself, is unusual, but not for Washington. Washington as the queen city of the complex twentieth century is also the king city of all of its paradoxes. Among the first is its politics. In Washington, politics is the fascinating way of life for the lucky unlucky few. They are lucky in that their slightest whim is reflected in the lives of millions of people, and that fame and glory necessarily attach to persons who wield that much power. They are unlucky in that the price of making history is to be broken by it. The higher the pinnacle, the greater the blast and the less the shelter. The ascent is incredibly difficult and the descent impossibly dangerous; but, paradoxically, the lure is irresistible. For every broken man carried down the slope there are a hundred pressing upward under the magnificent illusion that fate deals in names and not in numbers.

Washington, primarily, is the capital of the United States of America—a fact which is more often overlooked than not. Washington's politics is to the United States Government what a steering wheel is to an automobile. It gives direction, but the power and the strength are below in the engine. The engine of government carries on 99 percent of the work through anonymous assistants—the Government people—mostly career people—who know and live with the job below the whirlpool of politics. This is merely saying the obvious: that for every Postmaster General there are tens of thousands of postmen who deliver the mail; for every Surgeon General there are thousands of nurses caring for the sick; and for every conservation commissioner there are hundreds of fire wardens patrolling the forest trails.

Thus, paradoxically again, Washington, the seat of government, is only the headquarters of the work. Washington is present in every county in the United States and in every country abroad through its field men. Washington in the real sense, is everywhere. Indeed, it is a twentieth century miracle that you can summon Washington to your doorstep with a 3-cent stamp. Practically all of the experience of civilized man is at your beck and call upon inquiry to the United States Information Service. It will tell you anything and everything, from how to feed the baby to how to kill a Japanese beetle. Indeed, if their only signature for the ages were the Library of Congress, it alone would establish the timeless greatness of the American people.

But it is the far-flung Washington field men who are the immediate and effective Government of the United States. Washington radiates government authority and the delegation of power starts with the push buttons on the secretary's desk. It is axiomatic to those who know Washington that the Secretary's secretaries run the Department; but it is also axiomatic that it is the man in the field who finds the facts which control the decisions of the secretaries. The capillaries, paradoxically, control the action of the heart.

Washington's work is all-pervasive almost beyond the belief of the average citizen. There is no function of our national existence—from the lonely blinking lights off the Florida Keys to the signal towers of the Alaska Railroad—whose operations are not the responsibility of some unknown but very responsible person in the Nation's Capital. Tens of thousands of faithful, anonymous people give the civil services the same selfless devotion that the flag receives from the armed ones. Their work varies all the way from testing steel to producing antidotes for snake venom. Their heartbreaking role is that their effectiveness is taken for granted. They are noticed only when and if their service fails to function.

Government people, as distinguished from the politicians, also are part of the Washington paradox. Battle fleets are commanded by underpaid admirals who wait in line for the street car; billions are expended by men who return home at night to worry about sending their children to college on a salary of $8,000 a year. Yet few would leave willingly the bleak bridge of the ship of state for the comparatively comfortable quarters—and minor importance—of private business.

American Government is a study in reflex. Washington has a great effect on the Nation, but not nearly the effect that the Nation has on Washington. Washington governs America, but America governs Washington.

Washington as a city is famous for its physical beauty. But the historians, probably more than the architects, will record its broad approaches, great avenues, grand vistas, and magnificent perspectives. Because no less than that describes their mighty Capital at Washington, D. C., it also describes the mind, the spirit, and the heart of the American people.

Address by Hon. Edward Martin, of Pennsylvania, at Dedication of the Mellon Dormitory, Washington and Jefferson College

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Friday, January 20 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered at the dedication of the Mellon Dormitory at Washington and Jefferson College, Washington, Pa., on October 29, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The beautiful dormitory we dedicate today stands as a memorial to the honorable career and distinguished achievements of a great American, an alumnus of Washington and Jefferson College, James Ross Mellon.

It is a tribute of honor and respect from his son, William Larimer Mellon, who, with his wife, May Taylor Mellon, 10 years ago, established a foundation for the advancement of religious, charitable, scientific, and educational purposes.

We are saddened that William Larimer Mellon is not with us today to participate in these ceremonies. His death 3 weeks ago today brought to a close a life of brilliant accomplishment in many fields of endeavor.

William L. Mellon was a kindly man, retiring and soft-spoken. One of his outstanding qualities was modesty. He avoided the limelight. All forms of personal publicity were distasteful to him.

He could have chosen an easy way of life. His tastes were simple and his needs were modest. He did not have to work and search for riches.

But he was not of that stock. He wanted to create and to build.

He plunged into business and industry. He took great financial risks in his commercial ventures. He created jobs for men and women in many parts of the world. Success rewarded his vision, energy, and enterprise.

His business interests expanded tremendously but his real greatness is revealed by the fact that in the midst of his busy life he found time for active participation in his church and in government. He took part in politics but never sought his own advancement.

He wanted to build a better and more prosperous, stronger America.

W. L., as he was known to his intimate friends, wanted to help his fellow man. His contributions to churches, schools, hospitals, and for charitable purposes were generous and without ostentation.

W. L. Mellon was of the third generation of the Mellon family in America. The Mellon family name is associated with the progress and development of southwestern Pennsylvania. It is symbolic of the industrial and financial strength of our Commonwealth.

The story of the Mellon economic empire is most fascinating. Thomas Mellon, or Judge Mellon, the founder, was a poor immigrant from Ireland. Without social or economic background he brought assets of great value to America. He brought courage, the will to work, honesty, integrity, and strength of character. He cherished the principles of America—individual freedom and opportunity.

The same fine American characteristics descended to his four sons.

With the growth of the Mellon industrial and banking interests the gifts, endowments, and foundations of the Mellon family for the public benefit grew correspondingly.

They included such noble benefactions as the Mellon Institute, the site where the Cathedral of Learning now stands, the National Gallery of Art, located in the Nation's Capital, the School of Public Health of the University of Pittsburgh, the Graduate School of Industrial Administration at Carnegie Tech and many others well known to this audience.

Today the honorable traditions and the responsibilities of the Mellon family are carried forward by Gen. Richard K. Mellon, able and public-spirited son of R. B. Mellon.

Like the Mellons, other individuals and families have used accumulated wealth for the benefit of their fellow man. They have established industries, churches, hospitals, and colleges. They have created foundations for scientific and medical research.

This giving accumulated wealth for public service has been a mightly stimulant to American culture and the national welfare.

The roll of public benefactors includes the names of Peter Cooper, Johns Hopkins, United States Senator Leland Stanford, Andrew Carnegie, Julius Rosenwald, Henry C. Frick, Russell Sage, and George Eastman.

The great gifts of John D. Rockefeller have totaled over $500,000,000.

Others on the long and impressive list are Charles Hayden, James B. Duke, Mrs. Edward Bok, Augustus D. Julliard, United States Senator James Couzens, and Edsel Ford.

Here in Pennsylvania two great schools for the education of orphan boys were established by Stephen Girard and Milton S. Hershey.

Other Pennsylvania foundations bear the names of Falk, Buhl, and Drexel.

There are hundreds of others who have followed the road marked by the creators of these institutions and foundations.

During one 10-year period 100 foundations in the United States spent $500,000,000 for the public benefit in these seven classifications:

Education, two hundred and twenty-three millions.

Health, one hundred and seventy-two millions.

Social welfare, seventy-five millions.

Recreation, nine millions.

Internal relations, eight millions.

Religion, seven million, five hundred thousand.

Law and government, seven millions.

This does not include money spent for missionary and similar work.

No other country in the world has established such a magnificent record.

What made it possible?

As measured by the hourglass of nations, it is only a short time since the Western Hemisphere was discovered.

Its two continents were developed by groups having opposite objectives. To South America came men in search of gold. North America was settled by men seeking God.

That is the reason why material progress in our country has so far outstripped that of the South American countries.

Here God-fearing men established a form of government based on the theory that all men are endowed by their Creator with certain unalienable rights—and among these are life, liberty, and the pursuit of happiness.

They established an economic plan based on the theory that men must be free to own property and to have the reward of their own courage, initiative, and resourcefulness.

That freedom of economy, together with the other freedoms enjoyed by them, has built the greatest empire of agriculture, transportation, and industry of all history. It has given the people of the United States the highest living standard of all times. In addition, the people have enjoyed great culture and high spiritual attainments.

Other nations have had greater population and more of the world's natural resources. Although we have only 7 percent of the world's population, and occupy only 6 percent of the world's land area, we produce more than one-third of the world's goods.

What do we possess that the others do not have?

Just one thing—freedom of the individual.

As a result of our God-given freedoms we have more automobiles, more radios, more telephones, more newspapers, more colleges, more foundations, more life-insurance policies, more savings accounts, more homes, and more churches than any country in the history of the world.

In our free economy, many men of humble origin have become leaders in the professions, science, in commerce, and industrial development. The great endowments and foundations I have discussed were established with the accumulated wealth of such men.

These foundations offer a great and lasting argument for the incentive, capitalistic or free enterprise system of our country. That is a system built upon the solid rock, the firm foundation of free men and free women working in freedom.

They demonstrate clearly that free men will carry out the impulses of human brotherhood so much better than it can be done by government.

The gift of this beautiful dormitory to Washington and Jefferson College is representative of such an impulse.

It honors the memory of a private citizen—but also it is a monument to the system of free government and opportunity that made it possible.

The same system created and sustained nearly all the liberal arts colleges.

They have done an outstanding job in developing leadership in this country. They trained the men who founded this Republic. Their sons and daughters have developed the culture, the science, the philosophy, and the religious thinking of this Nation.

Their curricula have been broad. They have tried to teach men to think straight and analytically rather than along the lines of political doctrine or to dream of economic utopias.

They have given us great military, political, industrial, educational, and religious leaders. They have kept the lamps of learning lighted. They have done all this, however, without any agency of Government or any commissar of education, directing the way in which our leadership must be trained.

The small colleges of Pennsylvania have kept their doors open to students of all faiths and creeds, and all races. Upon them largely depends the tolerance of our people and the respect that is due every religion and every form of worship.

These small colleges are the guardians of the religious tradition in education. For generations they have combined mental and moral training.

They must have freedom in their cultural, academic and spiritual policies. The standards of the faculty and the quality of the student body must be judged by the institutions themselves. We must not receive young men and women without the mental and spiritual qualifications needed to make them worthy of the great history of our small colleges. There is no room for any student or faculty member who lacks spiritual interest or concern for the ideals of our country.

I am proud of Washington and Jefferson. It is a free institution. It has never accepted Government help. It teaches freedom, tolerance, and patriotic Americanism. We must keep it that way.

Yes, we must keep all our colleges free, uncontrolled, and unregimented. We must protect the American system of education

from the dangers which have arisen in recent years.

First, there is the trend toward Government control of education to be enforced by so-called Federal aid. That eventually would mean bureaucratic dictatorship of educational policies.

Should our schools and colleges ever come to depend upon the Federal Government for their support, academic freedom would be destroyed.

When Washington dictates what our schools shall teach, the foundations of American freedom will have been shaken.

Just as we hold sacred the principles of religious liberty, so must we be vigilant in the cause of educational freedom.

The second danger grows out of excessive taxation and the vastly increased cost of government.

Twenty years ago the Federal Government was operated at a cost of less than $4,000,000,000 a year.

This year Congress passed appropriation bills totaling almost forty-six and one-half billions—and contract authorizations for four and one-half billion more—making a total spending program of nearly $51,000,000,000.

This is frightening, but if the new and expanded spending proposals now before Congress are enacted, the cost of Federal Government will skyrocket to double that figure.

Today approximately 30 percent of all the earnings of the worker and the farmer is collected in taxes to support all levels of government.

If that drain upon the national income continues it will be impossible for any individual or any family to accumulate the wealth necessary to establish endowments and foundations such as have been created in the past.

Unless the present trend of reckless and unlimited spending by government is checked, we will soon dry up the sources of voluntary contributions needed for the support of our colleges.

It will force many of our colleges to close their doors. The others will become dependent upon financial aid from the Government. When that day comes, the American educational system, as we have known it, will be a thing of the past.

That is why I urge you to follow the example of W. L. Mellon in personal and active interest in the affairs of government.

A great educator and a great President, Woodrow Wilson, summed up his educational philosophy in these words, and I quote:

"No more vital truth was ever uttered than that freedom and free institutions cannot long be maintained by any people who do not understand the nature of their own government."

That is the end of the quotation.

Woodrow Wilson's words are a clear warning that unless we fully understand the nature of our Government we cannot maintain freedom and the free institutions of which our small colleges are such an important part.

Our system of free enterprise laid the foundations of our colleges at a time when the state did not concern itself with education. That system created those other great foundations for the improvement of health, morals, culture, and human welfare that exist in America.

It was that system of free enterprise that made it possible for our missionaries, both spiritual and medical, to go into all parts of the earth and teach the great underlying principles of religion and our American way of life.

The free-enterprise system made it possible to operate the millions of American farms by machinery and probably did more to drive famine from the world than any other thing under the sun.

Without that system the small colleges of the Nation cannot endure.

I am hopeful that the colleges of America will teach young men and women how to think and how to live.

I hope the students will acquire a proud knowledge of our form of government, its traditions, and its freedoms.

I hope they may come to revere the great men and women—church leaders, soldiers, statesmen, industrialists, educators, legislators, and craftsmen—the Americans who have made this country a great Nation.

I hope they may be so trained that they may teach others how to use the instruments created by our scientists and technicians for human progress, and not misuse them against mankind.

Above everything else, religious culture must be emphasized.

In this country our form of government is one of laws and not of men. Government by men is maintained by force and fear. Government by law is by independence and a willingness to live as free men, just as righteous men ought to live.

Here in America the object of education should be to fit our people for good citizenship and God-fearing lives. That objective is the special responsibility of the colleges of America.

We thank God for the small college, for America, and for men like W. L. Mellon, who have helped so much in building our great Republic.

Governor Driscoll, of New Jersey

EXTENSION OF REMARKS
OF
HON. ROBERT C. HENDRICKSON
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, January 20 (legislative day of Wednesday, January 4), 1950

Mr. HENDRICKSON. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial concerning the record of accomplishment of Governor Driscoll, of New Jersey, published in the Newark (N. J.) Star-Ledger of Wednesday, January 18, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SUBSTANCE IS THERE

Governor Driscoll appeared for his first inauguration 3 years ago as a new figure in the affairs of the State—a young man who was neither a machine creature nor a flamboyant crusader, but a thoughtful citizen who had learned the art of government in his home town, in the legislature and in an exacting administrative post as head of the alcoholic beverage department. He aroused high hopes 3 years ago, but there was also apprehension among his friends that he might prove too idealistic and inflexible to cope successfully with the tough and unyielding men and conditions that constitute the political scene in New Jersey.

The same man was inaugurated a second time as governor yesterday. That in itself was an eloquent commentary on the fact that he had met the tough men and the tough conditions and, in his own way, had managed to live with them and influence them for the better.

The fact of his second inauguration in itself reflects the story of a remarkable peaceful revolution in the very climate of government in this State—a revolution that swept away an obsolete, cumbersome form of government and paved the way for the sensational demise of the Hague machine in Hudson County.

In his address to the legislature yesterday the Governor could speak with the conviction and authority of one who had already simplified many a complexity. He took the long and broad view of government, calling attention to its failure to keep abreast of the sweeping industrial and social changes of the age and demanding that the present hodge-podge of confusion and costly overlapping among Federal, State, and local governments be rationalized in order to bring government close to the people.

While his message dealt primarily with the wisdom of providing the State with a clearly defined field in relation to the Federal Government, the Governor's philosophy of a federalism resting upon a maximum of local self-government and effective State government received its most cogent expression.

In an age when the doctrine of "one world" is receiving increasing consideration, the need for rationalizing big government along with bigness in industry, business, and labor becomes imperative and even desperate. Thus, the man who strongly urges that the Federal Government, in order to make itself more effective as a world leader, divest itself of those functions that properly belong to the States, also emphasizes the urgent necessity of municipal reform, in order that our cities may play their full role in making sense and order out of the enormous complexities of modern life.

The Driscoll viewpoint on government, a viewpoint that is definitely his contribution to our political thinking, has yet to be marked by the fighting, or the alluring, or the sensational phrase. Nothing quite so brief and easily remembered as New Deal or Fair Deal or private enterprise or good old days is available as the label of the Driscoll philosophy. But the substance of a new political movement is decidedly present.

Here is a man who is skeptical of all ideologies, firmly devoted to religious value and civil liberties, rooted in experience with local and neighborhood problems and profoundly aware of the flow of history. On the basis of successful performance in State government and his contribution to political thought, he has clearly earned a high place in the national councils of his party.

Since Governor Dewey's rise to the national scene in 1936, Governor Driscoll is the first Republican personality to offer successful experience in government administration as well as political achievement; and he is the only one among newer Republican personalities to offer a solution to our towering national problems of Government that is not rooted in obsolete controversies.

It is not with relation to 1952 that we point to Governor Driscoll's place in the national scene. It is 1950 that must pave the way for 1952, and the thinking for 1952 must be done now.

Address by Hon. Edward Martin, of Pennsylvania, at 1949 Campaign Dinner of the Republican City Committee of Philadelphia

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, January 20 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an address I delivered at the 1949 campaign dinner of the Republican City Committee of Philadelphia, at the Bellevue-Stratford Hotel, Philadelphia, October 28, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

President Truman thinks you are not paying enough income tax.

In fact he thinks the Federal Government is not spending enough of your money.

He wants to reach deeper and deeper into your pocket. He wants to take another chunk out of the pay envelope of every wage earner in America.

That's what Harry Truman meant last week when he announced that at the next session of Congress he will demand an increase in Federal taxes.

Does that make sense to you?

Can you swallow that without choking?

For the current fiscal year which began July 1 the Democrats in control at Washington appropriated and authorized the spending of nearly $50,000,000,000.

That is $350 for every man, woman, and child in the United States or $1,400 for the average family of four.

Of course the Federal revenue will not reach $50,000,000,000. It will fall short by twelve or thirteen billions.

But that doesn't worry Harry Truman and his spendthrift crew.

Oh, no. They just climb on the merry-go-round of deficit financing and the national debt—now more than a quarter trillion dollars—is pushed up, higher and higher.

Never in the history of our Republic have we traveled at such a dizzy pace around the vicious circle of more spending, more taxes, more debt, more spending, more taxes, and more debt.

Around and around it goes and where it stops nobody knows.

And there's no end in sight while the Democratic squander crowd remains in power.

The only solution they offer for any problem is more and more spending—not in millions but in billions.

If all the schemes now before Congress, and all the proposed experiments in socialism are enacted, the cost of Federal Government will eventually skyrocket up to $100,000,000,000 a year.

President Truman's own economic adviser, Dr. Edwin G. Nourse, couldn't take that. He fought a losing battle for sound common sense and when he resigned the other day he gave blunt warning that the administration's "monetary and fiscal tricks have no power of magic but are a slippery road to misery."

Keep that in mind—a slippery road to misery.

President Truman's demand for higher taxes is further convincing evidence that he has no intention whatsoever of curtailing the waste and extravagance that have led us into a deficit which may reach seven or eight billion dollars this year.

But he had an alibi ready. He blamed it all on the tax cuts made by the Republican Eightieth Congress. He called it a rich man's tax-reduction bill.

That is a typical example of the reckless and irresponsible statements to which Harry Truman resorts to cover up the real facts.

In Washington we have to fight continuously against such false and misleading statements at the national level.

I notice that in this campaign you have the same kind of fight at the local level.

It seems that the whole philosophy of the Democratic Party, from top to bottom, is based on loose, reckless, and irresponsible statements.

Let me illustrate.

When President Truman called the tax-reduction bill enacted by the Eightieth Congress a rich man's bill it was another move in his campaign to array one class of Americans against another.

He conveniently forgot that 71 percent of the four billion eight hundred million tax reduction went to people with incomes of less than $5,000 a year.

He conveniently overlooked the fact that more than 7,000,000 people in the lowest-income brackets were removed entirely from the Federal income-tax rolls.

Let me give you another illustration of the loose talk down in Washington that is being echoed here in Philadelphia.

The Democratic leadership, and that includes President Truman, have been talking about civil rights. They have promised all kinds of legislation for the protection of minority groups.

Now the Democrats had majorities in the Senate and in the House of Representatives. They packed the committees and had absolute control of the Eighty-first Congress.

But in all the 9½ months that this Democratic Congress was in session not one civil-rights bill was enacted into law.

The only civil-rights bill that was reported on the calendar of the Senate was an anti-lynching bill introduced by a Republican, Senator FERGUSON, of Michigan.

That bill was on the calendar for 4 months, but the Democratic leadership in the Senate refused to bring it up for action.

There was plenty of double talk, but not a single civil-rights promise was fulfilled.

The Republican Party may have its faults but it keeps its promises.

Don't let anyone tell you that your local election has nothing to do with national issues.

If we are to return to sane, sound, economical, constitutional government it must begin back here at home.

It must be built from the ground up, it cannot start at the top.

We hear a lot about getting down to the grass roots. In politics that means getting out in the field and digging for votes.

Here in Philadelphia you have a golden opportunity to make your Republicanism count.

You have nominated the finest candidates ever offered by any party anywhere in the United States.

They are men of outstanding ability, upright character—and unquestioned integrity.

Every public-spirited citizen can support your candidates with pride and complete confidence that they will give the people of Philadelphia distinguished service in their respective offices.

Remember that this election is the forerunner of 1950 and 1952.

Therefore, I say that any Republican who fails to give this splendid ticket his active and wholehearted support is guilty of a disservice, not only to the city of Philadelphia, but also to the State and Nation.

Legislative Program, Veterans of Foreign Wars

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. RANKIN. Mr. Speaker, on Tuesday of this week, Commander in Chief Clyde A. Lewis, and other officials of the Veterans of Foreign Wars, appeared before the Committee on Veterans' Affairs, of which I am chairman, to present that organization's legislative program.

Under permission granted me to extend my remarks in the RECORD, I am including the very fine statement made by Commander Lewis to the committee on that occasion.

Mr. Lewis' statement follows:

STATEMENT OF CLYDE A. LEWIS, COMMANDER IN CHIEF, VETERANS OF FOREIGN WARS OF THE UNITED STATES, IN REGARD TO THE VFW LEGISLATIVE PROGRAM, BEFORE THE HOUSE COMMITTEE ON VETERANS' AFFAIRS

Mr. Chairman and members of the committee, I am grateful for this opportunity to appear before your committee and discuss briefly some highlights of the legislative program of the Veterans of Foreign Wars. I have spent most of my time since my election traveling throughout the East, Middle West, and the South. In a few days I plan to be in California for a series of visits in that State, as well as in Oregon and Washington.

I can think of no congressional committee more important to our veterans and their dependents than your Committee on Veterans Affairs. The congressional reorganization plan, which consolidated jurisdiction of all House veteran bills in this one committee, had the full support of the Veterans of Foreign Wars. This committee, originally designated as the World War Veterans Committee, has had a long and constructive history. Your distinguished chairman has served with the committee since its inception, and others of you have been on it for many years. We are proud of the fact that one of our past commanders in chief, Gen. PAT KEARNEY, is now an old-timer on your committee, and another past commander, Capt. JAMES E. VAN ZANDT, rendered long and valuable service before moving to Armed Services. Notwithstanding the changing make-up over the years, the traditions and policy of the committee have remained steadfast. In good and bad times we have always been able to count on this committee to give every reasonable consideration to the needs of our veterans and their dependents.

I have with me today three of the ablest members of our staff who are outstanding in their field. I refer to Mr. Omar B. Ketchum, director of the national legislative service; Col. George E. Ijams, director of the national rehabilitation service; and Admiral Leland Lovett, director of public relations. I am sure they are well known to you.

The Veterans of Foreign Wars today consist of more than 1,100,000 men who have served on foreign soil or in hostile waters in the United States armed forces during some war, campaign, or expedition in which the United States has been engaged and for which a service or campaign medal or ribbon has been authorized. Of our membership, approximately 1,000,000 are overseas veterans of World War II.

The current legislative program of the Veterans of Foreign Wars is a broad and comprehensive one. Although the objectives to which I respectfully invite your attention this morning concern the welfare of our veterans and the widows and orphans of deceased veterans, they are by no means the complete program adopted by our Golden Jubilee Convention held in Miami, Fla., in August 1949. The delegates at that convention, representing 10,000 posts throughout the Nation and beyond the seas—a true cross-section of American life—were also concerned with the problems of national security, housing, foreign affairs, employment, the welfare of our armed services, our national economy, and the fight against the evil of communism.

In keeping with the program for this meeting I shall confine my remarks to a few of the highlights of our legislative program. A detailed outline of all of our objectives which come before this committee will be offered for insertion in the record by our legislative director. Subsequent meetings of your committee will provide an opportunity for full discussion of bills under consideration.

SERVICE PENSION

Before discussing other important points in our legislative program, I would like to commend your committee for its sincere and painstaking consideration of the pension program during the first session of this Congress. While the bill, H. R. 4617, which this committee approved and which passed the House on June 1, 1949, falls short of the VFW objective for a uniform pension for all war veterans—similar to the pensions authorized for veterans of the Spanish-American and previous wars; nevertheless, the bill represents a decided step forward. Despite the President's attempt, in his recent Budget Message, to sound a cataclysmic note at the prospect of future expenditures in behalf of our Nation's veterans, we shall not be deterred in our efforts to achieve a sound and equitable pension program. We believe that our old and crippled veterans are entitled to special consideration—at least equal consideration with our European neighbors.

In our pledge to continue the fight for enactment of the pension bill, H. R. 4617, we voice our opposition to the President's stand, as intimated in his budget message, that the pension bill represents an "overlapping and unwarranted * * * special benefit for veterans. The issue is clear and the battle lines are drawn. We shall not waver from our announced purpose that the traditional pension for our Nation's war veterans must be extended to the veterans of World Wars I and II.

COST-OF-LIVING INCREASE IN DISABILITY COMPENSATION AND PENSION

Our organization strongly favors an increase in disability compensation and pensions payable pursuant to laws administered by the Veterans' Administration. The Congress has been generous in the past in the matter of adjusting these rates, but unfortunately it has not kept pace with the rise in the cost of living.

In 1939 a veteran totally disabled, service-connected, received $100 per month. Today he receives $150 per month. It is more dollars but less purchasing power than in 1939. To provide a purchasing power equal to 1939 dollars, the compensation for total disability should be not less than $160. We are recommending an increase which would bring the rate for a 100-percent disabled veteran, service-connected, to $172. It is our hope that some day the Congress will put the totally disabled veteran on a standard of living comparable to that enjoyed by the citizen making an average wage in industry.

REVISION OF INCOME LIMITATIONS

The Members who served on the committee in the Eightieth Congress recall the extensive hearings devoted to this question.

Existing income limitations governing eligibility for veterans' part III non-service-connected disability pension and the widows' non-service-connected death pension are $1,000 where the veteran of the widow has no dependents, and $2,500 where the widow or veteran has dependents. These income limitations were written into the law in 1934 and the figures applied were those used for personal exemption for income-tax purposes.

Fifteen years have elapsed since the fixing of these limitations and for the past several years they have become arbitrary and lost their meaning. We believe, as this committee did in 1948, that these figures should be increased in order for the law governing eligibility for these pensions to have the same meaning that they had in 1934. We ask this committee to again consider this matter and to increase the limitations to $2,000 for the veteran and widow without dependents and $3,000 for the veteran and widow with dependents.

ADJUSTED SERVICE COMPENSATION

Since the close of World War II the national encampments of the Veterans of Foreign Wars have adopted resolutions calling upon the Congress to enact adjusted service compensation legislation which would tend to alleviate the economic disparity as between the young man who spent the war years in the military services and the young man who remained at home as part of the civilian war effort. Such legislation, in the form of readjustment insurance, was introduced in the Eightieth Congress and again in this Congress by your chairman as H. R. 914, at the request of our organization.

This legislation would place the veteran who, because of age, family commitments, or economic reasons, was unable to participate substantially in any of the benefits of the GI bill of rights, on a par with the veteran who did fully participate in the benefits of that bill. We do not believe, for example, that the veteran who had to go out and make a living for his family should be denied a benefit comparable to those received by veterans drawing readjustment allowances or who were able to go to school for several years. Accordingly, in this legislation we have suggested that the Congress deduct from adjusted compensation the tangible monetary benefits received by any veteran through the operation of the GI bill of rights.

INSURANCE

Twelve resolutions were adopted by our recent national encampment calling for certain amendments to the National Service Life Insurance Act so as to encourage more veterans to retain their policies and to facilitate reinstatement for those who have permitted their policies to lapse. Many of these resolutions are embodied in the bill H. R. 5574, introduced by the chairman at the request of the four major veterans' organizations. We are hopeful that the committee will hold hearings on this important bill in the very near future.

VETERANS' HOSPITAL PROGRAM

More than a year has elapsed since the promulgation of Executive order which reduced the VA hospital-construction program by approximately 16,000 beds. At that time we were shocked that the President, pursuant to recommendations of the Bureau of the Budget, acted so summarily without soliciting the advice of the Congress which had authorized this construction program.

We continue to insist that the President was poorly advised; and since then we have been supported in our contentions by action of the Congress in the independent offices appropriation bill for 1950, which continued the authorization of $237,000,000 for the projects which were ordered curtailed.

Your committee, rising to the occasion, reported favorably the bill H. R. 5965, which directs the Administrator for Veterans' Affairs to proceed with the construction of additional facilities to provide 16,000 more hospital beds. We are hopeful the Congress will enact this legislation before adjournment.

Distressing as was the action of the President in reducing the hospital-construction program, there is an even more dangerous threat to deprive thousands of veterans of an entitlement to hospitalization which was granted by the Congress many years ago. One of the proposals of the so-called Hoover report on Government reorganization would, if approved, sound the death knell of the veterans' hospital program.

The particular recommendation to which I refer is that which would transfer all the medical functions and hospital services, including VA hospitals, to a united medical administration operating directly under the President. There is much more than meets the eye in this proposal. Disguised with a veil of economy, the recommendation, if carried out, would mean the end of the veterans' medical and hospital program as we have known it for the past 25 years. And there is no assurance that economy and efficiency would result in such a consolidated medical set-up.

The Veterans of Foreign Wars of the United States will fight to the utmost against such a reorganization plan. We remember only too well the almost tragic consequences of a generation ago when treatment and hospitalization for the disabled veteran was identified with an other Federal medical agency. The Congress, after an exhaustive survey by a special commission, then created a distinct and identifiable veterans' hospital program in the Veterans' Administration, and we pray that our friends on this committee and in the Congress will join us to defeat this particular recommendation of the Hoover Commission.

In closing, let me again thank you for your courtesy in permitting me to appear before your committee and I will now yield to Legislative Director Ketchum, who will conclude our presentation.

Oscar Chapman, Secretary of the Interior

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, January 20 (legislative day of Wednesday, January 4), 1950

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article about the new Secretary of the Interior, Oscar Chapman. The article appeared in the Sunday Denver Post of January 8.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHAPMAN CAPS NOTABLE CAREER—NEW INTERIOR CHIEF RATED LIBERAL, CONSERVATIONIST

(By Barnet Nover)

WASHINGTON.—Oscar Littleton Chapman, Secretary of the Interior, is a modest man with a ready smile, a serene disposition, and a great capacity for friendship. Temperamentally, he is the exact opposite of the rambunctious Honest Harold Ickes, the self-styled old curmudgeon, under whom he served ably, amicably, and self-effacing, for more than 12 tempestuous years.

Indeed, Chapman is the only top-flight official of the Interior Department who had come in with Ickes in 1933 and was still around when Ickes made his sulfurous exit early in 1946.

That fact is proof of Chapman's capacity to get along with people, his skill in avoiding those fierce jealousies and that intense struggle for power and place which tend to make Washington the graveyard of many of man's ambitions.

A CONSISTENT CAREER

Survival is, of course, no virtue in itself. Otherwise, the galapago turtle, which reckons its life span in centuries, would have to be admired as the noblest of animals.

The fact that, first as Assistant Secretary, later as Undersecretary, and now as Secretary of the Interior, Chapman has broken all

records for continuous service at the little Cabinet and Cabinet level is not in itself of great significance.

What is significant is that Chapman's long tenure in the Government, all of it in the same department, forms an amazingly coherent pattern that is consistent within itself and consistent, as well, with the social-minded philosophy that has dominated his life and thought since his very early years.

The only time I ever saw Chapman display anything resembling a touch of temper—and I have known him for well over a decade—was when I sought his reaction to the charge made in a magazine that, while outwardly a liberal, he is actually only a coldly calculating careerist who has always trimmed his sails to the winds of political expediency and his own high-flung ambitions.

RECORD OF LOYALTY

Chapman dismissed that charge with asperity.

"I haven't the slightest interest in politics," he told me. "I have never wanted to run for any office and do not intend to."

To those who have watched Chapman's career in the Government closely this fact is certainly clear: He did not seek the job which, back in 1933, first brought him into the national picture. Nor is there the slightest shred of evidence to suggest that he ever participated in any intrigue to advance himself. The truth is he leaned backward to avoid it.

He was passed over in 1935 when the post of Under Secretary of the Interior was created; it went to Charles West. He was regularly passed over whenever that post became vacant, as it did no fewer than five times in the course of the last 10 years of Ickes' stay in office.

But while under secretaries and first assistant secretaries came and went, Chapman stayed on, loyally cooperating with them all and giving no indication that he was anything but happy to remain just where he was and continue doing the job he was doing.

Chapman's ambition has never been either in the direction of piling up a fortune or of scaling the dizzy political heights that lead to the pinnacles of power.

Had wealth been his goal, he would have retired from the Government long ago; indeed, he would probably never have gone into the Government in the first place.

The offer of an assistant secretaryship of the Interior came to Chapman not through his direct seeking but as a result of fortuitous circumstances and at a time when he was in a position to earn more money in private life than he had ever earned before.

He and the late Edward P. Costigan, whose successful campaign for the United States Senate in 1930 he had managed, went to Albany after the election of 1932 to discuss with President-elect Franklin D. Roosevelt certain problems of legislation that were due to come up when the new Congress met in March 1933.

It was the first time Chapman had ever met Roosevelt.

"Ed," said Roosevelt to Costigan when the conference ended, "I want to keep this young man in Washington. He is the kind of man we want in the Government."

CHANCE TAKES A HAND

At that time Chapman had no thought of entering the Government. His plans were to return to Denver and run Costigan's law office while the latter served in the Senate.

Roosevelt's remark put ideas in Costigan's head. He suggested to Chapman, whose attitude toward Costigan was just this side of adoration, that 2 or 3 years in Washington would be helpful experience for a young lawyer. There would then be time enough to go back to Denver and take over the law office.

One day in Costigan's Washington office, Chapman and Costigan's secretary, Marguerite Owens, were having a talk. Chapman happened to mention what the Senator had said about the usefulness of a spell of Government service to a lawyer.

"Here," said Miss Owens, laughing, while pulling the Congressional Directory on her desk toward her, "let's see what kind of job we can find for you."

F. D. R. APPROVED

With Chapman peering over her shoulder, she opened the book at random. On one of the exposed pages there was a description of the duties of the Assistant Secretary of Interior, including supervision of the General Land Office, the Office of Education, Howard University, the Indian Service and the administration of islands and Territories.

"Now that's the job I want," said the grinning Chapman. At that point Costigan entered the room and was made privy to the joke.

"But that's wonderful," Costigan said. "I'll talk to Roosevelt about it."

Roosevelt was agreeable to the idea. So was Bronson Cutting, Senator from New Mexico, who had been offered the secretaryship of the Interior and was then considering whether to take it. When Cutting refused the job, Harold Ickes was named.

VIEWS WON ICKES

Costigan took Chapman over to see Ickes.

"What is your philosophy of conservation?" Ickes asked.

"I am in complete accord with what Gifford Pinchot and Theodore Roosevelt have done."

"That's good enough for any man," said Ickes, adding: "Can you get Farley's endorsement?"

Farley was friendly, but revealed that he was committed to a Montanan named Harry B. Mitchell. An hour later, Farley called up Chapman and offered him the job of President of the Civil Service Commission, a job paying substantially more than that of Assistant Secretary.

STARTED WITH LINDSEY

Chapman suggested that Farley offer the Civil Service Commission post to the man from Montana, which, if the latter agreed to take it, would leave open the Interior post. Mitchell agreed to this swap. Chapman was willing to work for a lower salary in order to get a job in which he could be useful.

So it came about that Oscar Chapman began on a new career that was ultimately to lead to a Cabinet post.

Like so many ardent Coloradans, Chapman was born elsewhere and went to the State for reasons of health.

Born in the little Virginia town of Omega, in the tobacco belt, he received his education at Randolph-Macon academy at Bedford. During World War I he served in the Navy as a pharmacist's mate. In the course of his service he crossed the Atlantic 36 times and contracted tuberculosis which resulted in his moving to Colorado.

It is a familiar story in Denver how, enormously attracted by the personality and genius of Judge Ben Lindsey, Chapman determined to work for the latter and by sheer persistence and after countless disappointments finally managed to see him and be given a job.

BACKED THREE PARTIES

In 1922 Chapman became assistant chief probation officer of the juvenile court which, under Lindsey, had attracted world-wide attention. He was named chief probation officer in 1924.

Together with Costigan and Ickes, Lindsey was one of the three men who had the greatest impact on Chapman's life and philosophy.

All three had begun life as Republicans. All three had followed Theodore Roosevelt into the Bull Moose camp in 1912. All three had ultimately sought the carrying out of the programs they favored through the Democratic Party

The term "welfare state" had not been invented in their day. But Theodore Roosevelt's fair deal and Woodrow Wilson's new freedom were precursors of the movement that led to Franklin D. Roosevelt's New Deal and Harry Truman's Fair Deal.

Characteristic of all of them was their emphasis on the need of conserving both natural resources and human resources as well.

With this viewpoint Chapman has always been in complete sympathy. And his successive posts in the Interior Department have enabled him to put that program into action.

PROJECTS LEADER

As Assistant Secretary of the Interior, Chapman was largely responsible for the administration of the Taylor Grazing Act regulating grazing on public lands. To acquaint the cattle and sheep people with the law and also to give them a chance to be heard, Chapman held hearings in 11 States.

His was also the responsibility, under Secretary Ickes, for assigning oil leases, a particularly ticklish matter in view of the acute memories of the Teapot Dome scandal. Chapman is proud to recall that Ickes never approved an oil lease over his Assistant Secretary's disapproval.

Chapman also played a dominant part in the efforts to rehabilitate the Virgin Islands which President Hoover had once described as an effective poorhouse. He took a deep interest in the efforts to develop Alaska, improve conditions in Puerto Rico, bring statehood to Hawaii. He was largely responsible, again with the strong support of Ickes, for the program of developing synthetic fuels, including the oil-shale-extraction experiment at Rifle which appears to have succeeded beyond all dreams. He led the fight for creation of the Jackson Hole National Monument and has been vigorous in his efforts to build up the great national parks that have come into being since Franklin D. Roosevelt's first administration.

These represent but a small part of the contributions which, as an official, Chapman has made in the cause of the best use and wisest conservation of our natural resources.

They have not been his only contributions. Having no formal hobbies, he has spent much of his spare time working on behalf of minorities. He master-minded the famous concert given by Marian Anderson on the steps of the Lincoln Memorial after the noted Negro had been refused permission to sing in Constitution Hall. Behind the scenes he did much on behalf of the efforts that led to creation of the Republic of Israel. He regards the political work he has done, first on behalf of Roosevelt and, during the 1948 campaign, on behalf of Truman, as the least of his efforts.

In 1940 he took a leave of absence without pay to help organize the 11 Western States on behalf of Roosevelt's reelection campaign.

BOOMED FOR TRUMAN

In 1948 he was Truman's advance man, helping organize meetings for the President and drumming up support for him where such support was likely to count. Since he believed in what Truman stood for, he was willing to go all out in working for the latter, regardless of how dismal Truman's chances appeared to be.

Seeking no publicity, working quietly and effectively, the genial Chapman was one of the real architects of the surprise Truman victory of November 1948.

At 53, Chapman looks a lot younger than his years. He is happily married to the charming and attractive former Anne Kendrick, who for 3 years was his secretary. They have one child—a son.

A teetotaler and nonsmoker, Chapman is no hermit. He likes people and is liked by them; no Washington official is more popular. But he is no gad-about. Nobody in the Capital spends more time at his desk.

But with all of the vast responsibilities that have now descended on him—the administration of a department that spends more than $600,000,000 a year and has more than 60,000 in its employ—Chapman remains unharassed, unruffled, and unhurried. After 16½ years in public life he knows how to get things done.

Civil-Rights Program for America

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, January 20 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD excerpts from an address which I delivered at the National Emergency Civil Rights Mobilization on January 15, 1950, in Washington, D. C.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

Civil rights in America is on the march. This meeting is proof of that fact, because you who represent millions of Americans all over the United States are demonstrating by your presence the wish of the American people to enact into law the principles of brotherhood and human equality which democracy stands for.

All over this land the people of America, in their churches, in their trade-unions, in their fraternal organizations, in their farm co-ops, through their city and State FEPC laws and antidiscrimination laws, are telling the Congress of the United States, "Enact civil-rights legislation." They are telling the nations of the world, "We, the people of America, believe in the democratic principles we profess. We, the people of America, call upon our Congress to carry out the will of the electorate." The responsibility of American Government is to legislate for the people, not to consolidate the entrenched power of the minority by political manipulation of parliamentary rules.

The most vital issue facing the American Congress today is that of civil rights. The preservation of human rights is the paramount issue of our generation. The extension and the guarantee of human rights and civil rights is the core of our struggle with the totalitarian forces. The denial of human liberty, the betrayal of democratic ideals, is the sin and the crime of communism and other totalitarian doctrines. This great Nation of ours has poured out billions of dollars of the people's money in a struggle against the aggression of Communist ideology. We are sapping the economic strength of our economy to maintain a powerful military establishment because of the threat of Communist aggression. We live in a psychosis of fear because of the evil and ruthlessness of the totalitarian power.

How blind can we be? Are we incapable of seeing that neither communism nor fascism can be stopped by the mere demonstration of military power and financial resources? Our secret weapon in this great struggle is the fulfillment of the democratic ideal of human equality. This ideal is embodied in political form in the civil-rights proposals which are now before the Congress of the United States.

The issue of civil rights penetrates our foreign policy and adulterates our domestic policy. It penetrates our foreign policy because by our failure to guarantee basic civil liberties to all peoples, regardless of race, color, or creed, we are denying acceptance of the principles of human equality.

The underprivileged long-exploited peoples of Asia and Africa wish to be accepted as free and equal members of the human society. They will place their faith in the nation and the people who accept them and work with them as free and equal peoples. A foreign policy that does not include the issue of human dignity and human equality is one that is doomed to failure. As it has been stated again and again, the struggle we are now engaged in is one for men's minds. Respect, understanding, and affection cannot be purchased by loans, gifts, or grants. A unity of freedom-loving people cannot be molded by power and military might. The intangibles of human freedom, equality, and individual dignity are the only real forces and weapons on the side of democratic faith.

Our moral standing in the eyes of the world hinges on whether we pass civil rights legislation. The moral and political health of our own economy depends on whether or not we adopt civil rights legislation. We can scarcely call ourselves a democratic nation if we fail to guarantee the right to vote and the right of personal security. We jeopardize our economic strength if we deny people an opportunity for employment because of such factors as race, color, or creed. We weaken our national strength in direct proportion to the number of people that we discriminate against either in the exercise of their political liberties or their economic opportunities. We can no longer afford the luxury and the waste of second-class citizenship.

The facts of international politics, the moral obligation of our own political faith, the economic and political needs of our times, call upon the Congress of the United States to fulfill the pledges on civil rights legislation which have been given to the people.

It would seem to the casual observer that the enactment of civil-rights legislation would be a routine matter. Our entire history is one filled with the ideals of freedom, individual dignity, and brotherhood. The forward movement of our developing democracy has been that of human liberation. The Declaration of Independence, the Constitution, the Emancipation Proclamation—all are testimonies to the will of the people of this Nation to liberate ourselves from our sense of guilt and shame. The people of our country have carried a great moral burden for too long a time. We have cried out for democracy in other nations at the same time that we denied democracy at home. This hypocrisy has developed a sense of national moral guilt that calls for an immediate answer. Americans now realize that discrimination is a denial of our creed. We have been a Nation plagued with a guilty conscience.

We made an auspicious step toward absolving ourselves of this sense of guilt with the publication of the precedent-breaking report of the President's Committee on Civil Rights, organized labor, business, all religious groups—almost all sections of our public life were represented in this report which called—in ringing words—for an end to discrimination, the right of all citizens to live free of terror and oppression and to participate fully in the responsibility and benefits of their Government. This was a landmark in our march toward the realization of genuine democracy. The next step, and the step we now face, is the implementation of the Committee's recommendations.

In 1943 at the convention of the Democratic Party, the decision was abruptly made. When the delegates were challenged to get out of the shadow of States' rights and to walk forth in the bright sunshine of human rights, they voted to relieve themselves of their guilty consciences. They voted against discrimination and against bigotry. They justified the freedom of freemen.

Again, on last November the third, our faith in the American citizen was tested and affirmed. There can be no doubt now about the American people's passion for liberation. They voted to liberate themselves from their guilt as well as to liberate minority groups from their displacement. The American voter showed to all the world that he had the courage of his convictions.

In spite of that great demonstration in November, a minority in the Senate of the United States withstands the national tide. They will fail, because history is against them, the people are against them, the President of the United States is against them, the times are against them. Our President risked his political career to bring the issue of civil rights to the people. He traveled many miles to proclaim his vigorous views on this issue. He has broken all precedent in the degree of his strength and leadership to the end that man's inviolate dignity shall be accorded to all men equally. President Truman has truly shown that he would rather be right than be President.

As a Democrat I call upon my party to carry out its promises to the people. Those promises were embodied in the platform under four specific proposals: (1) The right of equal treatment in the armed forces; (2) legislation to abolish the poll tax; (3) a meaningful and effective antilynching bill; and (4) fair employment practices legislation.

I do not underestimate the difficulties that lie before us. Already in the Eighty-first Congress the people of the world have been betrayed by the sell-out of human rights known as the Wherry compromise which changed the rules of the United States Senate on the matter of curbing a filibuster. It was the Republican-Dixiecrat coalition just a year ago which passed the Wherry Resolution that requires a two-thirds vote of the entire membership of the United States Senate to stop a filibuster. This was indeed a Machiavellian body blow. It was the Republican-Dixiecrat coalition which made a political issue out of human rights. As a Member of the Congress, as one who has been given the honor to serve my Nation, I am ashamed and am heartsick that this tragic mistake and sell-out has taken place.

This is no time, however, for acrimonious attack or bitter words. This is the time for a call to reason and a plea for justice. Just because the rules were changed thereby making it extremely difficult to curb a filibuster, so now the obligation is all the more upon us to overcome the difficulties that have been placed in the path of human freedom by delivering the votes needed to break a filibuster and to pass civil-rights legislation.

That which has been done by men can be undone. The mistakes of yesterday can and must be corrected by the positive accomplishments of today.

I call upon the Republican Party and upon my own party, the Democratic Party, to come clean on the issue of civil rights. No man has a right to play politics with human lives and human dignity. To exploit the oppressed, to gain power or advantage by political expediency at the expense of human beings is not only a denial of democratic ideals, but is immoral.

The issue of civil rights should be a nonpartisan matter. The passage of civil rights legislation is a bipartisan obligation. Neither the Republicans nor the Democrats can honestly say to the millions of Americans who are suffering under the yoke of discrimination or bigotry that this Congress did not have the votes to pass the civil-rights proposals. The Republican Party is committed by platform and by pronouncement to this program. The Democratic Party is equally committed. It will not make much sense to the American people for the leaders of either political party to try to explain

their failure by the fact that a handful of opponents stopped action. This is but to say that the process of democracy has been stopped dead by a willful obstinate minority that was vastly outnumbered by the Democratic-Republican majority.

The President of the United States, who stands as the leader not only of this Nation but of his party, has given the call to action. He had every right to expect the support of all Members of Congress who have declared themselves for this legislation. Tonight I share the platform with a distinguished leader of the Republican Party, my friend and colleague, Senator WAYNE MORSE of Oregon. I appeal to the Republican membership of the Senate to follow the leadership of Senator MORSE and his liberal associates on this vital issue of civil rights. I know of no demonstration on the part of the Congress that would instill more faith in the hearts of our people as to the honesty and the integrity of the democratic processes than a bipartisan effort to pass civil-rights legislation.

Soon we shall come to grips with the issue of fair-employment practices legislation. The FEPC bill listed on the Senate Calendar as S. 1728 will be brought up for debate on the floor of the Senate within a matter of weeks. This bill has the support of the majority of the Senate Labor and Public Welfare Committee. This bill represents a reasonable, moderate, and constructive approach to a very serious problem. The principles of fair-employment practices legislation are neither new nor untried. The President's Committee on FEPC during the war years has an enviable record of accomplishment. Already 10 States have FEPC laws on their statute books. Many of the large cities have pioneered in this all-important field of legislation. Roughly speaking, about 50,000,000 people, or more than a third of our country's population, is already covered by State or local FEPC laws. It cannot be too strongly emphasized, however, that the problems of discrimination are Nation-wide. In discussing them, no State, section, nor community should feel that it is being singled out for criticism. To pass FEPC legislation is not to legislate against any section of the country. The problem of discrimination is present in all sections in some form or other. It is therefore the responsibility of the National Government through its Congress to establish a basic standard for human rights and problems of employment.

The passage of FEPC and other civil-rights legislation is, as I have stated before, jeopardized by the Wherry resolution. I do not want to underestimate the difficulties which are placed in our path. However, I am convinced that belief in the Golden Rule can overcome a Senate rule. If we should fail, there is but one alternative, an old, true, tried, and tested alternative, namely, a free election. I am sure that every Member of Congress can understand the meaning of this language. The time for political politeness is over. The clubby atmosphere of the Congress does not carry through to the country. It is not enough just to be a good fellow and to be liked by your colleagues. The American people did not send 531 Members of the Congress of the United States to Washington in order to develop our social life. We are here for the purpose of developing, protecting, and extending the democratic way of life. That way of life is being challenged by bigotry, hypocrisy, intolerance, and discrimination right here in America. It will require much more courage to stand up against the antidemocratic forces within America than it does to vote the people's money to fight the Communist forces outside of America. The eyes of the people of the United States are focused on Washington. They say: "Whether you are Democrat or Republican is not the issue. By your deeds shall ye be known."

Heywood Broun's Gifted Pen

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, January 20 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, last month occurred the tenth anniversary of the death of Heywood Broun, journalist, humanitarian, and founder of the American Guild, one of the great unions in the American labor movement. At the time of Mr. Broun's death, our great President, Franklin Delano Roosevelt, said:

Heywood Broun lived a full life and leaves a noble heritage. His great gifts of heart and mind and soul were ever directed toward his purposes.

Neither slander nor calumny nor thought of personal consequences ever deterred him once he had entered a fight in the cause of right and justice as he saw it.

He was a hard fighter but always a fair adversary and no matter for whom he worked he wore no man's collar.

He will be missed and mourned particularly by the underprivileged whose staunch champion he always was.

I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article, Jottings From Broun's Gifted Pen, which appeared in the Guild Reporter for December 9, 1949, a newspaper published by the American Newspaper Guild.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

SOME JOTTINGS FROM BROUN'S GIFTED PEN

(Broun wielded a gifted pen. It could cut, it could bring chuckles, and it could state an issue in simple, logical terms. Here are some random samples, culled from his columns in the World, the World-Telegram, the News Republic, and from speeches.)

A newspaper is, among other things, a business. And, even so, it must be more than that. * * *

A newspaper is a rule unto itself. It has a soul for salvation or damnation. * * *

A newspaper can neither rise nor fall beyond or below its staff. * * *

I've always had the feeling that newspapers most of all were fit subjects for some sort of socialization. I've never known even the most obscure reporter who didn't think he knew more about running a paper than the man who owned it. I've always felt that way myself. And once I was right.

There is no force which can stand against a fierce, a free, and stalwart spirit. The voice of such a one is louder than the roll of guns.

Liberals need not be born. They can be trained by care and kindness.

The word "liberal" itself has fallen into disrepute. To a radical it is a label for a man who professes friendship and then rushes away for his 30 pieces of silver as soon as the crisis comes. In the eyes of the conservatives a liberal is a dirty Red who probably bought his dinner coat with Russian gold.

Neither interpretation is correct and it should not be impossible to expose the fallacy of such reasoning.

Nobody has a right to demand that an editor shall never change his mind. New facts on any given situation may require a complete right-about-face.

I am not so much interested in the freedom of the press as in the integrity of the press. Freedom means any man who owns a large paper can print or throw into the wastepaper basket what he likes. A man who poisons news is more dangerous than a man who poisons wells and springs.

There can be no such thing as a free press and no such thing as the integrity of the news if the men and women who write the news live in fear of the security of their jobs.

He had the harassed look of a flapjack cook in a lumber camp.

Free speech is about as good a cause as the world has ever known. But, like the poor, it is always with us and gets shoved aside in favor of things which seem at some given moment more vital.

They never are more vital. Not when you look back at them from a distance. When the necessity of free speech is most important we shut it off. Everybody favors free speech in the slack moments when no axes are being ground.

The weakness of communism has always been in its basic dependence upon leadership which was far away and unfamiliar with American conditions.

Quite inadvertently, I am sure, some of the publishers have allowed the feeling to grow and spread that newspaper men and women who join organizations of their own creation will be subject to penalties.

The penalty may not be dismissal. All newspapermen know of an institution known as the Chinese torture room. A reporter who incurs the displeasure of the boss by organizing activity may find himself writing obits for the rest of his life.

A press that rests upon the fears and apprehensions of reporters who are frightened and who feel that they have good reason to be frightened is not free.

It is a curious tradition of American journalism that no one is supposed to speak well of it until he has left that part of his life behind.

At 51 I have more faith than I ever had before. People are better than I thought they were going to be—myself included.

But at 51 I'm a better fighter than at 21. Things which once were just a sort of sentimental solace are now realities. Brotherhood is not just a Bible word. Out of comradeship can come and will come the happy life for all. The underdog can and will lick his weight in the wildcats of the world.

Broun's description of Al Smith, at the 1932 Democratic National Convention:

"That curious voice, half Caruso and half Tenth Avenue. When Al speaks the nose has it. It cuts like a sharp blade, a fish knife, through the uproar. Al carries his own gavel in his larynx."

No body politic is in a healthy state until it begins to itch.

Anger isn't the same thing as hatred. It is a flash of feeling which goes over the dam

upon the instant. No man who has expressed his anger with reasonable fluency need go back to it again.

Revenge is a form of procrastination. The man who eases his soul by paying off a score at the end of 20 years confesses that he didn't have the nerve or the mental alertness to handle the situation when it lay immediately in front of him.

I still think that the lawless employers should be restrained, and if they don't like it here, I see no possible objection to sending them back where they came from.

I've been fired in the spring, the summer, and the early winter. I like it best in the summer. Three times in the 31 years isn't so much to be fired.

The first firing is often worse than the last. It's very discouraging to get canned when you're young. That's the way it was with me.

I was 21 and working on the Morning Telegraph. My stall in the old Eighth Avenue car barn was right next to Bide Dudley. He was getting $35 a week and my salary was $28. I wanted $30 but when I asked for it they fired me.

Public opinion in this country runs like a shower bath. We have no temperatures between hot and cold.

With all deference to tradition, I do not think that news, either in peace or war, is limited to the recital of overt acts. True reporting should be a great deal more than a recital of oddities. It should go deeper into the commonplace and ordinary.

Journalism at its best is current history, and in the long run history is compounded out of things which may seem trivial at the moment. There ought to be an eye for acorns as well as oaks.

All too frequently a daily paper takes on the form of cataloging the folk in a sideshow. The silliest sort of playboy can earn himself headlines by semi-insane antics. Lunatic acts and kindred deeds are overplayed, in my opinion.

There is no poorer rule for the approximation of news than the familiar adage about dogs and men. Unless there is some special setting for the event, I deny the existence of news in the fact that a man bites a dog. An editor's reaction to such an event should be to spike the story, saying, "It's just another nut or one of those press agents."

Wanting things is fun. Getting them ruins your appetite.

Newspaper reporters have the habit of bestowing the title of "sage" somewhat too readily. They speak of sages almost as often as dramatic critics and book reviewers refer to "genius."

I was a child prodigy myself. That is, at the age of 5 I always required 12-year-old pants.

It is not inevitable that today's strip of newsprint should be no more than tattered scraps in tomorrow's dust bin. The man who writes well enough and thinks through the thing before him can win his immortality, even though his piece appears obscurely in a Wall Street edition.

Most of us on papers, for all our swagger, are at least five and a half times too humble. We are apt to say, "Oh, I'm just a newspaperman." When called upon to justify ourselves we smirk and behave as if the thing we did were really of but small importance.

We know better than that. There is no reason why a first-rate man on any newspaper should yield precedence to every novelist and minor poet and and little essayist. In city rooms I've known the whole crowd to gape at some member of the staff in considerable awe and whisper behind his back, "He's written a book."

There's no special magic in getting between boards. Last year's novel is just as dead as last year's paper. Indeed, I know few sights more horrible than second-hand book stalls on which dead volumes are exposed to wind and weather, completely dead and lacking only decent burial.

Independent liberals always get beaten in American elections because they reserve their commitments until a month or so before election. * * * Organization can't be beaten without organization.

We're More Tax Conscious

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. SCUDDER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Chico (Calif.) Enterprise-Record of Saturday, January 7, 1950:

THERE'S MUCH TALK ABOUT TAXES

At the moment the people of the United States must be acutely tax conscious. There are several good reasons why they should be.

Every person in the country who draws a pay check this week, from which his tax deductions are made at the source, probably will blink and take a second look at the figures. His tax for social security has taken a bigger bite out of his check. The percentage deducted has gone up from 1 to 1½ percent. Instead of the deduction stopping when he has earned $3,000 this year, if he has a job which pays that kind of money, it'll go right on until he's earned more than $3,600.

Employers, too, may do a little blinking and give certain figures a quick double-take when they note at the end of the month that their contributions to social security for their employees have gone up correspondingly. They may fume a little, too, over the new requirement for monthly reports. Bookkeepers already are tugging at their hair because State and Federal deductions are no longer alike, and each must now be figured separately.

A great many people, the self-employed as well as the employed, must have been made very much tax-conscious by what they've been reading about Washington activities this week. Quite a bit has been said in Washington lately about those wartime emergency excise taxes, which somehow continued to hang on after the war ended to bear heavily and probably unfairly on certain lines of business. It develops now that the excise taxes, once designed to discourage buying of certain goods and wares, haven't really been going to help pay for the war. The Government found other places to spend the excise-tax money. Other things are now dependent upon the excise taxes, and if the excise taxes are taken off we'll have to dig up other tax money to keep these things going.

What has happened in the case of the excise taxes has happened before in other governmental activity. We're the darndest nation to get ourselves into an emergency of some kind, take emergency steps to relieve the emergency and then be unable to step back into normal position when the emergency is over.

A great many people, who were already well aware that the Government is now spending tax money it doesn't have, must have been made considerably more tax-conscious when President Truman talked to Congress this week. Mr. Truman asked Congress for a moderate tax increase, and asked again for some new ways to spend more tax money.

A great deal has been said about taxes down Washington way since the President's message to Congress on Tuesday. As of today, the big umbrella issue which hangs over all others in Washington is the issue of taxation. It's pretty plain to everybody.

The Associated Press felt Congress' pulse day before yesterday, after the President's tax request, and reported that at least a half dozen of his proposals are doomed to die a quick death. And it wasn't just those heel-dragging Republicans who were making that forecast, either. There were some Democratic voices which could be heard even above the Republican pleas for trimming expenses. Men of both parties are convinced that the Federal budget can be deflated to the point of eliminating deficit spending, and perhaps even paying a little on the grandpappy of all national debts.

If a great many people have been made tax-conscious, it's about time. Taxes are imposed by the Federal Government only by sanction of the people themselves. The people themselves have not only sanctioned, but actually have been responsible for much of the tax burden now weighing heavily upon them. They've done it by demanding more services, more facilities, more benefits from a government that has had to obtain the money from the only source of money the Government has—the same people.

So long as any taxpayer labors under the mistaken idea that anything government gives him will be paid for by someone else we're going to go right on being more and more tax-conscious.

Desk Memo for Congressmen and President Truman

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. REED of New York. Mr. Speaker, I have just received a desk memo for Congressmen and President Truman, which you and other Members of the Texas delegation may wish to read at the Jefferson Democratic dinner. It may be that this quotation has escaped the attention of the Democrats during the great spending orgy that has now brought the Nation to the brink of insolvency.

I am inserting in the RECORD, under leave to extend heretofore granted, the memo from J. Constantin, 508 Continental Building, Dallas, Tex.:

DESK MEMO FOR CONGRESSMEN AND PRESIDENT TRUMAN BY THOMAS JEFFERSON

(Quotation from Reader's Digest, October 1949)

"I place economy among the first and most important virtues, and public debt as the greatest of dangers to be feared. * * * To preserve our independence, we must not let our rulers load us with perpetual debt.

* * * We must make our choice between economy and liberty or profusion and servitude. * * *

"If we run into such debts, we must be taxed in our meat and drink, in our necessities and our comforts, in our labors and in our amusements. * * * If we can prevent the Government from wasting the labors of the people, under the pretense of caring for them, they will be happy."

Most of you in the past several years have made yourselves heard either over the radio or in the press crying for the stabilization of the country's economy.

I know of no better way to stabilize our economy than by following the concepts of the above statement made by Thomas Jefferson, a great American, nearly 150 years ago.

Army Open Door

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, January 20 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD, an editorial which appeared in the Washington Post this morning.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ARMY OPEN DOOR

If promises about the Army's new racial policy may be taken at face value, a major milestone has been passed. Under a new circular, Negro soldiers will be assigned on the basis of their skills and qualifications without regard to race. This sensible assignment policy is what is needed to implement the previously announced opening of Army schools and military occupational specialties to Negroes. These advances represent achievement of three of the four principal goals of the Fahy Committee on Equality of Opportunity in the Armed Services. The fourth, abandonment of the racial-quota system, remains to be met, but there is reason to hope that the Army will soon adopt the same criteria of intelligence rather than race that obtain in the Air Force and Navy.

It is the principle, rather than the immediate effects of this new policy, that is significant. The Army has at last shorn itself of the negative influence of the foot-draggers who insisted on strict segregation because of the Negro problem. This influence frustrated the recent decision to open schools and occupational specialties by preventing qualified Negroes from using their training except in Negro units or overhead installations.

Caution is still warranted by the well-known ability of individual Army commanders to sabotage policies with which they disagree, and it will be necessary for Secretary Gray to do some policing in order to insure that his orders are carried out in good faith. But an excellent start is being made in the unequivocal directive to assign critical specialists to any unit, white or otherwise, and to fill other vacancies with Negroes wherever practicable.

Aside from considerations of equal treatment, this move is fully warranted on practical grounds. The Army is short of certain skills which qualified Negroes are competent to fill. Efficient use of the best available manpower also dictates the substitution of intelligence tests for racial quotas—a practice which in the Air Force has worked out to maintain approximately the same ratio of Negroes to whites. As the Army moves toward integration, which is the only defensible standard for an American fighting force, we believe that its Negro problem will disappear.

Everybody Gets "Soaked"

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial from the Los Angeles Examiner:

The collectivist conspirators of the Fair Deal constantly strive to convince people with small incomes that they get material benefits from socialistic Government policies while others pay for them.

A research just completed by Representative HAROLD LOVRE, of South Dakota, demonstrates how completely untrue that is.

The national income for the fiscal year ended last June 30 was $225,000,000,000, of which Federal, State, and local taxes amounted to $56,000,000,000—about 25 percent.

Figures compiled by Representative LOVRE, with the help of the Federal Bureaus of the Census, Internal Revenue, and Labor Statistics, show that the average family with an income of $3,000 paid—in Federal income taxes, in corporate taxes passed along in the prices of goods, in social-security taxes, and in the various excise impositions—a total of $510.75 Federal taxes.

It paid $196.15 in State and local taxes.

The family's total taxes amounted, therefore, to $706.90, or 23.56 percent of its income.

The average family on a $5,000 income paid out $1,238.45 for taxes, or 24.75 percent of its income; and in the case of the $7,500 family the total taxes amounted to $1,970.70, or 26.27 percent.

The $3,000 family, as these figures clearly show, paid out in taxes only a very slightly lower percentage of its income as did other Americans, one-fourth of whose total earnings were taken by government.

So obviously the rich are not paying the taxes for the man of smaller income.

He is paying them himself, and if he wants to keep more of his income for his own family he can accomplish it only by insisting that the Truman administration stop squandering his money on socialistic schemes designed to buy his vote.

Mr. Speaker, the country and the Congress are indebted to Congressman LOVRE for undertaking the research which gives the facts as to who is paying the taxes which are forced on the people by the present administration. It is time that we realize that even those in the average income groups are not getting something for nothing and that the so-called security offered by the Fair Deal is only the old, well-known scheme of robbing Peter to pay Paul. I personally want to commend Congressman LOVRE for his great job of completing the research he has undertaken. It gives me a great deal of pleasure to present this editorial to the full body of the House of Representatives.

No Submission to Federal Blackmail

EXTENSION OF REMARKS
OF
HON. HAROLD A. PATTEN
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. PATTEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Arizona Daily Star of January 6, 1950.

The Federal Security Agency informed the State of Arizona that funds for the crippled children's program were being withheld effective January 1, 1950, unless the State of Arizona would make available to the children residing on Indian reservations all facilities afforded under the crippled children's program. This action by the Federal Security Agency has caused a serious situation in the State of Arizona, and has caused the crippled children, now being cared for, and the parents of those children, undue mental anguish.

The Arizona State Board of Social Security and Welfare submitted a compromise plan for the consideration of the Federal Board which was as follows:

1. That we will withdraw from our plan all reference to any class or group.

2. We will accept all applications on the rheumatic-fever program for Indian children who would make application and take them in the order received. (This is a wholly Federal project.)

3. If and when a special session of the legislature is called, we will ask for addition funds for crippled Indian children and discuss with our doctors a process for handling them.

This plan as presented was rejected by the Federal Security Agency and, with the continued withholding of funds, the situation is becoming more serious day by day.

The State department in Arizona does not have available any publicly owned or operated hospitals of any kind. The convalescent home for crippled children has very limited facilities and is used for convalescence purposes only. In contrast to this the Indian Bureau of the Department of the Interior has had, and now has, available hospital and nursing facilities which are for the use of Indian children only. The State, through its crippled children's program, has afforded clinical service to all Indian children whether they resided on or off the reservation. Those needing medical or surgical care were then referred to the Indian Bureau.

The Federal Security Agency has demanded that the State of Arizona give the same treatment and hospitalization to children residing on Indian reservations if they are to have their Federal funds restored. Considering the fact that the appropriations by the State legislature are limited, if the State were to concur in the demands made by the Federal Social Security Administration, it would not extend any great amount of service to reservation children and would curtail the service now being furnished

to other crippled children in the State. Arizona has a situation that is peculiar in that it has approximately 16.5 percent of the total reservation Indian population in the United States; also in excess of 70 percent of the total land in the State is owned by or is under the control of the Federal Government.

The reservation Indian children have, at the present time, available more facilities for medical care than any other group of children in the State of Arizona. The State department of social security and welfare will not accede to the demands being made by the Federal Security Agency. It would appear that the Federal Security Agency in this move is trying to set a precedent whereby the State of Arizona will be forced to assume all Indians that would qualify for aid under the various categories of the social-security program. The State is not financially able to carry this program nor is it responsible for the care of reservatiotn Indians, since that is a duty of the Indian Bureau and their responsibility in every respect.

The editorial follows:

NO SUBMISSION TO FEDERAL BLACKMAIL

We have just had a good lesson in what happens when a State starts accepting doles of Federal money to support new social work sponsored by the Federal Government.

Because Arizona would not make any kind of an agreement to accept responsibility for reservation Indians, the children's bureau of the Federal Security Agency in Washington has arbitrarily shut off funds that have been financing the care of crippled children and some others suffering from rheumatic fever.

After getting Arizona to start this new social work, the Federal agency comes along and says, "Do what we tell you, or we will shut off your funds."

Arizona properly refused. Certainly the Arizona director of the social welfare board would be exceeding his authority to take on the responsibility of caring for crippled children of reservation Indians. Yet that is what the Federal bureaucrats demanded. If that precedent were once established in Arizona, it would in time lead to the spectacle of the State of Arizona assuming the social welfare burden of these Indians, over which it has no authority.

So few people, outside of Arizona in particular, realize what this distinction means. The Federal Government sets aside the Indian reservation for reservation Indians. Over these Indians and their reservations the State of Arizona has no authority. Indeed, it is denied the right to exercise the least bit of authority over Indians living on reservations. For that reason Arizona now refuses to accept any financial responsibility for reservation Indian children, who are crippled.

This position can possibly be appreciated better when it is understood that Arizona discriminates in no way against Indians who do not live on reservations. They enjoy every right that every other citizen does. Their crippled children are entitled to just as much care as other children. But these Indians pay taxes. They are not wards of the Federal Government.

Moreover, Arizona has an additional reason for refusing to get trapped in the present controversy. On every Indian reservation there are hospitals for the exclusive use of Indians. Arizona citizens have no right to receive care in such Federal hospitals.

Behind all of this controversy is the determination in Washington, by certain top bureaucrats in the Indian Bureau and the Federal Security Agency, to browbeat Arizona into setting a precedent of recognizing responsibility for reservation Indians.

Arizona is not going to do it. It will be cheaper to forego Federal appropriations. It would be wrong to assume responsibility over something where authority is specifically denied, as it is in the case of Indians and their reservations.

Employment and the Tax Incentive Act of 1950

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. LYNCH. Mr. Speaker, under permission to extend my remarks, I include an address made by me on January 11, last, at a luncheon meeting of the Bond Club of New York. The meeting was presided over by Mr. C. L. Morse, Jr., president of the club.

The address entitled, "Employment and the Tax Incentive Act of 1950," follows:

I have had two surprises in connection with my appearance here today. The first was when I received the invitation, for I could think of no other organization whose members would care less to meet a Democratic Member of Congress. Coupled with the fact that I am a Bronx Democrat—than whom there is no more of a Democrat—and a member of the tax-symbolic Ways and Means Committee of the House of Representatives, I submit I had real cause for astonishment. My second surprise came today when I saw so many of those in the securities business present. I did not think there were that many of you left in Wall Street. I assume that is due in no small part to my good friend Ed Hanrahan, who, as a member and later as Chairman of the Securities and Exchange Commission, has been a real friend of your business and, at the same time, an able champion of the public interest.

I am sorry not to see here present my good friend Emil Schram. He is one man who, when he appears before our committee, or, in fact, before any committee either of the House or Senate, commands the attention and respect of his listeners. I believe that he has done a wonderful job—not only for the New York Stock Exchange—but for the whole securities business and the entire country. I am glad to know that he is out of the hospital and on his way to Florida for a much-needed rest.

You may get the idea from the topic of my address and the title of my bill and its provisions that I am moving in various directions. At the very outset may I say that pure logic is not the language of statesmanship or democratic policy. These characteristics are to be found in the spirit of moderation and compromise which gets things done without creating irreparable rancor. In the pulls an ` twists from the various great interests of the public as producers and consumers and investors, successful policy steers clear of letting any group have its way completely. You may say that irreconcilables can be reconciled, and I will not argue the point on grounds of logic. I maintain, however, that seemingly irreconcilable interests often have more in common than the differences that part them.

Particularly in the field of Federal taxation is the acceptance of the second best often imperative, and this acceptance comes with easier grace when one has a full and complete understanding of all the facts and viewpoints. Would that the Ways and Means Committee could bring forth a tax measure, wholly new, unmarred by ambiguities and undistorted by Treasury regulations and court decisions. Would that we could fashion a tax structure that would reach out and collect all the revenue the Treasury sought, and, at the same time, fill the taxpayer with delight at the prospect of filing the annual fright known as the income-tax return. Alas, that is the illusive ideal.

I wish more interest were displayed by the public in the process out of which the final figures on the income-tax form eventually emerge. As you know, the Constitution provides that all revenue bills must originate in the House. The underlying idea is that the lower House of the legislature is closer to the public opinion. However, direct election of Senators, made effective in 1913 by the enactment of the seventeenth amendment to the Constitution, has weakened this theory. In any event, the Senate has an important part in revenue bills because it may amend. The Ways and Means Committee is the tax committee of the House of Representatives and, together with the Senate Committee on Finance, is in charge of the preparation of revenue bills. My membership on the Committee on Ways and Means runs back to 1943. Our respected chairman, Hon ROBERT L. DOUGHTON, a really young and vigorous man of 86 years, has been a member since 1932. Membership on the committee, I say without boast, is a liberal education in economics and politics. The committee is made up of 25 members, with the usual division among the majority and minority parties. Every important group—and, sometimes we are inclined to think, every articulate individual—has bright ideas about taxes and presents them to members of the Ways and Means Committee, whose work often continues between sessions of the Congress. Hearings on a revenue bill are usually opened by the Secretary of the Treasury and members of his staff, preliminary to which private conferences have been held on many phases of proposed measures, including both basic issues and administrative and technical matters.

Hearings of the committee are public. You will readily recall occasions in recent years when Treasury officials have been questioned by committee members searchingly and without favor. While there have been far-reaching changes in the relation between the Chief Executive and the Congress in the past several decades, I am happy to state that the members of the Ways and Means Committee take their constitutional responsibilities very seriously and maintain an admirable degree of independence. Following the administration's presentation of the case for the bill, representatives of various groups appear to testify for or against the proposals in whole or in part. The committee also has the benefit of the comment of publicists, economists, and resolutions of various commercial and other organizations.

At times the Senate Finance Committee's proposed amendments having proved unacceptable to the committee, a conference or series of conferences are held between members of the committees of both Chambers. The agreement reached by the conference usually is approved, particularly as the time may now be short. A European statesman is credited with the thought that whoever wishes to keep his respect for sausages and laws should not see how either is made. I I can't speak for sausages, and there may be a measure of truth in the statement with reference to some bills. As to revenue measures in general, subject to the closest scrutiny of public opinion and picked apart by interested groups with little forbearance and less restraint, I can say only that they mirror

the fiscal needs of the country and reflect the best judgment of the committee as to how these needs are to be met.

To return to home base, and one revenue bill in particular which has still to run the gauntlet of the whole legislative process, H. R. 6393 was introduced by me on October 13, 1949, shortly before the first session of the Eighty-first Congress came to a close. As a little background material, you will remember that the President a year ago insisted on increasing the rates of individual income taxes in the middle and higher brackets and on corporations, except those with very small earnings. You will recall, too, that the President has consistently declared that the Revenue Act of 1948, which was passed over his veto, was responsible for the Federal Government's deficit. The present fiscal situation you are all familiar with from a reading of the President's budget message.

I would be less than frank if I pretended that my bill has the blessings of the administration, and I would be yielding to self-deception if I thought that you, reflecting the views of the world of finance, would greet all of my proposals enthusiastically. When I am through, perhaps it will be said that we disagreed only in opinion; but this is my bill; I have given it my name; and I am willing to make this essay in the art of persuasion, let the chips fall where they may.

H. R. 6393 provides that wartime excises be reduced on toilet preparations, long-distance and local telephone services, telegrams, photographic equipment and supplies, and the transportation of persons. Furthermore, the bill eliminates excises on electric-light bulbs and such preparations used in the care of infants as baby powder and baby oil. The bill provides for the exemption from excise duties of jewelry items selling for less than $50, furs selling for less than $500, and luggage retailing for less than $25. In this way the full rates now in effect are retained on jewelry, furs, and luggage, which are in the luxury class, whereas taxes on such things as costume jewelry and on inexpensive fur coats, handbags, wallets, suitcases, and the like, which are, in reality, necessities, and are bought by the average man and woman, are eliminated entirely. I suppose that this part of my bill, standing alone, will not invite much criticism. According to the best estimates obtainable, the revenue loss from these proposed changes in the aptly described "nuisance taxes" is around $620,000,000. But these provisions do not stand alone.

Secondly, H. R. 6393 provides for the following changes in capital-gains taxation: (1) A reduction of the tax rate on long-term gains to 10 percent, (2) an increase to $5,000 in the amount by which capital losses may be offset against ordinary income in any one year, and (3) shortening the holding period to 3 months. At this point, I would merely note that these provisions, designed to make possible increased production—the only source from which an increase in national income such as the President projected can flow—also do not stand alone, but are a part of a four-pronged measure meeting the President's tests of moderate fiscal reform. Capital-gains taxes are not primarily regarded as revenue features of the tax system. It is impossible to gage the effects of the proposed changes, although I believe studies of the consequences of our present set-up lead to the conclusion that the greater mobility of capital assets would more than offset the lower rates and, as a result, the Treasury would gain rather than lose income.

It is my considered judgment that these proposed changes in capital-gains taxation will encourage the flow of investment funds that will provide the machines and tools for well-paid job opportunities in industry. It takes an average investment of $8,000 to provide one job in modern industry. It is a matter of simple arithmetic to multiply this figure by the 700,000 new entrants into the labor market annually to see that billions of dollars of new money are required by private enterprise each year if full employment is to be maintained. It is through full employment that the prosperity of the country can be maintained.

Like everyone else, I am not insensitive to a favorable reception from my listeners, and I have anticipated that this part of my bill would meet your approval. Nevertheless, if I thought the proposals regarding capital gains would lead to unbridled activity in the securities markets, I would not for a moment countenance such changes. So long as the Federal Reserve Board has broad powers over margin requirements and the SEC retains its vigilance under the Securities Exchange Act of 1934 and the Securities Act of 1933, the possibility of a recurrence of the late twenties can be dismissed with confidence.

There is a strong and well-founded public opinion that double taxation of dividend income is unjust. Bearing the Treasury's revenue needs in mind, I have provided for only a 10-percent-dividend-income credit on income received from common-stock investments, which, however, will cause a revenue loss to the Government of approximately $575,000,000. This will not completely remedy the inequities of double taxation of dividends but will serve as a token recognition of the evil and, it is hoped, will convince the investing public that the administration is sympathetic with their problems. When I ask for sympathetic consideration of the taxpayer, may I also inject a plea for kindly consideration for an administration that is confronted with a gigantic war debt, a further tremendous financial outlay in a cold war that threatens the security of the world, and the complex domestic problems arising out of the natural desires of our people for a higher standard of living. And, when, on occasions, you hear Congress assailed and, unfortunately, too often made a target of ridicule, give sympathetic consideration to the 25 men, Republicans and Democrats, who are sincerely and earnestly and, I think, intelligently, facing these tremendous financial responsibilities and, when you think of them, remember that they are only typical of the rest of Congress.

Having, I hope, enlisted your sympathetic consideration, I now come to the most difficult part of H. R. 6393, which is the proposal to increase corporate income taxes by 4 percentage points this year and next. The added revenues resulting from this temporary increase would amount to about $1,200,000,000, or just enough to cancel the revenue losses resulting from the excise and dividend proposals.

I like to believe that H. R. 6393—I almost said, the Revenue Act of 1950—as a whole is stronger than the sum of its parts. The overarching consideration have been moderation, realism, and, if you will, a double-barreled philosophy. Let me elaborate.

For the past 15 years or more two broad schools of thought have sought to win over public opinion. On the one hand it has been said that national economic well-being can be promoted solely by direct methods of lifting mass consumer buying power. On the other hand, it is contended that the dynamic quality of our society lies in the use of ever larger amounts of labor-saving devices, which raise productivity. Not being an economist, I may not understand all the refinements of economic theory and I sometimes find myself almost unable to resist the arguments of those whom I have heard last. In H. R. 6393 I have tried to frame a a synthesis that will avoid extremes, improve the balance of the tax structure, provide immediately recognizable benefits, and make a beginning in the direction of solving several widely acknowledged faults in the Federal tax structure. Consumption obviously would benefit from the lower burden of excises. That excise taxes bear most heavily on the lower income groups cannot be denied. Not only would the lower income groups be relieved of these excise taxes but the heightened demand for consumer goods would more strongly fortify them in their jobs and give encouragement for the expansion of business and the development of job opportunities.

Changes in capital-gains taxes and the dividend credit are addressed to the need of keeping investment in new business equipment and machinery high. I have been impressed with the fact that the President and his economic advisers seem to agree that undeveloped foreign countries can be helped most effectively by the application of American capital goods and technical know-how. In these countries, consumption is pathetically low by our standards. Supplies of consumer goods, clothing, etc., would certainly be of assistance, assuming their ability to buy, yet it is recognized that the slower way of expanding production, heightening productivity and creating job opportunities is the sounder, more economic, and more lasting way in the long run. If this is true beyond our borders, it must be true in the United States.

I am also impressed by the fact that Government economists look for a run-off in expenditures on plant and equipment in the months ahead. Manufacturing employment is presently somewhat below the level of a year ago and while 3,400,000 unemployed at this time of the year is not a cause of alarm, it is a danger signal that should not be ignored. With November construction at $1,700,000,000 or 6 percent higher than in 1948, with steel production bouncing back to 97 percent, with the automobile industry in Detroit hitting toward its first 6,000,000-car year and with the New York Stock Exchange, during the first 10 days of January, doing twice as much business as in the same period in 1949, I am firmly convinced the evidence points overwhelmingly to greater prosperity for labor and the investor if the Government would moderately loosen the tax chains that presently hinder the normal flow of investment in the capital market. If we are to maintain high employment at high wages, we must not only have jobs for our present employables, but we must have the wherewithal to invest in the production of the machinery and the tools that will give employment to 700,000 who annually enter the labor field.

My innermost concern in a highly populous district is to do everything I can to maintain gainful employment, for I have watched at first hand the frustrations of uncertain and intermittent employment. I believe that the problem can best be solved by simultaneously attacking both underconsumption and underinvestment. I will concede it is simpler to see the relation between economic progress and consumption than to follow through the steps by which investment, by first adding to the production potential, finally leads to more work at higher rates of pay and makes possible a permanent improvement in living standards. I am not wedded to either economic theory. To my mind they are not inconsistent. They are different approaches to the same objective. We will, under H. R. 6393, advance both along the road of increased consumption by means of reduction of excise taxes and the road of increased productivity via capital gains changes and dividend credit, to the goal of fuller and more permanent employment.

To the extent that higher corporate taxes are involved, you may accuse me of a backward step. I am extremely reluctant to recommend even a temporary increase in corporate taxes. Unfortunately, I see no other

way of obtaining the other parts of H. R. 6393. My assumption is that business will be stimulated by the simultaneous advantages to investment and consumption contained in the remainder of the bill. In consequence, the actual addition to business costs would be reduced materially.

However, you may be certain that before there is any increase of corporate taxes, even to the limited degree contained in H. R. 6393, every effort will be made by the Ways and Means Committee to plug up the loopholes of tax evasion. I believe that a step in that direction will be taken this month when I expect that the House will pass a bill which will make life insurance companies pay income taxes. I expect that the burden upon you and me and the other American taxpayers will be reduced by $93,000,000, when we get the life insurance companies to pay 1947, 1948, and 1949 income taxes. And I can assure you that never again will life insurance companies go scot-free on income taxes as they have been doing for the past 3 years.

I am chairman of the Subcommittee on Taxation of Life Insurance Companies. I think we have caught up with them. You wonder not only that they haven't paid any taxes, but you are astounded when you are told that some of them don't think they should pay any taxes. Let me tell you bond men that not only are the life insurance companies invading your field and taking your business away from you, but some of them want you to pay their taxes besides. I think, in fairness to the life insurance industry, it should be said that the overwhelming majority of the industry is willing to accept this legislation. The real leaders of the industry realize the tax-consciousness of the country and the utterly untenable position of the life insurance companies in not paying their fair share of the cost of the government under which they exist and prosper. The two life insurance associations, representing 95 percent of the industry in their membership, have approved the proposed legislation and thanked the subcommittee for the fair and courteous treatment accorded them. Several small companies, and one large company—the Equitable Life Assurance Society of New York—feel that, while you and I and other Americans were breaking our backs under the tax load in 1947, 1948 and 1949, they should pay no tax.

The battle will be fought in the courts and in the district I represent. I expect every one of Parkinson's agents will be briefed on the alleged unconstitutionality of making the Equitable pay income taxes and they will thereupon contact every Equitable policy holder in my district. Using the technique of the modern radio commentator, I predict that "come election day, Lynch will still be in Congress and the Equitable will be paying Federal income taxes."

While talking of plugging loopholes, I might just as well say that those nonprofit institutions, founded for the intellectual and cultural development of our youth, which have gone in for the manufacture of macaroni, ball bearings, and similar scientific research and production, or have gone into the business of operating department stores and the like, all with a 38-percent tax advantage over their business competitors, may face the future somewhat grimly, but nonetheless secure, in the fact that the free ride has ended. Thirty-eight percent is a big tax advantage to give one competitor over another in the manufacture of even so humble a commodity as macaroni. Profits from department stores, whether operated by Macy's, Gimbel's, or the University of Pennsylvania, will be taxed. Profits from the sale of macaroni, whether manufactured by Angelo Baccigalupi or New York University, will be taxed, even if we have to plug up not only the holes in the tax law, but the holes in the macaroni as well.

Timing is all important in tax legislation as well as in decisions involving an investment portfolio. Right now I believe, in all earnestness, that my program will keep the economy on an even keel. It is not at all improbable that in several years, if business outlays for capital equipment lag, more emphasis may have to be placed on stimulating investment, or, in the less likely eventuality, should optimism be so prevalent as to create excessive business spending or profits, be maintained by a failure to pass on to the consumer any savings in operation, then a shift to emphasis on consumption would be in order. At this time the accent is properly on balance. H. R. 6393 is, I submit, a balanced tax bill.

Just a month ago you listened to the able finance minister of Canada, Mr. Abbott, in this very room. He set forth the wholesome effects of well-timed tax reforms centering around a dividend credit. There is entirely too much skepticism about the prospects of sound tax legislation at this session of the Congress. We will do a good job. It may not be all that you would like, but you are sensible businessmen and patriotic Americans. You know that almost 75 percent of the total Federal appropriations are in payment of the cost of the war or to maintain our defense in the event of another war. I doubt if the budget can be trimmed down on the rest of the appropriations to bring it into balance without tax receipts. I cannot, for one, advocate a tax bill that in a year of great prosperity and while the country is at peace would increase the deficit gap between the revenues and expenditures of our Government. Deficit spending in time of prosperity and peace will, if continued, lead to national bankruptcy.

I am convinced, however, that H. R. 6393 will not cause a revenue loss to the Government in 1950, and that in 1951 an expanding economy will result in increased revenues to the Government. I believe that H. R. 6393, or any bill containing its provisions, together with amendments to plug up loopholes in our present tax structure, will increase consumption and production, and, therefore, employment. I have no illusions about H. R. 6393. It is not the greatest tax bill ever introduced into Congress. It would, however, surely help the people of my district hold their jobs and get better jobs. It would develop job opportunities for young folks entering the labor field for the first time, so that they would enter upon their life work with the enthusiasm instead of the despair of the boys and girls of the '30's of even getting the most humble job by which they could maintain themselves. Furthermore, the enactment of H. R. 6393 will spread on the record, for all to see, that ownership capital in the world's greatest capitalistic nation is to be encouraged, that free enterprise and government can work together, and that the American economy, although heavily burdened by the costs of a world-wide war and by a humane, yet protective, program for the rehabilitation of the devastated countries, is still sound.

We have a great country. We have years of prosperity ahead as labor buckles to the job, as investors supply the needed savings for the machines and tools of production and as the Government—as I am confident it will—slackens off tax restraints, as the threat of inflation disappears and as the assurances of fuller employment and greater capital investment become more evident in year 1950. Yes, we have a great country and 1950 is the year.

Mr. Truman's Mystery Man

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. DAVENPORT. Mr. Speaker, under unanimous consent I include in the Appendix of the RECORD an article which appeared in the Saturday Evening Post, issue of December 24, 1949, entitled "Mr. Truman's Mystery Man," by Alfred Steinberg:

MR. TRUMAN'S MYSTERY MAN

(By Alfred Steinberg)

EVEN HIS BEST FRIENDS CAN'T TELL YOU WHAT DAVID NILES DOES FOR TRUMAN—ALL THEY KNOW IS THAT HIS TRIPLE LIFE PROBABLY CONCEALS SOME OF THE FANCIEST POLITICAL FOOTWORK IN WASHINGTON

David K. Niles, a round-faced little man who is one of President Truman's most important official advisers, has spent the last three decades making himself mysterious. In this enterprise he has been a brilliant success. Some of the men who have played cards with him week after week and year after year don't know much more about him than the fact that he is excellent at bridge, fair at gin rummy, and mediocre at poker. Niles' secretiveness has evidently served his own purposes well, for his White House influence unquestionably is enormous. This is not without its penalties, however. Any political figure who operates from the shadows is bound to excite suspicion. Opinions of Niles, necessarily uninformed, range from laudatory cries that he is the one idealist of the Truman administration to gloomy apprehensions that he must be, at the very least, an agent of the Kremlin.

Niles has played a major role in every presidential-election campaign since 1924. Such events are not readily confused with the deliberations of a secret society. Yet Niles, if noticed at all, has never appeared to be anything more than an unidentified political bystander. If some men have made achievement of their own obscurity a talent, Niles has elevated this accomplishment to a level of genius.

Niles spent years at the left elbow of the late President Franklin D. Roosevelt. With the exception of Stephen T. Early, now the Under Secretary of Defense, he is the last Roosevelt intimate who is still situated importantly in the executive branch of the Government. Niles helped the late Harry Hopkins cook up the third-term draft of Mr. Roosevelt, and Niles gave the President daily comfort and advice during the fourth-term campaign. Almost alone, despite his frequent ritualistic efforts to resign, he has survived the advent of the "Pal Harry" coterie in Mr. Truman's Washington, for he has proved invaluable as a liaison man with organized labor and all of the racial and religious minorities.

In his time, Niles has dispensed Federal patronage, built political machines, and honeycombed the Government with his protégés. Many a Cabinet member or other top official today has an uneasy feeling that he might rise or fall on a casual word from Niles. Currently, if he cared to, Niles could lay claim to master-minding the independence of Israel and President Truman's controversial civil-rights program. On the side, Niles is a minor angel of Broadway plays, a director of several private foundations, and an entrepreneur of the guest-lecturer industry. With all this, Niles has done the neatest

possible job of losing himself in the crowd. "I am a man of no importance," he says.

Niles, officially, is an administrative assistant to the President at $15,000 a year, one of those White House helpers whom President Roosevelt once proclaimed to be equipped with a passion for anonymity. In Niles' case, this definition was a magnificent understatement "I would say," a Niles acquaintance remarked the other day, "that the passion might be more accurately described as a mania."

Not long ago, a Boston Congressman telephoned Niles' secretary to ask what the K in David K. Niles stands for. "I haven't the slightest idea," she replied.

"I guess," said the Congressman, "that it must be K as in Kingmaker."

For that matter, the same secretary told a recent visitor, with patent sincerity, that I really don't know anything about Mr. Niles. In depression days, when Niles was the Federal relief distributor in Boston, a partition was built around his desk. Niles took one look and ordered pongee curtains for the windows in the partition. "I'm rather shy," he explained.

"I am glad that someone is writing about Dave Niles," Roger N. Baldwin, director of the American Civil Liberties Union, informed me a few weeks ago. "I have known him for 30 years and I would like to find out something about him."

Niles is convinced that his telephone is tapped by the FBI. If so, the G-men who have to listen in on him must be bored to death. Niles' phone conversations consist largely of such illuminating phrases as "You are misquoting me," or "You don't mean what you're saying," or "This should not be discussed over the phone." Recently, Niles was credited with a major role in mediating the public quarrel between Mrs. Eleanor Roosevelt and Francis Cardinal Spellman. "You flatter me," Niles told reporters. "I had nothing to do with it." The reporters nodded and looked wise.

As a virtuoso of obscurity, Niles is physically suited for the part he has chosen to play. His eyes are pale blue, peering nearsightedly through horn-rimmed glasses. He is short, plump, and altogether unremarkable. Niles' hair is thin and graying; he is somewhere in his late fifties—how late Niles won't say and nobody else seems to know for sure, except that he is about 58 or 59. His accent is a cultured Bostonese with overtones of Oxford, although Niles' formal education ended with high school. If he had not been involved in politics, Niles might have been an excellent private detective. No one would have given him a second glance.

Some of his close associates—it would be inaccurate to say that Niles has intimate friends—look upon Niles with something approaching the detachment of a psychiatrist. "I have about decided," says a long-time gin-rummy opponent, "that Dave has worked himself into a state of frustration. He knows so much because he keeps his mouth shut, but he is dying to tell what he knows to prove that nobody else knows more than he does, and he can't because then he wouldn't have a chance to know so much."

Some people, upon meeting Niles for the first time, come away with an impression that he is "a cold fish," others find him warm and affable. Behind whatever facade he may set up, Niles is a complex and emotional man. Companions have seen him weep when he walked through a slum area. He was extremely attached to his mother, and badly broken up by her death a little more than 2 years ago.

Niles has a curious reluctance to affirm or deny anything about himself. I asked Niles about the statement, reprinted for years as a fact, that he was the man who persuaded John L. Lewis to give nearly half a million dollars to the Democratic Presidential campaign of 1936, with the understanding that Lewis would be made Vice President of the United States. Niles responded instantly with a perfect Nilesian clarification. "Oh," he said, "John L. will get so angry again."

One Congressman declared inaccurately, in 1940, that Niles was Harry Hopkins' brother-in-law. Three years later, the assertion having gone unchallenged, the Congressman repeated it. Only then was the record corrected—and not by any statement from Niles, either. People who have known Niles for years assume he has always been a bachelor, but one former Federal official insisted that he saw a Government job questionnaire on which Niles wrote that he had been married and divorced. Niles was asked to comment. "Well," he said, "it's a good story."

Marriage, as a matter of fact, would be impractical for Niles today, for he leads a triple life. From Monday morning through Wednesday afternoon, he does his confidential chores for the President in Washington. From late Wednesday through Friday, he is a New York man about town. The rest of the week he is a Boston man of culture.

Early on Monday morning, Niles arrives back in Washington, fresh from a hectic week end in Boston, and unpacks his bag in his room at the Carlton Hotel. He has occupied this room for years and has thoroughly littered it with books and card tables. Then he hurries over to his drab office on the second floor of the decrepit old State, War, and Navy Building, next door to the White House and across the street from Blair House, where the Trumans are living temporarily.

Niles' job, basically, is that of political trouble shooter and buffer between the President and certain segments of the public. In addition to keeping labor and the minority groups happy, he dabbles in such things as New England patronage, Israeli matters and preparing for the next election. Currently, he is operating on the theory that President Truman will seek reelection in 1952, and that Gov. Chester Bowles, of Connecticut, is the man Truman will have to beat at the next Democratic National Convention—at least, that is the impression of people who have talked politics with him recently.

Niles spends many office hours listening to the requests of an endless line of people who want him to intercede for them, both within and without the Government. "I came to Washington with a little problem and a letter of introduction to Dave Niles," an awe-struck young Boston doctor recalled recently, "and the next thing I knew I was talking to Attorney General Clark." Actually, most seekers of favors receive little more from Niles than the impression that he will use his influence to help them. As an unofficial employment agency, however, Niles has been hailed—and condemned—as a close competitor of his friend, Justice Felix Frankfurter, in placing Frankfurter-Niles type liberals with Government agencies. The Niles clique in the Government has been diminishing in size ever since the death of President Roosevelt, but a few of those who have remained have risen steadily in influence and importance.

Niles is a shrewd political manipulator, but his Washington personality is difficult for either the average politician or idealist to take. His behind-the-scenes operations make him immediately suspect to the politician, and his concern with votes and patronage gives pause to the idealist. As one politician put it the other day, "Anybody who sees the President as much as Dave Niles must be knifing somebody." Washington folklore widely credited Niles with leading a campaign to oust the late James Forrestal as Secretary of Defense in favor of Louis Johnson. "Jim called me up one day and asked me about that," Niles told me recently. "I had lunch with him and assured him there was nothing to it." Then, grabbing me by the arm and looking me straight in the eye, Niles said, "You don't think I'm that kind of a fellow, do you?"

White House circles are agreed that Niles was a key man in the achievement of independence for Israel. When the Palestine issue came up after President Truman had taken office, Mr. Truman pushed the whole problem over to Niles, to be decided in terms of Democratic Party justice.

From Truman's opening shot that the British permit 100,000 Jewish displaced persons to enter Palestine, through the long-drawn-out international hearings that followed in the next year and a half, Niles cagily planned a series of Presidential moves which, despite certain inconsistencies and divisions among the Zionsts themselves, forced the reluctant British into a position in which there was nothing for them to do but agree to an independent Jewish state.

After a day of dealing with such heady matters, Niles retires to his hotel room for interminable gin rummy or bridge games with his cronies, many of whom are lawyers, both in and out of the Government. Niles never appears at cocktail parties or State dinners, which are hotbeds of verbal indiscretions.

Wednesday afternoon, Niles bustles back to the Carlton, flings some fresh clothing into his suitcase—he is usually somewhat rumpled in appearance, although he dislikes untidiness in others—and takes a taxi to the airport. A few hours later Niles, the man about town, takes up residence in the Roosevelt Hotel in New York. This is a more easy-going Niles. Enjoyment is the thing, plus a little business. Thursday is theater night. Niles usually has a few investments on Broadway, and currently is supposed to have small pieces of Mister Roberts and South Pacific.

If time permits, Niles looks into the Roosevelt Memorial Foundation, of which he is a trustee, and which at present is considering establishment of exchange scholarships between American and foreign schools. When something special comes up in Washington and Niles cannot be located on Broadway or at the foundation, he usually can be found at a Jewish restaurant on the lower East Side, happily consuming potato pancakes with salami or tongue, and sipping tea from a glass.

By noon on Friday, the glamour of Broadway begins to fade, and Niles heads for Boston, his natural habitat. Early on Saturday morning Niles can be seen at the Touraine Hotel breaking bread with Boston's young liberal set. The discussion begins on a lofty plane, but usually reaches realistic political levels long before the coffee cups are filled again. But even with these intimates, some of them former Washington protégés, Niles speaks guardedly.

In season, Niles attends Harvard's home football games. He dines at a Chinese restaurant on Saturday evening, then moves along with the crowd to the Boston Symphony. Niles the music lover, recently merged with Niles the politician, when he engaged in a bit of genteel lobbying over who should succeed Serge Koussevitzky as conductor of the orchestra. When the orchestra is on the road, Niles heads for a card game at the Preston Hotel in Swampscott or at the Belmont Country Club, in a Boston suburb.

Niles has an office in the Little Building, in the heart of Boston, and on Sunday mornings the door is open to visitors. There for many years before his death, Rabbi Joshua Liebman used to discuss psychology, philosophy, and religion with Niles, and together they hashed over much of the material in Rabbi Liebman's best seller, Peace of Mind. Mayor James Curley, Boston's favorite no-matter-what, is an old political crony, and so are Gov. Paul A. Dever and House Majority Leader John McCormack. Although he pro-

fesses to regard great personal wealth as a bad thing, Niles makes it a point to be friendly with wealthy people. One of the Boston Filenes, upon Niles' urging, established a cooperative department store and a cooperative grocery in the Washington area, and supported Niles earlier in establishment of the Twentieth Century Fund, a well-heeled private-research and public-education concern. Brandeis University, at Waltham, Mass., is another Niles project, named for the late Justice Louis D. Brandeis, another Niles friend.

By Sunday afternoon Niles is ready for business as one of the most successful practitioners of the traveling-lecturer industry. As director of Ford Hall Forum in Boston, one of the oldest such organizations in the United States, he goes out to greet the guest speaker who will appear that evening, goes over his speech, takes him to dinner, leads him to Ford Hall, shows him the stage entrance, and then disappears into the audience. Ford Hall Forum, which has heard many an avant-garde political thinker in its day, was the springboard Niles used 25 years ago to jump into his extraordinary career. Niles clings to it today as much for sentimental reasons as for the fresh contacts it gives him. After the forum, Niles makes a last-minute check into the Open Forum Speakers' Bureau, which he also directs. The speakers' bureau, a handy tool for molding public opinion, is one of the largest of its kind in America. After this inspection, he packs his bag to return to Washington. This weekly routine is broken only by political-trouble-shooting trips around the country, and by his summer vacation. For the latter, he holes up in a hotel at Poland, Maine, or at Martha's Vineyard, plays cards day and night for a few weeks, then returns, refreshed, to his lives in three cities.

Niles was born in the slum heap of North Boston, the son of Russian immigrants named Ascher and Sophie Neyhus. Somewhere along the line, Niles and two of his brothers changed their name from Neyhus to Niles, although another brother and his parents clung to the family name.

Niles' father was a tailor, and the family was poor. His mother encouraged in young David a burning desire to get somewhere in life, but when he finished high school there was no money for college. Niles went to work in a Boston department store, but he was restless and unhappy. His only fun came on Sunday evenings, when he would go to Ford Hall for the lectures and discussions. Niles soon took to hanging around the hall in his off hours, attracting the attention of George W. Coleman, a goateed Republican who then ran the forum and was the Dale Carnegie of his day. Soon Niles was Coleman's protégé, then a regular assistant. In 1915, Niles took a job with the extension department of the Milwaukee public-school system, where he helped develop an adult-education program. Homesick, he returned to Boston and Ford Hall 2 years later. When World War I broke out and Coleman went to Washington as Assistant Director of the Labor Department's information office, he took Niles along as his assistant.

In Washington, Coleman had a good opportunity to study his young helper at close range, and he liked what he saw. There was depth to Niles' mind. He did not push himself, but was quiet and self-effacing.

Although the Labor Department had little to do, Niles developed an appetite for Government service and politics. The end of the war eliminated his job, but experience he picked up in making movie trailers for the Labor Department landed him a job on Long Island with Paramount Pictures. Some months later, Niles switched to a new movie company organized by a group of Boston businessmen. Whether he wore puttees, a cap turned backward and a wide-mouthed megaphone, as was then the style for movie makers, cannot be determined, but Niles helped make a hit picture called The Miracle Man, starring Lon Chaney, Thomas Meighan, and Betty Compton. The Miracle Man was such a box-office miracle that the company overexpanded and went broke. Niles went on to a third movie outfit, also on Long Island—Hollywood had not yet become the film capital—but by this time he was beginning to doubt that he would make millions in the movies.

When a new job in 1921 tied up so much of Coleman's time that he had little left for Ford Hall Forum, he sent Niles an S O S. Niles turned his back on the movies and returned to Boston. In 1924 Niles was promoted from Coleman's assistant to associate director of the forum, and already he had surrounded himself in mystery. A close associate, in a book about the forum, reported that "the Ford Hall folks and Mr. Coleman have been only too pleased to recognize Mr. Niles' amazing talents, talents which are surpassed only by a modesty which renders impossible any accurate narration of his generous and unselfish devotion."

The same year, 1924, the elder Bob La Follette and Burton K. Wheeler established the Progressive Party and ran, respectively, for the Presidency and Vice Presidency of the United States. The candidates had been acquainted with Ford Hall Forum and they asked Niles to head their speakers' bureau. Niles accepted and in a short time was running the whole campaign. The regular campaign manager was so religious that he spent half of every day studying his Bible. Not so preoccupied himself, Niles dashed about the country, making wild predictions as to the outcome of the election. When voting day passed the Progressives had won only Wisconsin's 13 electoral votes, but Niles had learned a great deal about politics and had attracted virtually no attention to himself.

Two years later Niles found himself involved through Boston friends in the famous Sacco-Vanzetti case. This cause célèbre had already dragged along 6 years, but with the help of Felix Frankfurter, Niles soon brought the save-Sacco-and-Vanzetti forces together and whipped them up to a fever pitch. There were thousands of mass meetings, speeches, pamphlets, and demonstrations. Niles' major job was to coordinate the various defense groups, a most difficult job in view of the many factions primarily interested in using the two men as a symbol for whatever political product they were selling. Niles did some of the most skillful behind-the-scenes wirepulling of his career, but it was all in vain. Sacco and Vanzetti were executed on August 23, 1927.

By now, Niles was an incurable political manipulator. He went to New York in 1928 to direct the National Committee of Independent Voters for Al Smith. His work was of uncertain value to Smith, but of great value to himself, for it brought him into close contact with the Hyde Park Roosevelts and their social-worker friend, Harry Hopkins. In 1932, Niles and the insurgent Republican, George W. Norris, ran the National Progressive League for Roosevelt, another of the fringe political organizations in which Niles was fast becoming an adept. Niles was rewarded with the chairmanship of the Massachusetts NRA Adjustment Board, then made Federal Emergency Relief Administrator for his home State. Oldline Democratic politicians in Massachuetts didn't like this too well—many of them had never heard of Niles—but Niles made friends with them, handled himself shrewdly, avoided scandal and distributed millions where he thought they would do the most good. When WPA was established in 1935, headed by Hopkins, Niles was brought to Washington as Hopkins' general assistant on labor liaison.

Niles' first big Washington job was to obtain the 1936 campaign contribution from John L. Lewis. This success assured Niles' future, although his reputation for effectiveness was somewhat tarnished in 1938, when he was assigned to make Jimmy Roosevelt Governor of Massachusetts, and the effort fizzled badly, when the opposition discovered, among other things, that the President's eldest son was not even a registered Massachusetts voter.

Shortly after President Roosevelt began his second term, Harry Hopkins decided that the Nation needed Hopkins for President in 1940. Niles franked out thousands of copies of a speech in which Hopkins hailed deficit spending and pump priming as the best ways to insure prosperity. Howls of rage rose up in Congress, and increased when WPA scandals in Pennsylvania, Kentucky, and Tennessee broke into the headlines in 1936 and 1937. Then Hopkins' wife died and Hopkins underwent an operation. Momentarily, Hopkins lost his taste for the Presidency, dismantled the controversial theater and arts groups of WPA which Niles had established originally, and finally resigned as chief of WPA.

After a rest, however, Hopkins got the Presidential bug again. Mr. Roosevelt expressed no objection and even helped him along by making Hopkins Secretary of Commerce in December 1938. Niles went along to Commerce as Hopkins' assistant. Beyond pushing Hopkins' candidacy, his main job was to distribute 100,000 jobs necessary for taking the 1940 census. This Niles did to the satisfaction of hungry Democratic Congressmen, operating for months from an office with no name plate on the door until some Republican Congressmen inquired as to just who this mysterious figure was with so much patronage in his control. Congressman McCormack made it all very clear: "Mr. Niles is a fine gentleman, a very fine American, and equally a very fine public servant." Niles himself couldn't have done better.

Niles concocted the second Hopkins build-up for the Presidency on a foundation of pure corn. First Hopkins made a speech defending free enterprise, to the considerable astonishment of free enterprisers. Then he held a small-business men's conference in Washington, which proved unfortunate, because the small-business men got out of hand and raucous with their temporary importance. Then Hopkins bought a 340-acre farm in Iowa, announced to the curious press that he loved the soil, and was photographed in farm kitchens unhappily chewing on homemade cookies.

The second Hopkins build-up fell apart in August 1939, when Hopkins became ill again and left political ambition behind for good. In the spring of 1940, Hopkins moved to the White House as companion to F. D. R. Later in the summer, a few days before the Democratic National Convention opened in Chicago, Hopkins and Niles went to the convention city, and established themselves on the third floor of the Blackstone Hotel with a direct telephone line to the White House. Hopkins got on one end of the line, Mr. Roosevelt on the other, and Niles scurried about lining up delegates to make the third-term draft a certainty. The usually astute Jim Farley, who somehow thought he was in line for the top post, suddenly found himself out in the cold, with Roosevelt nominated and Hopkins and Niles advising the key delegates that the chief wanted Henry Wallace as his running mate. This was accomplished to a protesting chorus of boos which rattled the rafters of Chicago Stadium.

After the convention, Hopkins resigned as Secretary of Commerce and Niles went back to fringe-machine politicking. Niles, too, resigned from the Commerce Department, organized the LaGuardia-Norris Independents for Roosevelt, and thus further established his influence with Democratic irregulars throughout the country. This activity also further endeared him to the President, who

had no way of determining the importance of the job Niles had done, and shortly after the election, Mr. Roosevelt found Niles a desk in the White House as a key assistant and trouble shooter.

In those hectic days when William Knudsen and Sidney Hillman jointly headed the Office of Production Management, bickering daily in their respective accents, Niles was rushed over to help Hillman win some of the arguments. Once this unfortunate experiment was concluded, Niles was brought back to the White House and given the title he bears today—Administrative Assistant to the President. In the fourth-term campaign, Hopkins was overseas, so it was Niles upon whom the President leaned most heavily. Niles had been Harry Hopkins' "Harry Hopkins" for years; now he was playing the role of Hopkins himself. Niles also worked closely with his friend Sidney Hillman and Hillman's newly organized CIO Political Action Committee to bring out the labor vote. In addition, he directed independent groups for Roosevelt and passed out patronage to hard-working independents after the election.

When Mr. Truman came into office, Niles resigned. But so loud were the protests from minority organizations, who feared they would be without a sure entree to the White House if Niles pulled out, that Truman insisted he stay. Since then he has resigned several more times. It reassures him of the need for his services, associates report, to have the President turn down his resignation so regularly. Niles is as close to Mr. Truman today as we once was to Mr. Roosevelt, or to Harry Hopkins, or to Coleman, and he served cleverly and inconspicuously on the Truman board of campaign strategy last fall.

Since he is so modest, Niles' friends have often wondered what would be inscribed on his tombstone. It is not too difficult to predict, even at this time. There will be no tombstone.

For Equality in the Army

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, January 20 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the New York Times of January 17, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR EQUALITY IN THE ARMY

It is gratifying to know that the United States Army has completed, and will shortly carry out, its program for integration of Negro personnel on a basis of skills only, without regard to discriminatory quotas of any sort. This is as it should be, from every point of view. National defense is too big and the Army is too good to have any place for race and color bars. When we get to a sense of basic values we have a chance to further basic human justice.

The basic value here is skill, and it has nothing to do with the accident of pigmentation, one way or another. To impose any sort of quota in such a field is unintelligent as well as inhumane. We have come to understand this valuation in many fields, such as sport, for example, and there is no reason why we should not apply it to all.

Beyond that is still another basic value, that of our common humanity; the thing that Jefferson had in mind when he said that we held it to be self-evident that all men were created equal and that they were endowed, obviously equally, with unalienable rights. What the Army is doing is working toward that broader concept of values and every step in that direction is a mark of human progress.

Equal-Rights Program

EXTENSION OF REMARKS

OF

HON. CHASE GOING WOODHOUSE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herewith an article by Dr. Alice Hamilton, of Hadlyme Ferry, Conn. Dr. Hamilton is an outstanding authority on industrial medicine and is professor emeritus of Harvard University Medical School.

[From the Ladies' Home Journal]

WHY I AM AGAINST THE EQUAL-RIGHTS AMENDMENT

(By Alice Hamilton, M. D., president of the National Consumers League)

We hear a good deal nowadays about the Equal Rights Amendment, which, after more than 20 years of ardent effort on the part of a group of feminists, the Woman's Party, seems to have reached a point where its passage by Congress is possible. Both parties in the last election declared themselves in favor of it, and it has been passed on favorably by the Senate Judiciary Committee.

What is this amendment to the Constitution which may be put up to the State legislatures in the near future? It reads very simply:

"Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex. Congress and the several States shall have power, within their respective jurisdictions, to enforce this article by appropriate legislation."

Well, that sounds only fair and reasonable. No woman wants to have her rights denied or abridged. The amendment seems to open a closed door, to clear away difficulties that have been in her path. Perhaps she is working in an office where some man, not nearly so efficient and conscientious as she, has a higher place, just because he is a man. Perhaps she is a physician who, because she is a woman, cannot get on the staff of a hospital. Perhaps she is a teacher who knows that when the principal retires she would get his place if she were a man, but no matter how much she deserves it she will be bypassed and a man put in. Or perhaps she is a businesswoman like one who said to me, "Women in business are like the Red Queen in Alice; we have to run as hard as we can to keep in the place."

These women see in the amendment a means of wiping away all such sex discriminations; they see themselves placed on a real equality with men. But are these hopes justified? Will such a law do that? Will it give women more than it will take away from them? I do not think so, and I will tell you why.

No law can compel a man to employ a woman or to promote her, no law can compel a hospital to place women doctors on its staff or to admit them as interns and residents, no law can prevent an employer from passing by a competent woman and appointing a less competent man. These are matters which lie outside the domain of law; they are decided by men who are often swayed by the old prejudices, the instictive inhibitions and compulsions which centuries have implanted in us. I do not mean that these obstacles cannot be overcome; the history of the past century shows how far the emancipation of women has advanced already, but the advance cannot be brought about by law, by compulsion. Only the slow growth of a genuine feeling of sex equality can bring it about; but surely when we see the attitude of the young generation we cannot fail to be heartened by the striking signs of increasing equality between the sexes.

It is true, as the advocates of the equal-rights amendment insist, that there are still in some States inequalities that can be removed by legal action, and have been in the more advanced States. To that I would answer that it is in the power of such States to follow the example of their sister States, that it is not necessary to bring about such relatively simple reforms by so cumbersome a method as an amendment to the Constitution.

But why should we—I speak as president of the National Consumers League and as a member of the National Women's Trade Union League, the League of Women Voters, the Association of University Women—why should we who call ourselves feminists oppose a measure which, even if it does not do all its proponents claim, will still help to remove women's disabilities? It is because we know that women would lose more than they would gain if, at one stroke, all the laws which treat women as women and not only as persons were revoked. Now to the strictly orthodox feminist, women should be treated only as persons. I remember a debate before a women's club in which I took the side opposed to the amendment and the side defending it was taken by an eager, attractive, but very young woman. I argued that the laws, so general in the older countries, which provide vacation with pay for pregnant women in industry were necessary for the good of the race. She opposed it, of course, but finally gave way. "All right," she said impatiently, "if you say 'pregnant persons' we won't object, but not 'women'." I assured her we would be quite content with that.

This is, of course, an extreme instance of what one might call feminist fundamentalism, and I am not suggesting that it is typical of the Woman's Party. But I do think it is typical of that group to ignore the real physical and social differences between men and women, differences which lie at the base of the laws applying only to women and not to men. The fact that these differences have often been exaggerated in the past and that nowadays we ignore many of them does not mean that we can sweep them all away and act as if that settled it. Women still have to bear the babies and still ought to rear the children, and I ask any young mother if that is not a real handicap which deserves consideration.

The proposed amendment would do away with the protection of women as homemakers and mothers; it would either make the wife equally responsible with her husband for the support of the family or it would remove responsibility from both. In such a case, which parent would be more likely to get out from under? Ask any social worker. Surely it is only common sense to hold the husband responsible for the support of his family.

And what about alimony after divorce? So far the laws relating to alimony (passed by male legislators) have been much more favorable to women than to men; in fact, they have shown an absurdly sentimental attitude

and often they have worked great injustice. But to abolish them altogether and to put the woman on an equal footing with the man would work even more injustice. Take the middle-aged woman who has no professional or industrial experience, who knows no skill but amateur housekeeping and child care. When her husband tires of her and seeks a younger mate, is she to be left penniless to find her own support? Alimony laws need strict revision, but not abolition.

The laws of property as they affect married women are too complicated to be covered in this discussion. It is quite true that in backward States such laws are unfair to women, but in most of the States they have changed with the changing times and those disabilities that still remain can be removed if ardent feminists will only carry on the sort of intensive campaign which we of the older generation devoted ourselves to, some 40 to 50 years ago. They would then know exactly what they were trying to achieve, for they would be attacking a definite evil, not a system which is part evil and part good.

It is in connection with labor legislation that my opposition to the equal-rights amendment is strongest, for my field for 35 years has been the protection of working people against the harmful features of industrial work, against dangerous dusts, poisons, excessive heat and heavy exertion, long hours, low wages. Dangerous dusts cause silicosis, followed sometimes by tuberculosis; poisons used in industry include lead, mercury, mineral acids, carbon monoxide, and a host of volatile solvents which act like ether and chloroform, only sometimes more harmfully. Our efforts have always been to protect both men and women against these dangers, but when we could not do that, when legislators were willing to protect only the women, then we took gladly what we could get.

And in some respects protection is needed more by the women. For one thing, they have the handicap of youth; and, as we all know, the younger the worker, the more susceptible to a poison and to fatigue and to the harmful effects of dangerous dusts. Men in industry are divided into the different age groups just as men are in nonindustrial work, but women in industry are massed overwhelmingly in the early age groups. This means that they are more susceptible to all the harmful elements in their work, they are less prudent than older women, they are reckless and they have the silliest ideas about food and about protection against cold and wet. Partly because they are young, partly because they draw the lowest wages, young women workers have a higher tuberculosis rate than men. Young women workers cannot stand for long hours on their feet as well as men can, nor can they lift heavy weights; older women have their special handicap, housework and the care of children added to the hours of factory work.

It is true that the Walsh-Healey wage-and-hour law applies to men as well as women, but it covers only those industries that enter into interstate trade, not those that are strictly within the State—restaurants, hotels, laundries, stores, and the white-collar industries. For these, State laws are necessary, to prescribe a minimum wage and maximum hours. Of course, it would be better to extend such laws to cover men also, but this has never been done. We should be giving up a reality for a vain hope.

We do not need, we older women, to ask what will happen if all the laws protecting workingwomen should be revoked, for we remember only too well what happened before those laws were passed. In Illinois we fought for years for a 10-hour law for women. I knew a young Irish girl in Chicago who had a job as night waitress in an all-night eating place out near the stockyards. She worked 6 nights a week, 12 hours a night, 72 hours a week, and it could have been raised to 84 so far as the law was concerned. There were no minimum-wage laws in 1912 when, out of 5,000,000 workingwomen in the United States, half under 24 years of age, a million earned less than $4 a week.

In those days I hated to shop in Chicago stores, for I knew so well the lot of the girls who worked in them. There was no vacation; not even in the hot summer months could the employers be persuaded to close for 1 weekday. It was a 10-hour day with plenty of overtime—paid for usually by a lunch—especially before Christmas; wages ran from $2.50 to $10 a week and very few ever reached that latter figure, yet a girl could not then support herself in Chicago on less than $3 a week. Even to get seats for these girls meant a long fight. I remember a girl who was a worn-out, middle-aged woman at 24, after 10 years' work in a department store for never more than $7 a week, all of which went to her widowed mother. She had no normal girlhood, no fun ever, for her Sundays must be spent in sleep or in mending and laundering.

The women who are pushing the equal-rights amendment insist that to limit the hours of work for women and to insist on pauses for lunch, on separate toilets, on provision of seats—all these things handicap women in getting jobs and that they want to be free to compete with men on equal terms. I think that is probably true of a small number of women in industry, such as linotypists on morning papers, and ticket sellers on elevated roads and subways, who are not allowed to work on the night shift. But in normal times their number is infinitesimal compared with the number of women who welcome these safeguards. Of course in wartime all restrictions are suspended in most of the States.

I can assure you that when Ohio passed laws for the protection of women workers, Ohio women did not envy the freedom of the women of Kentucky to work as long hours and for as low a wage as they pleased; Massachusetts textile workers did not move to Rhode Island to free themselves from the wages-and-hours laws; the women of the Northern States did not look with longing at the untrammeled freedom of the South. There is no articulate organization of workingwomen that favors the equal-rights amendment.

For more than half a century the struggle to alleviate the lot of women workers has gone on, and we can point with pride to what has been gained. Twenty-six States have minimum-wage laws, and this means that some 4,000,000 women in hotels, restaurants, laundries, and so on, must be paid a decent wage. Forty-three States limit the hours which a woman may be required to work. Less essential, but still important, are the regulations which require seats—and their use—separate toilets, time off for lunch, and so on, and these are in force in practically all States. And such laws have not limited the employment of women, handicapped them in their search for jobs; on the contrary, it is during that past 25 years, when these laws were passed, that the employment of women has increased steadily—not only during the war—and in just those States where labor laws are strict. All this gain would be swept away by the adoption of the equal-rights amendment. Is it any wonder that workingwomen have dubbed it the unequal-rights amendment?

In theory, of course, women should fight for their rights as men do, but in actual fact they seldom do. Even now, in wartime, only about three million of the seventeen and a half million women wage earners belong to unions, and the majority of these are in war industries, aircraft, and automotive production. When the war is over few of them will remain in those industries; they will have to go back to their old jobs, most of them in unorganized industries or with far less strong unions. Surely they will need as much protection as they did before the war.

The equal-rights amendment will not free women from discrimination; no laws can do that. It will not make it easier for professional women to advance nor for workingwomen to get or to hold jobs, but it will sweep away the few measures which now make the lives of the wage-earning women less hard. It will remove from the wife and mother all consideration for her as a woman and will place her on a legal equality with her husband, an equality that is mostly imaginary, has little basis in hard fact. The legal injustices under which women in some States still suffer can be removed one by one with far less effort than was needed in earlier years, and without sacrificing what is good in order to get rid of what is bad. If women in and out of industry understood clearly what the proposed amendment would do, it could never be passed.

Why Does Uncle Sam Pick on Us?

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Carl A. Gray from the Saturday Evening Post:

WHY DOES UNCLE SAM PICK ON US?

(By Carl A. Gray, president, Grenby Manufacturing Co., makers of electronic equipment)

(Condensed from the Saturday Evening Post)

My son Harvey is 10 years old and already a businessman. He has a paper route. I am flattered that he has decided to follow in my footsteps. I have been a businessman ever since I left college some 25 years ago. Harvey is more enthusiastic about being in business than I am. According to his lights, being in business means supplying needed services or articles for a modest profit. He looks forward to a lifetime of following this simple formula.

I don't know whether to tell Harvey the economic facts of life or to let him enjoy his illusion. I cannot decide whether to tell him that the future of the small-business man is in jeopardy; that a generation hence he may be extinct.

Along with thousands of others, as a small employer I am today staggering along in a labyrinthine economy of uncertainty, weakened by the bloodletting of excessive taxation and faced at every turn by inquisitive agents of government. Today the margin of safety is so tenuous that one costly mistake of judgment in buying, selling, or engineering could wipe out not only the year's profit but the business as well. If the squeezing process continues, there won't be any small-business men when Harvey grows up. Then everybody will be working for the Government.

One day I walked into my office, and it was as busy as Grand Central Terminal. There were eight Government agents there, representing a variety of bureaus. They were checking our files, looking for statistical information, studying time cards, examining our books, and conning our personal records. It was just a coincidence that they arrived on the same day, but it started me thinking.

That night I went home and totted up the advantages and disadvantages of operating one's own business.

I was appalled to find that the debits more than outweighed the credits. A lot of things had happened, I discovered, since 1939, when my partner and I started in a tiny plant with three employees. Now we have 175, and the headaches have increased by geometrical progression.

Here are just a few of the Government agents who drop in to see us, sometimes in twos and threes, sometime like small hordes of locusts: State sales tax, State labor department, factory inspectors, Federal unemployment, State unemployment, revaluation and conversion, Internal Revenue, War Assets, Reconstruction Finance Corporation, Government auditors on contracts, renegotiation representatives, and, last but not least, wage-and-hour representatives. Many are pleasant fellows, but they all take time.

When you get a contract with some Government agency—your troubles really begin. We had one that ran for 7 months, back in 1945. Our monthly reports were filed and approved; we received payment, and final releases were signed.

Then out of a clear sky in June 1947 two men walked in and said they were going to audit all transactions on this contract. They stayed 4 weeks.

Three months later we got a letter saying our records were incomplete and we were liable to a penalty of $10,531. We yelped loud enough and the case was reopened. New auditors arrived and started from scratch. After a couple of weeks, one of them got sick and left. A week later his partner left. We put everything back in the files.

In June 1948 a stranger walked in. He explained that he was there to audit the contract. He stayed so long that I began to mistake him for one of the help. Then one fine morning he came up with an answer: The Government owed us $2.09.

But hold. A couple of months later two grim gentlemen from Washington arrived to tell us that they were going to do another once-over-lightly. That was early in 1949, and we were still holding our breath. Then a new 64-page set of regulations arrived, superseding everything else.

Sometimes it is impossible to find out what certain Government rulings mean. Not long ago we called the Collector of Internal Revenue to ask him if contracts secured from the Government prior to May 21, 1948, were renegotiable. He told us to call the office at Hartford. We did. They told us to call the main office in another city 40 miles away. We did. They told us to write to Washington. We did. Several weeks later we got a suggestion that the answer was included in certain sections of an enclosed document that covered 145 pages of legal-size paper. A few days later we received a note telling us to "please destroy the copy of part 423 sent to you earlier." Accompanying this note was another fat volume of 64 pages of legal-size paper. Somewhere in it is the answer.

Far worse, however, than these day-by-day pinpricks is the tragic siphoning of money out of business through taxation and dispersal of dividends. If we're lucky enough to make a profit of $100,000 in 1 year, here's what happens: Instantly that shrinks to $62,000 as the Federal Government takes its cut of 38 percent. Then the State government gets a whack at it. I'd like to keep most of what's left in the business for a rainy day. But section 102 of the Internal Revenue Code stipulates a penalty of from 27½ to 38½ percent unless I parcel out a large part of the balance for dividends. That way, of course, the Government gets still another lick at it through personal-income taxes of the stockholders. But it leaves me with less than $20,000, probably nearer $10,000, to go into surplus. You can't win.

At the present time our company has five good new devices gathering dust on the shelves. We just don't have the money to finance their production. And if we did, there's the inevitable feeling, "What's the use? We're only adding to our headaches."

You can't blame private investors for being skeptical. The owner of a business which makes small castings for us told me that he was trying to get more equipment and modernize his plant. It called for venture capital. He talked to a friend who has considerable money. Here is the answer he got: "If I put money into your company, even though it is in excellent shape, I am just risking money. And if I make money, it means that I have to pay more to Uncle Sam. The risks are too great for the sake of paying more income taxes."

Suppose, then, that you try to float a public stock issue to raise money. That's a nightmare I've been through. You've got to file a prospectus with the SEC. Minimum legal advice for this costs about $15,000. Minimum charges for SEC audits run to another $15,000. Bankers also like to have special reports from outside engineers. These cost another $10,000. If the small entrepreneur wants public financing, he's got to put about $40,000 on the line before his application is considered. With that kind of money lying around he probably wouldn't be applying in the first place.

Have I broken your heart yet? Then perhaps you'd like to hear about the sleeper in the wage-hour law. We got rooked by it.

There's a provision in the law that says if a foreman spends as much as 20 percent of his time doing any of the work of his men, he is entitled to time-and-one-half for overtime. Well, we bought out a New York concern and took several of their old employees on our pay roll. One of these newcomers slapped an attachment on our factory. It seems that during the war years this foreman had more on his mind than winning the war. He kept careful tab of the hours worked. He felt he had $20,000 coming to him.

Understand, all this had happened before we even came into the picture. But all our assets were permitted to be frozen by State law. The pay of our employees was in jeopardy until I scurried around and posted a bond. I have a friend who got nicked for nearly $75,000 by several of these sudden suits for overtime. The suits were stimulated by overenthusiastic representatives of government.

There are a lot of things I'd like to be doing if we had a proper margin of safety for operations. I have lots of swell youngsters coming to me wanting to learn a trade. It takes a couple of years to train a good machine operator. Even a graduate engineer needs a year or so under mature guidance before he earns his keep. We've had to pass up some of this good raw material, letting it go to bigger companies or, even worse, to seed.

I'm not being mealymouthed when I say I'm in business for more reasons than just to make a profit. I want profit because I want job security as much as the next fellow. But I also like to feel that I am contributing to the welfare and prosperity of my community. And I like to feel that my small company can do its part in creating a strong industrial fabric for war or peace.

I think my country is more secure with thousands of small plants like ours than with just a few big ones under centralized control. Recently we underbid one of the largest corporations in the country. The purchaser is saving $400,000 on this transaction because we carry no excess baggage on the pay roll.

There's not a small manufacturer I know who wouldn't be satisfied with a decent annual profit and the chance to operate in a friendly and secure atmosphere. By profits I mean not only money to put into stockholders' pockets, but profits to plow back into business; profits to make new products and to create new jobs.

My company is in good financial shape—better than most. Yet for 2 years during conversion from war to peace we made no profit at all. This year we will make a reasonable profit. But it will sift through our hands like sand through a sieve. During the year I have risked all my capital and worked day and night. I will have little to show for it even in this good year.

Why should I take all these risks? There is an easy way out. I can retire and invest my money in tax-exempt securities. I'd see more of my family. I'd stop waking up at night and asking, "Have we done this right? Are we violating a law or regulation if we do this?"

But I have no use for parasites. To me there is only one real wealth. It is the product of man's mind and skill and sweat. Anybody who tells you that Government produces wealth is kidding. Government consumes it. But you and I, when we take the raw stuff of nature and transform it into something usable, are creating wealth. That's why when we kill off the small entrepreneur we are killing off the real wealth makers of the country.

If we don't believe in a free competitive system, then, for heaven's sake, let's junk it manfully and cleanly. This slow suffocation is a painful sight to those of us who believe that free competition is best for all of us individually and collectively. I believe it is worse than a direct frontal attack from men who do not believe in the dignity of the individual or the worth of private brains, private capital, and private sweat. It is worse because small business is today slowly being throttled by the ignorance, stupidity, and suspicions of the very men who protest their faith in the American system.

And what of my son Harvey? I watch him as he walks down the street whistling and delivering his papers. One of my neighbors told me, "I tried to tip him, but he refused to take the money. He said, 'One price and the same good service to everybody.' "

I am old-fashioned enough to feel proud about that. Harvey finished the summer with a total profit of about $45 and a belief that he had discovered the American system. Do your job, display enterprise, give people the service they're glad to pay for. In return, you get the security of a good business and a steady income. It will pain me to disillusion Harvey. Someday soon, however, he's got to learn that the planned economy of the welfare state is here. In that state men seek pensions, not profits. They eschew adventure in favor of security.

I am not completely despairing. I think men like myself at 50 are probably too old to carry on the fight. I think that the generation that followed right on my heels is too enervated in its search for the illusion of security. They are too pension-bent, too hypnotized by the idea of the state as the all-in-all.

I know in the future, though, that still another generation must cut cleanly through these cobwebs. These are the post-depression babies and I hope they can rediscover America. They must come as a courageous, adventuring troupe, intent on the development of their own potentialities and inner resources. A man who is concerned only with security is only a half man, because he does not live up to the promise as a creative creature made in the image and likeness of God.

And when that clean, creative wind sweeps through this country of ours, I hope fervently that my son Harvey will have the honor of being among those present and doing something about it.

The 19 Hoover Reports

EXTENSION OF REMARKS
OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. BUCHANAN. Mr. Speaker, under permission to extend my remarks, I wish to include an article by Harold Stein appearing in the January 2, 1950, issue of the New Republic entitled "The 19 Hoover Reports":

THE 19 HOOVER REPORTS

(By Harold Stein)

(Harold Stein is staff director of the Committee on Public Administration Cases in Washington, an organization sponsored by the graduate schools of Public Administration of Cornell, Harvard, Princeton, and Syracuse Universities. He is a graduate of Yale who has spent most of the past 15 years in Government service.)

The Hoover report is back in the news again. A Citizens' Committee for the Hoover Report has been created on a Nation-wide basis, to build a fire under Congress; it has held a conference in Washington, at which the former President was himself one of the speakers. His remarks caused the resignation of Dewey Anderson, director of the Public Affairs Institute, who said that Hoover's observations made it clear that the committee is "no place for a liberal." Among those pushing the report is the Junior Chamber of Commerce of the United States. It is sending out 1,300,000 pamphlets to businessmen, repeating the familiar claim that millions of dollars are being wasted every day in the operation of the Government.

There is, of course, no such thing as the Hoover Commission report. The 12 Commissioners issued 19 reports, of varying quality and with a wealth of dissents (many admirable), and about the same number of so-called task-force reports, the latter ranging from excellent studies to documents that read like campaign speeches for John Foster Dulles. But even though there is no "report," the Commission did assemble and publish a set of recommendations for the organization of the Federal Government that provides a solid base for action. Most important, the reports show the wholehearted acceptance (with only occasional lapses) of the doctrine of Presidential accountability and responsibility and make a strong plea that the President be granted adequate authority to carry out that responsibility.

On this basic issue there already has been important progress. In June the Congress passed the Reorganization Act of 1949. As recommended by the Commission, the act exempts no agencies—except the General Accounting Office, considered, with dubious accuracy, an arm of Congress. However, the act does have other shortcomings; it will expire on April 1, 1953, and any Presidential reorganization plan can be defeated either by 49 votes in the Senate or by 218 in the House, within the 60-day period. The Commission had recommended a statute under which reorganization plans could be defeated only by a majority vote of both Houses.

The President's success in achieving major improvements depends on a variety of factors: his own prestige, the ability of the opposition to mobilize for the attack, the effectiveness of party leadership in Congress. A favorable item is the bipartisan support he has been getting from the Citizen's Committee for the Hoover Report, backed up by Hoover's own prestige. The committee's usefulness is limited by the fact that it is automatically committed to all the majority proposals—good, bad, or indifferent—and by its own unfortunate decision to sell the program on the basis of dollar savings. Most of the announced savings are quite mythical, and the public is left with the impression that our Government is staffed by incompetent and greedy bureaucrats. But on the whole its influence lies on the side of virtue.

During the past session of Congress, the arithmetical score on Presidential reorganization plans was good: eight plans sent up, six adopted, one superseded by new legislation; only the proposal for a Department of Welfare, which happened to arouse a curious mixture of congressional antagonisms, was defeated.

By reorganization plan and by legislation a good start has been made on modernizing and giving the President more effective control over the housekeeping functions of the Government. There is a new law clearing part of the statutory jungle of property legislation, and a General Services Administration has been established to combine in one agency a variety of formerly scattered functions. Congress has raised the salaries of key Federal employees and has passed an improved Classification Act. A more intelligible and useful form of budget is being put into effect and Congress seems to be rationalizing the appropriations structure to correspond. Minor improvements in the Government's archaic accounting practices are in prospect. The National Security Council and the National Security Resources Board have been placed squarely in the Executive Office of the President, where they belong.

Most of the President's responsibilities must be carried out through the Cabinet departments; if the President is to have effective authority, the heads must also have authority to organize and direct their own departments. In this field, useful advances have been made in State and elsewhere.

The one great achievement in departmental control is the Unification Act of 1949 for the National Military Establishment. The recent terrifying exhibition on Capitol Hill should not mislead us. Many of the attacks and counter attacks of the generals and the admirals received no effective reply, while the performance of the civilian chiefs gave no convincing assurance of their wise understanding of strategy. But at least it did appear that the President and the Secretary of Defense now have a chance to establish a defense policy that is something more than a military pork barrel.

Part of the problem of making the Government work better is straightening out some of the anomalies in the assignment of functions to the different departments and within departments. This is, of course, a never ending process. New stresses in our society, new concepts of Federal responsibility require adaptations in our governmental structure. This is peculiarly the area covered by the new Reorganization Act. The President has begun to move. Administrative responsibility has been lodged in the chairmen of the Civil Service Commission and the Maritime Commission, giving hope of improvement in those creaking agencies. Public Roads Administration has gone to the Department of Commerce as a first step in making Commerce the center of all nonregulatory transportation activities. The perpetual squabble over the location of the Employment Service and Unemployment Compensation has been settled—again—by transferring both to the Department of Labor.

These are the main points of action consequent upon the Hoover Commission report. For such a short period of time, it is an impressive showing. It carries on wisely from the great reforms proposed by the President's Committee on Administrative Management in 1937, and accomplished in 1939, notably in the establishment of the Executive Office of the President, the transfer of the Budget Bureau from Treasury to that office, and the strengthening of the White House staff. The Hoover Commission has built on that achievement; the total area of its impact, already astonishingly wide, promises to be still wider.

Much, very much, remains to be done. No arithmetical measurement of the Commission's work has any significance, because the recommendations range from the important to those that should be buried. To the latter class belongs the proposal for a united medical administration, of, by and for the doctors, or more probably, the AMA. (Item, a proposal for a permanent commission to "study Federal-State relations" that would inevitably push toward an abdication by the Federal Government of fields of taxation and control that can never be managed within State boundaries. (Item, a proposal to liquidate the Farmers Home Administration.) But there are many valid recommendations that have not been acted on.

The Civil Service Commission remains a hybrid body, ill adapted to carrying out a vigorous and liberal personnel policy. Beyond that, the present personnel laws are archaic, rigid, and utterly confused by veterans' preferences that work badly for the veterans and abominably for everyone else. New legislation has been introduced and more is in preparation. The chances for passage in the next session are good, but veterans and other groups may succeed in reintroducing many of the rigidities and defects that should be discarded. The Government is a good employer in the sense that public service can be deeply rewarding, but modern personnel practices are urgently needed.

The General Accounting Office should be transformed into an effective auditing agency for Congress—which it is not—and accounting responsibility should be restored to the executive branch. The majority of the Hoover Commission recommended an unhappy compromise, but there is no reason to believe that the Eighty-first Congress would touch the subject in any event. The present Comptroller General's great personal popularity reinforces the normal congressional belief that any disliked by the Executive is good for Congress.

One important reform in the President's own family was recommended by the Commission. That is to change the Council of Economic Advisers—now operating in the full glare of publicity and erratically for themselves, for congressional committees, for various interest groups, and for the President—to an economic adviser whose exclusive job will be to help the Chief Executive. The President must have informed assistance on the economic impact of his whole program and all its parts: paradoxically, he needs the assistance because he must do many things (like maintaining a large defense program in times of inflation) that are noneconomic. He can never hope to get unbiased advice if the advice is constantly made public. Most of the opposition to the Commission's recommendation has come from liberal groups in and out of Congress; their policy seems painfully short-sighted.

Another urgent need in Presidential staffing is a Board of Review for natural-resource-development projects. This was recommended in a dissent. Even the majority's somewhat confused proposals for a Board of Impartial Analysis for engineering and architectural projects would fill the gap created by the unseemly abolition of the National Resources Planning Board. Perhaps with the horrid word "planning" omitted, Congress might be willing to go along.

In the area of interdepartmental shifts there are two badly needed consolidations, both in the field of natural resources: the civil functions (rivers and harbors, and flood control) of the Army Corps of Engineers

should be united with the work of the Bureau of Reclamation, and similarly, though the need is not quite so urgent, the Forest Service (Agriculture) and the Bureau of Land Management (Interior), which includes the Grazing Service and the old General Land Office, clearly belong together in one agency.

The question of who should control a combined Forest Service and Bureau of Land Management is not a simple matter; both parent agencies can make out a pretty good claim. Along with the dissenters on the Commission, I plunk for Interior. This seems to me a good time to emphasize conservation in the public domain. The on-the-farm conservation job of Agriculture can and should go ahead anyway. Nobody knows what the President will do, and even if he recommends a transfer to Interior, Congress will probably defeat the plan, because the prestige of Agriculture and the Forest Service probably outweigh the political appeal of Interior and BLM.

The other case is clear-cut. River-basin development from the source in the mountains clear down to the sea should be handled by one agency and that agency belongs in the Interior Department, or in a new Department of Natural Resources, which is what Interior should become. Power, flood control, navigation, irrigation—all must be planned simultaneously and by one agency, and the basic function is civilian, not military. If the engineers need this kind of training, let them be given assignments with Interior. As they did in the WPA, they will learn much from working in a civilian agency and they will have something of their own to contribute. The present system gives only partial training to about 215 engineer officers at any one time and bids fair to wreck the effective use of our magnificent water resources.

I know of no one in Washington who thinks that a reoganization plan transferring rivers and harbors and flood control to Interior could get by Congress unless—and this is a big unless—and until enough people in this country wake up to the significance of the problem and tell their Senators and Representatives about it.

The Law of Reverence and the Law of Fear

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, January 20 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the sermon delivered by the Right Reverend John K. Cartwright at the Red Mass, on January 15, 1950, in the Shrine of the Immaculate Conception, Washington, D. C.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

Human society must be ruled by law. As inexorable as the force of gravity or the movement of the tides is the principle that all gatherings of men must establish rules for their order and their peace.

Even today, in the midst of unexampled disturbance and conflict there is by and large over all the earth a regimen of law. Anarchy exists only sporadically and momentarily. In the nature of things mankind must keep coming back to forms of stable understanding that we call law.

However, there is a wide diversity in the character of the laws that rule the world. Broadly speaking, the world is divided into two parts. In one the law is that of reverence. In the other it is the law of fear.

Of course law everywhere makes use of coercion and therefore imposes fear. But in free societies the fear operates only against the minority: the fractious, the unreasonable, the criminal. In a free society the good citizen does not fear the law for he does not intend to break it. But even in a free society the good citizen does pay the law the homage of his reverence. In last analysis the law rests, not upon the coercion which it applies to the few, but upon the reverence of the many which is its chief support, and without which society could not combine order and freedom.

In reading history we find that through vast reaches of human experience law has tended to repose on fear. Even in the classical republics where liberty was born, liberty was for an elite rather than for every man. In the enormous slave states of our own time, whether the nationalistic tyrannies which have been accounted for, or the socialistic tyrannies under which half the world now groans and which the rest of us look upon with dread, in these great areas the law of fear dominates with unexampled power. For fear in our age has acquired techniques and procedures quite unknown to man in any other age. In past time tyranny no less than beneficence suffered from lack of efficiency. In the present all the discoveries of science and the modern genius for organization put themselves at the disposal of terror. One-half mankind lies under the daily imminence, personal to every trembling heart, of espionage, imprisonment, torture, and cruel death.

We used to think that evils like these had fallen into desuetude by the mere fact that time had passed and man had outgrown them. Instead the slave state is among us in a form of effectiveness in which no past century could know it. And, as far as regards the techniques of fear, it is impossible to prophesy their exhaustion. They could be with us for centuries, for millennia, forever. And they could absorb not only the countries now cursed by them, but our own country and all the earth. There is unfortunately nothing about our climate, or our latitude and longitude, or our inherited blood-strains which would forbid the establishment among us of this law of fear. There is nothing to prevent it, except the virtues of our people maintaining the institutions of freedom under the providence of God, and making these institutions valid by the power of the spirit of reverence.

Our history has been one of reverence for the inherited principles of a great tradition, a tradition that began with the beginnings of European civilization and that reached a high point of enlargement and perfecting in the experiences of our own Nation. While other peoples were still living under stagnant tribal custom or under the futile restlessness of barbaric military states, the peoples who formed Christendom set about the august task of building the polities of freedom. The experiments of the Greek cities and the Roman republic with limited freedom, the inculcation of human dignity by the two testaments, the bringing of these teachings into universal popularity by the teaching of the church, the building of the statutes and jurisprudence of the Roman law, the writing of the great charters and documents of the Middle Ages like Magna Carta, the working out of the pacts and treaties that brought peace out of the religious wars, the charter of religious freedom of the Maryland settlers of 1634, the Bill of Rights of England of 1692 and of the United States of 1789, the Declaration of Independence, and the Proclamation of Emancipation—all these are high points of advancement in a progression through many ages of turmoil and battle toward a greater and greater heritage of honor and wisdom.

These problems we did not solve. They were solved for us and the answers belong to us and to mankind forever. These principles are the application to man's difficulties of eternally valid truths embodied in the natural law. They are not to be treated merely as rules of a game to be used pragmatically. They are to be regarded as emanations of truth and as the sacred foundations of all law. If they are so cherished then the body of statutes will be enlightened by them and will serve the uses of man's freedom. If they are so cherished then mankind will reverence the law he lives by and obey it. But if they are not so reverenced then the law of freemen must fail. And since man, free or not free, must have some law, since society cannot exist without it, the law which replaces the law of reverence can only be the law of fear.

The law of freedom and reverence is our heritage. But like all our heritage it is being attacked from without and sapped from within. An irreverent and irresponsible philosophy is growing daily in its influence. Positions of social prestige and intellectual power are being rapidly won by those whom a great English writer describes as vicious and ignorant children picking the mortar out of the foundations of society. There is no part of our inherited legal and jurisprudential wisdom which is sacred to this spirit of irreverence.

When our people built a residence for its highest court it tried very properly to express reverence for one of its greatest institutions by the majesty of the building. Have you noticed in recent years the sarcasm with which in certain circles of thought it is customary to ridicule this action?

When people are to be subjected to the guidance of law and some of them to law's sanctions and coercions, we might properly expect on the part of their judges a responsible and reverential concept of the human person so made subject to him. What can be looked for when a judge can say as one judge did say that for him there is no essential difference between a man, a baboon, and a grain of sand? This was the personal philosophy of one judge. But many a jurist has been to school at the feet of teachers of a similar philosophy. And if such came to be the thought not of a judge but of the judiciary, what reverence for the law beneath the laws would temper justice with mercy, what criterion would restrain the judging mind from any vagary to which politics or personal caprice might incline it? What might the people think of such a system by which they would no longer be law's beneficiaries but its victims?

When people are accused of violating the law, our system gives them the benefit of the doubt, the right to trial by jury, the right of expert counsel, the value of all the delays that can safeguard justice. In compensation the law expects from them the attitude of respect that makes the processes of trial orderly and indeed possible. Such an attitude it can commonly presume even when it deals with the thief and the murderer. But we have seen the scandal of organized and deliberate mockery introduced to our courtrooms by people whose intelligence makes them all the more guilty. They are the pawns and servants of a law that works by fear and they seek by deliberate destruction of the law of reverence to bring in here the law of fear.

The withdrawal of reverence from law is as yet exceptional. But it is frequent and its frequency increases. It increases because it is being diverted at its source.

For law, though it be the object of reverence, does not create reverence. Reverence comes out of the conscience of man. And the conscience of man needs to be both en-

lightened and animated by religion. Without religion the conscience atrophies. Without a conscience reverence dries up. Without reverence the law of free men cannot function. But society must have law. If it cannot be the law that rests on reverence it must be the law that rests on fear.

It is no accident or mere coincidence that in this divided world the habitat of official atheism is also the habitat of the law of fear. In the lands where the people are held in hourly terror, where the very rulers tremble together in a wretched loyalty of fear, in that land there is no use for reverence. Those rulers must not be inhibited from any savagery that by respect for men would prevent the application of effective fear. They must not be hampered in their mathematical justice by the irregularities and individualities of those who know they have a soul. Law must be supreme over all interests, unexceptionable, undeterred in merciless effectiveness. Away with those who call on constitutions and writs of habeas corpus. Away with those who talk of rights. Away with those who claim for man personality instead of number. Away with those who speak of souls and honor and truth and reverence. There can be no law of nature which is the will of God with reason to understand it and reverence to maintain it. There can be only laws—and torture to enforce them.

On the other hand the habitat of the law of freedom is the habitat of reverence. Here only the evil and the violent need fear the law. The citizen respects it and upholds it. He understands society's need for reasonable arrangement of its basic interests, and perceives that without this basic arrangement of law no other arrangement of any other interest either of business or of education, or of art or of friendship or of pleasure would be possible. Since human law is so basic to all forms of human society it springs out of the natural law which is only another word for the will of God. Therefore it has about it in a free society something that is sacred and that appeals not only to the intelligence but to the conscience. And this appeal to the conscience must be kept alive if a free society is to endure. The law of fear can operate in the mathematical functioning of the state when welfare is maintained by a secret police in its torture chambers. The law of freedom can function only when the masses and multitudes of men reverence the law of freedom as the gift of God.

Our country since its inception has been a country of freemen's law. It originated in the repudiation of the law of fear. It was able to substitute reverence for fear very easily, because its founders, its heroes, its common people had the religious conscience which is the first element in citizenship. They were rebels but not anarchists. Therefore they set up a government with an enlightened Constitution as the basis of its laws. And that Constitution was enshrined in their reverence.

Our traditions, particularly our traditional jurisprudence, have developed in the light of that understanding. Our law has understood how it is rooted in the religious conscience and for that reason among others it has respected the position of religion in society. It did not resuscitate the forms of religious establishment which history had found so lamentably wanting. On the other hand the religion of the citizen never asked or wished that there should be a reversal to these outmoded experiments. The religion of the citizen did not ask this and does not ask it and, please God, shall never ask it. Denominations as such and ministries as such do not ask from American law establishment or union or abusive privilege. But religion as such has at our law its full right to exist, to worship, to teach, to inspire, to console and to form the conscience of the citizen out of which comes reverence for society and law. American law has always respected religion not only for what it is in itself, the deepest-rooted of all human rights, but for its civilizing function of creating in the public mind the climate of reverence which is the only climate in which the law of freedom can exist.

God has blessed America in the beauty of her mountains and prairies. God has blessed her with abundance. God has blessed her in the energies and talents of her people. But God has given her no greater blessing than this of the working together of her free laws and of the religious conscience of her people. It is the law of reverence which makes possible the abolition of the law of fear. May it forever be so. And may the wisdom of our lawmakers and judges always make secure the honor of their own exalted ministry by maintaining the American tradition of the law of freedom enshrined in the reverential conscience of the citizen.

Spain

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Dr. Joseph F. Thorning, associate editor of World Affairs. Dr. Thorning, who is my friend and the friend of many Members of the Congress, gave this interpretation of international law in the New York Times, January 13, 1950. His explanation is not only clear and logical; it is also unanswerable, from the standpoint of sound juridical principles. An immediate exchange of Ambassadors with Spain would satisfy the claims of ethics and, at the same time, enable the peoples of the world to champion the cause of freedom and representative government. Full diplomatic friendship will pave the way to many other constructive acts of statesmanship. I recommend Dr. Thorning's analysis to the attention of my colleagues:

WASHINGTON, D. C., *January 10, 1950.*
To the EDITOR OF THE NEW YORK TIMES:

In the current discussion about friendship with Spain, an important admission was made in the Times' editorial Recognizing Franco, December 22, 1949. This reads as follows:

"It was wrong and short-sighted to withdraw the chiefs of diplomatic missions in the first place."

One could go further and acknowledge that the policy of attempted ostracism, adopted under an impression that the Soviets would be suitably appeased, has proved not only bad in principle but also a failure in practice. It had exactly the opposite effect to that intended: It consolidated overwhelming popular sentiment behind the head of the Spanish state as the symbol of resistance against outside interference. Indeed, according to the Madrid correspondent of the New York Times, the present administration in Spain is stronger than ever. For that result, the constant drum-fire of foreign dictation is largely responsible.

The Times is correct—and so was Senator ARTHUR H. VANDENBERG—in pointing out that the Spanish question should be considered in its "proper framework" and in the light of all pertinent resolutions of the UN General Assembly. But readers of the Times have a right to expect the whole record to be rehearsed and studied.

Although the so-called Franco Fascist regime, without any opportunity for self-defense, was denounced and a resolution was passed in 1946 recommending the withdrawal of chiefs of diplomatic missions from Madrid, it is untrue to assert that such a policy has been "reaffirmed by the Assembly."

When the "identical 1946 resolution" was brought up again in 1947, "according to the rules," by the Soviet-dominated Polish delegation, it failed to receive the necessary two-thirds vote and, in the official minutes of the General Assembly reporter, was recorded as rejected.

This is one reason why many experts on international law, including Dr. Edwin Borchard, of Yale University, and Dr. George Finch, former editor of the American Journal of International Law, judge the 1946 resolution to be invalid. Consequently, a number of nations, including some in the Western Hemisphere, considered themselves free to maintain, or to restore, a full complement of diplomatic officials in Spain.

More recently, in May 1949, a decisive majority (26 to 15, with 16 abstentions) supported the motion proposed by Brazil, Bolivia, Colombia, and Peru, to leave all nations free to send, or not to send, Ambassadors and Ministers Plenipotentiary to Madrid.

At the same time, and this is a point of genuine importance, the proposal of sovietized Poland to repeat the 1945–46 denunciation of the present Spanish Government as Fascist and as having been imposed by the Axis was soundly beaten by a vote of 32 to 11. A similar fate, by more resounding majorities, was inflicted upon all other resolutions urged upon the UN by the iron-curtain bloc in the General Assembly. With the defeat of these Soviet-inspired motions, the whole case against Spain fell to the ground.

In view of this historical sequence, it would appear to be reasonable to expect our country, democratically, to review its Spanish policy without delay. Since a mistake, admittedly, was made in 1946, the sooner we admit our error and try to repair the damage done, the more secure will be the people of the United States and the more advantageously we can provide for our national interests.

If we do what is right, there is no solid ground for belief that the shock to public opinion in western Europe, and especially in France and Great Britain, would be enormous. Has not the wartime Prime Minister of the United Kingdom, Winston Churchill, called, repeatedly, for a revision of bankrupt policy toward Spain? Did not the French Government, despite leftist clamors, reopen its Pyrenees frontier and resume a lucrative trade with the Spanish people? Has it been forgotten that the Times (London) calling for an end to hypocrisy in a powerful leading article (April 25, 1949), described the attempted ostracism of Spain a futile gesture?

"Without offending political honor or popular sentiment," the same editorial advises, "it would be both possible and wise to extend to Spain the normal facilities and courtesies which smooth the relations between sovereign states. * * * There is also a strong case on grounds of humanity and efficiency for admitting Spain to membership of United Nations agencies, if not to the United Nations itself. It is illogical to deprive the Spanish people of all international benefits because of the nature of their Government."

The public, here and abroad, will recognize a policy of good will and fairness toward the people of Spain.

Dr. JOSEPH F. THORNING,
Associate Editor of World Affairs.

The Australian Immigrant Aims at a Sitting Duck

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. GORDON. Mr. Speaker, under unanimous consent I insert in the RECORD an article that is worth 3 minutes of anybody's time to read. It is entitled "The Australian Immigrant Aims at a Sitting Duck," from the Washington Daily News, by Robert C. Ruark.

THE AUSTRALIAN IMMIGRANT AIMS AT A SITTING DUCK

(By Robert C. Ruark)

SYDNEY, AUSTRALIA, January 19.—It's been my privilege to observe a wonderfully gratifying thing, a sight denied me in America by virtue of my tender years.

This would be the influx of foreigners to a new, raw, nation, much as the Italians and Irish and Poles came aboard America in the last century, to remodel the land to their own specifications.

Australia flung open its postwar doors to the homeless, and the people flocked to a land where there was breathing space and room to flex a muscle. They are people of all countries, save the black and the yellow, for the Aussies still operate on a slogan of white Australia. In an odd sort of way, even this is pardonable, since you folks back home cannot imagine being a small oasis in a desert of alien culture. In the upsurge of nationalism among the Asiatics, Australia figures there are enough Asiatics ringing them without inviting them to come in.

But the gate has gaped wide to the folk who were stripped of their homes and identities by the European war, and they have eagerly seized the opportunity to begin afresh in a country where space is so vast that a million-acre sheep station is not peculiar. Australia's eight million live largely in the principal cities of Sydney, Melbourne, Adelaide, Brisbane, Perth, Darwin, and Townsville. The rest of the land is laid out there, panting for development.

These people, who have come down under to dwell, are folk who are accustomed to living in postage-stamp nations. The broadness of this land is new and wondrous in concept to them. They are pioneers in an age when pioneering is obsolescent. They have stars in their eyes, and limitless endurance in their muscles. These are dedicated men and women.

They have already begun to integrate themselves into the nation, even as our immigrants dug into America, by doing chores nobody else wants to do. They take the tough jobs, at small pay. They work the extra hours. They serve as menials, as rough laborers, and always they save. They save intently, fiercely. They squirrel away their small earnings, paring their expenses to bone, against the day they will be able to start their own business and found a new dream.

The job, for these new pioneers, is going to be pathetically easy. They are plumped into an economy of state-endorsed sloth, where the man in the street has knocked off work a couple of generations before his time. Australia is a beautiful object lesson in state interference with individual endeavor today.

There is no real overtime in Australia. One industrialist was trying to describe to me the difference between the Australian worker and the American worker. He said: "If you pay the Yank enough, he'll work a night shift, or even week ends. But you can't pay an Australian enough to work more than his 40 hours a week."

That is where the non-clock-watching migrant has his opportunity. He is aiming at a sitting duck. Australia will develop and expand, and people with "ski" on the hind end of their names will be a potent force in the development. It's a healthy thing all around for my Aussie friends, because with their tight inheritance of Scotch, English, and Irish, they were getting to look overmuch alike anyhow. This is one continent that can use some new blood—economically as well as physically.

Resolutions of Mahaska County (Iowa) Farm Bureau

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. LECOMPTE. Mr. Speaker, at the annual meeting of the Mahaska County (Iowa) Farm Bureau, a comprehensive set of resolutions were adopted by this fine organization. Under unanimous consent to extend my remarks in the RECORD, I include these resolutions in order that all Members of Congress may have an opportunity to read and know the position that the Farm Bureau of Mahaska County, Iowa, has taken with respect to the problems and proposals confronting our country at the present time.

The resolutions are as follows:

MAHASKA COUNTY RESOLUTIONS, 1949–50

I. APPRECIATION

We express our appreciation for the assistance given to the county committee by the various townships. It is from the information submitted by the townships and by individuals that these resolutions have been prepared.

We commend the county, State, and National Farm Bureau officers for their untiring efforts to secure for the farmers of America a fair share of the national income.

II. NATIONAL FARM PROGRAM

A. Political implications: We reiterate our belief that farm programs should be developed through bipartisan approach.

B. Controls: We believe that controls should be kept at a minimum since it is apparent that guaranties of 100 percent of parity as compared to lower supports would result in more drastic controls.

C. Cost: We believe there is danger of losing farm programs if the cost is too high. We recognize the fact that guaranteeing farmers 100 percent of parity would cost an untold number of dollars and it would be necessary to make a definite increase in taxes to carry out such a program.

D. Level of supports: We favor minimum guaranties or floors under farm prices. We are convinced that the free-enterprise system cannot exist under full guaranties.

E. Flexibility: We favor flexible price supports tied to the amount commodity is in surplus with a minimum floor established by the law and the Secretary of Agriculture have the authority to set price supports from this minimum up.

F. Production payments: We believe it would be dangerous to establish a cheap-food philosophy in minds of consumers at the expense of the Government and that the use of production payments would not noticeably affect consumption. We are opposed to farmers becoming dependent upon direct appropriation from Congress, however, in support of perishables we do favor the use of production payments.

G. Limits on production: We are opposed to limiting production of a farmer to approximately $26,000 gross if he is to be eligible for provisions of price supports. There is very little correlation between gross and net income and certain types of farms must be operated on a large scale to support one family.

H. Soil-conservation payments: We believe that satisfactory compliance with soil-conservation practices should be required of all farmers in order for them to be eligible for price supports.

I. Parity versus income-support standards: We are opposed to abandoning the parity concept for the income standard plan. We believe in the parity concept since it is a true relationship between the price of the products the farmer sells and those that he must buy.

III. NATIONAL AND STATE HEALTH PROGRAMS

We believe the $2,000,000,000 the Federal Government is spending is sufficient to better the health of our country. Due to limited facilities we do not feel an increased appropriation in Federal aid to encourage more doctors to enter the medical profession would be a wise expenditure at this time. However, we do favor increased Federal aid for construction of more hospitals and medical research.

If we have a Federal prepayment health-insurance program, we favor voluntary participation.

We believe we should revise our State health programs and adopt a county health unit program for Iowa.

IV. LABOR-MANAGEMENT RELATIONSHIP

We believe labor-management disputes should be settled through the human approach of mediation.

We favor the establishment of a worker-extension service for labor groups that would be similar to the agriculture extension service.

V. GENERAL

A. Rural mail delivery: We favor the changing of mail routes so that the principle of free mail delivery becomes an actuality to all rural families.

B. Rural telephones: We believe a Federal agency should be established for the purpose of expanding rural telephone service.

C. Hoover Commission: The rapid growth of our Federal Government has resulted in an establishment of a great many Federal agencies whose duties at the present time have created a considerable amount of overlapping and duplication within each department. To eliminate a great deal of confusion and waste of tax money, we aggressively support the report of the Hoover Commission.

VI. STATE

Speed-limit law: We favor the enactment of the speed-limit law with maximum limit being set at 60 miles per hour during the day and 50 miles per hour at night.

VII. COUNTY

Health: We believe Mahaska County should have a county health nurse; therefore, we urge the board of directors of the Mahaska County Farm Bureau to contact the proper authorities in an effort to encourage the employment of a county health nurse.

Roads: We recommend that a committee be appointed by the board of directors of the Mahaska County Farm Bureau to contact the county board of supervisors and urge them to instruct the county maintenance crews to do a better job of maintaining secondary roads.

VIII. PEACE

Everyone can recognize the present world-wide feeling of unrest, suspicion, and insecurity, and the need for a greater faith in a workable plan for peace. At the moment, it appears that the fate of civilization rests upon the Russian-American relations and the atomic bomb. As immediate action toward a more satisfactory world peace policy, be it resolved that the United States take the lead by cooperation in—

1. Increasing east-west trade in Europe.
2. The world-wide reduction of armaments.
3. Strengthening and supporting the United Nations.

COUNTY RESOLUTIONS COMMITTEE,
WALTER H. COLVILLE, *Chairman*,
HARRY HEDGE,
CORNIE VANDER LINDEN,
CLIFFORD BUSBY,
Mrs. FRANK RANDELL,
Mrs. ALVIN WIMER,
Mrs. ROYD MCCURDY.

Federal Fiscal Picture Alarming

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. HAND. Mr. Speaker, indicative of the alarm which is noticeable throughout my congressional district is the editorial in the Hammonton News of December 15, 1949, entitled "Federal Fiscal Picture Alarming." This is not a partisan matter but is a problem for all of us if we want to preserve our solvency and the solvency of future generations. The editorial follows:

FEDERAL FISCAL PICTURE ALARMING

The Federal Government's current fiscal picture cries out for the earnest consideration of New Jersey's delegates in Congress.

The $43,500,000,000 Federal spending program authorized by Congress for the fiscal year 1950 not only is the largest peacetime spending budget in the Nation's history, but contains many new projects which commit the Government to ever-increasing outlays in the years ahead.

The Bureau of the Budget estimates that 1950 receipts will amount to $38,000,000,000, which is $5,500,000,000 under the $43,500,000,000 spending total. This impending $5,500,000,000 deficit is larger than the total taxes collected by the Federal Government in any peacetime year prior to 1938.

The Federal Government's return to deficit spending depreciate the value of every dollar in the hands of American wage earners, housewives, pensioners, and local governing bodies.

The tragic thing about this sad picture is that Congress and the executive branch could have avoided deficit financing by forthrightly eliminating billions of dollars worth of wasteful spending and by exercising restraint in starting costly new spending programs and in dipping deep into the pork barrel.

Prospending Republicans must share the blame with their similarly disposed Democratic brethren in the Eighty-first Congress for the complete capitulation of Congress this year to the spending bureaucracies and pressure groups in Washington. Tens of thousands of letters received by Members of Congress from folks back home pleading for drastic cuts in excessive and wasteful Federal spending went practically unheeded insofar as effective affirmative action was concerned.

It is futile for us to aid and arm the rest of the world in the fight to arrest communism if, at the same time, we allow the financial structure of our Nation to crumble simply to satisfy the avarice and greed of selfish, short-sighted spending pressure groups.

Inexcusable Political Maneuver

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. KEATING. Mr. Speaker, the time has come when those who believe in civil-rights proposals, to which both major parties are pledged, should be fully informed of the facts as they exist in the House of Representatives.

It has been announced by the chairman of the House Committee on Education and Labor that he will seek recognition on Monday next to call up the FEPC bill. Whether he is recognized or not depends on the decision of the Democratic leadership of the House.

It so happens that there is also pending a proposal by the House Rules Committee to alter the very rule under which the chairman of the House Committee on Education and Labor will seek recognition. It is the recommendation of the Rules Committee that this rule be repealed and that the committee's previous authority as traffic policeman of the House be fully restored.

So that the FEPC bill might be considered on Monday, it was the intent of those sponsoring the rules change not to have it brought up until the Thursday after that vote. However, the Democratic leadership, through a parliamentary ruse, has scheduled the rules-change proposal for action in the House today, thus endangering the possibility of any vote on FEPC on Monday. Should the House adopt the proposed rules change, then the chairman of the House Committee on Education and Labor would no longer be privileged to seek recognition on Monday. This is the peril to civil-rights legislation for which the Democratic leadership is solely responsible. It is as craven a disregard of party pledges as this House has ever witnessed.

From my talks with my Republican colleagues I know that they stanchly believe that the FEPC legislation should be considered on Monday and that no proposals should be taken up by the House in the intervening days that might jeopardize consideration of FEPC. They intend, as I do, to vote for adjournment of the House today so that the rules change cannot be considered until after action on FEPC.

The Democratic Party has turned the civil-rights program into a travesty by endless maneuvers and delays which it mistakenly believes give it a political advantage. When it is realized that the FEPC legislation enjoyed a privileged position and could have been called up at any time after last August by the chairman of the House Committee on Education and Labor, and when it is recalled that the Senate Democratic leader announced that FEPC legislation should be considered in the Senate as the first order of business this year, only later to withdraw that promise, then it should be clear to all that the Democratic Party has no intention of ever enacting civil-rights legislation.

The overwhelming majority of House Republicans want the FEPC legislation to be brought to vote. We not only will oppose the efforts to bring up the rules change today but we will oppose all other efforts of the administration to keep the civil-rights program dangling like bait before the American people. The entire program should be brought to a vote at the earliest possible date.

Hon. Gerald R. Ford, Jr., of Michigan

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. VELDE. Mr. Speaker, I am highly honored to report to this distinguished body today that one of our Members has been chosen as one of the 10 outstanding young men of the country by the United States Junior Chamber of Commerce for 1950.

The annual dinner to honor these 10 young men is to be given at Peoria, Ill., in the district which I am honored to represent. Our colleague who has been singularly honored is the distinguished young gentleman from Michigan, the Honorable GERALD R. FORD, JR., and I am sure that we can all agree that the JC's made no mistake in his selection.

Representative FORD is an outstanding practicing attorney from Grand Rapids, Mich., holding degrees from both the University of Michigan and Yale University Law School. He was in the thick of the fight during World War II in the Pacific serving on board the U. S. S. *Monterey* as assistant navigator.

My good friend and colleague has played an active role in politics, both as a delegate to State conventions and as a candidate for the office which he now holds. Since becoming a Member of our body, Mr. FORD has distinguished himself time and time again by his forthright stand on various issues presented before this body.

I am sure my Republican friends will all agree that he has been most able and sincere in representing the principles of the Grand Old Party here in Congress. We likewise feel sure that he will be returned by the electorate of his district to the Eighty-second Congress and as long as he chooses to represent the good State of Michigan.

Much Disconnected Ado About Something

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. O'SULLIVAN. Mr. Speaker, we all must agree that it is a bad state of affairs, which medically should be inquired into immediately, if one hears voices and no one is physically present, such as Hamlet did and some present-day left- and right-winged reactionaries do.

We all must agree also that if a person has a copious oral cavity and uses his voice and does not say anything which even the most credulous could believe, like some present-day political left- and right-winged reactionaries do, that too is a very bad state of affairs and is very possibly a pressing personal and community problem and is a matter which medically should be inquired into immediately.

We all must agree likewise that some left- and right-winged reactionaries who have whopping voice boxes and mouths to match them, use their natural noise-making apparatus to spew and roar about horrors and horrible fates which the Republic and its people will endure in an attempt to describe President Hoover's ridiculously conjured up last mile toward his dreamed up governmental chaos, when in truth and in fact the alleged last mile is the goal of true progress in human government, that also is a frightfully bad state of affairs and is a strait-jacket and padded-cell matter suggesting and requiring immediate restraint and long political rest and quiet if the parties are public officeholders.

Of course you do not necessarily need to be crazy to be either an extreme left- or right-winged reactionary, but I must admit that it should help a lot.

There should be, and I am sure that there is, some way of stopping this political flitting and roaring about of some people through the towns and countrysides of America like evil spirits and fairly making "the welkins ring" with their oh, so patent airy nothings. The votes of the people—the common stockholders of the Republic—can put every Mister Effervescent Worry Wart officeholder, however, where he needs to be—in retirement.

The following is a portion of a letter which I received recently from one of my constituents:

> I believe that divine providence has put a mark upon people who wittingly or unwittingly have determined to pursue with eagerness, by violent expostulation, the causes of evil and selfishness. Their harsh, croaking, rasping, and indistinct voices, betray them. It has been said of old, in substance, that by their works or deeds and not their mouthings, ye shall know them. Basic notions, however, have changed since the days of these utterances. Time was when I could tell a Communist from a reactionary just by looking at them, but now I cannot tell them apart because both of them, are today, equally bug-eyed and wild. Of course, sometimes a right-winged reactionary dresses a little better and eats a little better food and is housed a little better and has a little better automobile, and of course, all that helps to differentiate between these political species.
>
> However, I have always been able to tell a reactionary and a Communist by their voices. When you stop to ponder the statement and think about bird and animal life and all of the other creatures whom God privileged to make noises, the truth of the statement that the voice is the key to the heart seems to be indisputable. Carrion birds, such as the vultures, ravens, and crows, have bad voices and look and smell bad also. Also the great pillagers and devourers such as lions, tigers, hyenas, and leopards, have alarming, soul-penetrating, back-shivering, blood-curdling voices. Look at the simeon brood such as the orangutan, chimpanzee, and gorilla and their voice box concoctions are anything but music to the ear, or should I say a discordant harmony not yet understood.
>
> This is the advice which I give to all. If you hear a noneuphonious, or any other inhuman voice over the radio or otherwise, tune it out of your life because it is a dead certainty that a reactionary is offending your auditory nerves.
>
> If, however, you hear a nice, bold, pleasing, manly voice, that's probably President Harry S. Truman or some other liberal, so just turn him on louder and give that voice profound attention because he is talking for the purpose of doing you some good and not to enslave you financially or otherwise, or to pick the gold fillings out of your teeth, if you have any, while he talks to you as many of our reactionary trumpeters and brayers do.
>
> Another constituent writes:
>
> Today, due to the ignoble efforts of right- and left-winged reactionaries, some of the inhabitants of our zoos and circuses and the household pets fare much better than some of the men, women, and children in America.
>
> I know of no present-day opportunity to play wild animal any more. To illustrate, I am reminded of an old story I heard some years ago about an Irishman who was out of work and answered a circus advertisement to secure employment. He was hired and told to put on a lion's skin and get in the cage and play lion. He followed the directions and when he was in the cage a little while he observed another bristling lion at the other end of the cage and a great fear momentarily overcame him, but his terror vanished when the other lion called out, "Fear not Pat, I am an Irishman too," and he recognized the voice and lo and behold it was his long lost brother Mike.

Today, I believe, we have passed from the great era of harmless deception into the age of harmful deception. I believe that there is now a crying need for all Democratic officeholders to determine to be servants of the people and not their masters or their deceivers. We must, as President Cleveland so aptly put it, be ever mindful that "a public office is a public trust." We must move with intelligence and decision toward the goal of our great Democratic Party—the fulfillment of the promises made to the people in the last Democratic platform. We must aid and assist our truly great President, Harry S. Truman, in making this great country safe and comfortable for the people by promoting the general welfare and not let it again be a hunting ground for the greedy and the selfish who it seems have never yet learned that everything in this world was not made for them exclusively, but for mankind, generally.

I would like to requisition your attention for a little while longer and present to you the following rhyme which may or may not be pertinent or of any use to you in cultivating your sense of humor and adding to your storehouse of wisdom in these restless, trying times, when it seems to be so difficult to keep political and other heads supplied with common bay-horse sense:

A DREAMING WITH GARGANTUA THE GREAT

(Inspired by the following news item: "The 550-pound carcass of Ringling Bros.' Gargantua the Great, circus gorilla, is to be a permanent exhibit at the Peabody Museum of Yale University," and written in collaboration by Joseph M. Lovely and Eugene D. O'Sullivan of Omaha, Nebr.)

My children list whilst I relate,
The tale of old Gargantua's fate.
An ape was he, yea anthropoid,
And all through life was unemployed.

No love he made, and hence unmarried,
He lived a life unvexed, unharried.
He reached the age of maturity,
Neck deep in caged security.

He had no worries, and never a care
O'er what to do, or eat or wear.
He saw the dawn of the atom age
Safe in his air-conditioned cage.

No servant problems, no income tax,
Nothing to do but just relax.
Safe from fevers, and aches, and chills,
No rent to pay and no doctor bills.

No bugaboos of welfare state,
Screeched forth at him from frenzied pate,
To mar his sweet monotony,
As lolled, clad he, in nature's botany.

His precious freedoms, three in all,
He always had at beck and call.
His life was full as was his paunch,
No Gabrielson at him could "faunch."

Dear Harry's talks, he never heard
Nor those of prudish goppy-birds.
The lobby "gelt" and selfish greed,
His life's fat plan did not impede.

At friendly man he bold leered out,
With rightist jungle mien and pout,
As if he knew that apes like him
Ran loose and wild amidst life's din.

Who would not love to emulate,
The life of old Gargantua the Great?
Fine home, fine care and yea, well fed,
Then off to Yale when you are dead.

Query: If an ape can fare so well, why cannot human beings fare better?

Will Fight for Silver

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. BARING. Mr. Speaker, the Joint Committee on the Economic Report recently has committed the absurdity of recommending the repeal of the Silver Purchase Act and suggests that the Government buy no more silver for coinage purposes. As may be expected, Senator GREEN of Rhode Island, front man for the silver fabricators and arch-enemy of monetary silver, has taken the opportunity to introduce a bill to give force to the recommendations of the joint

committee The cheaper the price of raw silver and the higher the price of tableware, the better the dapper Senator from Rhode Island likes it.

In spite of these moves, the New York Times reports that there is a growing interest among western countries in the coinage of silver. This I consider to be a healthy trend. In the case of silver we have a curious and perhaps unparalleled situation where the silver miner is subsidizing the Treasury—hence the average citizen—rather than getting subsidies from the Government. Every ounce the silver miner sells to the Treasury at ninety-odd cents becomes worth $1.29 when coined into dollars, thus making the general public a profit of 30 cents at the expense of the miner.

The late Senator Key Pittman, of Nevada, fought all his life for the Silver Purchase Act, and I intend to continue the fight with all I am worth. I shall oppose the efforts of any eastern Congressman to repeal this act which is so vital to the state of Nevada and western silver producers.

A Brave Little Band

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial appearing in the January 2, 1950, issue of the New Republic, entitled "A Brave Little Band":

A BRAVE LITTLE BAND

Edward A. Rumely, accused of acting for Germany in World War I, has extended his activities to a new organization called Fighters for Freedom, an offshoot of the Committee for Constitutional Government.

Rumely's name doesn't appear in any of the advance promotion material his organization is putting out, but transmittal and business letters are signed by him as executive secretary. On the letterhead are the names of Dr. Williford I. King, as chairman, and Sumner Gerard as treasurer, plus a partial list of trustees and advisory board, including ex-Senator Edward H. Moore, Tulsa, Okla.; Frank E. Gannett, Rochester, N. Y.; Lamar Fleming, Jr., of Houston, Tex., and others.

The FFF is commencing an advertising and personal-fund-solicitation campaign among business and professional men who can be scared by the threat of a socialist-labor-union conspiracy to take over the Government. The organization argues: If you don't give us $50 or $100 or $500, then the labor unions, which are organizing politically, will move in to get the Taft-Hartley Act repealed and bring on a welfare state, and the only way to stop that is for businessmen to organize politically.

In Texas, the organizing drive is scheduled to begin soon after the first of the year, with Dallas and Fort Worth as the starting points. The FFF sets 1,460,000 as its Nation-wide minimum membership goal—1 percent of the population in each community. With that minimum membership, the propaganda says, "each radiating his or her influence to five or eight others, this 1 percent can build a block strong enough to tip the scales at the bar of public opinion and reverse the drift into socialism."

As an important part in the campaign, the FFF plans to distribute 2,000,000 copies of John T. Flynn's The Road Ahead, which it describes as the most important book of this decade. It exposes how, in secret, planners at top level in Washington have been working for a stealthy revolution in collaboration with labor monopolists, according to one letter. The legislation they have forced through fits together as the pieces of a jigsaw puzzle, each piece part of a general plan to drive America into collectivism exactly as have the Fabians in collaboration with British trade-unions in England.

The FFF divides its fighters into four classifications: Group A, or grass-roots fighters (goal: 1,250,000), will pay $2 and will get limited amounts of literature. Group B, or associate fighters (goal: 500,000), will pay $5 and will get more literature, including biweekly mailings from Representative RALPH GWINN, Republican, New York, and Dr. King. Group C, or cooperating fighters (goal: 250,000), will pay $10 and will get more literature. Group D, the sustaining fighters (goal: 50,000), will qualify by contributing $25 or more or by buying that much literature.

Telegram of New Orleans Spot Cotton Merchants' Association

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

NEW ORLEANS, LA., *January 19, 1950.*
Congressman OTTO PASSMAN,
House Office Building:

The New Orleans Spot Cotton Merchants' Association, at a special meeting, adopted in resolution form the following press statement of Mr. Ben J. Williams and respectfully call it to your attention. It will be appreciated if you will insert it in the CONGRESSIONAL RECORD as the quickest and best means of calling it to the attention of other Members. Your expressions to Mr. Wilson are greatly appreciated.

"The report from unofficial but authoritative sources that the Federal Government is about to engage in the barter of American cotton for critical materials is causing wide concern. Such a program is viewed as threatening to the commodity marketing system as well as the whole structure of private enterprise," Ben J. Williams, prominent New Orleans cotton merchant, said today.

"It is expected that businessmen everywhere will join commodity merchants and traders in taking immediate steps to acquaint the Congress with public disapproval of such a plan. A barter program is both contrary to proven methods of trade and a threat to our own economy and that of other nations," Mr. Williams stated. "Since price is normally arrived at on the basis of supply and demand, the principal danger of exchange of goods for goods is that price becomes unimportant. The sale price of cotton exported against a barter transaction may be fixed at a completely arbitrary level—at whatever price is deemed necessary to offset prices also arbitrarily set for the things imported. Therefore, this deviation from the established system of buying and selling through separate and distinct competitive channels will be ruinous," Mr. Williams continued. "Hardest hit will be small business, because the break-down of our established marketing procedure will result in only large corporations with world-wide organizations participating in what is done. It is hard to understand how our Government can consider the substitution of peremptory methods for free enterprise at home on one hand and condemn the same bureaucratic domination of individual rights by other nations. It is likewise difficult to understand the thinking behind a program which will destroy the very fundamental values we have and are spending billions of dollars to salvage out of a chaotic world situation," Mr. Williams concluded.

J. E. GOULD,
President, New Orleans Spot Cotton Merchants' Association.

Put the Peril Point Back in the Reciprocal Trade Act

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. SCUDDER. Mr. Speaker, there is now on the lawbooks of this land a measure known as the Reciprocal Trade Act, a statute which has as its stated—and very worth-while—aim the breaking down of trade barriers between the United States and other nations. I am very favorable to the aim and favorable to the principle of world trade insofar as it can be carried on without undermining the economic enterprises of the United States. But I do not want to have a treaty which, in effect, disregards protection to American factories, to American working men, and to American farmers.

The bill as it stands today allows the State Department to carry out reciprocal trade agreements with various nations. It allows the State Department to say to those nations, if it desires, that the United States will reciprocate for their favors by allowing our own industries to go into bankruptcy.

In the Eightieth Congress a new clause was written into the Reciprocal Trade Act—a clause which required the establishment of what is called the peril point at which importation of cheap foreign goods or products would be destructive to American industry or agriculture producing a similar item. In extending this act the first session of the Eighty-first Congress eliminated this section.

Restoration of this peril-point clause will not erect the tariff walls of years ago around these United States. It will not prohibit competition, nor will it restrict it unduly. What it does is assure that foreign producers will not be able to take unfair advantage of the wages they pay workers in order to mass-produce cheaply for American consumption. Fair competition will then be maintained—as it should be—on the basis of the quality of goods rather than on how low a wage can be paid to a worker.

If the Truman administration would rather have the United States act as a society for promoting economic uplift among our overseas friends instead of collecting money for our depleted Treasury, let it hint to foreign manufacturers that they might spend some of their money which might otherwise go to tariffs on improving the lot of their workers.

Let me cite an example of how the reciprocal agreements affect industry. Many thousands of Californians depend upon lumbering for their livelihood. The employees receive wages of about $1.45 an hour for their work, while in Canada workers in the lumber mills receive 95 cents an hour. This amounts to $4 a day less pay for a Canadian worker than for an American. It requires one logger and one millworker about 1 day to produce 1,000 board feet of lumber. This means a cost of $8 more per 1,000 feet to produce lumber in the United States than in Canada. Since Canada does not have the 3-percent excise tax on freight shipments—a tax which, incidentally, I am seeking to equalize through passage of H. R. 3374—it costs her lumber producers less to ship to market. Thus they can sell on the American market much more cheaply than American firms can. In boom times, this differential is not easily noticeable since all the output of American mills is bought. But when the demand for building materials is contracting—as, indeed, it is today—the pinch is on. Cheap foreign lumber is bought; American lumber goes begging. Americans, who have worked for many years to achieve and maintain a high standard of living, will be thrown out of work. The poison of unemployment will choke off the arteries of commerce, for without purchasing power by our workers there can be but one result—a slow-down of the Nation's economic life.

The fishing industry, too, faces ruinous competition from abroad. An unskilled male worker in the California fishing industry is paid $1.55 an hour. If no protection is afforded to the industry and to this worker, American-caught fish would have to compete on the open market with fish caught by a Japanese fisherman earning the equivalent of 31 cents, American money, for an entire day's work. There is no assurance under the existing law that foreign fish, such as that from Japan, could not be brought into the United States in greater and greater quantities and dumped onto the market to the detriment of the American producer.

Take for another example the producing of olive oil. In 1948, 15,554,968 pounds of edible olive oil was imported from Italy and Greece. Despite the fact that olive oil produced in California was filling the warehouses to capacity, the President saw fit last year to reduce the duty on Italian olive oil packaged in drums of less than 40 pounds from 8 to 4¾ cents per pound; and on Italian and Greek olive oil, packed in drums of more than 40 pounds, from 6½ to 3¼ cents per pound. Such reductions have proven ruinous to the California olive-oil industry.

California also has an extensive almond-growing industry. The Mediterranean nations, with a climate similar to California's, also produce large quantities of almonds. These nuts are shipped to the United States for consumption. The situation in this case is much the same as in the olive-oil industry; there is ruinous competition from abroad. Have not our producers a right to protection by our Government against economic aggression from outsiders?

Just today I have been informed that a cut in the present low tariff rate on brined cherries—the raw material for maraschino cherries—is on the new list for possible cutting this year under the Reciprocal Trade Act. Already there is a surplus of such cherries on the Pacific coast, yet it is proposed that the duties be lowered to allow more Italian cherries into this country for cutthroat competition. More sweet cherries today are brined than are canned; in California, Oregon, and Washington, brined cherries account for 28 percent of the annual crop. A substantial volume of brined cherries come from other States, too—principally from Michigan, New York, Wisconsin, and Pennsylvania. A cut in the tariffs at this time would be ruinous to the cherry industry.

The peril-point legislation I propose asks only that the employers and employees of industries have a chance to be heard before the nonpolitical and nonpartisan Tariff Commission prior to the State Department's entrance into reciprocal trade treaties. The Commission has only the power to investigate and recommend. The Commission would determine the peril point below which importation would be damaging to domestic industries. If the President desired to reduce the tariffs lower than this figure, he would then be required to obtain approval by the Congress.

I favor full employment throughout the entire world. But I oppose our creating such full employment through deliberately allowing idleness and unemployment in our own United States.

Lee Evans

EXTENSION OF REMARKS
OF
HON. EARL T. WAGNER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. WAGNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Enquirer:

LEE EVANS

It is all in the day's work for a newspaper reporter to write obituaries or for an editorialist to pen tributes to leading citizens when they pass away. It is a little different when they are doing a piece on a colleague—and particularly on a colleague who held such a warm spot in the hearts of his fellow workers as did Lee Evans.

Lee Evans was a member of the Enquirer staff from January 1914, until January 1950, and that is a long time. During this period he served as a reporter, financial editor, city editor, and more recently, as head of this newspaper's New York bureau.

Mr. Evans was a man of fine understanding and deep feeling. He had real affection for the multitude of persons he genuinely liked and a fine tolerance for the far fewer people for whom he cared little.

Dozens of able nwspapermen today can thank Lee Evans for their starts to successful careers. He always was willing to lend a helping hand to boys who wanted to become journalists, and he did help many of them. He was an unusual character, honest to the core, and a first-rate newspaperman.

Lee Evans counted his friends by the hundreds and they were in all walks of life. These men and women will miss him but, most of all, he will be missed by his fellow workers on the Enquirer who knew and loved him best.

The Welfare State

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. BIEMILLER. Mr. Speaker, I had the pleasure of addressing the Milwaukee Junior Bar Association in my home city on December 12 and, permission being granted, wish to insert in the RECORD my speech before that group on the welfare state.

The address follows:

I once read a poem—or a sort of poem—by a very modern writer indeed, Gertrude Stein. She is, in fact, so modern that many think she has become completely unintelligible. She starts this one in a fashion that is certainly at the least unusual. The opening words are printed in a circle and go, if you wish to read them in this sequence: "Rose is a rose is a rose is a." Or if you prefer to start at another point: "Is a rose is a rose is a rose?"

Recently I was reminded of this ring-around-the-rosy by two articles that I read in order to prepare myself for this particular occasion. Since I myself am a legislator, rather than a lawyer, I thought I might be better equipped to discuss the—shall we call them legal—aspects of some of the current political questions if I learned more of the legal point of view, so I glanced through the most recent copies of the periodical which, I gather, is the official organ of the legal profession, the Journal of the American Bar Association.

The two articles which interested me particularly were on the subject with which I, in my capacity as Congressman, am as closely concerned as any lawyer—the welfare state. One was written by a gentleman from Alabama, Mr. William Logan Martin, who, I understand, is not only a member of the Alabama bar, but is a representative to the American Bar Association's house of delegates. The other was written by a man to whom the members of the legal profession gave the recognition of electing president of the American Bar Association, Mr. Frank E. Holman.

These two treatises, although different in style, are extremely similar in content. They are both on the subject of the welfare state—called variously by the two distinguished authors by what they consider equivalent terms of opprobrium—"welfare state," "statism," "socialism," and "social justice." They both start with the premise that since the time of Mr. Franklin Delano Roosevelt, this country has been—not drifting, but catapulting—down the road toward totalitarian-

ism, and that the shocking reason for this shocking fact is the Government's presumably new-found concern with the security of the masses of its people.

ARGUMENTS NOT NEW

These arguments are not exactly novel to me. I have heard them before. In fact, in studying the history of our country, I have come across them many times. But I must admit that I have never read statements so frank and direct in presenting this viewpoint since I marveled at a pronouncement made by John D. Rockefeller in the eighteen seventies—another story about a rose—when he said blandly, "The growth of a large business is merely a survival of the fittest. The American Beauty rose can be produced in the splendor and fragrance which bring cheer to its beholder only by sacrificing the early buds which grow up around it. This is not an evil tendency in business. It is merely the working out of a law of nature and a law of God."

After my reminiscent gasp of amazement, I decided to read the articles more carefully. After all, since I had not had legal training, I thought I might have missed the point. Possibly this was a technique used by lawyers in order to put their own positions into a sharper and more dramatic contrast. So I went on reading.

This is what I found. First, a welfare state, as defined by Mr. Holman, is a state "which provides for the social and economic well-being of the citizenry." That sounded fine to me. But, continues Mr. Holman, by that very fact, it is—and I quote again—"a form of collectivism."

Secondly, a state concerned with the welfare of its people is unconstitutional. Third, such a form of government is beyond the remotest conception of the founders of this country.

Those are the three major general conclusions. But these gentlemen do not limit themselves to generalities. They are quite specific. They itemize, carefully, and in logical sequence, the particular pieces of legislation that support their thesis. And this is an even more fascinating study.

BAR PRESIDENT AGAINST RACIAL EQUALITY

Mr. Holman is primarily concerned with what he considers the dangerous and foreign-inspired theory of racial equality. He argues vehemently against it, asserting that our forefathers, when they declared "all men are created equal" did not at all mean social or economic equality, but merely—and in case you may think I am taking liberties with his presentation, I give you his own words again—"intended to permit any inequalities to rest solely on the basis of actual differences in personality and ability." It is therefore, the president of the American Bar Association deduces, not only a historical fallacy, but basically unconstitutional, for the Government to interest itself in civil liberties, or to do anything to assist in equalizing opportunity.

Mr. Holman carries this argument all the way to the Supreme Court, and questions the constitutionality of the Court's recent decision, which declared that anyone who was able to buy property must be allowed to live on it. This seems to me to place so eminent a lawyer in a curious position. It is my understanding that the Supreme Court is the arm of the Government which has the right to decide on the constitutionality of laws made by nonlegal persons such as myself. Or is it, not the administration, but the very basis of our Government itself that Mr. Holman is questioning?

The defender of the Constitution does not stop with his theory of racial inequality. He also despairs of other things. He considers the idea of Federal aid to education equally vicious and un-American. The fact that Federal assistance to educational institutions was started in 1806, by Thomas Jefferson, would not, I think, convince him. After all, if Mr. Holman had lived in those days—and I wonder, perhaps, whether he still doesn't—he would very probably have been against such Government interference even then. I'm sure he, like many of his Federalist contemporaries, would have considered Mr. Jefferson a dangerous revolutionary. In fact, he would probably have called him a republican—a term then associated with the French Revolution and used with as much abhorrence as the author of this current tirade attaches to the words "social justice."

Mr. Martin agrees entirely with Mr. Holman on all the points I have mentioned. But he goes into more detail. He itemizes all the social legislation which—he seems to think—sprang full-grown from the pagan head of Franklin Roosevelt—social security, labor legislation, farm-price supports, public utilities, and public housing—and blasts all these with the same logic and virulence that his colleague used. These are the things, he announces, that lead to communism—that are unconstitutional—that our forefathers would never have thought of.

But there are more. Under President Truman, Mr. Martin thinks, the Fair Deal makes even the New Deal look old. He uses pages of small print exposing the enormity of the Government's interest in the health of the Nation. And he spends his best prose efforts being horrified in elaborate language at the two new proposals which he, as a member of the bar, is now fighting most actively. According to Mr. Martin, you all, as fellow members, will immediately recognize what these two issues are. Which two recent proposals are the most illegal, the most destructive, to our system of government—the most dangerous to the welfare of cultivated and white and Christian people?

HUMAN-RIGHTS CONVENTION CRITICIZED

I am amazed that you do not seem to identify these proposals automatically. Mr. Martin assures me no member of the legal profession could possibly be blind to the perils of the proposed convention on human rights. Apparently our representatives to the United Nations—not only Mrs. Roosevelt, who, of course, might by some be regarded as contaminated by humanity—but, if I am not mistaken, including, at that time, that great protagonist of social progress, Mr. John Foster Dulles—apparently these two, among many others, were so blinded.

But not so the member of the Alabama bar. It is presumably a shocking thing that a statement should even be proposed—particularly in the company of other nations—which attempts to secure to all persons these basic civil and political rights: The right to life; the right to protection against torture, slavery, forced labor, arbitrary arrest or detention; the right to freedom of movement and residence; the right to a fair and public hearing; the right to freedom of religion, assembly, and association; and the right to the equal protection of the law.

To attempt to secure these rights for all mankind—this is the monstrous hoax Mr. Martin claims would violate and abolish the rights of the individual—and would be the last step toward a totalitarian state.

The second pitfall the lawyer from Alabama is afraid we shall plunge into—and which he points out the President has already sent to the Senate for ratification—is the Genocide Convention. Do you realize the dangers of this subversive document? This is a statement, again worked out with trial and tribulation in the United Nations, and with the participation of revolutionaries such as members of our Department of State—proposing, in essence, to prevent the mass slaughter of any race—no matter how much Mr. Martin doesn't like it.

There have been, recently in the world's history, incidents which suggest why these wicked people at Lake Success thought such a convention relevant. You may have read in the paper only a few weeks ago of the discovery of a new mass grave which answered the question of where some of the millions of Jewish bodies had been hidden—bodies which a man named Hitler had ordered killed because he didn't like their race.

But to propose the outlawing of the crime of genocide, and for nations to agree to punish any individual who commits this crime—this Mr. Martin calls the "destruction of the 'indestructible union of the indestructible states'."

I realize I have gone into considerable detail discussing two articles—or shall I call them philosophies—which I do not, and I am sure you do not, sponsor. But I make no apologies. I have done it partly because I find them quite literally breath taking, and partly because I think it important to discuss with you the opinions—almost the official voice—of your profession. Primarily, however, I have presented these legal anachronisms in such detail because they state my own position so clearly. All you need to do is start at another point in that circle of "rose-is-a-rose-is-a-rose."

Actually these articles show more clearly than I would otherwise have known how to do—exactly why I am for everything their authors are against.

May I review again some of the key statements to show what I mean?

JUSTICE DOUGLAS DISAGREES

Mr. Holman's definition of the welfare state is, in my opinion, excellent—a state "which provides for the social and economic well-being of its citizenry." It is only that he thinks this is a communistic goal, and I think it is the very heart of our democracy. As Mr. Justice William O. Douglas put it—and he, I gather, can be considered as quite as learned in the law as the president of the American Bar Association:

"The human welfare state is the great political invention of the twentieth century. It is the instrument of politics that the Communists fear above all else. * * * The greatest assets of a nation, greater than any material resources, are its men and women. The industrial system was designed to serve mankind. Human welfare is the measure of its service. There is a place for justice in the factories as well as the courts. Human rights transcend property rights."

And later he states: "We place our faith in a society that preserves the greatest possible freedom for the individual yet secures the masses in their basic needs."

I am, of course, not so well equipped as any one of you here to argue the legal aspects of the charge that an interest in human welfare is unconstitutional. However, long before the present era—long enough ago to be nostalgically acceptable to the most unreconstructed southern legal practitioner, in 1837—Justice Barbour, of the Supreme Court of the United States, handed down a decision which said in part:

"It is not only the right but the bounden and solemn duty of a state to advance the safety, happiness, and prosperity of its people and to provide for its general welfare."

A hundred years later this opinion was reaffirmed and extended by another distinguished jurist, also a member of the Supreme Court of our land, when Mr. Justice Cardozo stated for the Court:

"Congress may spend money in aid of the general welfare. * * * The purge of the Nation-wide calamity that began in 1929 has taught us many lessons, not least, of the solidarity of interests that may once have seemed to be divided. * * * The problem is mainly national in area and dimensions. Moreover, laws of the separate States cannot deal with it effectively. Congress, at least, had a basis for that belief. * * * Only a power that is national can serve the interests of all."

WELFARE IS LEGITIMATE CONCERN

In view of these legal opinions, I think I have a sound basis, grounded in law, for my contention that an interest—and an active interest—in the general welfare is a legitimate concern of government. But there is another basic argument—a sort of obbligato that runs through both the Bar Journal compositions—a plaintive repetition that "our forefathers would not have done this." Here, again, I am in perfect accord. I am sure that the theory of a state concerned with social security, with public housing, with industrial relationships, with farm-price supports, was, in the words of Mr. Holman, "not conceived by our forefathers."

I can only add that in the eighteenth century, in an almost totally agrarian economy, years before the industrial revolution, before steam and electricity, in the time of small-farm owners, each of whom could produce for himself more than enough food for his own needs—at that time in our and in the world's history it would have seemed rather odd for our forefathers to base their plans on a twentieth-century civilization. Even the imaginative men who form our Union could hardly have been expected to visualize modern factories and skyscrapers, radios, and airplanes. It seems to me that what these gentlemen are saying is much like crying out, "Take a horse," to the driver of a 1950 convertible.

So I am not dismayed by the fact that our ancestors did not conceive of the necessity for certain kinds of social legislation—I would be much more startled if they had. However, there is one point I think our two historians ignore. These same progenitors of our democracy felt strongly and deeply the need for defending it, and took every measure they knew in order to preserve it.

When Thomas Jefferson argued passionately for States' rights, it was at a time when the new Federal Government was dominated by the bankers and a few rich landowners. The democratic participation of the people was in those days only possible in the local communities. Jefferson was defending, not the prerogatives of the states to supersede the Nation, but the prerogatives of the people—of the masses of the people—as opposed to the interests of the small wealthy group who were trying to take control of the Government.

When Andrew Jackson vetoed the Bank Charter, it was because he considered that the bank would make the rich richer and the poor poorer, and he proclaimed it his duty to take a stand against all new grants * * * of exclusive privileges, against any prostitution of our Government to the advancement of the few at the expense of the many.

When Lincoln had the sad obligation to lead the Nation into a civil war, it was because he believed the responsibility of the Nation to all its people came before the economic interest of some of the States in maintaining slavery—that human rights came above States' rights.

And this, I think, is perhaps the most important issue of all. The president of the bar association twists the meaning of our forefathers by a redefinition of the statement that all men are created equal. He turns this into all men are not created equal. It is an interesting reinterpretation. He makes it, because, he argues, otherwise the shiftless and the industrious would have to be considered equal. And, of course, therefore there would be no more incentive for private enterprise.

I find these arguments extraordinary. I never knew that equality of opportunity was equivalent to the division of the world's goods into equal portions. But since we do not live in 1789, as Mr. Holman seems to deplore, what kind of government would we have if we did not at least try to equalize the chances for everyone?

REAL EQUALITY OF OPPORTUNITY

If Mr. Holman had been black instead of white, if he had been a factory worker instead of a member of the bar, he might well listen differently to words such as those of Woodrow Wilson, who in his first inaugural address, pointed out that:

"There can be no equality of opportunity, if men and women and children be not shielded in their lives, their very vitality, from the consequences of great industrial and social processes which they cannot alter, control, or singly cope with. Society must see to it that it does not itself crush or weaken or damage its own constituent parts. The first duty of law is to keep sound the society it serves. Sanitary laws, pure-food laws, and laws determining conditions of labor which individuals are powerless to determine for themselves are intimate parts of the very business of justice and legal efficiency."

Mr. Martin goes even further than his colleague in his denunciation of the interference of government in defending human rights. He not only considers the protection of human rights an inappropriate function for the Federal Government, or for the nations of the world. He believes that genocide—homicide compounded—should not be considered a crime, or at the most, that no one should be punished for it if the very persons who committed it do not so wish it. Do you by any chance notice any similarity between this point of view and some of the lynching trials that have taken place in Mr. Martin's part of the country?

But again, the definitions made by Messrs. Holman and Martin are excellent. I, too, think the concept of the welfare state is inseparable from an acceptance—more than that, an insistence—on the rights of all people to be treated as human beings, and to have equal opportunities and equal justice.

So, altogether, these two legal writers have helped to state my position succinctly. I believe a welfare state is a state concerned with the welfare of all its people not only with the interests of the few and powerful. I believe such a state in the society of today must make provision for the social and economic security of its members, since society is so constructed that there are many factors beyond the control of the individual. I believe that in an industrial system, where the machine might otherwise dominate the man, and the employer the employee, the Government has an obligation to see that the worker is protected in his right to work. I believe that in a country dedicated to free enterprise, the Government must be responsible for protecting free enterprise against the encroachment of monopolies. And above all, I believe that a country rooted in the concept that all men are created equal should be the leader of the world in carrying that concept to the far corners of the globe.

My two legal references concluded their denunciations with an exhortation to the legal profession, in the important and strategic posts they hold throughout the country—to put aside personal ambition in order to preserve our Nation against destructive forces. I can do no more than echo their sentiments. And I am convinced that as members of a profession which should, above all others, know the meaning and stand for the principles of justice, and as Americans, who should, above all other nationals, know the meaning and stand for the principles of democracy, you will agree with me—not with those two isolated legal secessionists—that we have no other course, except to preserve our system from the dangers of both the right and the left. To accomplish this, we have grave responsibilities, responsibilities of which we were reminded by President Roosevelt in the dark days of 1938, when he warned us:

"Democracy has disappeared in several other great nations, not because the people of those nations disliked democracy, but because they had grown tired of unemployment and insecurity. * * * In desperation they chose to sacrifice liberty in the hope of getting something to eat. We in America know that our democratic institutions can be preserved and made to work. But in order to preserve them we need * * * to prove that the practical operation of democratic government is equal to the task of protecting the security of the people."

One World

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, from an outstanding American who, because of his experience and training, has a wide and accurate knowledge of foreign affairs, comes a copy of a letter written to a member of another body.

This letter is so timely, so thoroughly American in its sentiment, that it is printed herewith:

JANUARY 19, 1950.

Hon. WALTER J. MAHONEY,
Chairman, Finance Committee
of the Senate,
Capitol, Albany, N. Y.

MY DEAR SENATOR: I have known you for some time by reputation as one of the ablest members of the senate, and you may be sure that I do not question the sincerity of your belief that by the development of a world government, peace can be assured to the world. While I differ with you in regard to this proposition, I trust you will credit me with equal sincerity in the expression of the belief, that had you lived among the teeming millions in India and Burma, even for a brief period, as I did in my youth—not merely traveling but actually living in the jungles among the people—you would hardly be inclined to sponsor the resolution you now have before the senate.

I say this, not because I think you would have been prejudiced against these people by reason of their color or their race—certainly, I was not, and that this lack of prejudice was reciprocated was proved by the circumstance that one man whose life I saved in upper Burma, and another to whom I had rendered some service in Ceylon, on bended knees and with their hands around my ankles, sought to enter my service for life—but, because I think you would have appreciated that these people, by and large, can only be governed by some form of paternalistic dictatorship. The historic native style was as often kindly as harsh. The British system was unquestionably irritating but benevolent. However, since the evacuation, I venture to believe that it will be the ultimate fate of all India to bear the Russian yoke.

Inasmuch as you may wonder at my basis for advancing this contention, perhaps I should say that for 9 months during World War I, as an officer of the United States Army, I was assigned to collaborate with a representative of the British Government in connection with the revolutionary movement in India insofar as it affected the interests of the United States. For this reason, I believe that I know who had a large part in instigating the revolutionary movement, and who fostered it after the war against Germany was concluded. That, however, is

another story. In any event, all Asia has a population of approximately one billion and a quarter. Popular government to this mass of human beings is a chimera but if ever this great horde could be made to understand its principles, Asia could outvote the world and her ideologies would be supreme.

In a comprehensive study of war initiated by the University of Chicago in 1926, which was carried forward under the direction of Prof. Quincy Wright, you will find a statement to the affect that a list of all revolutions, insurrections, interventions, punitive expeditions, pacifications, and explorations involving the use of armed forces would probably be more than 10 times as long as the 278 wars listed between the years 1500 and 1940. You will also find that although the United States had been involved in only 12 wars in its history, according to Professor Wright, it was in addition engaged in over 170 distinct military campaigns. (Cf. A Study of War, p. 636, et seq.) In other words, the inference is inescapable that the mere creation of a great state like our Federal Union does not preclude the possibility, and, I should be inclined rather to say, the inevitability of war.

The Pax Romana was probably the nearest thing to universal peace the world ever attained. It was a peace imposed upon a mixed and discordant population by a ruthless dictatorship and supported by a magnificent army. When that army became corrupted and was infiltrated by recruits derived from subject people, the Roman Empire collapsed. That result was, of course, as inevitable as it was logical.

Let us be realistic, Senator, so I ask you what kind of an army can we conceive would come into existence to support a world government today, if its recruits were apportioned fairly among all the peoples of the world. Who would command such an army? Our people represent only 6 percent of the world's population, so I venture to say, that on the basis of popular representation we certainly would not be in control, at least not for long after we surrendered the position we now hold.

In a speech entitled "Un-American Internationalism," delivered in the House of Representatives on Tuesday, June 14, 1949, by Congressman ROY O. WOODRUFF, an important point was brought out which should not be lost to sight. "There is," said Congressman WOODRUFF, "actually in existence today a government whose fundamental purpose is known to be the establishment of the supremacy of its system over all peoples of the earth. I refer, of course, to the Soviet Union. The population of that country is composed of 182 different nationalities, speaking 149 different languages or dialects, and the Government of the Soviet Union only maintains itself in power by the exercise of a ruthless dictatorship, which is utterly unthinkable to people who believe in popular self-government.

Let me add to this quotation that it is, I believe, common knowledge that the Soviet Government now has under restraint in terrible concentration camps some ten to fifteen million of its people.

As I, and the people associated with me in the American Coalition, which is an organization of 85 of the leading patriotic societies in our country, believe in a government of the people and by the people, as set forth by Lincoln in his Gettysburg Address, we cannot contemplate, therefore, with equanimity the submergence of our system in a world government composed of people who, by traditions, customs, and habits of life belong, or are subject to the control of, wholly different ideologies, and, above all, of widely divergent interests.

The United States at the present moment, and has, since we granted the loan of $3,750,000,000 to Great Britain, been supporting a Socialist government whose fundamental program is, in substance, like that laid down by Karl Marx. It differs in fact only in a minor degree from the professed ideals now set forth by the rulers of Soviet Russia. Likewise, we are financing regimes on the continent of Europe which are socialistic in character, and differ only in varying degrees from that of Britain and Russia in the ideologies professed by their rulers. In other words, we are paying for the maintenance in power of a number of these governments, who, by reason of their special interests only are not, at this moment, sympathetic with those in control of the Soviet Government in Moscow .

I suggest, my dear Senator, that the only way concord can be maintained between such divergent interests in the ultimate is by force ruthlessly applied. For my part, and that of my associates in the American coalition, it seems that the United States can render a greater service to humanity by upholding the torch of liberty as an example to the world than in burying our sovereignty in a world government. We Americans in the American Coalition loathe fascism, we detest communism, and we abhor all forms of dictatorship.

Now, let me say a few words regarding the economic aspects of this proposal. I have before me a copy of a leaflet entitled "Beliefs, Purposes, and Policies," of the United World Federalists, Inc., and I see on the second page:

"*Resolved*, That a world federal government must initially be based upon the following principles and include the following powers:

"PRINCIPLES

"1. Basic structure: The world federal government should include the following basic organs: (a) a world legislature to enact all laws necessary to carry out the functions delegated to the world federal government; (b) a world executive agency to administer and enforce the laws; (c) world courts to interpret the constitution and laws, and to try and to sentence lawbreakers.

* * * * *

"4. Enforcement of world law: World law should be enforceable directly upon individuals.

* * * * *

"7. Revenue: The world federal government should have authority to raise dependable revenue under a carefully defined and limited but direct taxing power independent of national taxation."

There is the program. If it goes into effect, we would cease to be free. We would be a minority of 6 percent in the face of 94 percent of the world population. What that means I suggest would be well set forth in an analysis of the races of the world and their degrees of civilization. The Dictionary of Races and Peoples, published by the Immigration Commission of the Senate in 1911, is a source authority to which I respectfully refer you. We Americans would be subject to tribunals manned by people foreign to us in a multitude of ways. In this connection I suggest a rereading of our Declaration of Independence.

Finally, consider the power to tax which it is proposed to confer upon the superstate which the world federalists envisage. It is a well-worn, but, nevertheless, true axiom that the power to tax is the power to destroy.

I venture to say, Senator, that it is no answer to assert that the taxing power would be limited under the constitution of the world government because once our country entered the arms of this Frankenstein our power to resist unjust impositions would be gone, and our right to secede is specifically denied in the program.

There is, my dear Senator, in a magazine entitled "American Affairs," volume X, No. 3, dated July 1948, an extremely interesting article entitled "How To Equalize the Wealth of the World." In this article it sets forth, in substance, that, according to the latest estimates (1938–39), the population of the world amounts to 2,145,000,000. A corresponding estimate of the population of the United States at that time was 130,000,000, or around 6 percent of the world's total population.

The article also sets forth that the wealth of the world amounts to $1,100,000,000,000, and that of the United States around $330,000,000,000, or 30 percent of the total.

The income of the world is given as around $210,000,000,000, and the income of the United States, as of 1940, from $72,000,000,000 to $75,000,000,000, or a percentage of the world's total of 34 to 36 percent.

Now let me quote from the article:

"In order to establish equality throughout the world, the United States must retain only her per capita share of the total world income, i. e., she must reduce her income to 6 percent of the total, and must give away the remaining 30 percent of the world income which she now holds, so that 94 percent of the population outside the United States will also receive 94 percent of the world income. This operation would theoretically raise the rest of the world to an average per capita income of one unit—which is a theoretical gain of 50 percent from the present average. But the average citizen of the United States would, in the process, lose five-sixths of his income."

Now, Senator, let me suggest to you as a practical politician, that in the face of the virtual bankruptcy of the world, the inevitable result of our submergence in a world government would be the reapportionment of our wealth and the destruction of our immigration barriers, so that the overpopulation of Europe and Asia could swarm upon us and destroy the magnificent structure, whose foundations were laid by the men who brought about our separation from the British Empire.

This is a long letter, and I trust that you will pardon the scope which it encompasses, but the subject, I believe, is vital to the continuance of our existence, and that is my excuse for burdening you with this communication.

Respectfully yours.

JOHN B. TREVOR.

A Good Tag Game

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks I include an editorial from the Christian Science Monitor of January 18, 1950:

A GOOD TAG GAME

Republican leaders have come up with two fresh ideas in the new session of Congress. One is a dud and the other a dandy. The first is the notion that next November's election is going to be one on the island of Formosa. The project for military intervention would play Moscow's game by fastening Chinese attention on "American imperialism" while Russia seizes Manchuria. It's a game that holds many pitfalls, few votes.

But the second idea—that of putting price tags on Fair Deal projects—carries a lot of promise. The idea of telling the people how much each slice of Truman pie-in-the-sky is going to cost strikes us as not only good

sport but good politics. It's a fair game, for the administration has either refused or neglected to let the voter know what the bill will be for several of its more glamorous offerings. For instance, the Brannan farm plan and the Ewing medical insurance plan have been well advertised—with the price tag carefully omitted.

A really fair deal would give citizens an honest accounting. And we trust that if the Republicans start this tag game they will be scrupulously careful to give accurate and clear statements of the cost for each project before Congress—including their own pets. Of course, there are some folk to whom prices mean nothing—especially if they think somebody else is paying. For this reason it might be useful to tell voters who think they pay no taxes how much each project will cost in hidden taxes—of which the average family pays $700 a year.

But we believe the great majority of Americans are honestly ready to pay their own way—refusing to buy when they can't. Even those willing to "charge it" want to see the price tag. Let's have the goods on the counter, plainly marked.

Power Grabbers

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of December 22, 1948:

POWER GRABBERS

Representative EBERHARTER reports that 25 percent of the House Members have responded to his recent proposal for curbing the dictatorial Rules Committee, and nearly all the replies are favorable. If this reform is adequately presented to Members of the House, it will probably have the support of a large majority. For the average Congressman is interested in getting legislation enacted and is as disgusted as other citizens when the Rules Committee takes upon itself the responsibility of saying that the House shall not vote on measures that a majority may favor.

Legislators of the Seventy-ninth Congress will remember that when the House Labor Committee reported out a labor-relations bill the Rules Committee impertinently discarded it and gave a special rule to the much more drastic Case bill. The latter bill had been introduced only 2 days previously and had never been considered by a legislative committee. In other words, the Rules Committee usurped the function of the Labor Committee and disrupted the orderly process of lawmaking instead of aiding it. This year the Rules Committee forced the emasculation of the Taft-Ellender-Wagner bill before permitting it to go to the floor. It was responsible in very large measure for the defeat of that bill and thus contributed immeasurably to the Republican debacle in November.

Of course, the House never intended to give any small group of men such arbitrary power. It created the Rules Committee only to facilitate the flow of legislation by granting priority to important bills and prescribing conditions under which they may be debated. The rule makers have come to be dictators only because House leaders and a long-suffering membership have tolerated that breach of trust. Once before the House surrendered its powers of legislation in accord with the wishes of the majority, but those abuses were swept away in the revolt against Uncle Joe Cannon in 1910. Now another uprising must curb the powers of the Rules Committee if the House is to become a reliable instrument of the popular will. The first duty of every progressive, democratic, and liberal-minded Representative in the Eighty-first Congress will be to reduce the power-grabbing Rules Committee to its proper status as a legislative traffic director.

Real Estate Road Show

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD an article appearing in the January 2, 1950, issue of the New Republic entitled "Real Estate Road Show":

REAL ESTATE ROAD SHOW

Unable to defeat the slum-clearance and public-housing sections of the Housing Act in Congress last session, the real-estate lobby is putting pressure on local city councils throughout the country to refuse Federal assistance for construction of low-cost housing. The lobby opened its drive early this month when the National Associaton of Real Estate Boards passed a resolution opposing the "$15,000,000,000 socialized-housing program," urging State and local home builders to "carry on the fight" by referenda, and recommending that Congress amend the act to limit "occupancy in all socialized housing to the indigent." Since that convention, the lobby has appeared before city councils in St. Petersburg, Norfolk, Dallas, and other sizable cities in its all-out effort to scuttle the low-cost-housing program.

At St. Petersburg, the owners of slum property teamed up with the apartment house owners, and hotel men's association, the local real estate board, and private builders and contractors. Through advertisements in the local papers and personal contact with a friendly city council, they charged that the housing program would jeopardize the income of units normally rented to tourists, that construction of new housing units would absorb all skilled labor in this field, crippling the builders, and, following the lead of NAREB, that public housing would kill private enterprise and initiative. The city council and the mayor openly opposed the Federal program and are referring the matter to the voters in a referendum.

The lobby was not so successful in Norfolk. Last week, the city council adopted an ordinance paving the way for construction of some 3,000 low-rent housing units which will cost an estimated $28,000,000.

The real-estate interests are now concentrating on Texas, where the lobby hopes to force referenda in Dallas, San Antonio, Beaumont, and Corpus Christi. If the request for a referendum is turned down by the city council, the group has threatened to circulate a petition in an effort to force the action.

Tell It to the Pentagon

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Harlan Trott from the Christian Science Monitor of January 12, 1950:

TELL IT TO THE PENTAGON

(By Harlan Trott)

WASHINGTON.—So the marines think they're tough, do they.

Montezuma, Tripoli, Chateau-Thierry, Guadalcanal, Iwo Jima? Huh.

Never mind the howitzers, men. Belay those ready assault waves. Call off your close-air support. Those marines aren't that tough. We've found a way to lick 'em.

Scuttle 'em in one sentence. Let 'em have it—smack in the budget.

Like this, see: "Six Marine Corps battalion landing teams will be maintained."

Six battalions of marines, a bare half a division, is all the new 1951 budget leaves the Nation's "first team"—instead of the two skeletonized divisions of the fleet marine force Congress and the country have been counting on as the hard, steel spearhead of a force-in-readinness poised and ready to move by land or sea or air on less than 24 hours' notice.

This solar plexus punch by the Pentagon planners did not take the marines by surprise. The fact is they saw it coming.

They have been warning Congress about the fancy footwork of top defense officials, the familiar tactic of stroking the Marine Corps with one hand and yanking its funds out from under it with the other.

Gen. Clifton Cates, Marine Corps Commandant, reminded the Vinson committee last October of the fears within the corps that the functions assigned it by law are being unsurped by others, namely the Army General Staff.

The prevailing opinion around the Army section of the Pentagon seems to be that the Marine Corps is a luxury the country can do without. Generals Bradley and Collins have given the impression that there's nothing in the Marines' Manual the Army can't do as well.

They admit that the marines pioneered and perfected the techniques of amphibious warfare. But look at the Army's record in Sicily, southern France, and Normandy, the generals say. They are especially proud of their webfooted exploits in Normandy where General Eisenhower's infantrymen swarmed out of the surf and over the German west wall.

General Cates told the Vinson committee last October that the corps was pared down to the limit of its bone and muscle. Any further reductions in combat strength, he intimated, would be fatal to the concept of the force-in-readiness which Congress mapped out for the marines.

Now, the thing General Cates greatly feared has come upon the marines in the new 1951 defense budget, which cuts the present nucleus of two divisions in half. Marine Corps leaders say this reduces them to the role of policemen as effectively as though the issue had never been debated in Congress and decided in the Marine Corp's favor.

In writing the 1947 National Security Act, Congress plainly intended to safeguard the

Marine Corps, especially its amphibious functions, and provide for its integrated mobilization in time of war.

But the trouble is that Congress didn't go far enough. It put a ceiling on the Marine Corps. It said the marines should not exceed 20 percent of the personnel of the Navy. But it failed to put a floor under the Marine Corps.

General Cates told the Vinson committee bluntly that the underlying effort on the part of the Army to contravene the act of Congress has never subsided. The Marine Commandant said furthermore that the Army was not seeking to have Congress redefine the roles and functions of the armed services but was proposing that the Joint Chiefs of Staff put to a vote the Army-sponsored proposal to transfer and reassign the traditional Marine Corps functions.

Each of those two budget-riddled Fleet Marine Forces—one on each coast—has been regarded as the Nation's No. 1 "force-in-readiness": Air-ground teams, developed during World War II when the marines perfected the method of coordinating the striking power of air and ground forces in a new form of attack.

Under the roles and missions drawn up at Key West at a conference of Army, Navy, and Air Force leaders, the Marine Corps was designated as the amphibious force-in-readiness to move within the first 24 hours after the outbreak of war.

It was assumed at Key West the Nation was confronted with the possibility of a war in which an opponent would hold the initiative. Circumstances alone, it was agreed, would restrict the United States to a series of damage-control operations—the marines' job—against the time when the Nation could grapple with the enemy somewhere on the flaming outer fringes.

The marines may be in for their hardest fight—their last one or their best one—when that sentence in the budget reducing the Fleet Marine Force to six battalion landing teams comes up for consideration. There are signs that they will have considerable close support in Congress by the time the decisive battle begins.

Opposition to FEPC Not Confined to South

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1950

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I submit herewith a letter from Mr. Kern Dodge, engineer, Lewis Tower Building, Philadelphia, Pa., expressing in clear and forceful terms his opposition to the FEPC and his reasons therefor.

I commend his letter particularly to the attention of my colleagues who come from the Northern and Western States. As I have previously pointed out, the FEPC means regimentation of the employer wherever he may be, in Pennsylvania, in Michigan, in California, as well as in Mississippi. Behind the pious label and the lofty objectives of the bill lies the dark threat of the further intrusion of government into the liberties of the individual, of the further vesting of autocratic power in a bureaucratic body, of a further tendency toward a police state.

The letter from Mr. Dodge is as follows:

PHILADELPHIA, PA., *January 16, 1950.*

DEAR CONGRESSMAN: By all means, vote against any so-called civil-rights measures, especially those having to do with fair-employment practices. Such a bill would—

Deny employer freedom of contract;

Deny the employer the right of selective judgment in procuring his employees;

Deny to fellow employees the right of selecting associates;

Deny the employer the right to hire, promote, or discharge employees upon the basis of their efficiency, merit, or faithfulness.

It would subject the employer to endless investigation, harassment, and possible fines and penalties, determined by a commission.

It would deny the employer the right of trial by jury, and give him no right to a review of the facts found by the commission.

It would compel the employer to give testimony against himself and expose his private letters, books, and papers for the inspection and investigation of a horde of employees of the commission.

It would compel the employer to hire a person whom he did not wish to have in his employ, and deny him the privilege of selecting an employee of his own choice.

Such a commission would have the power to make rules and regulations which have the effect of laws, of which we have more than enough, and which hamstring business.

I am sure you would not vote for a bill which would require a person of a certain race or color to work for another against his will. Therefore, you should not vote for any bill which would require another person to employ someone to work for him against such employers will.

This whole civil-rights program is being pressed by certain minority groups who are not satisfied with life in the finest country in the world, but who wish to remake it for their own special selfish benefit.

Yours very truly,

KERN DODGE.

Confederate Memorial Day—Robert E. Lee

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting an address which I delivered to the Daughters of the Confederacy in Statuary Hall this afternoon, the one hundred and forty-third anniversary of the birth of Robert E. Lee.

The address referred to follows:

Madam Chairman, United Daughters of the Confederacy, ladies and gentlemen, first, permit me to thank your distinguished chairman for her flattering introduction.

It is a real pleasure to appear before you today, on this the one hundred and forty-third anniversary of the birth of Robert E. Lee, and to pay my humble tribute, not only to that distinguished leader, but to all the other heroes of the War Between the States.

I first want to pay my tribute to the glorious Daughters of the Confederacy, one of the greatest women's organizations the world has ever known. They, together with the Daughters of the American Revolution, have probably done more to protect our form of government and our American way of life than all the other women's organizations combined.

The Daughters of the Confederacy are due the credit for establishing our Memorial Day. On April 25, 1866, just 1 year after the war closed, the Daughters of the Confederacy at Columbus, Miss., in the district which I have the honor to represent in Congress, while decorating the graves of the Confederate dead, decorated alike the graves of about 40 Federal soldiers who had been buried there.

The news of this incident spread throughout the country and brought from the pen of the Honorable Francis Miles Finch, a distinguished northern writer, a little poem called the Blue and the Gray, that will live as long as this Republic lasts.

This incident occurred on the banks of the Tombigbee River, the inland river to which Judge Finch refers in his beautiful poem, in which he said:

"By the flow of the inland river,
Whence the fleets of iron have fled,
Where the blades of the grave grass quiver,
Asleep are the ranks of the dead;
Under the sod and the dew,
Waiting the judgment day;
Under the one the blue,
Under the other the gray.

"These in the robings of glory,
Those in the gloom of defeat,
All with the battle blood gory,
In the dusk of eternity meet;
Under the sod and the dew,
Waiting the judgment day;
Under the laurel, the blue,
Under the willow, the gray."

He closed with this verse:

"No more shall the war cry sever,
Or the winding rivers be red;
They banish our anger forever
When they laurel the graves of our dead.
Under the sod and the dew,
Waiting the judgment day;
Love and tears for the blue,
Tears and love for the gray."

Standing back of me, or I should say almost beside me here, are the statues of two outstanding figures of the Confederacy, Robert E. Lee, the great commander of the Confederate forces—the War Between the States—and probably the greatest commander of men the world has ever known, and Jefferson Davis, the only President of the Confederacy.

Theodore Roosevelt characterized Lee as the greatest commander of the English-speaking race.

Field Marshal Wolseley, of the British Army, once said Lee was the ablest general and to him the greatest man he had ever conversed with. He said "I was simply awed with his inherent greatness."

As Senator Ben Hill, of Georgia, once said:

"When the future historian shall come to survey the character of Lee, he will find it rising like a huge mountain above the undulating plain of humanity, and he must lift his eyes high toward heaven to catch its summit. He possessed every virtue of other great commanders without their vices.

"He was a foe without hate, a friend without treachery, a soldier without cruelty, a victor without oppression, and a victim without murmuring.

"He was a public officer without vices, a private citizen without wrong, a neighbor without reproach, a Christian without hypocrisy, and a man without guile.

"He was Caesar without his ambition, Frederick without his tyranny, Napoleon without his selfishness, and Washington without his reward.

"He was obedient to authority as a servant, and royal in authority as a true king. He was gentle as a woman in life, modest

and pure as a virgin in thought, watchful as a Roman vestry in duty, submissive to law as Socrates, and grand in battles as Achilles."

In the words of Oliver Goldsmith—

"As some tall cliff that lifts its awful form
Swells from the vale, and midway leaves the storm—
Though round its breast the rolling clouds are spread
Eternal sunshine settles on its head."

He stands today the most commanding, the most masterly, the most serenely inspiring figure upon the horizon of human history.

I cannot let this opportunity pass without pausing to pay my respects to Jefferson Davis, the great president of the Confederacy, whom Caleb Cushing once characterized as being "eloquent among the most eloquent in debate, wise among the wisest in counsel, and brave among the bravest on the battlefield."

He was the real victim of the War Between the States; but as time goes on, and the people of the world learn the facts, his stature will grow with the passing years.

Bishop Galloway once said of him:

"Marvelous, many-sided, masterful man, his virtues will grow brighter and his name be writ larger with each passing century. Soldier, hero, statesman, gentleman, American—a prince of Christian chivalry, the uncrowned chief of an invisible republic of loving and loyal hearts—when another 100 years have passed no intelligent voice will fail to praise him and no patriotic hand will refuse to place a laurel wreath upon his radiant brow."

If Jefferson Davis, Robert E. Lee, U. S. Grant, Abraham Lincoln, and all those brave men who wore the gray and the ones who wore the blue in the War Between the States, could come back today and see what is going on in this country, they would probably forget their differences and join hands in a supreme effort to save this Republic, this great constitutional Government of ours, as well as our American way of life, from being destroyed by our enemies abroad, who are aided and abetted by the enemies within our gates.

We, the sons, grandsons, and collateral relatives of the men on both sides of that great conflict, are joining hands today, across the walls of party politics, to try to protect this Nation, and to protect American liberty—that proud heritage of patriotism, conceived in the minds of the greatest statesmen the world has ever produced, guarded and protected by the undyng loyalty of a noble ancestry—to preserve and defend that liberty in our time and transmit it unimpaired to our posterity, that this grand old Republic, with its free institutions, its guaranties of liberty, and our American way of life, may go on down to the future with strength in her loins, hope in her soul, and the eternal song of triumph on her lips.

New Russian Diversionary Moves Expected by Diplomatic Observers

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Constantine Brown concerning future courses of action by Russia which appeared in the Washington (D. C.) Evening Star of January 19, 1950:

NEW RUSSIAN DIVERSIONARY MOVES EXPECTED BY DIPLOMATIC OBSERVERS

(By Constantine Brown)

The time is approaching, according to a number of diplomatic and military observers, when a new Russian blowup should be expected somewhere in Europe or the Near East.

These observers do not claim to have positive information as to when and where it may happen. Their fears are based principally on the Russian strategy of creating diversions in one sector of the world in order to help themselves in another.

The Berlin blockade and airlift are mentioned as particular instances of Russia's deceptive diplomatic strategy.

From the strictly military point of view Berlin was of no consequence either to the Russians or the Western Powers. At the time when the blockade was established Moscow's plans for the conquest of China had ripened.

INCIDENTS COOKED UP

The reorganization of the Chinese Communist armies had been completed and they were facing fairly efficient nationalistic forces, which were weakened by the State Department's undeclared embargo on arms shipments.

The Nationalist forces were supported, however, by the American Congress. The Republican-dominated Eightieth Congress was determined to carry out the commitments of President Roosevelt to the Nationalist Government. Moreover, at that time—the winter of 1948—President Truman himself wished to follow the policies of his predecessor.

It became essential to distract the minds of the American Government and its people from the Far East. The Berlin incidents and blockade then were cooked up.

This was countered by an American-British move in which prestige took precedence over military necessity. We were not going to be pushed out of the shambles of the former German capital by the Russians, it was said, and the spectacular airlift was decided on as an answer to the Soviet blockade.

For more than a year the attentions of the western peoples were focused on Berlin. Whenever it appeared that public attention in American and western Europe was relaxing, as the airlift became routine, inflammatory incidents—such as collisions between airlift planes and Soviet fighters—were concocted by the Russian authorities. This revived western interest and rumbles of an immediate war between East and West began to spread in the West.

But all this time the real Soviet action was taking place on the Chinese mainland. With America chiefly interested in the airlift, little thought could be given to China.

REDS GAINED OBJECTIVE

The Nationalist armies gradually lost heart, while the Chinese Communist forces gained strength. Finally, the Russians gave up their spectacular plan of deception in Berlin and lifted the blockade. By this time, however, they had achieved their objectives.

The Soviet puppets in China defeated the Nationalists. Moscow helped itself to three juicy slices—Mongolia, Sinkiang, and Manchuria, while the rest of that vast country was placed under the leadership of Moscow's Charlie McCarthy—Mao Tze-tung.

By the time we awoke to what had happened to us in the Far East it was too late. We were faced with an accomplished fact in China, alteration of which we are neither willing, prepared, nor capable.

We discovered belatedly—despite statements to the contrary by those who muffed the ball—that our strategic position in the Pacific and Indian Oceans had been dangerously weakened. The arguments advanced by the administration supporters, both in and out of Congress, and the unprecedented official attacks on Chiang Kai-shek, chief of state of one of our allies, are clear indication that American officials feel our policy may have missed fire.

While we were looking across the Atlantic the Soviets stole China. Now we are looking across the Pacific, wondering what happened. It is probable that this interest on the part of politicians and the people in general will continue for some time.

Meanwhile, the Russians are suspected, and not without well-founded reason, of preparing to resume their diversionary tactics somewhere in Europe or the Near East.

The Upset Down Under—No. 5

EXTENSION OF REMARKS

OF

HON. ROY C. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Morley Cassidy, from the Washington Evening Star:

THE UPSET DOWN UNDER—V—BRIGHT PLANS THICK AS BLOSSOMS IN NEW ZEALAND'S LITTLE EDEN

(By Morley Cassidy)

WELLINGTON, NEW ZEALAND, January 20.—Bright new plans are busting out all over this little Garden of Eden, thick as the Pohutukawa blossoms in the midsummer air.

"You won't see me driving a cab much longer," says Frank Choate, 33, a veteran of the New Guinea campaign, as he drives you to your hotel.

"My chum and I, we are going in business for ourselves, making the best fruit drink you ever tasted.

"We've been trying to do it for 3 years but the old government wouldn't give us a license. Said it wasn't economic.

"Now we can go ahead. And you watch—you'll be drinking our product in the States one of these days."

HE'LL RAISE SHEEP

Up in Auckland, Hartley C. Peeres, an insurance salesman, has a gleam in his eye. He's going to raise sheep, a job he was born to.

"I've been trying since 1947 to buy a place down south on the island," he says. "An old chap there has been running 1,000 ewes and I told him I could double that so we made a fair deal. But the old government stopped it. It fixed the price so low the old chap wouldn't sell. Now maybe we can get together."

Plans are blooming everywhere. An elderly gentleman sunning himself on the Parliament House grounds happily tells of his hope that he now can sell his Wellington home for enough to build a cottage near his old home at Dunedin. A bustling grocer on Lambton quay brings out his plans for modernizing his shop by putting in a frozen-food department.

In the Hawkes Bay area a group of businessmen are organizing a new building company to turn out prefabricated houses. Everywhere tens of thousands see a chance at last to buy their own homes.

All New Zealand, in short, is tasting the intoxicating pleasures of an exciting idea.

The idea? Don't laugh. Free enterprise.

It may be a phrase to scoff at in other places. But not here. While other countries have been enjoying free enterprise and sometimes jeering at it in recent years, New Zealand has been getting a man-sized dose of its alternative, socialism.

SOCIALISTS ARE MYSTIFIED

Why? Socialism's leaders, wandering idly through the halls of Parliament House, where they ruled for 14 years, are mystified and saddened.

They thought they had made New Zealand a happy land. Their Labor government had given the people the most advanced social-security system in the world.

Sociologists came from all over the world to study its generous old-age, widow's, and invalid's pensions, its free medical and hospital care, its unemployment payments, sickness benefits, veterans' allowances, and dozens of other safeguards against misfortune.

They could point to such full employment that a waiter in a Lambton quay restaurant boasts, "I could step into a dozen other jobs tomorrow."

They could point to the best wage level and shortest hours in the nation's history, and to more legal paid holidays than any land in the world. But New Zealand has quietly but firmly turned out the men who did all this, and today is preparing to gallop down the reactionary road of free enterprise.

"It was the vote of the young people that turned the scales," says Walter Nash, genial, kindly Minister of Finance, who was New Zealand's wartime envoy to the United States.

He shakes his head sadly. "Young chaps don't remember what times were like in the depression. It's a pity. They talk of restrictions because they never knew what hard times were like."

And that, say New Zealanders of all ages, is exactly the spirit which they have finally cast aside.

GHOSTS OF 1932

"For 14 years," says a 38-year-old Wellington haberdasher, "the Labor Party has kept us living in the midst of a slump that ended in 1936. They've kept ghosts of 1932 dancing before our eyes every minute.

"At every election they have bombarded us with speeches about 'eating the bitter bread of charity,' about the days of the soup kitchens and of cast-off clothing.

"But we have discovered slowly that we were buying security at the cost of freedom."

New Zealand, eagerly setting out on the road of free enterprise under the government of Prime Minister S. G. Holland, is not casting security aside. Its social-security program, much less sweeping than England's, much less generous in many respects than those in many American States, was never an issue in the recent elections.

It is almost universally approved and the new government is pledged to maintain and safeguard it.

"We didn't shoot Santa Claus," says a young Wellington professor. "We voted to keep him alive when he was about to die of arteriosclerosis."

When New Zealanders today tell why they turned against the socialistic theories of the Labor government, and what they hope for from the new regime of free enterprise, one word inevitably pops out: "restrictions."

It is a word that stands for hardening of the bureaucratic arteries, a disease which a majority of New Zealanders find has grown with every year of Socialist planning.

IDEAS HELD BLOCKED BY PLANNERS

"It had just got so nobody could turn around," says an earnest young policeman. "We just had to turn the people loose to get things rolling." Every second New Zealander today is eager to tell how restrictions have crippled New Zealand's normal progress.

Tens of thousands are like Choate, the taxi driver, who has been wanting to set up his own business. Labor planners have compelled every man to get a license to go into business. Licenses were never granted if the new business threatened to compete with Government-run enterprises or were not economically essential to the community.

So tens of thousands of ideas for earning British pounds or American dollars have been blocked at the outset because planners couldn't see the possibilities.

Peres, the insurance salesman, is an example of another hated restriction—land-sales control.

Four classes have been hit here—farmers and would-be farmers, home owners, and home seekers.

With noble intentions—avoiding land-price inflation—Socialist planners limited farm land prices to 22 times the value of the land's 1942 production. Well and good, but today's production is far higher and the prices of products have doubled. No one has been willing to sell.

Old owners have held the land, often restricting the number of sheep to avoid the risk that any farm with over 1,000 ewes might be divided under another Government rule, and eager ex-servicemen haven't been able to buy farms under any circumstances.

Home owners and home seekers have been hit the same way, with prices frozen at 1942 values. The old gentleman in the Parliament House Grounds is a perfect example of how bureaucratic rigidity has frustrated its own purposes.

WHY SHOULD I SELL?

"Government assessors put my four-room house down at £1,100, about $3,000," he says. "I could find 20 people tomorrow to pay me £2,000, and it would cost me £1,400 to build a three-room cottage at Dunedin. Why should I sell?"

Tens of thousands of home seekers, as a result, are still waiting for homes which owners are only too eager to sell at a price based on replacement costs.

One of the most effective posters for the recent campaign was headed, "Everything under control" and showed the Labor government dangling from a cluster of balloons labeled "coal-mine control, egg control, waterfront control, land-sales control, and rent control."

New Zealanders might have endured the controls willingly if the benefits were clearly visible, but a disastrous series of experiments in Government-run enterprises and the mounting costs of social services have brought steadily soaring taxes.

But the greatest evil seen by the new generation of New Zealanders is in controls which have blocked individual effort and competition which would reduce prices.

It is this that makes free enterprise appeal to New Zealanders as an exciting idea full of promise for the future of the last happy land of earth.

Policy for China

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dorothy Thompson relative to our China policy which appeared in the Washington Evening Star on January 19:

ON THE RECORD—POLICY ADVANCED BY ACHESON FOR CHINA DECLARED SO EXTREMELY COMFORTABLE

(By Dorothy Thompson)

The Secretary of State, Dean Acheson, speaking at the National Press Club last Thursday, advanced a policy for China (and we presume, for the rest of the world) which has all the charm of extreme novelty.

"The single, most important fact shaping American policy in the Far East," Mr. Acheson said, "was the attaching by the Soviet Union of the four northern areas of China." The United States must not now do anything which might divert Chinese attention from Russia, he continued, for the division of China "must bring upon the Russians the hatred and righteous anger of the Chinese people."

PLANNED IT THAT WAY?

So we planned it that way? The reason for the secret treaty at Yalta, giving Russia special privileges in Manchuria, was just to encourage Russia to overreach herself? The reason for forcing the truce upon Chiang Kai-shek in November 1945, and allowing tens of thousands of Communist troops to escape; and for insisting in 1946 that the Kalgan Pass be opened to permit a million Communists to move into Manchuria and be armed by the Russians with the entire equipment of the Japanese Kwantung Army, was to be sure that by Russian encroachment in China, the Chinese people would recognize their real enemy?

Do we, perhaps, have a secret agent in the Russian Politburo who directed the Soviet Union to annex the four northern provinces of China, since this is going to make the Chinese people awfully sore?

We don't like the Nationalist Government—runs the argument—so it is well for the Communists to defeat it. But communism being synonymous with Russian imperialism is hostile to the real interest of the people of China, and they will revolt. Ergo, the more successful Russian communism is, the less successful it will be.

No wonder George Kennan, author of the containment policy, resigned from the State Department. To contain communism is putting the cart before the horse, said Secretary Acheson. "It is the United States aim to develop within the people a resistance to communism based on the dignity and right of every people to develop their own way * * * anyone who violates the integrity of China is the enemy of China and is acting contrary to our own interest."

But, apparently, you can't develop a resistance to communism until you first have it, nor rise in righteous anger against the violation of territorial integrity until it is violated.

This is certainly a subtlety outsubtling the Kremlin.

ANOTHER TITO, OBVIOUSLY?

What we want to know, however, is just how the indignation of the Chinese (and other) peoples is going to express itself once the Russian noose is around their necks and all anti-Communist leaders assassinated or exiled?

There are at present some million Nationalist guerrillas on the Chinese mainland. There are 300,000 Chinese Nationalist troops (trained by the United States) in Formosa. There is a leadership, now very reduced, but still a leadership, and all these express the hatred and righteous anger of the Chinese people.

But we mustn't support them. No, we must wait for something more inspiring—obviously another Tito.

Maybe Secretary Acheson has one in mind. We suggest, however, that the Russians have

thought of that possibility, and aren't going to let it happen twice.

At any rate, we have a new foreign policy, surely the most remarkable in our history—and so extremely comfortable. Under it we don't have to do a thing except keep our own purposes perfectly straight, perfectly pure, perfectly aboveboard, and our enemies will do all the rest for us.

Stalin doesn't know it, but he's our ally. The more people's he subjects, the more he will be hated and, conversely, the more we, sitting still in our perfect purity, will be loved.

Obviously, too, we were wrong about Hitler. If we had just let him take the world, people would have been plenty sore, and would have revolted—the Jews, for instance.

It is incredible. But it's true; it's the policy.

Coal Shortage

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. PATTERSON. Mr. Speaker, the continuing stoppage in the soft-coal fields is doing irreparable harm to our Nation. The effects are being felt more every day by both domestic and industrial users. The midwestern home owners are suffering for the arrogant attitude of one man—John L. Lewis. Although bituminous coal is rarely used for domestic heating purposes in New England, its industrial use is almost universal.

Telegrams and letters I have received from the Bristol (Conn.) Brass Corp.; the Naugatuck (Conn.) Chemical Co.; the Chase Brass & Copper Co., Waterbury, Conn.; and the Scovill Manufacturing Co., Waterbury, Conn., outline the difficulties faced by these concerns in maintaining production of essential products. A continuance of this unwarranted work stoppage will result in the unemployment of thousands of workers in Connecticut who can ill afford to be idle.

The President is evidently reluctant to invoke the provisions of a statute duly passed by the Congress to halt this one-man dictation to the whole Nation. Whether the President approves or disapproves of the Taft-Hartley Act is of no consequence. It is his sworn duty to administer the laws of our country, notwithstanding the pressure of certain groups who exert tremendous influence.

The telegrams follow:

JANUARY 17, 1950.

Hon. JAMES T. PATTERSON,
House of Representatives,
Washington, D. C.:

On acount of coal shortage St. Joseph Zinc Co. have notified us that they will have to suspend shipments of zinc from their Josephtown Smelter at Josephtown, Pa., because Duquesne Power Co. will cut off power this Friday. Zinc is one of our basic metals and will affect our operations if this condition is not remedied. Please see if you cannot do something which will help this situation.

BRISTOL BRASS CORP.,
A. D. WILSON, *Chairman.*

JANUARY 19, 1950.

Hon. JAMES T. PATTERSON,
House of Representatives,
Washington, D. C.:

Coal shortage increasingly affecting supply of essential materials. For example shutdown of Duquesne Power Co. for lack of coal will paralyze production by St. Joseph Lead Co., of zinc oxide, an indispensable material for rubber and chemical industries. Urgently request you use your influence to effect use of existing legal measures to end this intolerable slow-down of vital industrial activities.

NAUGATUCK CHEMICAL CO.,
P. E. RICE, *Factory Manager.*

CHASE BRASS & COPPER CO.,
Waterbury, Conn., January 18, 1950.

Hon. JAMES T. PATTERSON,
House Office Building,
Washington, D. C.

DEAR MR. PATTERSON: We have just been advised by one of our suppliers of zinc that they will be forced to suspend shipments because of the action of the Duquesne Power Co. in shutting off industrial power due to the coal shortage.

Any interruption in the supply of zinc will be serious for the brass industry, and, if continued, result in curtailment of operations with resulting unemployment throughout the brass industry.

Settlement of the present difficulty in the coal industry is, we feel, of vital importance, and we urge that every possible effort will be made to bring this about promptly.

Very truly yours,
CHASE BRASS & COPPER CO.,
W. E. HUSTED,
Executive Vice President.

SCOVILL MANUFACTURING CO.,
Waterbury, Conn., January 18, 1950.

Hon. JAMES T. PATTERSON,
House Office Building,
Washington, D. C.

DEAR JIM: I thought you would be interested in knowing that the brass industry faces a very serious situation with reference to high-grade zinc.

We have been notified by one of our important sources that the Duquesne Power Co., which supplies the electric power for their thermic unit at Josephtown, Pa., is shutting off power commencing Friday due to coal shortage; and as you probably know, the New Jersey Zinc Co. has been closed for some time due to labor difficulties. The matter of power at the high-grade zinc plants about the country due to the coal shortage is very serious, and while we read in the papers there is no emergency due to the coal situation, we also hear of possible shut-downs all through the Middle West and the serious effect that this will have on Connecticut manufacturers, and I urge you to do all possible to endeavor to alleviate this situation.

Kind personal regards.

Very truly yours,
SCOVILL MANUFACTURING CO.,
W. M. GOSS,
Executive Vice President.

Medical Education

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article appearing in the Washington Evening Star on Thursday, January 19. This article is by Dr. Walter A. Bloedorn, who is the dean of the George Washington University School of Medicine.

Dr. Bloedorn is a former citizen of Nebraska and a graduate from one of its medical schools. You will find his article, which is in answer to an editorial, "We Need More Doctors," to be factual and well written.

The article follows:

MEDICAL EDUCATION—DR. BLOEDORN DISSENTS FROM STAR EDITORIAL AND VIEWS AIRED AT ACADEMIC DEANS' CONFERENCE

To the EDITOR OF THE STAR:

I am writing you regarding the editorial We Need More Doctors published in the January 11, 1950, issue of the Evening Star. This editorial is based on statements reportedly made at the American Conference of Academic Deans held in Cincinnati on January 9, 1950.

Although the editorial admits that such a charge may be grossly unfair, it cites a statement which it asserts lends plausibility to the charge that the medical profession and the medical schools are protecting physicians from the competition of outsiders in keeping down the number of new students by extraordinary limitations placed upon admissions to our medical schools—wholesale exclusion of potentially good students—no matter how eligible many of them may be.

The idea is too naive to warrant the characterization of grossly unfair.

The Association of American Medical Colleges' headquarters' office in Chicago reports that for the year 1948–49 there were 6,514 freshmen enrolled in the medical schools. The number enrolled in 1949–50 was 6,887 which represents an increase of 373 over the previous year.

It is true that more students apply for admission to medical schools each year than are or can be admitted. The process, however, is one of selection and not of exclusion. The fact is that anyone, no matter how ill-prepared or ill-suited to undertake the long and difficult study of medicine, can apply. The fact is that thousands of those who do apply are wholly unqualified.

The careful selection of students for the practice and study of medicine is one of the most important functions of the medical school. Students are selected for admission on the basis of demonstration ability to do creditable work in premedical studies, tested medical aptitude, character, and motivation. The sole purpose of this careful selection is to assure, as nearly as possible at the outset, the training of physicians in whose hands patients would be willing to place the health and often the lives of themselves and their families.

FACTORS CONTROLLING ADMISSIONS

The actual number of students admitted to the medical school each year is determined, not by an arbitrary limit set in conspiracy by the medical profession and the medical schools, but by several more fundamental, if less sensational factors:

1. The capacity of the physical plant of the individual medical school; lectures and laboratory work cannot be conducted in the public parks.

2. The number of qualified teachers available to instruct the students; students cannot teach each other.

3. The number of hospital beds available for clinical instruction; students cannot learn medicine from books alone.

The physical plants and the teaching staffs of the medical schools are limited by budgets. Tuition fees cover but a fraction of the cost of medical education. At the present time the Nation's medical schools require addi-

tional financial support even to maintain existing facilities and faculties at the present standards.

The Nations' medical schools, at the moment, are training medical students at the limit of their capacity. The accelerated program in effect during World War II, in the opinion of most medical educators, lowers the standard of performance of the medical schools.

The number of students admitted to medical schools could, of course, be doubled overnight if standards regarding selection of students, adequacy of equipment, availability of qualified teachers, and sufficiency of clinical facilities were thrown overboard.

It is unlikely that the critics of the present system of medical education would willingly consult a physician trained under such circumstances.

The editorial also implies criticism of "the long years of costly study, the added years of internship, and the widespread tendency to concentrate on a specialty instead of on general practice." If any adequate substitute for long years of study and internship can be suggested which will provide well-trained physicians, the thousands of men now undergoing the hardships and sacrifices of this discipline undoubtedly will welcome them.

It would, of course, be possible to establish diploma mills to turn out thousands of doctors and additional thousands of specialists with training limited to short periods of instruction.

ONE DOCTOR FOR EVERY 710 PERSONS

The Star's editorial criticizes the medical schools chiefly, because, it states, "there simply are not enough doctors to cope with the health needs of our greatly increased and still growing population." "There exists," the editorial states, "a doctor shortage"—"especially in the nonurban areas." The fact is there are more doctors in the United States in proportion to the population than in any other country in the world—with the sole exception of Palestine, where many refugee physicians have gone from Europe.

There is 1 doctor for every 710 persons in the United States.

As to the needs of our increasing population, the fact is that during the past 20 years the number of physicians has increased at a greater rate than the population as a whole.

Since the beginning of World War II, new medical colleges or expansions of former 2-year schools of basic medical sciences have been developed in Alabama, Washington, California, North Carolina, Texas, Utah, and Illinois. Others are being considered in Mississippi, Florida, West Virginia, North Carolina, and elsewhere.

It is true that there is a relative shortage of physicians in some rural areas. This shortage exists independently of the relative abundance of physicians in the Nation as a whole, however. Merely increasing the number of students admitted to medical schools will not solve that problem.

There are today many small communities without newspapers or colleges, and in these communities there are no editors or college professors. Similarly, there are communities without hospitals, health centers, laboratories, and many of the other facilities necessary for the practice of modern scientific medicine; for this reason, there are communities without physicians. The solution to this problem is not the wholesale turning out of ill-trained physicians. The solution is to be found more likely in furthering local, State, and national programs for the establishment at well-selected points of clinics, health centers, and hospitals to provide facilities which will make it possible and attractive for physicians to practice good medicine in these areas.

Medical education is not perfect. No one knows this better than medical educators. Medical education is the foundation of our national health and welfare. The importance of the medical schools to the Nation is far out of proportion to their number, their size, and their costs of operation. It is important that undergraduate medical education be maintained at a high level of quality.

WALTER A. BLOEDORN, M. D.,
Dean, the George Washington University School of Medicine.

Washington—Disgrace to the Nation

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include an article appearing in the New York Times of Friday, January 20, 1950, taken from the February issue of the Woman's Home Companion, entitled "Washington—Disgrace to the Nation":

WASHINGTON—DISGRACE TO THE NATION—EVERYBODY KNOWS THAT AMERICA IS THE WORLD'S FINEST DEMOCRACY; BUT BEHIND THE BEAUTIFUL FACADE OF THE NATION'S CAPITAL LIES SQUALOR, BIGOTRY, POLITICAL SLAVERY—LET'S CORRECT THESE CONDITIONS TO IMPROVE OUR POSITION IN WORLD AFFAIRS, URGES HOWARD WHITMAN

Washington, the Nation's Capital, has hidden long enough beneath its glistening white facades as America's show window, democracy's living monument the world over. What is the Capital City really like? Let's take a tour no sightseer ever took.

We'll find slums so vile that Michigan Senator, HOMER FERGUSON, after he saw them, scrubbed his hands and said, "But you can't scrub out your soul after sights like these." We'll see men with trousers rolled up to avoid the vermin and women carrying sticks to protect them against rats. We'll find a city touted as the heart of democracy—with its 1,000,000 people deprived of the right to vote. Worse, we'll find a dread lest democracy be turned loose in the District of Columbia and drive out special privilege.

We'll find city hospital facilities so bad that doctors and nurses all but weep at what their patients suffer. At Gallinger, Washington's big city hospital, we'll see a man virtually rotting to death because facilities for his proper treatment are lacking. We'll find a Jim Crow town. In the citadel of democracy we'll see Americans barred from restaurants, hotels, movies, hospitals and schools because of the color of their skin. This is the lame-duck District of Columbia, governed by a Congress which is too busy pleasing the folks back home to give two hoots about a million voteless people on the Potomac.

The District of Columbia contains more than a hundred thousand dwellings. Of these, reports the National Capital Housing Authority, 44,000 are substandard. Nearly half of the dwellings in the Capital of the richest nation on earth do not meet civilized standards of safety, health and fitness for human habitation. "In these squalid slums," reports Dr. Leonard A. Scheele, Surgeon General of the United States Public Health Service, "the tuberculosis death rate is 99 percent higher than for the rest of the population, the pneumonia rate 25 percent higher."

Perhaps you have been to Washington. Perhaps, as I did, you regarded Washington as a city of beauty and inspiration. The illusion smashed abruptly for me. I was touring Washington in a police scout car. Suddenly it turned off one of the large open streets, nosed into an alleyway. "Like going through a rathole, eh?" one officer joked. My eyes darted over rows of filthy tumbledown shacks, with people swarming in and out of them; unpainted gray boards and sagging walls; a litter of garbage and bones, with scavenging dogs and cats and buzzing clouds of flies.

It was the center of a city block, hollowed out to make a slum. You could walk around that block for days and never dream such a rotten inner core existed. "But I had no idea Washington had slums like these," I said. "Nobody does—they're hidden," replied the policeman. I came to know dozens of other rotten hollow cores of city blocks that look respectable on the outside. I found rats so abundant that I learned to flush them by tapping a stick ahead of me as I walked up dark smelly stairways.

Would you expect to find outhouses in Washington, D. C.—within sight of the Capitol? The courts and alleys are full of rows of ramshackle privies, some with slats broken out and doors that don't close, sitting in the garbage-cluttered back yards, emitting a horrible stench. The slum dwellings, occupied by Negroes mostly, have neither steam heat nor running water. Kerosene lamps and candles provide light; coal stoves provide heat—for those who can afford to buy coal. In the yards there are water spigots, one to half a dozen families. Some are cross-connected with toilet plumbing so there is no telling when bacteria from the toilet wastes pour out in the drinking water.

Senator Ferguson, during his tour of the slums, blurted in astonishment, "Aren't there any health laws?" No, Senator, there is no modern plumbing and sanitation code in Washington. The Housing Authority drew one up 10 years ago. It would have ruled these slums off the map. But for 10 years the code has gathered dust in the District Commissioners' desks. Meanwhile the district clinic must continue treating the babies who are brought in with festering red holes on their fingers and foreheads—rat bites.

The main reason for Washington's failure as the world show window of democracy is that Washington is not a democracy. It is a disenfranchised little protectorate where 1,000,000 Americans are denied the right to vote. They are placed in the same category as felons, aliens, and the certified mentally ill. The world champion of democracy has seen fit to turn away democracy on its own doorstep.

Washington's rulers are three Commissioners appointed by the President and they can do nothing without the approval of Congress—Congress acting as a sort of board of aldermen. Congressmen must waste their time over every smidge of local legislation. Recently, with world emergencies breathing down its neck, Congress had to wrangle over a bill for the disposal of weeds.

The District government is a morass of accretions, improvisations, and confusions. It is doubtful if 10 percent of the Members of Congress understand it themselves. There are over a hundred departments, divisions, agencies, subboards, and miscellaneous bureaus—each with a finger in the pie. Its fumbling is grievously seen in the inside story of Gallinger Municipal Hospital. Yet Gallinger looks trim and first-class on the outside.

Gallinger is Washington's only city hospital. It has 1,500 beds—for a city of 1,000,000. It is forced to pack the pneumonia cases so close together they cross-infect one another. "We don't have enough anesthetists to keep our surgical service going," reports Dr. Joseph Fazekas, chief of staff. "Patients who need elective surgery just don't get it." A doctor described the X-ray department as "the worst equipped I've seen in any hospital." Last August the American Medical Association refused to okay it for residency training.

The hospital is so short of drugs that Dr. Fazekas must beg for hand-outs from the large drug companies. Nurses have impossible loads—up to 60 patients. One nurse said, "We don't even know what's ailing some of the patients. We haven't time to find out." The staff wants to change Gallinger's name to the Nation's Capital Hospital. Why? Because that might shame somebody into doing something, Dr. Fazekas explains.

Self-government for Washington may seem to most Americans a simple question to settle. But is it? Washington's population is 22 percent Negro. The desire of many Congressmen to keep it a segregated city is hidden behind much of the opposition to home rule. Negroes would vote. And if Negroes voted, segregation—by democratic process—might go.

Many Americans would be shocked to realize that when they set foot in the Capital of their country they are in a city where Negroes must eat in Jim Crow restaurants, where Negro children are barred from white schools, where a Negro can't even go to the same movies as his fellow citizens of lighter complexion.

This is doubly shocking to many of us because we feel that the rest of America has gone far in recent years toward ending racial and religious discrimination. Much remains to be done but much has been done, officially and privately—the various State fair-employment laws, the removal of restrictions in our armed forces, for example; the inspiring Springfield plans and good neighbor clubs, the dropping of bars in many college fraternities. And let's not do any finger-pointing at Georgia or Alabama until we have taken a good hard look at Washington, D. C.

Segregation of human beings because of race, color, or creed is tragic enough anywhere in the world. It is doubly tragic in the capital city of a nation dedicated to the proposition that all men are created equal. I met a judge in Washington—a Negro appointed to the Department of Justice by Theodore Roosevelt and later to the bench by Calvin Coolidge. At noon every day this judge must walk a mile to the Union Station to get his lunch because no restaurant near his office will serve him. I met a taxi driver who served 4 years overseas in the war but is not permitted to drive a veteran's cab. Such cabs are for white veterans only.

Countless incidents—an African foreign minister turned away from a hotel, a Puerto Rican senator forced to sleep on an office couch, a Bolivian educator turned out of a restaurant—reached an ironic climax last spring when the Negro diplomat, Dr. Ralph J. Bunche, refused the post of Assistant Secretary of State. Life in Jim Crow Washington was something he didn't want to inflict upon his three children.

There is a bill in the congressional hopper, written by Congressman ARTHUR G. KLEIN, of New York, to end segregation in the Nation's Capital. It hasn't a ghost of a chance of passing. But there is a sentence in it to remember. The failure to close this gap between the principles of democracy and the prevailing racial practices in Washington, D. C., materially impairs the leadership of the United States in the cause of a democratic world.

How can we sell democracy if we don't dare open our sample case? How can we try to democratize the outside world until we have really democratized Washington, D. C.? Washington belongs to all of us. We want our children to go there with their high school classes and see American ideals brought to shining flower. We know the American way of life. We know it is the finest way of life man has yet found. Let Washington exemplify it through and through. Washington should be a national shrine—not a national disgrace.

Timely Observations

EXTENSION OF REMARKS
OF

HON. PHIL J. WELCH

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. WELCH. Mr. Speaker, under leave to extend my remarks, I wish to insert the following articles from the St. Joseph News-Press, St. Joseph, Mo., of January 16 and January 18, 1950:

[From the St. Joseph (Mo.) News-Press of January 16, 1950]

TIMELY OBSERVATIONS

May we quote Dana? It was Charles A. Dana, journalistic giant of the famed New York Sun. When criticized for printing news happenings of tragedy and disaster, he remarked something in this vein: "What the good Lord in His omnipotent wisdom sees fit to let occur, I in my humble role as editor of a newspaper shall not deem myself too lofty to report." That story on the great Dana comes to mind as we read of that United States Senate committee which is toying with the idea of a Federal law banning advertising hard liquor, beer, or wine in interstate commerce.

Sincerely and frankly we leave out any thought now of income to a newspaper from liquor advertising. (Why ration department stores' advertising if our only concern for liquor is to get their money?) We oppose a prohibition of liquor advertising on sound ground. This newspaper is for temperance. It has repeatedly over many years deplored the abuse of liquor. But this newspaper opposed national prohibition with all the force at its command. It predicted that national prohibition would be a failure. It made only one error in that prediction. It failed miserably to estimate the enormity of that failure.

But the people spoke, or so we thought. The eighteenth amendment became law. It was opposed by two great leaders of that day, Woodrow Wilson, then President, and James Cardinal Gibbons, archbishop of Baltimore and a beloved churchman and friend of many Presidents. Woodrow Wilson so bitterly opposed a constitutional amendment against liquor he vetoed the Volstead Act, the enforcing law for that amendment. The story of national prohibition is a sordid tale of terror, of gangsterism which is still felt in the States. It brought the worst forms of official corruption. Washington hired prohibition agents to spy on fellow agents and then a third set of spies to spy on the spies. No fooling. And all three sets of the spies took graft. Look at the record.

Then, again the people spoke. Prohibition was repealed in one of the most complete and fastest reversals of public opinion this Nation has ever known. When prohibition was repealed liquor became legal and newspapers of the land then again accepted legally advertising of whisky, beer, and wine. That is the situation today.

If the people of St. Joseph and Buchanan County through local option want a ban on liquor, fine, extra fine. If the people of Nodaway County or Gentry or Platte or Andrew—any of them—through local option want a ban on liquor we heartily agree. There are many counties in Missouri that through local option permit no liquor. In Kentucky, the home of bourbon, there are more dry, by local option, counties than there are wet.

But local autonomy must prevail. National prohibition cannot succeed unless the mind of the people, the mass mind, undergoes a tremendous change. Many of us remember Czar Wayne Wheeler and his methods with the old Antisaloon League. A Congressman could be so drunk he could just stumble to his desk to record his vote for prohibition. To Wheeler and the professional drys that was all right. Congressman John Q. Souse, who lived wet but voted dry, got the support of the monumental political machine of the professional drys and was returned to office time and again.

This newspaper deplores the abuse of liquor. It hails such groups as the Woman's Christian Temperance Union and Alcoholics Anonymous. And yet legislatively it is against letting other States force their views on moral issues such as this upon the State of Missouri. And as long as sale of liquor is legal, so long must it be legal to advertise it in newspapers and magazines. Let's not return to the witchcraft, crackpot era of regulating our lives by a law that created more grafters and perjurers than any law in the history of America.

Some of our good friends will not like these observations. There will be some who will willfully accuse us of being swayed by the cash register's tinkle. Not at all. No more than we would be influenced by the owner of that store or factory or shop whose son got arrested, and we were threatened, almost politely, but firmly nevertheless, that unless we kept sonny's name out of the paper, papa would withdraw his advertising. Want to know how we react to that? And the "we" there means the whole staff, both papers. Want to know what we do when someone makes a threat or even boasts to a friend that he can "square off" so and so "up at the paper"? It goes page one.

One more thought on the drive against liquor advertising in the United States Senate. This newspaper and this column have deepest reverential respect for that great Protestant church that maintains an official board of temperance and morals. Yet it regrets its radical approach to national prohibition a generation ago. It regrets that today one of its great bishops is spearheading the drive to ban liquor advertising. That man is taking advantage of his profession. He is using the dignity of the cloth in a manner unworthy of his sacred calling.

[From the St. Joseph (Mo.) News-Press of January 18, 1950]

TIMELY OBSERVATIONS

For the first time that can be recalled, Timely Observations has a guest contributor today, that is, one who has no connection with the staff of the News-Press. He is our valued friend, the highly respected pastor of First Baptist Church, Dr. Adiel Moncrief. There are so many things on which the good cleric and this column do agree, it seems unfortunate that there must be any difference at all. But Timely Observations did some observing on advertising liquor, which Dr. Moncrief resents. His letter, intended for the Forum, appears herewith in full:

"EDITOR, THE NEWS-PRESS,
St. Joseph, Mo.:

"DEAR SIR: Your observations on the subject of advertising liquor make one point clear: You favor such advertising and seek to justify it. I was under the impression this was the case. Mr. Editor, what has your lengthy excursion into the evils of the late prohibition era, gangsterism, political corruption, lawlessness, and a kind word for the late Cardinal Gibbons who opposed national prohibition, to do with the subject?

"You reject the obvious reason why a newspaper might favor this kind of advertising. You say it is not the profits, since the paper could substitute department-store advertising for liquor ads and there would be no loss of revenue. Then you assert that the paper is 'for temperance.' You say it has deplored the abuse of liquor while 'opposing national prohibition with all the force at its command. It predicted that national prohibition would be a failure.' Again, what has all this to do with a straight answer to the question, Why is your newspaper advertising liquor and determined to continue doing so?

"I have always believed that there are three reasons why a person favors the manufacture, sale, and use of intoxicants. (1) He likes the liquor and wants to drink it, (2) he likes the profits and wants to sell it, (3) he likes the business and wishes to engage in it.

"I would agree with you that national prohibition is not the way to curb the evils and tragedies of the tremendous liquor business in America. But I do not agree with you that advertising of liquor has any logical justification in political wisdom and social sanity. Why continue through newspapers, magazines, movies (where the drinking scenes are dragged in in the most disgusting manner), and even radio with its beer and wine promotion, to ever increase the consumption of drink and the billions of profits to this harmful beverage industry?

"There is good reason why the liquor trade ought to be curbed and controlled far more than it is today. The bills which constantly appear in the Congress and in State assemblies reveal a growing sentiment among the people to impose by law such restrictions. But I do not have great faith in the law. St. Paul said of man's moral reformation, 'What the law could not do in that it was weak through the flesh (God did in the revelation of goodness in His Son) who condemned sin in the flesh.' Our hope lies in moral changes.

"We have got to stop making drinking so attractive and smart to youth. It ought to be treated with a realistic attitude as it is in some countries. A stigma is attached to drinking in excess.

"A young college student, speaking recently to a civic club in our city, made my cheeks burn and my heart sick, as he described the attitude of European peoples to America because of the false presentation of American life they have had through the Hollywood movies with their orgies of drunkenness and crime. We seem to be in the unhappy position of being accepted as a stupid, lustful people who have nothing but money and sex as the end-all and be-all of life. This false picture of America is dangerous in a day like this and it should not be tolerated for a moment.

"I respectfully renew my appeal to the editor of the News-Press to seriously consider the elimination of liquor advertising in the newspaper as one step in the direction of temperance—for which the newspaper stands, according to your own testimony.

"ADIEL J. MONCRIEF."

Timely Observations has no desire to quarrel with the brilliant minister at First Baptist. Long, long ago we learned never to pick a quarrel with a priest, a rabbi, or a minister. It's no good. Furthermore, it's bad luck. Then, too, laymen should have too much veneration for the ministry to permit themselves to appear to say or do anything to hold that ministry in disrespect.

Dr. Moncrief does ask why we mentioned the late Cardinal Gibbons. The Baptist minister seems to think we went out of our way to say a kind word for a Roman Catholic prelate. Dead right, Doctor. But there was a purpose. Cardinal Gibbons at the time the eighteenth amendment was adopted was the chief representative of one of the three great Christian churches that opposed national prohibition.

But let us assure the good minister that there are many radical Catholics on the subject of liquor. Surely he is familiar with the Knights of Father Mathew, a total-abstinence society for Catholics. And all Protestants do not see eye to eye on the advantages of national prohibition. American citizen No. 1 today happens to be Baptist layman No. 1, the President of the United States. We believe his views on liquor are more in accord with ours than Dr. Moncrief's. It sums up to this: Dr. Moncrief is opposed to the use of liquor, we to the abuse of it.

The Common Cold

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Paul de Kruif, from the Reader's Digest:

IS THIS, AT LAST, GOOD-BY TO THE COMMON COLD?

(By Paul de Kruif)

November 15, 1949, marked the beginning of a great step ahead in the comfort of mankind. On that date occurred the scientific publication—in the New York State Journal of Medicine—of a powerful and practical preventive and cure for the common cold.

The new cold-killer is no tantalizing laboratory curiosity; it's available to everybody. It is safe, and it is not limited to expensive prescriptions; the Federal Government permits its direct sale to the public in drugstores.

Until 4 years ago just about all that anyone knew about colds was that they were catching and were caused by a virus. Cures? Here was the gloomy advice of Dr. Perrin H. Long, famed therapeutist of Johns Hopkins: "The only rational treatment * * * is to be put to bed at the onset and remain there for 2 or 3 days." But in 1945—with no fanfare whatever—came the hint of a clue for a cure.

Dr. Elizabeth Troescher-Elam and coworkers in San Francisco proved that the sneezes and sniffles of hay fever were scientifically identical to the sniffles and sneezes of acute cold in the head. The culprit in both troubles was a chemical, histamine, released by the human body in all its allergic explosions. As the Journal of the American Medical Association put it in an editorial comment last September 10, "the common cold is an allergic response in susceptible persons."

Physicians in 1945 were getting their hands on a battery of new antidotes for allergies—chemicals called antihistamines. Dr. John M. Brewster of the United States Navy Medical Corps dosed more than 100 victims of the common cold with benadryl. Ninety-five percent of the sick sailors got marked relief and had much shorter colds than usual. Ten percent, treated very early, had their colds quickly cured, aborted, an event truly unique.

But there was a catch. Benadryl made many of the sailors very sleepy. Pyribenzamine (PBZ), a more powerful and less drowsy antihistamine, was launched against the colds of nearly 400 factory workers in Framingham, Mass., by Dr. H. G. Murray. Caught early, the colds of 110 workers were blitzed completely within 24 hours after the patients started swallowing pills of PBZ. Most of the others were markedly benefited; as were also 89 percent of sneezy students in Charlotte, N. C.

But, alas, PBZ and other antihistamine pills, though acting effectively against early head colds, all sang a troublesome chemical lullaby. Too many of those cured grew deeply dopey. No antihistamine could be sold except by prescription.

And how many of us go to our doctor at the first unhappy harbinger of our colds in the head?

Hope for a more practical cold killer came out of Yonkers, N. Y., in the autumn of 1947. Chemists of Nepera Chemical Co., Inc., under the direction of Dr. Edmond T. Tisza, vice president in charge of research, synthesized a new antihistamine they named neohetramine. Powerful against allergies, neohetramine did not make folks sleepy. The Council on Pharmacy and Chemistry of the American Medical Association declared it the least toxic of available antihistamines.

In the autumn of 1948, at Sing Sing prison in Ossining, N. Y., began a comprehensive and truly scientific test. Dr. Charles C. Sweet, medical superintendent of the prison, called in an expert allergist, Dr. J. J. Arminio. From volunteers among the prisoners Dr. Arminio chose 311 who gave no history of hay fever. He divided them into three groups. When colds developed among the men that winter he gave neohetramine tablets to one group, blank tablets looking just like neohetramine to the second group, and the traditional doses of aspirin, nose drops, and lozenges to the third group.

The result made history. The men getting the blanks or the aspirin ran through all three phases of colds in the head—the sneezy and nose-running first phase, the stuffy-headed second phase, and the third phase with its thick discharge caused by the secondarily invading microbes that followed the attack of the cold virus. The colds averaged the 5 to 6 days that all of us suffer.

But the colds of the lucky fellows getting neohetramine within 24 hours of onset were cured in just a bit over 1 day; and those beginning treatment within 48 hours were restored to health in 2.8 days. However, when treatment was begun after 2 days—in the third, purulent phase—it did no good at all.

None of the prisoners got sleepy or showed any other side effects from the neohetramine treatment.

But an ounce of prevention is worth a pound of cure. Drs. Arminio and Sweet began testing neohetramine's preventive power upon Sisters at the Maryknoll Convent and students at the Maryknoll Seminary, near Ossining. One hundred took one 50-milligram neohetramine pill once a day; 100 took two pills a day; 100 took three. Again it was an impartial experiment, for all mixed up with these 300 nuns and students were 300 more getting blank pills; and none of the 600 knew which was which.

The results were astounding. All 600, intermingled, had the same chance of exposure to the cold virus. Of the 300 getting the blank pills every day for 6 months, 241 caught one or more colds, some of them five or six. One hundred seventy-nine of them developed real "blingers" going through to the phase of secondary infections; some developed pneumonitis, bronchitis, or misery of their sinuses.

Among the 200 getting neohetramine pills 2 and 3 times a day during that 6 months, 182 (91 percent) had no colds at all. And the others, who developed a bit of a sneeze and stuffiness, were well in 1 to 2 days. No headache. No sinus. No cough. No fever. No work loss. A few of the group getting three pills a day had some throat dryness; the three daily pills were cut down to two. Twelve subjects of the one-pill-a-day group got well-established colds, but even these were mild.

During all those 6 months none of the 300 experienced any sleepiness, dizziness or any other discomfort.

The Federal Food and Drug Administration, recognizing the safety of neohetramine, has now permitted its over-the-counter sale direct to the public. It is the first antihistamine so approved, but there will unquestionably soon be others. Neohetramine will continue to be known by that name to physicians. The public will purchase it under the trade-name Anahist. The tablets are 25 milligrams. They can be given to children as well as to adults. One large electrical company has already introduced Anahist cold prevention among its 10,000 workers.

Use of Anahist at a cold's first warning signal, with regular dosages thereafter, will likely kill a cold within 36 hours. It will also minimize the sneezing and coughing and runny noses that now spread the virus to others. It may break the ages-old chain of infection. Thus it seems within the range of possibility at last to wipe out the curse of the cold in the head.

Governmental Costs for Pay Rolls Near Twenty-two-Billion Mark

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include a recent article from the Washington Evening Star:

GOVERNMENTAL COSTS FOR PAY ROLLS NEAR TWENTY-TWO-BILLION MARK

Governmental pay-roll costs are approaching a $22,000,000,000-a-year mark, an Associated Press survey showed yesterday.

These pay and allowance outlays by Federal, State and local Governments account for nearly $1 of each $6 paid out for wages and salaries in this country. They were surpassed only during the 1943–45 wartime period.

By official records, 7,685,000 persons—about one out of every eight workers in the country—are drawing Government pay.

The total includes members of the armed forces and school system employees.

Commerce Department data showed Government pay rolls hit a peacetime peak of $21,900,000,000 a year in November, and it appeared the climb was continuing.

Officials helping to analyze President Truman's budget for fiscal 1951—the 12 months beginning next July—said total Federal pay-roll outlays in that period will approximate $11,000,000,000.

That means a $600,000,000 increase over this year, split about equally between 1,500,000 members of the armed forces and approximately 2,000,000 civilian workers.

TWO HUNDRED AND FORTY-FOUR DOLLARS FOR EACH TAXPAYER

The $11,000,000,000 Federal total averages out to $244 for each of the 45,000,000 Federal income taxpayers. The increase over the current fiscal year is due to boosts in military and civilian pay voted by the last Congress.

Precise figures were not available on the number of employees of the Congress and courts, but pay and allowances in those departments were budgeted at around $50,000,000.

The budget called for 1,960,000 civilians in the executive branch of the Government. The all-time peak, in wartime 1945, was 3,770,000.

The Decisive Decade

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the content of an address by Herman Steinkraus, president, Chamber of Commerce of the United States, in Pittsburgh, Pa., on January 10, 1950.

Mr. Steinkraus, a Connecticut citizen and outstanding industrialist, is well qualified to speak out on the issues facing this country, as he has done in this address. I commend its reading to all who may peruse the RECORD.

I am very happy to be here this evening in Pittsburgh. It was just 30 years ago this month that I first came here for a company in Cleveland, on my first job as a traveling salesman. I remember Pittsburgh made quite an impression on me—or rather, what I could see of it—if you get what I mean. I remember my laundry bills were very big. I realize all that is changed now, so I shouldn't bring up those old days.

But at least my enthusiastic impression of this fine city still remains, and it is a pleasure to be here to speak to you, in this place which has always been so much the industrial heart of our country.

At this time I am conscious as you are that we are at the beginning of a new year, a year of great promise, but also of grave significance. Within the last few days we have heard the President's message on the State of the Union, the economic outlook, and his budget message. We have also heard many predictions from economists, bankers, and businessmen as to the outlook for 1950. The prophets are optimistic. They say business will be good.

Far be it for me to throw cold water on such optimism, but I believe that while this short-range view is helpful and interesting, yet when we consider the trend of our times it is much more important for us to have a long-range view, not for the next year alone, but for the next 10 years, which may well be for us the decisive decade.

Great events don't happen full-blown in a single year. They cast their shadows before, and the world lives in their aftermath. Events that will mark our future are shaping all about us today.

Pick up the daily newspaper, and you read of world-wide changes. The quiet course of day-to-day living of the early part of our century is gone forever. Changes come so swiftly it is hard for us to keep up with them, much less develop programs to handle them.

These dynamic, and in some cases catastrophic, changes seem to fall into three general spheres. First, the physical. The whole map of the world is different. Boundary lines, we learned in school, for Europe and for Asia have passed into history.

The great British Empire, whose bonds held tight for centuries, now finds those ties are loosened. New nations are born. We see ne wnames appear in parts of India, China, and the satellite countries. The last new nation—at least unless a new one has happened today—is the United States of Indonesia, comprising an area almost as large as that of our own country.

In fact, map makers are hard pressed to get out maps fast enough to make the correct changes of just the last few months.

Along with these are major population shifts, millions of people moving from one place to another—in Russia, China, and Europe, with its millions of refugees from Poland and Germany and elsewhere. A million people went to Israel alone in the last 12 months; many came to this country.

All this brings some nations closer to the realization of freedom, while others who have struggled for years to win their freedom now have lost it. Still others mark time, like patriotic little Finland, using her wits to save her soul, or Czechoslovakia, living on hope.

So, the physical changes of our world are vast and numerous.

The second sphere of change is in the field of science, with more new inventions and discoveries than at any time in the world's history. We absorb them quickly. It took a century to make full use of the invention of the power engine which brought about the industrial age. Today, with the growth of our technical knowledge, our skilled engineers, and our lightning speed of communications it is a very short time from the scientific discovery to its actual practical use.

Think of the march of science in just the last few years—radar, electronics, atomic energy, not to mention new metals, chemicals, and wonder drugs. Scientists tell us that there are many more discoveries on our doorstep in every one of these fields. In medicine doctors feel they are very near the answer to diseases that have ravaged man since history began. Last week 10,000 scientists met in New York City and announced the latest discoveries in many fields, including Einstein's new formula.

The other evening as I came home on the train a fellow commuter was studying the page before him with the picture of the new Einstein formula on it, with its numbers and letters. As he looked at it intently I said, "Do you understand that formula?" "Are you kidding?" he said, smiling. "It looks to me like a formula is a formula is a formula."

I presume some of you scientists here in Pittsburgh do understand it.

The third sphere of changes is the most important of all. That is the sphere of ideas—new concepts arising to challenge the old. Ideas about people, about governments, about life. The one that affects us the most today is the concept of totalitarianism which has been revived, challenging the principle of freedom which has been with us since the French Revolution. Many astute thinkers believe this challenge between totalitarianism and democracy will come to a head and be resolved in this decisive decade that lies ahead. It threatens the very way of life as we have known it.

As Dr. Vannevar Bush expressed it at MIT recently when he said: "The fundamental question of our times is the strength of the democratic system as compared with the strength of the totalitarianism system and the ability of each system to grow in strength in the years to come. By and large,

all questions of policy, national or international, economic or political, immediate or long-range, take on importance and urgency to the degree and only to the degree that they bear on this basic issue."

The danger for us lies in the fact that totalitarianism extends itself by conquest; it holds its conquest, not by persuasion, but by force and terror. There can be no freedom. We hate such methods. Yet there is no use in our burying our heads in the sand, ostrichlike, and not facing the unpleasant facts, such as the military expansion of Russia, her tremendous standing army, her so-called German police guard in the eastern zone, her Arctic air force, her submarines, her development of missile planes, and now the atom bomb.

In the last few months we have had the benefit of reports from many observers in Russia—journalists, businessmen, and others, including our former Ambassador, Gen. Bedell Smith. Almost without exception they tell the same story. They have no doubt whatever that Russia is bent on world extension of her communistic ideas. Incidentally, with their curious habit of calling things by names which they are not, Russians call it, not communism, but democracy, or socialism.

The reason Russia is so ready to use force to eradicate free forms of government is that she doesn't believe the two systems can exist peaceably in the same world. One or the other must be conquered.

As Stalin once expressed it, "In the future progress of international revolution two world centers will be formed: the Socialist center, attracting to itself all the countries gravitating toward socialism, and the capitalist center, attracting to itself all the countries gravitating toward capitalism; the struggle between these two centers for the conquest of world economy will decide the fate of capitalism and communism throughout the entire world."

But our observers of Russia also say, almost without exception, "This does not necessarily mean war." But they add the proviso—"provided the United States remains strong."

I have dwelt on this world issue because I feel it should be perfectly clear that our economic strength is a subject that is linked very closely to the survival of democracy and to the cause of freedom in the world.

To keep our country strong in every sense is the best protection we can have, and the best thing we can do for world peace. We know Russia expects and waits for our weakness. In the past she has never attacked the strong; instead, she has absorbed the weak.

If we are militarily protected, and keep our economy and industry sound, time and history will work for us. The records show no aggressor nation has been able permanently to hold together different peoples in far places, with different customs, ideals and beliefs. It is not likely that Stalin or the men in the Kremlin can succeed where Alexander the Great, Caesar, Napoleon, and Hitler failed. But the "if"—and it is a big "if"—'s, if we remain strong, not merely in means of wartime defense, but strong in our industry, sound in our finances, and strong in purpose.

I do not wish to be an alarmist, but many of our leaders are deeply concerned, and feel the situation is even more serious than I have indicated. Only last Friday Mr. Tom Beck, the publisher of Collier's, said, "The Russians have got China. Next is Formosa, then Indochina, Malaya, and Siam. They'll take Japan when we get out. There's trouble in Kashmir on the border of Russia and India right now. The Russian boast is that they could take India in 60 days. Communist infiltration is taking place in Nigeria and Eritrea in Africa."

He believes that some day the Russians will overstep the bounds of caution, such as with the imprisonment of American nationals, and go too far in their undeclared war on the United States. For when America decides she has had enough, the strength of the two systems will be put to a test, and a severe one.

Are we building our Nation strong enough to meet this emergency or any other that may arise? That is the question. One thing we are sure of, the opposition is working day and night and making great sacrifices to grow militarily stronger than we are. Furthermore, Lenin said just before he died: "We shall force the United States to spend itself to destruction."

Let's look at the question of our financial strength, which is basic to any other kind of national strength. We are now entering upon the third year of major deficit spending. The annual deficits of this fiscal year and the next one, for which the President has just released his budget message, are actually greater than the entire annual costs of our National Government in the years before the war.

Now the President proposes still greater expenditures on more programs. He asks for still higher taxes, and estimates a deficit of $5,100,000,000 for 1951. What would happen to us in the midst of this period of bountiful spending if a serious crisis would occur?

We can all remember those years of $100,000,000,000 budgets during the Second World War. Could our economy stand such a strain today on top of our already huge debt of $259,000,000,000? If such a catastrophe comes, we can't count this time on some other nation holding the aggressor off until we get ready. Other nations are still so weak from the last war that we must help them with our ECA funds to put them back on their feet. We can't expect a year or two of grace, as we had in the previous two World Wars, when our Allies and two oceans kept our enemies from our shores.

I fear we would be in for a lot of trouble if we had to face such a situation tomorrow. I hope it doesn't happen at all, but we can't depend on hopes alone when our eyes and ears tell us what is going on throughout the world. We ought to plan for the worst that might happen, and that in itself is the best guaranty that the worst will not happen.

So I think we should ask ourselves this question right now: With the highest rate of national income in our history, and the highest level of taxes in our history, and the largest Federal debt in our history, and the biggest threat to the future of democracy in its history, is this the time for greater spending, and greater taxes, and greater deficits? Or is it about time to stop that course, reverse the direction in which we are going, and resist the demands for still greater benefits for all—out of the public purse?

I say, the American people should wake up to the danger at their door. They should be aroused to insist on economy in Government, in balancing the budget, and on preserving our industrial strength.

We have a number of men in the Senate and the House who have tried to show how this could be done. Senator BYRD, who for 16 years has had to do intimately with fiscal policies of our Government, has proposed a budget of $36,000,000,000, without curtailing any of our defense program or other essential programs, but cutting down waste and many high-riding items we don't need. Only recently he warned that without solvency and stability our form of government cannot survive.

Yet, in the face of such wise counsel from devoted Americans in high places, the program for the coming year is one of still greater spending, still more deficits, still higher taxes. Few people realize that even a $36,000,000,000 budget is $2,000,000,000 higher than the budget for 1948. This year we are spending $43,300,000,000. For next year the President asks for $42,400,000,000. But there is little if any reference at all in any of the President's three messages about economy.

I have read over the President's economic message several times. It is about 8,000 words long. It uses the word "economy" 34 different times. In each case, however, it is business economy, peacetime economy, expanding economy, and so forth. Apparently the President's economic advisers know only one meaning of the word, and that pertains to business. They never, not even once, mention Government economy, the kind we need worst of all.

Some people have the impression that this increased spending program is due to larger amounts going for defense, and our aid to Europe. This is not exactly true. In fact, the Defense Department has been making savings for a number of months. The deficit of five and one-half billions for fiscal 1949 is due to an increase over $6,000,000,000 in our domestic spending alone, for different programs of our administration, for social welfare, housing, and other items.

Probably in themselves they are all desirable things to have, just as each of us can think of many things we would like to have for our families if we had the money. But in times like these our desires must be tempered with good judgment and foresight. When the course of this Nation for the future hinges on what we do now, our tax and expenditure program should be a sound one.

Our American voters shouldn't be lulled into a feeling that the future is completely rosy for 50 years to come, and everyone should earn a thousand dollars a year more in 5 years, and building air castles about the year 2000. What we need most right now is one simple word of advice: "Economize."

There is another way in which we must be strong in any emergency. That is, in our industrial strength. I don't have to recall to you that basically that is what saved us in the last war. We had the production, miracles of it. The world had never seen anything like it. Even Russia benefited from our industry to the tune of $11,000,000,000 worth of goods—everything from raw materials to machines and tanks and trucks and ships. But Washington has apparently forgotten about that. For in the feverish activity for the redistribution of wealth under the New Deal and Fair Deal programs, our Government has devoted little thought or attention toward helping our industry create more wealth.

For only American industry and agriculture and business and labor can create wealth. The Government can't do it; but it can hinder the rest from creating it. Unfortunately, I fear that is what has been happening. Attacks on business from high Government places have hampered us for many years.

Right now many of our most successful companies are being attacked for the very bigness which made it possible for them to serve our Nation so well. You know who they are. Some of them are represented right here tonight. How Russia would love to see the bigness of these basic industries destroyed.

Industry is being taxed so heavily, investment capital is slowing down. Even the President recognizes that such investments went down an alarming 18 percent in 1949, and are still dropping.

We need all business, big and small, to grow steadily to provide the growing number of jobs we need in every town. Each year an additional six to eight hundred thousand young people come into our labor force. To provide jobs we must attract more people's savings which they are willing to risk in common stocks of business corporations. That means the risk must be made worth while. A basic 33 percent of corporation

tax, which is threatened to be raised still higher, plus a double taxation on dividends, is shown by very simple arithmetic to mean that under the most favorable circumstances the Government takes more than 50 percent of a company's earnings. In the most adverse circumstances the Government takes as much as 82 cents out of every dollar of profits, and the owner is left with less than 18 cents.

Unless we have drastic changes in this tax set-up, middle- and small-sized companies will find it harder and harder to get capital for their business to grow. They will stagnate; some will want to sell out to the very same bigger ones, which the administration wants to trim down.

In the most earnest way I can put it, I urge the present administration to correct this growing discouragement of venture capital. We cannot remain strong or grow any stronger unless our Government leaders understand better, or perhaps I should say, act better toward the problems of business. The Nation must look to American businessmen for the creation of jobs, production, and the creation of wealth. That is the only fountain source from which all the benefits they promise can possibly come, these benefits to be distributed by a generous and loving government.

This change in attitude on the part of the Government should certainly include stopping the damaging attacks on business and having the constructive one of helping business to become stronger. It also should include an end of Government competition with business, an end of threats. For example, such threats that if private enterprise decides against building a certain number of certain priced houses in a certain city, then the Government will. An end to threats that if the steel industry is unwilling to accept Government figures on how much productive capacity is needed, the Government will build it. An end to such plans as dividing the country into nine regions ostensibly for flood control. Practically it would mean complete control of the basic power facilities of the entire Nation under the direction of 27 appointed commissioners with responsibility only to the White House. It is just too much power in one place.

Finally, if we are to be stronger industrially we must by all means have greater unity in relations between management, labor, and the Government. Many of you here tonight could speak eloquently about the need for better leadership of our Nation's top officials to stop the loss in income for workers and management, the cost to the American people, and the destruction of good will and violence that come in the path of strikes.

I can see we are making some slow progress.

But oh, for an end to the class struggle, the false accusations, the play for power and for votes, and the loss and distress to the public, who are the ones who always pay in the long run. Pittsburgh could write a history of sad and bitter experience perhaps not equaled by any one other city in the country.

But every section of the country suffers from labor strife, and every man, woman, and child pays for it.

I have two specific suggestions as to how we might start to build a happier, better relationship between government, managemen, and labor. It might not work, but I think it would. It is worth a try. It is something we could do right now.

First, I think the Taft-Hartley law should be given a fair chance to operate without the continuous blanket condemnation that it isn't any good, and without schemes to avoid its fair application, as in such instances as the coal situation today. This law was put on the books after one of the most thorough hearings from all sides as to what kind of a law was needed ever experienced in Washington.

Of course, it has restricted some privileges of union leaders, but it has also set up strict rules which management must follow. I believe most workers are for it, because it protects them against abuses which had crept into the labor movement. It also protects the public from some of the abuses it used to take, under the old laws, from management and labor both.

Such statements as that which the President recently made condemning the law impedes its fair trial.

Under this law an avalanche of strikes was curbed; under this law Communists have been driven out of many unions; under this law workers and management both have had the best set of rules for collective bargaining they have ever had; during this period we have had the best conciliation and mediation service we have ever had.

No matter what is said to the contrary, experience all across the country shows it has helped the collective-bargaining process, and it will do still better if given a reasonable chance. It is unfortunate that it has had to operate under continued attacks on the part of labor leaders and holders of public office.

My second proposal is that the Department of Labor be reorganized to become the Department of Labor and Industry, or perhaps it might be called the Department of Labor and Management.

I have given this matter considerable thought for a number of years, and have discussed it with a number of Government officials. Reaction has been so favorable, I would like to suggest it tonight. Here is the reason for this proposal.

When the Department of Labor was first organized back in 1913, labor needed the help of the Government in order to bargain with management on a fair and equal basis. The Department of Labor was given the specific purpose by law to further the interests of labor, and nobody else.

But now labor has grown into great strength, and the situation has changed completely, and a further step is needed. Such a reorganized department would be charged with the responsibility of promoting better understanding between labor and management, and to develop methods of avoiding strife and strikes, which cause such distress and financial loss.

Secondly, the new Department would be charged with safeguarding the interests of the public. As it is now, frequently both sides are partly right and partly wrong, and the public gets caught in the middle.

Such a Department would clarify many of our labor problems, I believe, because there would be some unity in the handling of such matters. Consider the lack of logic in our present situation where the Bureaus of Conciliation and Mediation have nothing whatsoever to do with the Department of Labor, and for a good reason, too. The Department of Labor does have a Bureau which compiles labor statistics, and a very good Bureau it is, too.

But the fact is, the present Department of Labor, as a whole, is completely outmoded. It does not meet our present or future needs. The reorganization I propose would serve all parties, and become an instrument of service to all. For the basic interests of both labor and management are the same. A union can only be successful when connected with a successful company. The sale of the New York Sun last week is an example. When labor and management share the responsibilities more successfully, then, and then only can they also share the rewards of teamwork.

The atmosphere in which business blames labor and labor blames business only injures the industrial health of our Nation. No matter who is right or who is wrong, or whether both are partly right and partly wrong, the fact is that strife between them weakens the whole Nation.

If my analysis of the No. 1 problem of this year and the decade to come is correct—all of us will have to sacrifice some of our pet ideas—all of us will have to give up the idea of benefits which right now we would like to have, but which we cannot afford. All of us will have to rededicate ourselves to the protection of our great heritage.

I sincerely hope that in this session Congress will devote its talents and energies to these urgent matters; that it will face up squarely to the realities of the situation and will not permit an impending election to cause them to play politics with the future of our Nation and the democratic world.

Fortunately for us, we have men of great leadership on both sides, whose devotion to country surmounts all other considerations, and whose advice if followed will lead us to a successful conclusion to the critical years that lie ahead. But businessmen too must rise from their lethargy and let their voices be heard. We should be sure that our representatives in Washington know our views.

The challenge of this decisive decade is not a challenge of material things; it is a challenge to the character of our people, a challenge to their willingness to face realities, and put the things first that ought to come first. Give them courageous leadership, but please don't fool them with honeyed promises of greater benefits, at this time when we face a danger which we can only meet if we are a united, strong people. God grant our leaders the wisdom to lead us right.

Gary, Ind.

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. MADDEN. Mr. Speaker, the following editorial by editor H. B. Snyder of the Gary (Ind.) Post Tribune again reveals that the Calumet region of Indiana is today recognized as the No. 1 steel-manufacturing center in America. We have Carnegie, Illinois, Inland, Youngstown, and other large steel mills in Gary, East Chicago, Hammond, and Whiting, Ind.

The largest oil refineries, cement plants, and almost every branch of heavy industry makes its home in the Calumet region of Indiana.

GARY MEN TAKE OVER

The Gary-Chicago district has been taking over Pittsburgh's place as the Nation's steel capital, so it's quite fitting that Gary steel men should be taking over top executive positions in Carnegie-Illinois Steel Corp.

Selection of S. M. Jenks to be Carnegie's vice president in charge of operations means that three former Gary plant executives now are in key posts with the No. 1 subsidiary of United States Steel.

In addition to Jenks, there is Earl Moore, who preceded him as Gary Works general superintendent, as Carnegie's vice president for industrial relations. And there's James Darbaker, former top man of the Gary Sheet and Tin Mill, as Carnegie's manager of sales.

Gary was a proving ground in their development as top-level executives with Carnegie-Illinois. And so it was with Austin J. Paddock, former manager of the American

Bridge plant here who is now operating vice president of the company, and with Laurence S. Dahl, former hot strip mill superintendent of the Gary Sheet and Tin Mill, who now is operations vice president of Columbia Steel, United States Steel's west-coast subsidiary.

The Midwest is continuing to be an expanding-market area for the steel industry. Pittsburgh steel men regretfully admit that the smoky city is definitely losing its preeminence in steel and that it never will be regained.

We aren't so optimistic as to believe operating headquarters therefore will be moved from Pittsburgh to this district, but it is encouraging to know that three of the key executives in the Carnegie-Illinois set-up are former Gary men who know and understand the potentialities of the industry in the Calumet.

Example of Ultra Vires Action by Rules Committee

EXTENSION OF REMARKS
OF
HON HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of June 5, 1949:

HOUSING STALL

With Chairman SPENCE of the House Banking Committee moving to bypass the obstructionist Rules Committee, a vote on the housing bill now appears to be a certainty. That is good news, for failure of Congress to pass any comprehensive housing legislation at this session would not only undermine the hopes of a vast number of poorly housed families, it would also be regarded as a repudiation of the pledges made in the last campaign by both major parties and would thus be a blow to confidence in popular government.

The Rules Committee has followed its traditional head-in-the-sand policy. When it received the housing bill from the Banking Committee 3 weeks ago, any well-informed citizen on the street could have told it that this was an important measure which should be sent to the floor promptly with a rule allowing ample consideration. A similar bill had passed the Senate by a vote of 57 to 13. But the committee stalled, held hearings for 3 days, and stalled some more. Its conduct seems especially unenlightened in view of the new rule which permits the Banking Committee to take its appeal directly to the House 3 weeks hence. One can only conclude that the Rules Committee majority has learned nothing from the revolt of last January against its tyranny.

The high-handed nature of the Rules Committee's action is illustrated by its probing into cost figures and the extent of the Government's obligation under the bill. These are problems for the committee reporting the bill, the Appropriations Committee, and the House itself. So far as we can see, they have nothing to do with the Rules Committee's function of routing measures to the floor in an orderly fashion.

As to the merits of the bill, we do not think that economy is the major issue. Of course, the total amount that is to be spent under this measure must be determined by the resources available. Even for the replacement of slums with decent housing for low-income families, expenditures must be kept within the limits of a sound fiscal policy. But that does not minimize the desirability of getting this program started—of getting a sound public housing act on the books. A long-range policy is envisaged under which the Government will help local communities to meet their slum problems. We think that policy is sound and practicable even though it may have to be inaugurated on a small scale compared to the need.

Nor is socialism the issue. Americans have never regarded it as socialistic to aid families who, by reason of misfortune or low income, are forced to live in squalor or unhealthful environment. The current housing bill is merely a means of making such help practicable. It is predicated on the belief that private enterprise should provide housing for all the families that it can possibly serve. Beyond its reach, however, are vast slum areas that must be wiped out by governmental effort to save our cities from an incredible burden of crime, delinquency, disease and social malaise. Our highly integrated society cannot neglect this problem without risking its own health and stability.

Government Economy

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. BYRNES of Wisconsin. Mr. Speaker, the Marinette County Pomona Grange has forwarded to me a resolution recently adopted by that fine organization. The resolution comes like a fresh breeze on a sultry summer day. So that all Members may dwell upon it, I ask unanimous consent that the resolution be printed at this point in the RECORD. The resolution follows:

Whereas it has been intimated that we can make very little progress toward economy and business in Government this year because most of the Members of Congress are up for election;

Whereas if this intimation is valid, it means that America is in grave danger of being governed by fear rather than democratic principles, and that its citizens are voting to protect selfish interests rather than the general welfare—that they have sunk to the depth of selling their vote to the highest bidder; and

Whereas the report of the Hoover Commission, which has been received enthusiastically by the country as a whole, under such reasoning, would be subject to the whims of selfish Government employees rather than put to work for the common good: Therefore be it

Resolved, That the Marinette County Pomona Grange go on record with the following convictions:

1. That there are enough loyal citizens, whether employed by the Government or not to elect officials pledged to good government and sane economy.

2. That the intimation that we cannot foster good government during an election year is an insult to the American people, and is not worthy of the consideration and publicity it has been given.

3. That we firmly believe in the ideals of the great Emancipator, Abraham Lincoln, and call upon every citizen to do his best to insure that we keep the Government of the people, by the people, and for the people: Be it further

Resolved, That a copy of this resolution be sent to the press, our Congressmen and Senators, to each subordinate Grange and to the State and National Grange.

House Resolution 133

EXTENSION OF REMARKS
OF
HON. ANDREW JACOBS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. JACOBS. Mr. Speaker, speaking to House Resolution 133, I reported to the people I represent as follows:

Good evening. Within a week democracy will face a severe test here in Washington.

This test will not be directly concerned with any particular legislation.

But the very bedrock foundation of democracy is to be tried. A terrific strain will be brought to bear upon the cardinal principle of democracy.

That principle is the right of the majority to govern this country within its constitutional framework.

The attack upon the democratic principle of majority rule is a subtle one. But it is very simple indeed when all the hocus-pocus is exposed.

Here is the issue in stark simplicity: Shall 7 Congressmen be empowered to veto the right of 428 Congressmen to vote yea or nay upon a bill—a bill, if you please—that has been studied and recommended for passage by another legally constituted congressional committee.

Now, having stated the issue, let's see how it is coming up. A little background will make it perfectly clear.

I hope all of you will follow me carefully. The issue is vital, but, I repeat, it is simple. It is one which every man, woman, and child in America should understand.

We are a nation of some 150,000,000 people. We are committed to the sacred principle of self-government.

This principle is embodied in the historic documents upon which our Republic was, and is, founded.

Our Declaration of Independence declared that all men are created equal and that we are each endowed by our Creator with the inalienable rights of life, liberty, and the pursuit of happiness.

That immortal document then asserted that to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed.

Thus the fundamental principle of your government is your consent, which means your approval of a proposed new law. One hundred and fifty million people cannot meet, consider, and give their individual decisions on each proposed law. We Americans have, therefore, resorted to representative government.

Each district sends a Representative to Congress. You of the Eleventh Indiana District sent me.

There are 435 of us in Congress. Thus we are a large parliamentary body. We could not operate without rules.

In the absence of parliamentary laws and a code of procedure, we would fall into utter confusion.

The Constitution gives us the power to write our own rules of procedure. This we have done.

Our membership is divided into committees. Each committee—usually consisting

of 25 Congressmen—is charged with the duty of studying legislation in its given field, like Labor or Education or Foreign Affairs, Agriculture, Armed Services, etc.

There are 19 standing committees. One is the Rules Committee. We will discuss it and its function later.

The 18 remaining committees are charged with the responsibility of studying and holding hearings on proposed legislation.

If a majority of such committee approves such legislation, it is voted out with recommendation that it pass.

The public hearings are printed and the committee prepares a report. These are for the information of the public and other Congressmen.

The bill then goes to the House of Representatives for consideration of the Representatives of all the 150,000,000 people in the United States.

Here, however, we must have further rules of procedure. Otherwise, the chairman of the 18 standing committees would never agree upon the order of business.

Members are entitled to know what bills are on the calendar for debate and vote. They are thus enabled to concentrate their study upon these bills, reports, and hearings.

Therefore, there must be a calendar; and since the 18 chairmen of the standing committees would probably each consider his bill of greatest importance, they would never agree upon a calendar.

It is, therefore, necessary to empower someone to make up the legislative calendar.

Here is where the nineteenth standing committee comes in.

It is the Rules Committee. It has charge of the order of business. In other words, the Rules Committee makes up the calendar for the House. It has no power to write the rules governing the House.

Some bills are long and complex. Some are short and simple.

Thus it requires more debate and consideration for some than for other bills.

Accordingly, it is proper and necessary that more time be assigned some bills than others.

Someone must decide the time allotted for each bill.

The Rules Committee's duty is to decide as to time allotted for debate on a bill—as well as certain control of its place on the House Calendar.

In order to allot time, the Rules Committee must know something about the bill under consideration.

Therefore, it is proper that the Rules Committee hear evidence as to the nature of the bill.

Naturally, as the members of the Rules Committee hear what the bill is about—and what it provides, these members form opinions.

Such is the course of the human mind—a course that is inevitable—and concerning which there can be no objection.

After all, the members of the Rules Committee are also Members of Congress. They will be called upon to vote upon the bill; that is, once it is scheduled for consideration on the floor of the House of Representatives.

But there is the rub. There is where the issue—the crucial test of democracy is coming up. The members of this committee want the power to decide that bills they don't like can't come up on the floor.

Let's keep in mind the real function of the Rules Committee. Its duty and responsibility is to schedule business in the House of Representatives—to act, as it were, as a traffic engineer—to assist the orderly flow of business in the House of Representatives.

It is not the duty of a traffic engineer to stop every person and decide whether he should be allowed to make his particular trip—to pass judgment on whether I should go to a lecture or you should go to your grandmother's for a Thanksgiving dinner. The traffic cop should decide when you cross the intersection, but he hasn't the right to say you shall never cross.

The Chief Justice of the Supreme Court may be authorized to make up the court's calendar.

Then, when a case is heard, he can cast his one, out of nine votes, for a decision.

But the Chief Justice has no power to conclude that your case shouldn't be decided and, therefore, refuse to schedule it for hearing; perhaps because he thinks a majority of the Justices will decide your case differently than he would.

When he does that, he is usurping the entire power of the Court; of which he is but one of nine members.

But that is exactly what the Rules Committee has done in the past.

As the years rolled by, its members gradually lost sight of the distinction. They overlooked the great difference between the standards and quantum of their vote as members of the Rules Committee and as Members of Congress.

They began to support their views as Members of Congress, where they were just 1 of 435 men; yes, they backed up their individual views by refusing to schedule bills they opposed.

Congressional committees of 25 have heard from the public on many bills and voted to recommend passage. But the Rules Committee usurped the power to decide that it was a bad bill. So the Rules Committee simply denied the bill a hearing before the House.

In many cases the bill was one that had been an issue in a national election, and the party sponsoring it won.

So these 12 men sit in the Rules Committee and just 7 of them, a majority, decide the people made a mistake; that the other 428 Congressmen can't be trusted; and therefore, the bill goes into the proverbial pigeonhole.

Now that was the situation in the House of Representatives when the Eighty-first Congress met.

Congressman EBERHARTER, of Pennsylvania, proposed a way to stop this usurpation of power. He proposed that on certain days the chairman of a standing committee could call up any bill his committee had approved; without consent of the Rules Committee.

We adopted this new rule by almost 2 to 1. Some of you may recall my mentioning this in my broadcast of January 22, 1949. At that time I said:

"I recall my first vote in Congress. It was on the question of whether or not we would change congressional rules so that we Congressmen could force the leaders to bring legislation out on the floor of the House so that the Members could have the opportunity to vote or be forced to vote upon it.

"A member of the Rules Committee who spoke against our proposition said, 'For every man who has asked me to bring a bill out on the floor, there have been 10 who asked me not to bring it out because if they were forced to vote upon it, they would be defeated in the next election.' It was my judgment that any man who didn't have the courage to vote on legislation had no business in Congress and, therefore, I voted for the change."

I have not changed my mind.

However, the Rules Committee has voted out a resolution to repeal the Eberharter rule. It will probably come up next Tuesday. In other words, this committee is trying to again arrogate to itself the power that belongs to the House of Representatives.

The Senate has its filibusters—the House had Rules Committee procedure that permitted 7 men to stop dead in its tracks a constitutional body of 435 elected Representatives of 150,000,000 people.

We took that power away from it. Now it hopes to regain that power—places its hopes on the fear of some Congressmen to vote on controversial legislation—in this case, the Fair Employment Practices Commission, known as FEPC.

Strange as it seems, this legislation was, in effect, pledged by both major parties.

However, the well-known coalition between certain Democrats and Republicans is spearheading this movement.

None of these people has the responsibility to represent any except his own district.

Yet they want to decide what I shall be privileged to vote for.

I calculate that you folks in Indianapolis don't expect me to be afraid to vote on any measure. I further calculate that you elected me to represent you; and that you aren't relying upon any of the 12 men on the Rules Committee to do that job.

Naturally, many of you will disagree with me; some on one measure, some on others. And in the end, a majority of you may be dissatisfied with how I have represented you generally.

But, it is not representative government when men from distant parts of the country say that your Representative can't represent you.

Nor do I have a right to hide behind the Rules Committee's skirts. Nor do I want to. Nor should any other Congressman want to.

Congressmen aren't supposed to be weaklings. If they can't stand on their own feet, the sooner that's discovered, the better.

For these reasons I think democracy is now in danger in the House of Representatives.

For the same reasons, I am going to vigorously oppose repeal of the Eberharter rule and the return of this unwarranted and usurped power to the Rules Committee.

Goodnight.

Strengthening Liberty

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable James A. Farley at the annual meeting of the Manhattan Council of the Boy Scouts of America, held at the Hotel Commodore, New York City, on January 16, 1950:

This introduction makes me feel very humble, for as I face this great audience I realize how much more many of you are contributing to the cause of Scouting and the boys who are growing up among us in New York City that it is within my power to do. Right here I would like to pay tribute to the hundreds of unselfish leaders in the Manhattan council who are giving their time and effort and intelligence to bring the Scout program to the boys of this area. The cubmasters, the scoutmasters, and the explorer advisers, with their assistants, are directly affecting the lives of boys who in the future may make a contribution to the happiness of millions of people. They are dealing with deathless values. Then there are the commissioners, members of committees, and hundreds who serve in other positions, all of you engaged in this great undertaking of building the human foundations of our country's future. The thanks of New York City and of the Nation go to you for the work you are doing. The results will extend further than you and I may ever know.

It must give you great satisfaction that because of your efforts during the past year your council has made the greatest gain in membership in all its history. Your president has told me that the upswing in the number of units, and in the number of boys and leaders in those units, far surpasses anything you have previously achieved. I congratulate all those whose hard work made this record possible.

Yet, I wish to remind you that this record should be interpreted always in human terms, in terms of boys growing up to manhood on the streets of the city of New York, growing up, many thousands of them, into upright, responsible, God-fearing citizens because of the exertion made on their behalf by the men and women in this audience. Only by continuing and extending these efforts can we help to overcome some of the handicaps of the living conditions which we have imposed upon the boys in New York City.

Some of you may know that I am not a city-bred man. I grew up in a small town, and the things which we as boys took for granted as part of our daily lives, would be privileges beyond the purchase of even the well-to-do boys in New York City today. It is true that we had no neighborhood clubs, no movie houses, no radios. But we had the open fields and the hills and the streams and the woods. In the summer we could go fishing or get up a game of baseball on a vacant lot. In the winter we skated or coasted down hill or sometimes got together in someone's big kitchen to pop corn or make candy and play games. We were rich, though by the economic standards of today we would be considered underprivileged. We were rich in a hundred opportunities which the boys growing up around us can never hope to experience, unless we bring them such a program as Scouting; unless we take them out of this walled city of steel and concrete, out to where they can see the blue sky, hear a bird call through the quiet woods, and live through some of the simple primitive experiences that are the natural heritage of every boy.

These boys shouting over their games in the midst of the city traffic are living the most impressionable years of their lives. Right now their lifetime habits are being formed. Right now, they are being permanently influenced for good or for bad, by the sights around them, the people they meet, and the ideals which we present to them.

I believe that under God and the fitness of things, we owe to them the best preparation within our power to give, for the burdens which we are going to lay upon their shoulders. In a few years, these boys are going to take over where we have left off, and upon their integrity and clear thinking and hard work will depend the future not only of our city, but of our entire country which we love so dearly.

For the conditions which confront the young people in New York City are not just a local problem. They are pretty universal throughout the country, and I wish that at least in these few minutes which I spend with you, you would mentally extend your horizons, and think of your Scout work not just in terms of the Manhattan council and the boys that it serves, but in terms of the Nation as a whole, and your contribution to the future of America and, indeed, the entire world.

You are taking part in a Nation-wide crusade which should bring to American boys a vision of their heritage as free-born citizens of the greatest country on the face of the earth, and furthermore help them to realize, in terms of a boy's language and a boy's ideals, that they as citizens of this great country, have definite responsibilities toward themselves and toward other people.

I have been studying what you call the targets of your campaign, and it seems to me that you have been wise in selecting as your first one, good leadership, because the effectiveness of any kind of training for young people depends upon the effectiveness of the leadership. A top-notch leader, a man whom boys admire and want to imitate, can have more influence on his boys even without a program, than the finest system the mind of man could devise, if it is administered by a man they do not respect. Influencing young people is a delicate business. Older people frequently think they know how to do it, and they often succeed without realizing just how. Influence depends upon who the leader is, and how the boy feels about him. I think everyone in this group can probably recall some person who has made a lasting impression upon his thinking and acting.

A man well known in public affairs once told that never since he was 12 years old had he ever pointed anything, even a stick, let alone a gun, at anybody. He had received his first instructions in handling firearms from a man whom he respected greatly. This man was a veteran of the Civil War, and a woodsman, an expert marksman, and when he urged caution, the boy treasured what he had to say, because the boy had faith in his teacher. That boy was taught by the right sort of man under the right conditions. Yes. undoubtedly, the Boy Scouts learn a great many more things from their Scout leaders than technical Scouting.

Now, the second thing that you have set up in your targets comes under the heading "Program," and this is where you catch your boys. Don't fool yourselves on this. You feel that the Scout program offers good training in democracy, that it prepares boys to be cooperative citizens, and helps develop the kind of character you want to see in your son. But the boy first, last, and always joins the Scouts, not because he wants to be done good to, but because he wants to have a good time, and he thinks that the Scouts will give it to him.

Who says the future is menacing and the world is out of joint? Not the boy. He sees the world as a splendid, exhilarating jamboree that meets in a jungle especially designed for his purpose. As long as your program gives him adventure, something to do in the woods and the fields, boys will want to be Scouts.

You have a lot of competition for the boy's interest these days, so you have to be on your toes to keep your program up. All sorts of commercial amusements are available on every street corner, many more now than when this Scout movement was first developed. But the nature of boys has not changed in the past 40 years nor in the past 400 years, psychologists tell us, and most boys still will prefer the adventure the Scout program offers, if you make sure that you give it to them—camping, a chance to sleep out in the open, build a fire and cook dinner over it, to learn first aid, life saving, how to take care of themselves and other people.

It is not altogether easy for you folks in a big city like this to give these outdoor experiences to boys. I realize there are unusual problems. But of course it can be done, and I am glad to learn that you have been doing it, and that you had more boys in camp in 1949 than ever before.

Did you ever drive in the dusk of a late afternoon in autumn through the outskirts of the city? In the open fields and in the vacant lots you will see them, the boys of the neighborhood, gathered together in little groups. And the thing that holds them fascinated in the gathering darkness is a bonfire, their campfire. Maybe it is crudely built of just a few old slats or broken boxes, but to them it means adventure and magic. That is a need deep in the heart of every boy. That is the quality you have to keep in your program if you expect to get across to boys some of the other fine things like citizenship that you want to teach them.

Another feature in your program that attracts the boy—the chance to learn and do things that seem to him worth while. It is an appeal to the man that is beginning to take shape in him, a chance to be recognized, to stand out in his community as someone to be relied upon. Boys have a great deal more idealism than some people give them credit for, and are eager to work hard and make personal sacrifice, if the cause seems to them to justify their effort. For instance, look at what Boy Scouts accomplished during the war. These boys, most of them in their early teens, worked at back-breaking tasks, collecting and salvaging tons of material which the Government requested; they drudged cheerfully for millions of hours at all sorts of unspectacular jobs, because they believed they were helping to win the war. If any of you ever have any doubt of the fiery idealism that burns in American boys, I suggest that you look over the record of Scout war service.

Through his Scout unit, the boy finds a chance to help in many projects for his community and other people. He gets training that he knows will qualify him to be of service to others. Because he wants to help, he works hard.

One thing always impresses me when I read the reports of service that Scouts have rendered, and that is the amount of hard work that boys do almost automatically as a part of their Scout program. Paradoxically, although as individuals I think we are not sufficiently alert to our obligations to youth, we often ask too little actual work from them in this mechanical age. It is true that in rural areas boys are usually obliged to take a definite share in the duties of the farm and home, but in a city like New York, boys are not expected to assume many duties, compared to those required of us when I was a boy.

The ability to work is the foundation of good citizenship, and the opportunity to work is a part of our American heritage. The men who built America were workers. Unfortunately, a good many people today overlook this fact, and believe that if a man is smart enough he can find ways to live without working. Maybe an individual can for a while, but a nation never. The trend of the times seems to be to get as much as we can and to contribute as little as possible. We cannot build our house upon sand, and there are certain principles which have stood the test of time and upon which we must still stand, if our American institutions are to go forward. One of these is loyalty, and the other is work. The time must come when our able-bodied men and women must settle down to work and earn and save. That is our priceless American heritage which we must pass on to our children—the privilege of work.

Another feature in the Scout program which appeals to me strongly is that it is not based upon a mere materialistic foundation, but upon the consciousness that there is a God who is to be honored and served. The Scout is taught in our American scheme of things. Let me recall to you the judgment of George Washington, the father of our country. He said, "Let no one cherish the illusion that without religion and morality the security and well-being of the Nation can long survive."

Religion is the foundation of society, the basis on which our civil government rests. It was religion which braced the founders of this country against the dangers of the ocean and the perils of the wilderness and helped them to build here a true democracy. A few years ago I saw an interchurch world survey of church relations in cities with a population of over 300,000. The picture is not a bright one—52.7 percent of the population, so the survey showed, were non-church-going people. In rural areas, the percentage was even higher. Now speaking to you as a father, and as a churchman, I ask you what can we expect of our boys and

young men when more than half our homes are "religious jungles?" How important it is that you men in Scouting should emphasize by every means within your power the importance of the twelfth Scout law: "A Scout is reverent. He is reverent toward God. He is faithful in his religious duties, and respects the convictions of others in matters of custom and religion."

It is not going to be easy in the years ahead to protect our democratic way of life. We can help to do so by making religion a living reality in the lives of the boys of America. We must teach our children to respect the convictions of others, and recognize the inspiration of religion and power of Almighty God. The American future cannot be guaranteed by a few slick tricks of economic manipulation. We need to get something akin to a vast religious awakening that will give new dignity and new valuation to our lives.

I notice you have set up as your third target, an increase in your membership. Speaking as one outside your organization, that would seem to be automatic. If you have the right leaders and the right program, the boys will come knocking at your doors. It is important that you set up the machinery to take care of it. As a businessman, I find your organization plan for taking care of boys good procedure. Anybody can throw a basketball up in the air and collect a gang of boys. But when you build on a church, or a men's club, or some other group, you give a stability and permanence to your units, and that is the way you are building them.

There is only one danger there as I see it, the human tendency which we all have, to relax when we are doing a good job. Sure, your church has a Cub Pack, and maybe your Legion post has a troop. It takes care of ten, twenty, perhaps even more boys. But maybe that church or Legion post ought to be serving a hundred others. Maybe there are that many boys in your neighborhood wanting to come in, only there's no place for them. Soon they may get tired and look for their recreation elsewhere. Soon it may be too late to reach them. So I hope that you will make sure, if you feel that you are doing your share, that you really are. Maybe your church ought to have a group of older fellows, those too old to join your troop. Or the younger one—they can get some mighty valuable experiences if your board of directors votes to get a pack started for them.

What a debt we owe these boys! Don't forget that a few years ago it was our young men who flew our planes, drove our tanks, died in fox holes and won the war for us. We owe our youth a debt we can never pay. We have the finest young people in the world right here on the sidewalks of New York. I am always impressed as I meet with them and talk to them by their sincerity, their frankness, their fine sense of loyalty and capacity for devotion. And yet the majority of our criminals are boys and young men. Eighty percent of them are less than 25 years of age. Our rate of juvenile delinquency is equally depressing. If the good people of the borough of Manhattan ask why so many youths become delinquents and criminals, I can tell them why. Experience shows that the majority of these young people have had bad influence during the impressionable years covered by the span of Scouting, from 8 to 18. During these years every boy needs the influence of the right kind of man. He needs such a man to supply his ideals and become his hero. The reason so many boys become criminals is because they follow the wrong leaders.

This condition is a challenge to the men of our city. Nightly these thousands of boys roam our streets, looking for amusement, longing for adventure, yearning for companionship. Many come from broken homes. Few have had a chance for church influence. Should we shut the doors of Scouting in their faces? Should we not provide a place where they can meet and find wholesome activities under the right kind of leader?

This is a practical thing. It can be done. You have made a beginning, with wonderful results. Why should you not undertake it in a bigger way? Will you not, each one of you, here and now accept the challenge and do your part for the boys who are knocking on the door?

I do not think we should spend too much time looking into the past. The world is not finished. We have just started. As long as we have the desire to go ahead, we shall progress. What we need is to help with all our might the young people who are going to carry it on. We can make the future what we want it to be if we will equip them to carry on what we have begun. When we compare our democracy to the forces that beset us, forces that stand for the suppression of religion, of free speech, free press, and the dignity of the individual, for the perversion of youth by propaganda, we realize how necessary are such movements as the Boy Scouts, devoted to the development of character, integrity, reverence, and the American principle of fair play.

The symbol of America, the Statue of Liberty, represents liberty and justice. It stands for everything we hold good. Americans should be prouder than ever of their country today, and the ideals on which it is founded. You have embarked upon what you term a crusade to strengthen the arm of liberty. I urge that you step in and win it. Make this a crusade of decency, for democracy, for the sanctity of the individual and the cleansing of the moral fabric, through constructive training for youth.

I think this crusade can make a real contribution if it helps boys to realize what real Americanism is, so that they can grow up to live by it. Our forefathers instilled into their children a love for the blessings of freedom and liberty. It is now our turn to teach the next generation that liberty and honor are a precious heritage which must be guarded with all our strength. The continued freedom of this Nation depends upon generation after generation of citizens holding fast to the truths without which no people shall ever achieve national greatness.

Generation after generation of fine boys and girls have grown up to defend these principles. Strong in body, keen in mind, brave in heart, generous in spirit, these young people are the glory of the present, and the hope of the future. God is sending us such young people today as he has sent them to every generation in the past. In them and in God Almighty we put our trust. To them we pledge our best today, and as long as life lasts.

Nationalists Can Hold Off Formosa Foe

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a first-hand report on conditions in Formosa. The State Department constantly passes out stories about allegedly worsening conditions in Formosa, threatened revolt against the Chinese Government, or defection to the Communists. It continues its obvious determination to produce all the bad things it has predicted in order to justify its miscalculations about the Chinese Government whose downfall it has been solemnly forecasting "within a few months" since 1944. What are its sources of information? I have talked to many Americans and Chinese who have been in Formosa in the last few months. None of them confirms the picture of hopelessness. Almost all report improving conditions. The following article shows the heroic efforts Chinese and Formosans are making to stay free. Would it be wrong for us, the descendants of Valley Forge, to encourage those efforts and, for a change, reorganize and commend good where it exists as well as condemn bad?

The following article by Walter Simmons appeared in the Washington Times-Herald January 20, 1950:

NATIONALISTS CAN HOLD OFF FORMOSA FOE
(By Walter Simmons)

TAKAO, FORMOSA, January 19.—With their backs to the wall, the Chinese Nationalists will surprise the world by holding Formosa without American military aid for many months, most qualified American observers agree. This forecast was confirmed by the writer's independent survey of defense installations.

Hainan Island is not being defended seriously and will be lost to the Communists soon. But on Formosa the picture has changed so rapidly in recent weeks that there is a move to get the American Joint Chiefs of Staff, due to visit Japan in February, to see the encouraging new situation for themselves. Here are the high lights:

1. Reforms plus the incorporation of Formosan youths into the army for the first time have roused the islanders to a wild patriotic fervor. Grumbling natives, bitterly antagonistic to their Chinese rulers a month ago, have become their rabid backers.

TROOPS READY TO FIGHT

2. Under the inspiring leadership of a new commander, Lt. Gen. Sun Li-jen, the defense garrison has developed the greatest fighting spirit ever observed in Nationalist troops.

3. Ransacking forgotten Japanese arms depots, the Chinese have found thousands of weapons and large supplies of ammunition. Although the soldiers are pitifully underequipped, they still have enough arms to repel any assault the Communists are likely to mount this year.

4. New government leaders have risen to power, replacing most—but not all—the crooks and incompetent who lost the mainland war.

5. The weakest spot is the island's economy which, under the burden of the present military effort, will collapse within an estimated 6 months without substantial outside aid.

This correspondent, who watched General Sun's men in beach defense maneuvers today on the island's southern coast, was impressed by the dash and physical condition of the troops.

Although about only half of the troops had rifles and they lacked shoes, helmets and adequate transport, they repelled a mock landing with fierceness, reflecting General Sun's Americanized training methods. The beaches are guarded with new concrete pillboxes, barbed wire and automatic weapons. Coastal guns up to 150 millimeters and 75 millimeters pack artillery overlook the landing sites. Underwater obstacles are being placed. Land mines are ready for placing. The defenses are being manned 24 hours a day.

The Japanese intended to defend Formosa against American attack with 200,000 infantry and artillery troops. Sun has more than

this, together with aerial and naval superiority which the Japanese lacked.

SEVEN THOUSAND YOUTHS VOLUNTEER

The armies have a strong backbone of determined men. They include 7,000 youths who, ignoring the traditional student immunity from military service in China, slipped through the Communist lines to volunteer. Five hundred officers from the beaten first army in Manchuria escaped to Formosa to rejoin Sun, who had trained them in Burma.

Hundreds of American light tanks will utilize the island's excellent paved road network as mobile defense forces poised to guard the best landing beaches.

Conscripted last week, 4,500 Formosan students already are uniformed and drilling at Fengshan near here. The Nationalists had feared the results of conscripting natives but it was a political masterstroke.

Sun's problem is to defend a 13,900 square mile area included within a 708-mile coast line.

At a south Formosa arsenal, moved bodily from Nanking last year with 1,400 workers and 2,000 machine tools, old Japanese .25 caliber rifles, rusting since VJ-day, were being repaired to fit .30 caliber ammunition. Already 100,000 had been modified and 20,000 more were stacked nearby.

No Answer From Russia

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include therein a copy of a letter written by our Ambassador the Honorable Arthur Bliss Lane to His Excellency Andrei Y. Vishinsky, Foreign Minister of the U. S. S. R., Lake Success, Long Island, N. Y., under date of November 7, 1949, touching on the Katyn incident and asking an authentic report of the massacre of more than 4,000 Polish officers in the Katyn Forest and the disappearance of another 10,000 Polish prisoners elsewhere in the U. S. S. R. during the last war.

I am informed through reliable sources that this letter has never been accorded the courtesy of a reply, in other words, it has been disregarded.

AMBASSADOR ARTHUR BLISS LANE'S LETTER TO MR. ANDREI Y. VISHINSKY

NOVEMBER 17, 1949.

His Excellency ANDREI Y. VISHINSKY,
Foreign Minister of the U. S. S. R.,
Lake Success, Long Island, N. Y.

YOUR EXCELLENCY: As chairman of the American Committee for the Investigation of the Katyn Massacre, Inc., I have the honor to request Your Excellency's assistance to this committee to establish the truth regarding the massacre of more than 4,000 Polish officers in the Katyn Forest and the disappearance of another 10,000 Polish prisoners elsewhere in the U. S. S. R. during the last war.

We appeal to you not only as the present Foreign Minister of the Soviet Union but also as an official who was Soviet Vice Commissar for Foreign Affairs in 1940 and 1941, and who was in charge of Polish affairs during that period when it is alleged this war crime was committed.

As you will recall, you had many highly important conversations with the representatives of the Polish Government on this subject, specifically with the Polish Amabassador, Prof. S. Kot, on the following dates: September 20, October 6, October 14, November 2, and November 12, 1941, and July 6, 1942

More than 4 years have passed since the end of hostilities. During this period a sufficiently large number of new facts concerning the war crime of Katyn have come to light to warrant a new investigation. To conduct such an investigation is the purpose of this committee. It is the aim of the committee to establish the truth beyond any shadow of doubt.

Therefore, this committee will appeal to the whole world for assistance in its endeavor to establish the truth. It will accept testimony from any direct or indirect witness of the crime regardless of nationality, creed, or race. It will carefully listen to all the direct and circumstantial evidence available, and, in evaluating this evidence, it will be guided only by the measure of credibility and veracity of the evidence produced. The committee pledges itself not to abandon its task of establishing the truth about the mass slaughter of the more than 4,000 Polish officers at Katyn and the disappearance of more than 10,000 other Polish prisoners of war in Russia, no matter how long the task will require.

May I express, not only in my own name, but also in the name of every member of this committee, the deep hope that Your Excellency will either be good enough to appear before this committee or will delegate a duly qualified representative to do so, in order to further our work which will be guided by the promise to humanity as expressed in the joint declaration issued on the close of the Moscow Conference in October 1943 over the signatures of President Roosevelt, Prime Minister Churchill, and Premier Stalin, reading as follows:

"Let those who have hitherto not imbued their hands with innocent blood beware lest they join the ranks of the guilty, for most assuredly the three Allied powers will pursue them to the uttermost ends of the earth and will deliver them to their accusers in order that justice may be done."

With the expression of my esteem, believe me, Excellency,

Very sincerely yours,
ARTHUR BLISS LANE,
Chairman.

Gas Rate at Jacksonville, Fla.

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. BENNETT of Florida. Mr. Speaker, the following is submitted for inclusion in the CONGRESSIONAL RECORD at the request of officials of the city government of Jacksonville, Fla.:

Whereas at the request of the City Commission of the City of Jacksonville the Federal Power Commission made available to the city three of its staff experts in proceedings instituted by the city commission to fix a fair and reasonable rate for the sale of manufactured gas to consumers thereof in the city of Jacksonville by the Jacksonville Gas Corp. and on the appeal by said gas corporation from the action of the city commission to the Florida Railroad and Public Utilities Commission; and

Whereas the services rendered by said staff experts Messrs. Edward L. Dunn, Carl T. Kallina, and Robert Simonds have been of invaluable assistance to the city of Jacksonville and to consumers of manufactured gas in this city, and have contributed in a large measure toward the rendition of an order by the Florida Railroad and Public Utilities Commission reducing present rates for the sale of manufactured gas in the city of Jacksonville: Now, therefore, be it

Resolved by the City Commission of the City of Jacksonville, That the grateful appreciation of this commission be extended to the Federal Power Commission for the assistance rendered to the city of Jacksonville in the aforesaid proceedings to establish a just and reasonable rate for the sale of manufactured gas to consumers thereof in the city of Jacksonville, Fla.; and be it further

Resolved, That the sincere thanks of this commission are hereby extended individually to Messrs. Edward L. Dunn, Carl T. Kallina, and Robert Simonds for their untiring, efficient, and valuable services rendered to the city of Jacksonville in the aforesaid proceedings; and be it further

Resolved, That certified copies of this resolution be transmitted by the Secretary of this commission to the Federal Power Commission and to Messrs. Edward L. Dunn, Carl T. Kallina, and Robert Simonds.

A true copy.
Attest:

EARLE E. JONES,
Secretary, City Commission.

Newspaper Advises Landlords and Tenants Re Decontrol

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1950

Mr. DOYLE. Mr. Speaker, I am pleased to call to the attention of all the Members of this House what appears to me to be a very worthy newspaper article, which appeared Friday morning, January 13, 1950, in the Long Beach Independent, at Long Beach, Calif. Long Beach is the largest community in the State of California which has voted decontrol of rents by its duly constituted city council.

There are several other similar communities in California which had previously done so.

I present this for both landlord and tenant, not only in Long Beach, Calif., but for landlords and tenants in every city in America, as they meet this problem of cooperative adjustment, when necessary, as a result of decontrol.

The article follows:

LANDLORDS BEWARE

Rent controls are not off. The Governor has approved decontrol, but until officially decontrolled by the Federal Housing Expediter, it is not official. He must decontrol, but landlords must await that official action, which should be in about 2 weeks. It is hoped the action will make little difference between landlord and tenant. But above all, landlords should recognize their responsibility and danger.

First reaction of both tenant and landlord will be emotional. Many tenants will expect

eviction or rent increases where none is intended. Some landlords may hope to use decontrol to gouge tenants with unreasonable rent increases. This type landlord is the greatest menace now faced by the property owners who seek only the right to operate their own properties.

The President only this week asked Congress to renew rent control for another year after June 1. What happens in Long Beach can mean his request will be granted. If rents soar here it will be used as an example of why Nation-wide controls are necessary. Long Beach is the largest city yet decontrolled. What happens here will be watched by all who seek permanent socialization of housing. It can mean only a few months of decontrol then permanent control.

There are certain to be some adjustments. If they are reasonable, tenants should expect them. Rents have increased an average of 15 percent while all other commodities and services have increased much more. On the other hand, landlords have had a steady income for 10 years which they did not have before and again soon may not have. It is an emergency that calls for decency and sound thinking, free from emotions and selfishness by both tenants and landlords.

There will be evictions. Some will be for good reasons where tenants have deliberately misused property and been obnoxious. No one can criticize landlords in such cases. But even in these cases, landlords would be wise to go slowly, lest they dig their own grave by controls being reenacted. It is a good time to stop, look, and listen before jumping.

Surveys have shown rentals are becoming daily more plentiful. It is only a short step to seeing vacancy signs in every block. A year ago, we were begging for newsprint for the paper. Today, we have far more available than we can use. Few publishers expected that condition for at least 3 years. The same thing can happen to housing. It is common sense to keep tenants who pay regularly rather than to be seeking new tenants. It is also common sense to hold down criticism of decontrol by not raising rents or promiscuous evictions.

All owners of rental properties are on a spot. We hope they make of Long Beach an example of why decontrols are justified and not an example that will be used by those who seek control of all private property.—L. A. C.

Canada Succeeds in Cutting Taxes

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. REED of New York. Mr. Speaker, this country if it is to maintain its pay rolls and create more jobs will have to lift the crushing burden of taxation from those who create venture capital through thrift and savings.

Canada has had the vision and wisdom to approach this problem realistically by reducing its excise taxes and other tax burdens without resorting to deception by increasing the taxes of their corporations, and thus passing the excise-tax load back onto the people.

Under leave to extend my remarks, heretofore granted, I am inserting in the Appendix of the RECORD the following article which appeared in the New York Journal-American of January 10, 1950:

CANADA SUCCEEDS IN CUTTING TAXES

(By Don Hassell)

What goes on across the border?

That's what tax-conscious United States legislators wanted to know when Canada's Finance Minister Douglas Abbott presented a 1949–50 budget that not only called for heavy tax reductions but provided for further slashes in the national debt.

To Congressmen belabored by constituents demanding tax relief, the whole Canadian program—if it worked—was potent ammunition to be trained against the Fair Deal's announced tax-and-spend policy.

Even Canadian conservatives admit now—with only 3 months of the fiscal year to go—that Abbott's estimate of an $87,000,000 surplus, to be applied toward debt retirement, will hold. In short, Canada has reduced taxes and pared her public debt again: a feat few, if any, nations in the world have achieved since the war.

What is even more significant, however, is the basis for corporate tax relief. As Abbott puts it:

"These reforms were undertaken, not because of any deterioration in the profit position of Canadian corporations, but because in the Government's view, the economic development of Canada depends upon the willingness of our people to risk their money in constructive enterprises."

Taxes have been going down in Canada, in gradual stages, for about 4 years, but the 1949–50 over-all 32-percent slash in personal income-tax revenues is the healthiest cut of them all. Most of this relief took the form of higher exemptions, removing some 750,000 Canadians from the income-tax rolls which formerly totaled 2,000,000. And it meant a revenue drop of $235,000,000.

But other forms of taxation figured in the new budget.

The rate on the first $10,000 of corporate profits was cut to 10 percent to protect the small family type of business. Profits in excess of $10,000, however, were taxed an added 3 percent. Net result: $8,000,000 added revenue.

Individual Canadian shareholders were allowed a credit against their personal income taxes equal to 10 percent of the dividends they received from common shares of Canadian taxpaying corporations. This represented the first step toward removal of double taxation of dividends, and accounted for a revenue cut of $9,000,000.

Numerous wartime excise taxes were repealed. These included, with their corresponding revenue reductions, soft drinks, $24,500,000; candy, $16,600,000; chewing gum, $1,700,000; transportation, $19,200,000; communications, $6,500,000.

Other excise taxes—sales, toilet articles, luggage, matches, smokers supplies, pens and pencils, cigarette lighters—were cut to 10 percent for an over-all revenue slash of $17,300,000.

Americans who reckon the public debt, taxes, and Government expenditures in terms of billions of dollars may at first glance look upon Canada's tax-relief program and its debt retirement as "small potatoes." But when it is pointed out that population across the border is a mere thirteen and one-half million and the total net national debt by March 31 will be only $11,600,000,000 (after a $1,700,000,000 reduction in 4 years), the picture is a little clearer.

For example, if the same debt-retirement program undertaken by Canada in the last 4 years had been put in effect in the United States, our public debt would have been reduced by nearly $30,000,000,000.

While Canadians were enjoying the fruits of a balanced budget, the main cogs in its economic wheel looked like this:

Steel output last year hit 2,200,000 tons against 2,100,000 in 1948, the previous high; oil production soared to 21,000,000 barrels from 12,300,000 in 1948, the previous peak; banks were in the strongest position in their history; telephones in use jumped to a new record of 1,500,000; automobile production hit 280,000, an all-time peak; power output jumped to 46,200,000,000 kilowatt-hours, another record.

Value of shares listed on the Montreal Stock Exchange was estimated at $8,200,000,000 against $8,700,000,000 in 1948 and 1947. Newspaper advertising and circulation was at an all-time peak, but increased costs cut into profits; employment was high and the country was free of strikes in the key industries of the economy; newsprint production was 5,100,000 tons against 4,900,000 in 1948, the previous record.

Address by Hon. Edward Martin, of Pennsylvania, at Northampton County Republican Campaign Dinner

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered at the Northampton County Republican campaign dinner, at Easton, Pa., on Friday, November 4, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great honor to meet with you tonight in old Northampton County.

When my good friend, your chairman, Ken Kressler, invited me to attend this grand Republican rally, I accepted with pleasure.

I welcomed this opportunity to come to Easton because I have so many friends here with whom I have had such pleasant associations.

I like to come to Northampton County political gatherings because your leadership and your organization preaches and practices the kind of politics that strives for good government. You take part in politics because you want to preserve America as a land of freedom and opportunity. That, my friends, is real peacetime patriotism.

We are in another important political campaign.

All campaigns in America are important no matter whether they are local, State, or National. Under our system of self-government in the United States, every vote cast in every election means something.

Daniel Webster, one of the greatest of American statesmen, expressed a strong and classic political truth when he said:

"The first object of a free people is the preservation of their liberty."

And I say to you that the preservation of our liberty begins at the ballot box in your own community and in your own voting precinct.

All good government has its foundation in municipal or local elections such as we are having next Tuesday. The offices we fill in this election are of so much importance to the people because their duties and responsibilities bring them in direct contact with the people.

Schools, roads, streets, elections, police and fire protection, health services, and your county courts come under their jurisdiction.

Local government is self-government. It is home rule. It is the bulwark of our freedoms.

Local government is the last line of defence against the advance of centralized bureaucracy. It must be maintained in health and vigor or we will be defeated by those who would control and regiment the lives of our people under a socialistic planned economy which destroys freedom of the individual.

There have been great changes in government in the United States in 20 years.

Let us make a few comparisons.

In 1929, only 20 years ago, we spent less than $4,000,000,000 to operate all the functions of the Federal Government.

In this fiscal year our Government will spend more than 11 times as much—approximately $46,500,000,000. In addition, Congress in the session just closed, passed contract authorizations of $4,500,000,000, making a total of almost $51,000,000,000.

Now, you know, it is impossible for any of us to comprehend just how much that is.

Let me make some comparisons that give a better idea of the amount the Federal Government will spend this year.

If every life-insurance policyholder in the United States cashed in all of his life insurance, the total would amount to $44,000,000,000. That would not be enough money to run the Federal Government for 1 year at the present rate of spending.

If every city home owner in the whole country disposed of his home, the total would amount to $30,000,000,000. That would run the Federal Government for about 8 months.

If every farmer sold his farm, all the equipment on it, and all the livestock, the total return would be $25,000,000,000. The Government could not run 7 months on that amount of money.

If every industry converted its net working capital into cash, a total of $39,000,000,000 would be realized. That would not be enough to run the Government for 11 months.

The cost of local government in the whole country is about $10,000,000,000 a year. That would only support the Federal Government 2½ months.

All the 48 State governments collect another 10 billion, which would only keep Uncle Sam going 2½ months.

Let us continue our comparisons. In 1929 the national debt was $16,500,000,000. Today, just 20 years later, it is 15½ times as big, or approximately $256,000,000,000.

Since July 1, the beginning of this fiscal year, the Federal Government is already in the red approximately $2,300,000,000.

In 1929 the Federal Government had less than 600,000 employees on its pay rolls. Today the number of persons working for Uncle Sam is more than 2,200,000.

They are increasing daily and will continue to increase if the present trend is not stopped.

These figures should serve as a warning signal. They reveal the dangerous pace at which the free spenders at Washington are burning up the Nation's wealth and the earnings of its workers.

Today approximately 30 percent of the total income of our people is being taken away from them to support local, State, and Federal government.

We spend more to govern ourselves than we pay for food. Government costs us 13 times as much as we spend for education and 40 times as much as we contribute to our churches.

In other words, we are working about 3½ months out of every year just to pay the cost of government.

Forty years ago, of all the taxes collected, 55 percent went to local government. Now it is only 13 percent. Forty years ago, 10 percent went to the States. Now it is 13 percent. Forty years ago, only 35 percent went to the Federal Government. Now it is 75 percent.

This will be the year of the greatest peacetime spending since the birth of our Nation.

The tax collections for this year will be far short of expenditures. We will undoubtedly end this fiscal year with a deficit of at least six to eight billion dollars. That will be the greatest peacetime deficit in the history of America.

This is an alarming situation. It should cause every American possessed of common sense to stop, look, and listen.

But it doesn't worry the spendthrift crowd that is in charge of the Government at Washington.

Two weeks ago President Truman announced the most brazen plan in the long history of reckless extravagance by Democratic administrations.

With the Federal Government spending about $8,000,000,000 a year beyond its income, Mr. Truman says that's not enough. When Congress comes back into session next January his first demand will be for higher taxes.

President Truman says he knows no way to balance the budget except by increased taxation. He wants to reach deeper into the wages of the worker and the earnings of the farmer.

I would like to suggest to Mr. Truman that he could get some very good advice if he would come up here to Easton and talk with some of the good housewives in your community.

They could tell him how to make expenses balance with income. They could tell him what they do when it becomes necessary to economize. They could tell him how they cut down on the family expenditures and live within their means.

But it seems that Mr. Truman has never learned that simple principle of economics. From his early business experience down to the present time, he still thinks he can get ahead by spending more than he takes in.

That is what we mean by deficit financing. It means living on borrowed money, and going deeper and deeper into debt. Mr. Truman thinks that's good for the country.

Actually, it is like cutting off a dog's tail in order to provide him with meat. You end up by whittling away the dog.

In the same way we are allowing our Government to be destroyed.

Not higher taxes, not more spending, but prudence, efficiency, and economy in government are America's needs today. We need better management, better housekeeping, and a realization of the fact that the course we have taken is the road to national bankruptcy. It is the road which ends in the loss of freedom under tyranny and dictatorship.

When President Truman's own economic adviser, Dr. Henry G. Nourse, resigned 2 weeks ago he gave blunt warning that the administration's monetary and fiscal policies have no power of magic but are a slippery road to misery.

How long can we stay on that road without rushing headlong into disaster?

How far can we travel along our present course and preserve the American system of individual freedom?

How long can we, as a nation, spend billions beyond our means and continue to enjoy the highest living standards in the world?

President Roosevelt, when he was a candidate in 1932, gave the answer when he said:

"Any government, like any family, can for a year, spend a little more than it earns. But you and I know that a continuance of that habit means the poorhouse."

That was a sound statement. Unfortunately, it was soon forgotten. It was overwhelmed in a mad rush of bigger and bigger spending.

We cannot, we must not, keep it up much longer.

I predict that if it continues another decade the great blessings we have enjoyed as Americans will be lost.

What has brought all this about?

Are we not as understanding about Government matters as were our fathers?

Are we not attentive enough to our duties as citizens?

I am afraid we are neglecting the obligation we owe to our country.

We are thinking too much about our rights and not enough about our responsibilities.

We are listening too much to the demagogues who buy votes by promising ease, comfort, and security to be paid for with your own money.

We are listening too much to the agents of the Soviet Union. The Communists have predicted that America would spend itself into economic collapse.

They have infiltrated every sort of organization and group. These people, their fellow travelers, and their innocent dupes, wage a never-ending war on Congress for greater and greater spending by the Government.

We are listening too much to thousands upon thousands of misguided "do-gooders."

We are listening too much to the demands of pressure groups for new governmental services. Once established they grow by leaps and bounds from year to year.

All this results in a great centralized bureaucracy at Washington which, slowly but surely, takes away the power, authority, and functions of State and local government.

What can we do about it? How can we prevent the loss of local government and home rule?

There is only one way and that is for every American to take part in government.

To take part in government effectively we must take part in politics.

Only through the ballot box can we rebuild local control and local responsibility in every community.

Good government begins by electing qualified men of upright character and unquestioned integrity to local office.

I hope there will be a full turn-out in all the election districts of Pennsylvania on Tuesday.

If we place good Republicans in our city halls, our township and borough buildings and in our court houses in this election, we will have a solid foundation for Republican victories in 1950 and 1952.

It Is Appeasement of Aggression, Not Resistance, That Leads to War

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Bridgeport Post of January 18, 1950. Its recognition that it is attempted appeasement of aggression, not firm resistance to it, that leads to war is as irrefutable as the quotation from our colleague the gentleman from Connecticut [Mr. LODGE], whose words it takes as its text.

The editorial follows:

M'MAHON AS AN APPEASER

It may surprise some Connecticut citizens to find Senator BRIEN MCMAHON depicted as an appeaser on Formosa, or in general, an appeaser of the Communist domination of

China, but in the opinion of Congressman JOHN DAVIS LODGE, who is a member of the House Foreign Affairs Committee, that is what the Senator's conduct amounts to.

"Unlike MCMAHON," says LODGE, "I do not believe in compromising with communism. I believe that the policy of military aid and advice which succeeded in repelling the godless forces of communism in Greece and Turkey can also succeed in Formosa. Doesn't he know that the policy of resistance to communism has been successful in preserving freedom in both Greece and Turkey without precipitating a world conflict?

"For my part I am convinced that peace is a product of strength, that war is the result of weakness, and that the administration's policy in the Far East, actually a do-nothing policy, increases the chances of war. I am convinced that if Asia succumbs to Communist aggression, Europe cannot endure as a free area. If Europe goes under, the very survival of our Nation is at stake * * * I wonder what the Senator has learned from the tragic events which led to World War II."

Senator MCMAHON'S expressed opinion is that if we take an aggressive stand to aid the Chinese Government in Formosa or to prevent the further spread of communism, it will lead to war.

But historically Congressman LODGE is right. We got into World War I not by doing something, but by doing nothing. We got into World War II, as most persons can easily remember if they will prod their memories a bit, in exactly the same way. We did nothing, we convinced the aggressors that we would do nothing and as a result of that conviction, Japan struck at Pearl Harbor, and we were in.

We do not believe that the Communist-dominated nations want war or are prepared to wage war. But they are only too pleased to take advantage of our timidity at no cost to themselves. What they want above all else is time in which to consolidate their gains, perfect their weapons, increase their armies, and become strong enough to defy us or even to conquer us by force.

Chase National Bank Fund To Aid Small Business

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Wednesday, January 4), 1950

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the New York Times of January 20, 1950, indicating a loan fund established by the Chase National Bank to aid small business. I trust that other banks of the country will follow suit.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOAN FUND SET UP BY CHASE NATIONAL—$10,000,000 CREDITS ESTABLISHED TO AID SMALL BUSINESS THROUGH CORRESPONDENTS—LATTER ALL OVER COUNTRY—LOCAL BANKS TO HANDLE MATTERS UP TO $25,000 FOR 3 YEARS AT OWN DISCRETION

The Chase National Bank has established an initial $10,000,000 loan fund to participate with its correspondent banks in extending loans to small business in their communities throughout the Nation, Winthrop W. Aldrich, chairman, announced yesterday.

More than 3,700 banks, at least one of which is in virtually every county in the 48 States, have a correspondent relationship with the Chase, it was pointed out, and over a period of years the Chase has participated in many credits with them.

"This plan has been devised to meet, at least in part, the contention that some small businesses are unable to obtain the intermediate term credit they require," Mr. Aldrich said. "Whether or not this is true, we believe the commercial banks of this country can, and will meet the legitimate credit needs of small business for bank credit.

"The Chase National Bank is anxious to help meet whatever need does exist. Our plan is an offer of cooperation to banks in all sections of the country which may, because of local circumstances, need additional lending capacity for intermediate term loans to local business concerns. Our offer of assistance is made on a voluntary and friendly basis for the sole purpose of helping our correspondents in meeting this problem."

Correspondent banks of Chase will soon be supplied with full details of the plan, Mr. Aldrich said. Under the plan all applications for small business loans must be made through local banks, not directly to the Chase, which will offer to take up to 90 percent of the dollar amount of each loan, subject to a 5-day review period, it was explained.

The local banks are to have discretion in arranging the terms of these loans up to a $25,000 maximum amount and for not longer than 3 years. Chase will allow the local bank one-half of 1 percent as a service fee for handling the loan and will request for itself a minimum net interest rate of 4½ percent.

Excerpt From Inaugural Address of Carl B. Rechner Before Real-Estate Board of Kansas City, Mo.

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Wednesday, January 4), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from the inaugural address of Mr. Carl B. Rechner as president of the Real-Estate Board, Kansas City, Mo., January 6, 1950.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

And now may I discuss briefly an issue which outweighs all others and is trying to stamp out the pattern for generations. I refer to the drift away from independent, free initiative and enterprise, and the trend toward building the security welfare state with its plan of socializing our lives and business. No political party or special group alone is responsible. But by expecting something for nothing, by fear, laziness, and the attempt to divide by class, too large a number of our people are looking to a paternalistic Central Government to wet nurse us through every contingency of life. Our reward system, the free-enterprise system, under the grace of God, has steadily given the great masses of our people a standard of living far beyond our neighbor nations and is the envy of the world. Our great incentive system, backed by education, research and development has won two world wars largely through production. Yet this same system has failed to use its great salesmanship and ability in simply furnishing the truth of its results and worth, so that it is more fully understood and appreciated by all our people from school child to housewife and wage earner. This is our system, yours and mine. Our values, efforts, and future are built on this premise. People in alarming numbers are demanding of Government on all levels, additional services and direct security without knowing the cost in taxes.

The cost of government has now risen to the point considered by the best economists to be close to the limit of our ability to support. To illustrate, take your four principal items of expense from each dollar:

	Cents
In 1929:	
Food	23
Shelter	23
Clothing	13
Government	12
In 1949:	
Food, no change	23
Shelter, one-third decrease	18
Clothing, a decrease	11
Government, almost 100 percent increase	23

The source of these statistics is the United States Department of Commerce.

Our job is to be alert to the cost of government, to intelligently formulate and work for a better understanding of this great system of free enterprise, which has given us these unlimited advantages we accept as commonplace. This basic knowledge must be taught in the schools to children, be understood by school teachers, by parents, and be our watchword. The spreading of this truth is real security, our real welfare. The Government will reflect our thinking and desires as long as we stockholders, the American public, speak. Many thinking citizens are aware of this influence. Effective action is being launched now by private and trade organizations.

Enlightenment on this issue will bring the right results. We have always had problems but if we are alert and willing, we can master and solve these new problems with certainty.

Again our objections are not directed at politics or individuals but apply to principles. We demand progress. Business must furnish untiring leadership for the improvement of all men. We can never achieve this noble objective if we are broke, divided and beaten. We must continue to build internal strength. Strong and unified, we then can continue to be the light of the world.

Address by Hon. Edward Martin, of Pennsylvania, at Fifty-first Annual Dinner of Pennsylvania Society

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered before the fifty-first annual dinner of the Pennsylvania Society at the Waldorf-Astoria Hotel New York, N. Y., on December 10, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a rare privilege to be a member of this fine assembly.

Over us tonight hovers the spirit of William Penn and Benjamin Franklin and the other illustrious Pennsylvanians whose memory we honor in praise and gratitude.

In no other country of the world could a group like this, with widely divergent views and opinions, meet in friendly relations to discuss the problems confronting our Nation and its people.

I am particularly pleased to express my deep appreciation of the fine association I have enjoyed with my distinguished colleague, Senator MYERS.

As you well know, we are frequently on opposite sides on questions before the Senate, but that has not interfered with our sincere personal friendship and fine understanding.

Tonight I want to talk with you about some of the things that have been happening in Washington.

It would be pleasant to report that the State of the Union is perfect. It is always pleasant to view our country through rose-colored glasses. There are those who would have us wear those rose-colored glasses permanently. But we would only be deceiving ourselves, if we were to accept the rosy picture as natural color.

For the sake of our land, for the preservation of our liberties, for those who will come after us, we must face up to facts, not technicolored fiction.

In recent years we have witnessed radical changes in the philosophy of government and dangerous departures from traditional American course.

We have seen a vast increase in the size and complexity of the Federal Government. We have seen its power encroaching more and more upon the functions and authority of State and local government.

We have seen the cost of Government multiplied eightfold in 20 years. We have seen excessive taxation drain away the earnings of the worker, the farmer, and the resources of industry.

We have witnessed the tragic spectacle of an administration unaware of the danger of national bankruptcy and the threat to American freedom that is inherent in a national debt exceeding a quarter of a trillion dollars.

We have witnessed the wildest spending spree in our Nation's history. This year alone it may add $8,000,000,000 to our present crushing burden of debt.

For the first time in the peacetime history of our Republic, an administration spokesman—the Secretary of the Treasury—has advocated deficit financing as a definite policy of government.

That is a shocking reversal of our historic policy of balanced budgets. It must not go unchallenged.

You will recall that President Truman told the Nation he knew only one way to balance the budget.

Just raise taxes, he said.

Don't try to economize. Don't eliminate waste and extravagance. Don't cut away the thick undergrowth of needless and useless Government functions. Don't do away with duplication and overlapping.

Just raise taxes.

But everyone knows that today the American people are trapped in a great jungle of taxes, both hidden and direct.

Thirty cents out of every dollar of every one of us—worker, farmer, preacher, lawyer, doctor, and businessman—goes for government.

With this big tax bill confronting us there are important and critical questions which must be answered.

How much of the national income can be taken in taxes and still leave enough to continue high employment and operate industry at full capacity?

How large a cut can we take for taxes and still maintain our high living standards?

How far can we go without everyone getting hurt in the tax squeeze?

If we cut down taxes more people will have more money to spend for automobiles, homes, household appliances, and the necessities of life. That is the way real income should be increased, not by inflation through borrowed money.

Deficit financing is like cutting off a dog's tail in order to provide him with meat. You end up by whittling away the dog.

Unfortunately, too many of our people do not recognize the fact that every increase in the national debt is another step toward inflation.

It is the dangerous process by which we water our currency and depreciate the value of the dollar.

Let me give you an example.

President Truman told the country recently that under his policies the income level of $4,000 per family per year could be established.

And he envisioned an increase of $75,000,000,000 in the national income in a short time.

However, we must remember that these figures don't really mean all they appear to mean on the surface. An income of $4,000 per family today is not double an income of $2,000 for the same family 10 years ago.

Let me explain that.

Suppose, 10 years ago, in 1939, you invested $18.75 and purchased a $25 United States savings bond.

This year, 10 years later, your bond has matured. You cash it in and get $25. You have deferred use of your money for 10 long years. It has increased by one-third, or $6.25.

But has it really? The answer, I am compelled to say, is "No."

Under the inflationary policies fostered by this administration, you can buy less goods for $25 today than you could buy for your original $18.75 in 1939.

Thus, you have gone without the use of your money for 10 years to find you have less than when you started. This administration's inflationary policies are largely responsible for that.

The same depreciation in real value, as represented by the reduced purchasing power of the dollar, strikes at savings funds, insurance policies, annuities, pensions, and all other forms of fixed payments.

Labor, agriculture, and business are entitled to a stable dollar.

We are told, however, that if the Government bureaucrats are given greater control of our national economy we can have security against all the contingencies of life.

But I assure you that all the fiscal tricks of the present administration at Washington will not produce a magic formula that can provide security for 150,000,000 people.

Real security must be bought and paid for by work and sweat, individual thrift, and sacrifice. It is the reward of enterprise, initiative, and prudence.

Security cannot be achieved by the simple method of having the earnings of the people spent, not by themselves, but by a spend-thrift Government bureaucracy.

The Federal Government has made itself the biggest single distributor of income in the United States. More than 19,000,000 men and women get a check of some kind from the Federal Government at regular intervals.

History teaches us that one of the causes of the fall of the great Roman Empire was the steady trend toward turning citizens into pensioners. When the Roman masses got their minds firmly fixed on free bread and circuses, they soon became indifferent to liberty and freedom.

In modern times we see the abuses of democracy in the constantly increasing pressure and demand upon the Government for support of destructive programs that reach into every activity of our daily lives.

When Government control goes far enough into medicine, education, agriculture, labor, and business, the freedoms which made us such a great nation will be lost.

These are only a few of the trends and dangers.

What are we to do? Is there any way to curb the danger? Or do we want our lives planned, controlled, and regimented by an all-powerful central government? The answer must be given by the people. It can be given only through our political parties.

There are some of us—not divided by party lines—who have been fighting to bring economy and a balanced budget to Washington. We seek to end this reckless spending, these endless deficits. We want to reverse the dangerous trend toward a socialistic economy which robs youth of freedom, opportunity, and incentive.

Because we are making this fight we have been ridiculed as representing selfish interests. We have been told we are 160 years behind the times, that we are reactionaries and do-nothings, that our principles are vicious and against the interests of the people.

Those who attack us call themselves liberals. They claim Thomas Jefferson and Andrew Jackson as their patron saints. But they pay only lip service to the principles of those American statesmen. They do not follow the teachings of Jefferson and Jackson.

Thomas Jefferson was a great prophet of the evils of government debt and government grown to monstrous size.

It was no reactionary, no Republican, it was Thomas Jefferson who cried out in warning:

"We are ruined if we do not overrule the principle that 'the more we owe, the more prosperous we shall be' and that 'a public debt furnishes the means of enterprise.' "

It was Thomas Jefferson again—and I hope they are listening down there in Washington—who said:

"I place economy among the first and most important virtues—and public debt as the greatest of dangers. To preserve our independence, we must not let our rulers load us with perpetual debt. We must make our choice between economy and liberty • • • or profusion and servitude."

Yes, that was Thomas Jefferson talking.

And what of that other patron saint, Andrew Jackson? This is what he believed:

"From our past experience it cannot be doubted that simplicity in the character of the Federal Government and a rigid economy in its administration should be regarded as fundamental and sacred."

Later he told the Congress:

"No people can hope to perpetuate their liberties who long acquiesce in a policy which taxes them for objects not necessary to the legitimate and real wants of their government."

Let me remind the free spenders at Washington that these quotations express the philosophy of Jefferson and Jackson. Let me ask:

"Will you brand them as reactionaries and tories because they, too, preached economy and limitations upon the growth of the central bureaucracy?"

Let us step forward to the year 1893.

The great Grover Cleveland, first Democratic President after the Civil War, is being inaugurated for his second term. In his inaugural address he said:

"The lessons of paternalism ought to be unlearned and the better lesson taught that while people should patriotically and cheerfully support their government, its functions do not include support of the people."

Will they in Washington sneer at Grover Cleveland and disown his great memory?

Then, in 1913, the next Democratic President occupied the White House—Woodrow Wilson. Let me quote briefly from Mr. Wilson. He said:

"There is a point at which, in peacetime, rates of income and profits taxes discourage

energy, remove the incentive to new enterprises, encourage extravagant expenditures, and other attendant evils."

Again, it was Wilson who declared:

"The duty of economy is not debatable. It is manifest and imperative."

I turn now to the Democratic National Convention of 1932. The platform adopted contains this language:

We advocate an immediate and drastic reduction of governmental expenditures by abolishing useless commissions and offices, consolidating departments and bureaus, and eliminating extravagance, to accomplish a saving of not less than 25 percent in the cost of Federal Government."

May I point out that in that year the entire cost of operating the Federal Government was less—I repeat, less—than this year's interest on the national debt alone.

Running on that platform was Franklin D. Roosevelt, who declared in a major address:

"Any government—like any family—can for a year spend a little more than it earns. But you and I know that a continuance of that habit means the poorhouse."

Ladies and gentlemen, those are magnificent words. They should be hung in every office in every department and bureau in Washington—and I include the President's own offices in the White House.

Then in 1943 a Democratic Member arises in the United States Senate. He says:

"It seems that when public funds are to be expended no one has any interest in what happens to them, no matter what his responsibilities may be under his oath of office.

"I dislike to make such a statement, but unless this body and the House of Representatives exercise their prerogatives in connection with the purse strings of the Government, much of the money appropriated will be thrown away for no good purpose whatever."

At that time we were engaged in total war. The Senator who made that statement was the chairman of the Special War Investigating Committee. It was Harry S. Truman, then a Senator from Missouri.

And so, when I hear them call those of us who are economy minded, reactionaries, and horse-and-buggy folks, I remember the strong stand of every great Democratic President in our history, down to the time of the New Deal and the so-called Fair Deal.

Were they all wrong? Were they all reactionaries? Were they all horse-and-buggy tories?

Were all these great men fools because they feared deficit financing and growing Federal encroachment upon the liberties of the citizens?

Were Roosevelt, the candidate, and Truman, the Senator, reactionaries, and tories?

We who are called tories and reactionaries because we fight for economy and solvency are struggling to preserve the greatest product given by God to mankind—freedom and opportunity.

The American people have become so accustomed to it that they have forgotten its real worth. They have forgotten that no other country in all the world offers this great product so freely.

They are trading it off, day by day, in exchange for fool's gold, wrapped in the most seductive, vote-getting package of all history.

We must find a way to make all our people understand that what they are sacrificing is infinitely more precious than the gaudy, tinsel-covered package whose glitter must fade away and leave nothing but broken hopes and disillusionment.

Heaven help our Nation if the ideals upon which it was founded and upon which it has grown great, are now to be regarded as false principles.

Heaven help America if, like Esau, we sell out the birthright of future generations—and their heritage for the temporary gain of hand-outs from Washington.

We glory in the greatness of America. We boast of the miracle of American progress in a comparatively brief span of years from a trackless wilderness to the mightiest nation of the world.

We are proud of the vast productive capacity of our giant industrial strength.

We rejoice in our high cultural and spiritual attainments, and in the high living standards of our people.

What has been responsible for all these unparalleled achievements? Why have we surpassed other nations with equal or greater population and richer natural resources?

What does the United States possess that other nations do not have?

It is individual freedom. It is the right to work at the job of our choice; the right to retain the results of our enterprise, courage, and resourcefulness; the right to take part in our Government; the right to worship God as our conscience dictates.

To secure all these blessings the Atlantic seaboard was the stage for the greatest drama of all history. Here was enacted the story of man's fight for individual freedom.

The players in that stirring drama were the greatest men and women of their time. They had been trained for their parts in the most exacting school—that of hard work, courage, and necessity. They came to this country seeking God, truth, and freedom.

The freedom they established has been preserved by the blood and sacrifice of heroes in every generation. It is too precious to be lost through indifference or neglect of our responsibilities.

If we are to help save America we must all interest ourselves in politics, because the kind of government we are to have is decided at the ballot box.

We need a deeper understanding of practical, patriotic politics—the kind of political activity that is based on the highest standards of morality, honesty, sincerity, and love of our country.

With those standards as our guide we can spread the gospel of true Americanism. We can preach what our precious freedom means to us as individuals and as a Nation.

It's great to be an American. Let us have the courage to be real Americans.

Let us have pride in the past and look with confidence to the future.

Let us put our trust in the sovereignty of God rather than the sovereignty of an all-powerful central stete.

The Coal Situation in Delaware

EXTENSION OF REMARKS

OF

HON. J. ALLEN FREAR, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Wednesday, January 4), 1950

Mr. FREAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a telegram which I received from Mr. Leon Walker, president, Delaware State Coal Club, and also a letter from the same gentleman.

There being no objection, the telegram and letter were ordered to be printed in the RECORD, as follows:

Reports received from representative retail coal dealers throughout Delaware show present stock of prepared sizes of anthracite for domestic heating, also for broiler growers use, are extremely low. Many dealers are already out of sizes. A spell of cold weather will quickly exhaust present stock and 3-day operation of mines, resulting in curtailed and delayed shipments, will not then be able to take care of an acute situation. An emergency does now exist and immediate steps should be taken to place operation on a normal basis. Letter follows.

LEON WALKER,
President, Delaware State Coal Club.

DELAWARE STATE COAL CLUB,
Wilmington 1, Del., January 21, 1950.

Hon. J. ALLEN FREAR, Jr.,
Senate Office Building,
Washington, D. C.

DEAR ALLEN: Confirming my telegram of date, copy enclosed, reports received from representative retail coal dealers throughout the State show their present stock of prepared sizes of anthracite for domestic heating purposes is extremely low and should we have normal winter weather a critical emergency will exist within a period of 3 or 4 days, or at least a week. Many dealers are now out of sizes and due to the 3-day operation at the mines, shipments are necessarily confined to those days and if not then made no shipments can be made until the following week, plus a further delay of a week to 10 days for rail movement before any coal can be received. The present 3-day production schedule cannot possibly meet normal winter weather demands and with stocks exhausted and limited shipments, an acute emergency will quickly develop.

Reports from the lower end of the State also indicate that the stocks of nut coal on hand by dealers supplying broiler growers will not exceed 1 week's normal winter requirements. The only solution is for immediate resumption of anthracite production on a normal weekly basis. Should we have a spell of cold weather, further delay in handling the present situation will be disastrous. The President should act before it is too late.

I have taken the liberty of addressing you on the subject because of its importance.

With kindest regards,

LEON WALKER, *President.*

Illusory Women's Rights

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent that an editorial on the subject of the equal-rights amendment be inserted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Post of July 19, 1945]

ILLUSORY WOMEN'S RIGHTS

We have always had difficulty in taking seriously the campaign to secure equal rights for women by amending the Constitution. However, with both the Democratic and Republican Parties on record in favor of such an amendment and the present House Judiciary Committee approving the proposal, it is no longer possible to assume that common sense will save us from the folly of incorporating a meaningless and mischievous slogan into our basic law.

The proposed amendment has an attractively egalitarian ring that may commend it to the thoughtless because it proclaims that "equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex." It is

only when we undertake to find out just what this amendment would do for women that doubts arise. There is no denying that in some States women are subject to legal discriminations that should be abolished. But in contradistinction to such discriminatory laws, which are being whittled away year by year under the pressure of an increasingly enlightened public opinion, there is a vast body of legislation applicable to women that is primarily protective in character.

Most States limit the number of hours women may work, require minimum wages and provide other forms of protection for their health and efficiency. Married women and widows also receive preferential treatment under State laws. The wife, for example, is entitled to support under State laws. That fact alone justifies differences in laws relating to the property rights of men and women.

Assuming that the proposed amendment might succeed in effecting complete equality of men and women before the law, women would soon find that they had paid a heavy price for limited gains. For the effect would be to eliminate all the special legislation designed to safeguard women in industry and in the home along with the laws that are unfairly discriminatory. In short, the proponents of this equal-rights amendment have set up standards for guidance that are utterly unrealistic, being based on the untenable assumption that women are in a position to make their way and fend for themselves quite as well as men. Nobody knows better than the working women how false that notion is.

The handicaps—physical and social—under which women, especially wage earners, labor are often formidable; many of them are purely physical handicaps that it would be sheer folly to ignore. Others are an outgrowth of prejudice and customs that legislation cannot alter. Only time, education, and slowly changing public opinion can assure women a perfectly fair deal in the competitive rough and tumble of modern life, even in those occupations for which they are by nature and training well fitted. Hence, it is not surprising to find major labor groups and outstanding women leaders, such as former Secretary of Labor Perkins, who are intimately acquainted with labor problems, actively opposing the equal-rights amendment. They realize that equality before the law is worse than an empty formula.

It is an invitation to oppression for the law to disregard differences between the sexes that affect earning capacity and to refuse to make allowance for the different social positions of men and women as members of family groups. As the minority members of the House Judiciary Committee said, "using the Constitution for a broom with which to sweep away indiscriminately the good with the bad is neither sound law nor sane behavior." Where State laws unjust to women exist, efforts should be directed toward their revision or elimination; that is, there should be a separate bill for a separate ill.

The proposed amendment sets up no legislative standards to replace existing laws it would invalidate. It is purely negative and essentially destructive. Nor is it clear what is meant by the second paragraph of the amendment to the effect that Congress and the several States shall have power within their respective jurisdictions to enforce this article by appropriate legislation. Conflicting interpretations and endless litigation would be the result of incorporating any such vague amendment into the fundamental law of the land. However, there appears to be general agreement on one point: the amendment would wipe out all the laws, State and Federal, that give special protection to women and would also make it impossible to provide for their protection in the future, without extending a like degree of protection to men who may not desire nor require it.

Willie Six

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, January 23 (legislative day of Wednesday, January 4), 1950

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column Next to the News, by Alfred Mynders, which appeared in the Chattanooga Times of Sunday, January 15, 1950. Mr. Mynders tells of the passing of a distinguished American Negro whose life was a tribute to Christian usefulness. What has been related by Mr. Mynders about the late Willie Six amounts to a eulogy to be desired by any man, whatever his color or creed or religion may be.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEXT TO THE NEWS
(By Alfred Mynders)

Today and for the next decade or two, the so-called color line will be a controversial issue to all who are of and who love the South. "Crossing the color line," a phrase which must have been invented by someone not of the South, is in current use. But this column deals with something entirely different. It is the story of a man who transcended the color line. So powerful was the force of his spirit, so convincing was the quality of his devotion, that he took with him in his flight across the mystical barrier many hundreds, certainly, and perhaps thousands.

His name, Willie Six, might seem almost whimsical to someone not knowing Sewanee athletes and their fierce loyalty to this unusual man. But he came by the name honestly. He wore a discarded football jersey with the numeral "6" on it. His name already was Willie Sims, so quite simply the transition was effected. The new name pleased "his young men" and in that it coincided precisely with his life's motive.

He was building a church in 1908 when Coach Harris G. Cope asked him to become trainer for the team the following year. It was about half finished when Willie turned to the gymnasium in 1909, and half finished it remains, under the name of All Saints' Chapel at the University of the South.

It is not given to many to be buried from a church which they helped to build, but that is one of Willie's honors. He was buried last Saturday in the rocky soil of the mountain top which he loved and which loved him. The story of his death had been flashed throughout the land and brought some comments which are notable. A major general telephoned from North Carolina to say, "I feel a personal loss. Having known Willie since 1912, I can say that in that time and in my experience on several continents, I've never seen greater devotion to duty, greater loyalty. I've come to think of him as exemplifying the real spirit of a Sewanee man."

Telegrams from bishops in Florida, Virginia, and New Mexico, from a lieutenant general in Atlanta, from the head of the largest of the world's broadcasting companies * * * these were only a few of the messages which revealed a relationship beyond the power of words to express.

The junior Senator from Washington, Senator HARRY P. CAIN, arose in the United States Senate Friday to eulogize a friend—Willie Six, who had watched over him when he was a well-known Sewanee athlete years ago. He noted the passing of this good Christian gentleman and he said: "The junior Senator from Washington has risen to express his personal feeling of loss and to extend his sympathy to the family of Willie Six."

Many of the virtues which Christ talked about were qualities whose desirability he was reiterating, qualities which had been recommended before by the philosophers of ancient Israel, as well as those of China and India. But some of the meaning which Christ gave to that virtue called humility and to that dynamic outpouring called love had a new quality and gave a novel flavor to His teaching.

If we are to believe the testimony of witnesses who can be called nothing less than reliable, then we have seen an humble colored man whose love was so great that he left a lasting mark on his time.

One of his closest friends, Gordon Clark, for 20 years athletic director at Sewanee, has perhaps said what needs to be said: "Willie Six was a great Christian gentleman. I have never known a greater one. He brought to a relatively lowly station in life a dignity, an integrity, a charity which would do credit to the highest office. He loved more people and thought more continually about their welfare and comfort than anyone I have ever seen. He leaves countless friends to mourn the passing of a rare spirit."

Valete, Willie Six. Your example has not been lost nor your sacrifices made in vain.

A Forecast of Conditions Under Socialism

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, January 23 (legislative day of Wednesday, January 4), 1950

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "All of Us," by Wheeler McMillen, editor in chief of the Farm Journal, appearing in the February 1950 issue of that publication. As I read the article I could not help feeling that it might happen to the people of the United States, as it has already happened to the British people.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALL OF US

Here all of us are, facing the last February of the first half of the twentieth century. A few days after you receive this issue of Farm Journal I shall be observing another birthday. Since I was born in the nineteenth century, before another 25 years roll by I may be old enough to write reminiscences. So this month let me be old and cantankerous and pessimistic, and imagine that I am already 25 years older. Would I, perhaps, be writing notes like these?

February 1975: I can remember clearly how, back in 1950, nearly every family had an automobile. People were putting television sets in their homes. New houses were being built by individual families. No one used ration coupons for anything, although some had been used during the Second World War, and people knew what they were. All meat and grocery stores were then owned and operated by private individuals and companies, who competed with each other on price and quality.

March 1975: My neighbor was arrested today and they say he will be sent to jail for 2 years. His sow raised a litter of nine pigs, but he reported only eight to the meat administration. He had managed to hide the other one from the farm inspectors, but someone found it out when he butchered the pig. He had hoped to give his four youngsters a little home-grown meat. The meat administration says that not nearly enough meat can be produced or imported, and that the ration must be reduced to a half-pound per week.

April 1975: Our hens, encouraged by spring, laid an extra egg today. It would be nice to have two for breakfast again some morning, but it has become too dangerous to try to dodge the law. Besides, for many years now one egg a week has been the allowance, and we have got used to getting along. We never appreciated our good fortune when it was possible to have two eggs and bacon, too, every morning for breakfast, and even cream for our coffee. I remember how sorry I felt for the English, back in 1949, when they had only one egg a week.

May 1975: I went down to the Lumber Administration today to apply for three two-by-fours to brace up the barn. Had to fill out three sets of application blanks, six copies of each, and to draw a diagram to show just where the pieces would be used.

June 1975: This morning I stood in line until noon before the Health Administration offices. Wanted to get the tooth pulled that has kept me awake most of three nights. I couldn't get in to see the clerk. Long ago, before we had this "free" medicine for everybody, one could generally find a doctor or dentist fairly quickly. They took a personal interest in our troubles. Now they just jot our number down in the book and hurry us through, if we get to see them at all.

July 1975: The Fourth of July reminds an old fellow of his younger days, when we celebrated or not, according to how we felt. Today, as is usual now, everybody had to appear in town to listen to the official program, and watch and hear the President make his speech on the municipal television. He ranted about freedom, like his father used to do, but what he says and what he does are two different things.

August 1975: The Lumber Administration refused my application for the three two-by-fours. They said it was improperly made out.

September 1975: I have been trying to figure out in my own mind just when these present conditions had their beginning. Some say it was when the Government bought all the railroads. Next they took the coal mines, then the steel mills, then the truck hauling business, then the whole petroleum industry. They said they had to have the mines and the oil business to get fuel for the trains and trucks, and the steel mills to get enough steel for everybody. Just try to buy some now. Now the Government runs nearly every kind of business, just as Russia did when I was a young fellow. Then production started going on down, and the country has been getting poorer ever since.

October 1975: I think the beginning was further back. It might have been about 1936, when the politicians discovered they really could buy votes in quantities with borrowed public money, through the WPA and other things. Some of the younger people now can't even remember when we used to have elections.

November 1975: I've got it now. Our freedom began to be lost in 1913. That was the year the income-tax amendment was ratified. The idea would have been all right, probably, if it had contained a provision that no more than one-fourth of any ordinary man's earnings could be taken in taxes, and no more than half of the biggest incomes. Since there were no limits on taxes the politicians eventually discovered that there were no limits on the amounts they could spend. They kept taking more and more from everybody to give more "free" help, until no one could save. Then there had to be still bigger pensions for us old people, and more Government services of every kind. No one could save up for investment, so the Government said it would have to take over business.

December 1975: Kind of hard to be cheerful at holiday time. Can't help remembering the great days when every American out of jail was free and full of hope for the future.

July 1976: Just two centuries ago the Declaration of Independence was adopted. Two hundred years. Years that saw the United States produce the highest standard of living that ever has been. And years that saw us, in my time, fritter away our freedom until all of us once proud Americans are no better off than serfs. Except the Government crowd, of course.

August 1976: They'll shoot me if I print these paragraphs. And suppress Farm Journal. After all, this isn't 1950 any more, when one could still say what he believed. All right, let 'em shoot.

Are my "reminiscences" exaggerated? I hope so. But I have mentioned nothing that doesn't happen today in England or Russia. And the United States of America has been faithfully following the English route. Next month I'll write about the cheerful and wonderful prospects that can be realized if the United States of America is left free to go ahead.

WHEELER MCMILLEN.

Louis Houck

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Wednesday, January 4), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Louis Houck," delivered by Hon. Norwin D. Houser, of Perryville, Mo., judge of the Twenty-seventh Judicial Circuit of Missouri, at the Southeast Missouri State College, Cape Girardeau, Mo., on October 15, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COL. LOUIS HOUCK

(A speech delivered by Judge Norwin D. Houser at Southeast Missouri State College, Cape Girardeau, Mo.)

FOREWORD

Institutions, quite appropriately, honor their founders and those who played leading roles in their early histories. At the homecoming ceremonies held at the Southeast Missouri State College, October 15, 1949, the memory of the late Col. Louis Houck, a man who loomed large in the early history of the college and southeast Missouri, was honored. For 39 years he served as a member of the board of regents and for 36 years as the president of the board.

The speaker chosen for the occasion by the alumni association was Hon. Norwin D. Houser, a former student of the college, now judge of the Twenty-seventh Missouri Circuit. This brochure presents in full the address which he delivered. Those who heard the address adjudged it an eloquent and comprehensive analysis and evaluation of the achievements of Colonel Houck, one of the recognized builders of this region. Undaunted by recurrent obstacles, he was able to realize the objects of his dreams. To quote Judge Houser: "Louis Houck felt the hand of destiny on his shoulders."

The Southeast Missouri State College and its alumni association are under obligation to Judge Houser for his most excellent address and to the Cape Girardeau News for making it available in this form.

W. W. PARKER,
President, Southeast Missouri State College.

The complete text of Judge Houser's speech follows:

"I regard it as a high compliment to have been chosen to do honor to Louis Houck, southeast Missouri's most illustrious citizen, and I want to acknowledge my debt of gratitude to M. Leming, and the other members of the committee.

"Nearly a quarter of a century after his death in 1925, the commanding figure of Louis Houck continues to stand out in bold relief in the Hall of Fame.

"Fifty years from now—a century hence—indeed, as long as men can read of the glories of the past, his achievements will be indelibly stamped and recorded as an integral part of the legal, historical, academic, and commercial development of the land we live in.

"A new generation has sprung up since he departed. Many of you were yet unborn during the time of his great deeds, whereas many others of us congregated here tonight were his contemporaries.

" 'Too often we forget the men of the past. Soon all memory of their labor vanishes from the common recollection of men * * *. Yet it is the work of the men of the past bequeathed to us that is our priceless heritage. It is because they labored and suffered, dared and did, thought and executed, because they laid deep the foundations of our civic institutions that we today are enjoying a material prosperity, the marvel of the world.' (From a tribute by Louis Houck to Alexander Buckner, delivered September 28, 1897.)

"And so it is fitting and proper that we pause for a few moments to honor this indomitable man, this resolute spirit, this distinguished newspaperman, lawyer, public servant, author, historian, railroad builder, and educator-administrator.

"And it is quite appropriate that these exercises be held here, on the campus of this great college which was so dear to him; on the very steps which he caused to be built as part of a beautiful and symmetrical plan."

MOVED TO CAPE

"Born in St. Clair County, Ill., while William Henry Harrison was still President of the United States, Louis Houck came to Cape Giradeau when he was 28 years of age. Already he had made a name for himself in the fields of journalism and law, and had served as Assistant United States District Attorney at St. Louis.

"When this gifted young man settled here, in 1869, 4 years after the conclusion of the War Between the States, southeast Missouri was a wilderness of isolated villages and malaria-ridden swamps. Cape Girardeau, an unimportant river landing, with a population of 2,500 souls, was going through the dark reconstruction days. There were no railroads. There was no system of drainage districts.

"What a contrast between the meager opportunities open to Louis Houck in 1869, in a comparatively primitive civilization, and the marvelous opportunities for the young men and women of 1949, in this, one of the most highly developed areas of America.

"He practiced law here during the seventies, married Miss Mary Hunter Giboney in

1872, developed into one of the best lawyers who ever practiced at this bar, and during the late seventies developed an interest in railroad building, and a vision of the importance of transportation by rail to the commercial development of southeast Missouri.

"This was a frontier-like country. The principal products, outside of the minerals produced in the area, were timber, furs, wheat, and corn. There was no way to market these products, except by river transportation after long overland hauls by team and wagon, over tortuous dirt roads, trails and through bog and swamp. Remember that there were no highways; no farm-to-market roads, and no railroads closer than than Iron Mountain."

RAILROAD BUILDER

"Houck, with prophetic vision, knew that if the isolated communities of southeast Missouri could be welded together into one unit; if the millions of acres under water could be drained and reclaimed, their rich alluvial soil would yield a harvest sufficient unto the needs of an empire. He believed that a system of railroads linking together the entire area would transform these raw wastelands into a garden spot of production. Louis Houck felt the hand of destiny on his shoulder, and he undertook the prodigious task of making his dream come true.

"He pioneered in the railroad business with little previous knowledge of the engineering, construction and financing problems involved. All he knew was that he wanted to build railroads, and by the eternal, he was going to build them.

"He started out with $5,000 in cash, an iron will, and the determination to succeed.

"During the next 25 years, from 1880 to 1905, he pierced the swamplands and highlands of southeast Missouri with 500 miles of railroads, which feat was accomplished in the face of seemingly insurmountable adversities, which he overcame by virtue of dogged persistence, adroit (and sometimes unconventional) financing, ingenious resourcefulness and rugged individualism.

"Some have said that he failed; that he lost his railroads; that he became entangled in a morass of litigation. But let it ever be remembered by his critics that when this empire-builder passed from the scene of his labors in 1925, trains were operating daily over almost every mile of right-of-way he procured; trains carrying wheat, corn and cotton; lead, cobalt and iron; cement, limestone and brick; shoes and shirts and the myriad other products of modern factories; livestock and lumber and a thousand other products of our area, into the marketplaces of the world.

"And in that 45 years, this section of the country had been transformed from a strictly provincial outpost into a prosperous, diversified, thriving community.

"The 'Open Sesame' was Louis Houck."

CAPE TO DELTA

"Resourceful? Let me tell you that Louis Houck was resourceful.

"The first railroad he built was from Delta to Cape Girardeau. He contracted to put the road through and drive an engine into Cape Girardeau by midnight, December 31, 1880. On this condition he was assured of a subscription list and bonus of $10,000. The distance was 16 miles. The time limit was 6 months. He had no engine, rails, ties. He had no previous experience. Trestles had to be built—everything done from scratch. He contracted with the Iron Mountain Railroad for rails. There was an unbroken forest primeval along the line of the right-of-way, and he chopped his ties from the virgin woods. It was hard to get laborers. There were no quarters with which to provide them housing. The winter of 1880 was one of the worst ever known, snow beginning to fall on the 18th day of October, and zero weather up to January. The Iron Mountain was slow in delivering rails. Many difficulties were encountered. When at last they got to a point 1,000 feet from Cape Girardeau they ran out of rails. The Iron Mountain failed to deliver under their agreement. No rails could be produced elsewhere, and if they could have been found they could not have been brought in, for the river was frozen solid. The time was getting short. So, with characteristic vigor, Louis Houck ordered the engine run to the end of the uncompleted track, then ordered his men to tear up the rails laid behind, fixed them in place on the Cape Girardeau end, laid the rails straight into the city. Time was so short that old residents, swore that it was 3 minutes before midnight on the last day of the contract when Houck's decrepit, wood-burning engine, borrowed from the Illinois Central, steamed into Cape Girardeau, in literal compliance with his contract.

"Time does not permit any extensive delineation of the hardships, litigation, and competition thrown in the way of this tenacious, bold, self-reliant, independent, adventurous, and far-seeing man."

DEFEATED JAY GOULD

"The story of his defeat of Jay Gould, the railroad tycoon, of his encounters with the Missouri Pacific and Frisco, of the floods that washed out miles of his tracks, of the methods of construction sometimes resorted to to get the trains rolling, of the experiences of those early days of trains jumping the tracks on soft spots in the roadbeds, all makes one of the most fascinating, romantic, and delightful chapters in the history of railroading, and all testify to the astuteness, the insatiable ambition, and the uncompromising drive of this remarkable man, who, in spite of hell and high water, Gould and the receiverships, creditors, and competitors, was bound to, and did, connect southeast Missouri into one railroad circuit."

PROLIFIC WRITER

"During this period of creative activity, which would have occupied the full time of a dozen ordinary remarkable men, Louis Houck found the time, and had the intelligence and scholarly attainments necessary, to give to the world a history of Missouri from the earliest recorded times down to the admission of Missouri into the union of the States. Houck's history of Missouri is the foundation upon which all subsequent histories of the Commonwealth have been written.

"Another work, the Spanish Regime in Missouri, published in 1908, is rated by many critics as a highly authoritative account of the Spanish settlements in this country. It earned for him a place in the Encyclopedia Britannica.

"His other literary achievements included the Boundaries of the Louisiana Purchase and Law of Liens.

"Louis Houck not only scattered the seeds of learning and lighted the fires of knowledge with his hand and pen, but, more than any other one man, is responsible for the development of this great educational institution from whose portals have issued an innumerable throng of teachers, educators, and scholars, to bring light to dark corners, to disseminate knowledge, to contribute to the profession, arts, the skills, and the crafts throughout the far reaches of the earth."

CHAIRMAN OF THE BOARD

"For 39 years he was a member of the board of regents. For 36 of these years he was president of the board, and chairman of the executive committee.

"He was working for this college even before it was located here. When the General Assembly, in 1872, passed the law which authorized the establishment of a college in southeast Missouri Louis Houck became instrumental and influential in inducing the commission to select Cape Girardeau as the location for the college.

"When it came to selecting the ground upon which the institution should be built, Louis Houck offered 10 acres of ground, free of cost, in the South part of the city, near Ford D. as a site for the building.

"Instead the board purchased the ground where Academic Hall stands, some 9 acres at that time, for $1000, actuated by a desire to establish the school upon a high eminence, visible from all parts of the surrounding territory."

NINE TEACHERS

"When he first entered on his duties as a board member, in 1886, there were 9 teachers on the faculty, a total of 278 students enrolled, one building, and 9 acres of campus.

"When he passed on in 1925, still a member of the board, the faculty and administrative staff consisted of 60 persons, the annual enrollment topped the 2,000 mark, and the campus and grounds had been enlarged from 9 to 190 acres; and the educational plant consisted of seven monumental stone buildings.

"In those early days the terrain surrounding the spot where we are gathered tonight consisted of steep hills, deep gullies and ravines. There was a gaping quarry 30 feet deep where Leming Hall now stands. The site of Kent Library was the top of a high hill. The college was built far from town. There were no sidewalks, no paved streets leading to the college—many of the present streets and avenues were fields, forests, and creeks. There were only one or two houses in the vicinity of the college. There were only two or three houses on North Pacific Street. Where these beautiful approaches rise now, there was an ugly ravine 20 feet deep, which ran all the way down to Pacific Street, and in order to make the grounds accessible, a bridge 30 or 40 feet long was constructed.

"There was no system of terraces; there were no trees, no dormitories, and none of the present buildings existed."

HAD VISION

"A man of small vision would have failed to provide for the enormous expansion of this institution; would have allowed the city of Cape Girardeau to grow up and surround the original 9-acre tract; but Louis Houck was a man of far-flung vision, who could and did foresee the time when this city would be a metropolis, and this institution a major center of education and culture, required to meet the needs of a populous and enlightened civilization."

BUY MORE LAND

"To prepare for things to come, he immediately began to insist on enlarging the college grounds. In the eighties, he caused his board to purchase 3½ acres, now known as 'The Home of the Birds,' for the sum of $85 which, although insignificant in these days, was no doubt an item of importance in their meager budget. They purchased 24 acres from the Kaiser estate, paying for it at the rate of $200 a month. Mr. Houck purchased individually and donated to the college two tracts of land, one of which was 10 acres east and north and east of the city water reservoir, land he bought from L. R. Johnson, no doubt the land where the tennis courts and Cheney Hall are now located. The site for Kent Library was purchased, the top of the hill graded off, and for years that part of the campus was known as the Athletic Field. Other tracts were secured, the board, under the direction of Mr. Houck, sometimes making small down payments, paying for the properties on the installment plan out of incidental funds.

"Many of these purchases were made over determined opposition, which did not deter Mr. Houck, for he knew what he was doing.

"Streets were laid out, sidewalks built, trees planted, terraces established, barns and unsightly structures removed, hills graded

down, appropriations fought for, and buildings erected, all under the proud and watchful eye of the man whom we honor tonight."

BUILD DORMITORIES

"Dormitories were needed for the students. Three public-spirited citizens, Mr. Houck, Mr. M. E. Leming, and Mr. Leon Albert, realizing the need, and having the best interests of the college at heart, organized a company, advanced the money, and built Albert Hall, employing the same architect who designed Academic Hall. Thereafter they built Leming Hall, with their own funds, renting the halls to the college for only enough to pay the interest on the money they had borrowed to build them. Thereafter the legislature appropriated $80,000 to buy these buildings, which was $10,000 less than they cost originally.

"Another willingness to sacrifice for the college was demonstrated by Mr. Houck when he offered to donate the stone to be used in the construction of the Education Building in 1922.

"Thus, largely through the vision and foresight of Louis Houck, the physical plant and environs of this delightful college were bounded on a scale sufficient for the needs of a growing institution for a century to come, and the basis laid for what is today the most beautiful college campus in the Midwest.

"In 1925 a committee consisting of Dr. Serena, R. S. Douglass, and Judge James A. Finch, in drafting a memorial about Louis Houck, said this, among other things."

CULTURE AND BEAUTY

" 'His interests, however, were not in the buildings alone, nor even in the rapid increase in the number of students. He believed in culture and beauty.' His concern for the library, that it might always possess the world's greatest books, his love of the humanities, especially the classics, and his gift to the college of the fine group of statuary, reproductions of many of the world's masterpieces, are mute evidence of his real interests. It was through his effort that the Beckwith collections—archeological and historical—were secured, and largely through his efforts that other invaluable collections were added to the institution's possessions.

" 'He believed that this college is placed in its wonderful setting, a veritable light upon a hill, to hold ever aloft the torch of learning, beckoning to it the youth from the thousand hills and the rolling plains of southeast Missouri that here they might pursue learning.

" 'In the years of richest life experiences he more and more turned aside from a development of the natural resources of southeast Missouri to the pioneer in developing the intellectual and spiritual power of the youth of this new empire. It is not an exaggeration to say that in his last years this college became the ruling passion of his life, and that in the years to come the (Southeast Missouri State Teachers) College, for which he wrought so well and did so much, will be his proudest monument.' "

RESPECTED CHURCH

"Other monuments to this great man are to be found in many of the churches of this section which were the object of his bounty, and at least one of which was wholly built by him, and deeded to the members of the congregation, acts of charity not noised about, and known of but by few. Mr. M. E. Leming once said that Mr. Houck contributed to more churches than any other man in the country, and that no man had greater respect for the church.

"Senator James A. Reed, a close, personal, and political friend of Louis Houck, in speaking of Mr. Houck's political belief, said at a memorial service in 1925:

" 'He stood for the Constitution, because he knew that so long as it remains unimpaired, so long as it is revered and loved, the liberties of the American people will be secure. And if our country ever fails, it will not be by attacks from without, but from corruption and indifference within. He knew that corruption and indifference will not come if we continue to cultivate a spirit of individual liberty, and to teach the doctrine that each man stand upon his own feet; fight his own battles; receive the rewards of success and suffer the contumely of failure—asking from the Government no protection, save that which is guaranteed by the Constitution and the Bill of Rights. He knew that by thus proceeding we would be every day developing the character of our race, putting iron into its blood, steel into its nerves, and courage and exaltation into its soul.' "

STOOD ON OWN FEET

"Yes, my friends, here was a man. Here was the personification of the spirit of individual enterprise. Here was a man who stood upon his own feet, and fought his own battles, and hewed out his own destiny with his own mind and hands; who received the rewards of success; who knew no discouragement, and recognized no defeat; who operated on his own and created his own opportunities.

"Louis Houck despised the despairing creed that the world owed him or any man a living. His pride was in his strength and courage; in his will to serve family, community, and nation.

"His life was gloriously fulfilled, both materially and spiritually, because, in an atmosphere of freedom and opportunity, in a system free of governmental regulation and restriction, he loosed his individual powers and employed his will, his courage, his enterprise, and his faith, to the attainment of his objectives.

"His life and deeds are an object lesson of the accomplishments which are possible in America, under a governmental system which is based upon free, competitive, individual, private enterprise.

"I conclude with the following extract from a tribute to Louis Houck by his lifelong friend, Allan H. Hinchey:

" 'The civilization of today has come through the Louis Houcks of the past; the civilization of the future rests upon the Louis Houcks to come, for in all ages there must be such as he.' "

That Mandate Again

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend, heretofore granted, I am inserting in the RECORD a New York Herald Tribune editorial which was reprinted in the February issue of Reader's Digest:

[From the Reader's Digest of February 1950]

THAT MANDATE AGAIN

(Editorial in New York Herald Tribune)

Mr. Truman is determined that the country shall accept his version of the mandate which was conferred upon him in November 1948.

The real question is whether the Government can now insure good wages for labor, a fair opportunity for small business and cooperatives, an insured income for the aged, protection against loss of income for the ill and unemployed, decent housing at prices they can afford for the citizenry, educational opportunities for all our young people, a fair price for farmers, better health and medical care for everyone, and equal participation in our national life, free from fear and discrimination for all Americans.

No one disputes the desirability of the goals, no one doubts that the American system has within itself the power to attain them to a degree known to no other nation. But to achieve them demands more than mere faith, more than a political formula, more than the denunciation of reactionaries. It is not enough to laugh off the question of cost, or the infringement on personal freedom which the injection of Government intervention into these spheres entails, as simply the propaganda of the reactionaries. The program which Mr. Truman puts forth in so debonair a fashion is as complicated, difficult, and costly as anything which could well be imagined. Combined with the vast commitments for defense and foreign aid which the United States has undertaken, it would constitute a crushing burden on the productive energies of America. This is not what the will of the people demanded, nor what Mr. Truman told the voters in the 1948 campaign. He spoke then, and he speaks now, as if a goal has only to be stated in legislation to be won, painlessly and finally. The experience of too many countries with this kind of wishful thinking, however, has proved it to be futile and dangerous.

Moscow Can Thank Tito for Western Recognition of Mao

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Human Events written by the brilliant French observer Bertrand de Jouvenel. His penetrating insight that Tito's removal of Yugoslavia, at least temporarily, from Russia's direct control is likely to be the factor which by its influence on sentimentalist wishful thinkers in the West, brings Asia under Russian control in only a part of his brilliant analysis of the fatal malady—loss of convictions—which afflicts the West, including ourselves:

THANKS TO TITO

(By Bertrand de Jouvenel)

PARIS, January.—The British have recognized Mao Tse-tung as the rightful government of China. When Mao celebrated the new year with Stalin they were aware of this impending move. They must have dedicated a kind thought to Tito. For they owe him his great diplomatic victory. His unpunished secession has encouraged western policy makers to put their hopes in further secessions: Mao is to be another Tito.

Seceding Communist tyrants are to be offered, according to an already established pattern, British advice, British trade agreements, American money and machines, American protection; ultimately they are to be provided with arms and drawn into a wide scheme of collective security, including national Communist with democratic societies.

From the angle of Realpolitik the test of this grand strategy is its success. The bigger the battalions the better the chances. Let

us however be clear that we are thereby rejecting moral standards in international affairs, and that the American sword is henceforth to be drawn equally in defense of tyranny and of liberty.

It can be forcibly argued that alliances are a matter of expediency, ruled by the necessity of containing dangerously expanding powers. Did not liberal England uphold in the nineteenth century the rotten Ottoman despotism? And is it not true that Europe paid dearly for the reversal of this policy? This line may be taken, but it is then a palpable inconsistency to exclude from our alliance such non-Communist states, the internal regime of which does not meet with our approval.

If history can provide many arguments in favor of the Realpolitiker outlook, the student of our own times must stress the monstrous danger of this line in our democratic societies. It is very much to the credit of the people that the forces of public opinion cannot be marshalled without an appeal to the moral sense. If our cause is the right one, it is not easy to explain that some of our allies are just as bad as our opponents. Nor do some intellectuals make it any easier by their curious propensity to sugar-coat with moralism the bitter pill of expediency.

It has taken the West all of 5 years to emerge from the moral befuddlement attendant upon the Russian alliance. Of course the condemnation of Germans for crimes against humanity was marred by the presence among the judges of those responsible for many Katyns. Of course, the penance done by Germany for its aggressive imperialism fails to drive home its lesson while Germany's original accomplice wallows in its conquests. In September 1939 Leon Blum branded Stalin as responsible for the war: "Had he signed with England and France, war would have been impossible or highly improbable, his signing with Germany made it almost inevitable." (Le Populaire, September 21, 1939.)

We have lived through years of scandalous would-be moralism, deferentially consulting mass murderers on the right wording of a charter of the rights of man. It was a stifling atmosphere, a nightmare of values. We are at long last emerging from it. Is it to be plunged again into confusion?

Let us beware. We have in the West a mass of morally spineless intellectuals whose impotent desire for boldness, discipline and strength turns to a female craving for Communist company. The present explosion of moral disapproval against Stalinism has frightened them away from the Moscow shrine; they are offered an unhoped-for alternative; they can do their pilgrimage to Belgrade. Who will blame them for praising on their return the institutions of a valued ally? There are not a few signs that Tito may prove the Trojan horse in the western camp.

EUROPEAN NIHILISM

We want Tito and other such to help us defend western Europe which we do not feel strong enough to defend by ourselves. In the same manner the declining Roman Empire called upon barbarian allies. They caused the corruption, breaking apart, and downfall of Rome: so will it be with us. For our lack of strength which makes them desirable associates also makes their influence irresistible. It is a lack of moral strength. There never was in Europe a more numerous population than there is today to withstand the assault of Asia. Nor was the Roman Empire lacking in numbers or equipment: on the eve of its collapse it stood incomparably superior in quantities of men and arms to what Rome was when she ranged the known world under her laws. But one thing had departed: virtue.

Europe is internally eaten away by doubt, distrust, and cynicism. It is perhaps the tragedy of our age that socialism—practically, reliance on others—is offered as a cure for a feeling of insecurity which could only be cured by a restoration of self-reliance. Nor are great physical assets a condition of such self-reliance. Men are not cowards: they have the courage of their convictions; it is the convictions that they need. Nihilism is Europe's malady.

It is not fear of the Cossacks which reduces Europe to a helpless jelly. It is doubt of the justice of our cause, a vague feeling that the Communists may have right and history on their side. Perhaps after all their system is the fulfillment of democracy—and here the follies of western war propaganda comes to roost—and is not their creed the tail end of our prevailing beliefs?

We can be thankful for the crazy Valhalla lyricism which made the Nazi creed unpalatable and ridiculous to the West. The Soviets on the contrary speak the language of utilitarian technocracy which is the common language of the West. In my country the youth who was tempted by nazism was usually a romanticist. In direct contrast it is striking to see juveniles simultaneously buying a magazine about engineering and a pamphlet about Russia. Minds cluttered with factual knowledge avidly absorb the dreary tale of figures uttered by the Moscow radio.

Taught by their masters to doubt all beliefs and by too many surrounding examples to deride them, their gods are machines and the building of socialism is to them as entrancing as a gigantic game of meccano. Stalin is to them a more tangible Einstein, who has also written out the laws of the world on his blackboard.

The watcher who sees them merrily putting in their little rivet is apt to be moved by their boyish enthusiasm. We must be prepared to have again and again the sort of thing American correspondents in China have been giving us: That the Communists entered Shanghai in admirable order and seemed animated by excellent feelings. Whoever thinks that great things, even bad, can be achieved without an appeal to virtue and the play of virtues, knows little of man. All the dangerous seductions of our age have owed their effectiveness to the virtues they enrolled.

So there can be no antipathy in the heart of the watcher who in a small village, in a suburb, sees a youth enthusiastically enrolling his good will in the Communist cause. He tries to argue this recruit away, and finds no effective weapon in the armory of his nineteenth-century ideas. Shall he speak of progress, of evolution, of enlightenment? This is it, answers the youth. Society moves forward, rejects the last of superstitions, the new man emerges, the rebuilder of the world. Yes; but freedom of thought? Why, would you not, the youth retorts, move to the foot of the class those who do not give the right answer in the right figures? But must you crush human beings? Why not, if it is to benefit a greater number?

The watcher moves on, troubled in his nineteenth-century mind. He has no answers. The nineteenth-century biological outlook provides no justification for the absolute value of the individual life. Nineteenth-century relativism in regard to truth must logically emerge into a pragmatism which admits that deviationist beliefs are bad because they are deviations and enervate the collective effort. Thus, the nineteenth-century utilitarian must give up. But as he moves on he sees the priest moving in to the Communist lair. The priest, indeed, is the only one who, in fact, tackles the venture. His is the only non-Communist voice which makes itself heard in Communist circles; a situation which is not without its dangers for religion itself which some nonbelievers would use as a social weapon. But the very existence of this situation testifies to the inherent weakness of current humanism, incapable of making an effective appeal to the people in its own name.

The weakness of Europe lies in the absence of convictions, and consequent lack of power to convince, of its great mass of intellectuals.

Amending the Rules of the House

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1950

Mr. VORYS. Mr. Speaker, I am in favor of this resolution eliminating the power of the 21-day discharge rule.

To me there is something unreal about all of the sound and fury of this debate. It is amazing to have the Democratic Speaker arguing against rules that his party put in force in 1931 and operated under all through the days of the New Deal. This is even more astounding when it has been stated by members of the Rules Committee of both parties that a rule was never denied on a bill when the Speaker, Democrat or Republican, demanded it.

Under the 1931 rule, which was in effect until 1949, any bill could be brought to the floor by a discharge petition or by the committee on Calendar Wednesday. It takes unanimous consent to dispense with Calendar Wednesday, yet I can remember the call of committees on Calendar Wednesday just once during the past decade. The present rule, giving every chairman the theoretical power to bring a bill to the floor has not meant very much during the first session of the Eighty-first Congress. In theory the rule can bring anything to the floor that any committee wants, in practice it depends entirely upon the Speaker. All he has to do is to fail to recognize the chairmen on the days when committee discharges are permitted, and the bill does not get to the floor.

Representative government in Congress is no different in essentials from representative government in lodges, unions, clubs, churches, and other organizations that everybody knows about. Pure democracy will not work, because all of the people cannot get together at one time to talk things over; therefore, they choose representatives. In any organization as big as the House of Representatives, with a membership of 435, the membership cannot work out an intelligent program except through representation of the members on committees, and through leaders acting formally or informally. The rules of the House are not perfect, but they represent the experience of nearly a thousand years of striving toward workable, representative, parliamentary government. As one wise Member has put it, the problem is to strike a balance between the rights of the individual Member and a majority; to permit a majority to work its will after due consideration of the views of the minority, but in all of this to have machinery and rules to get the work done.

Under our rules the party in power has control of the program, of what is to come up. This is as it should be. This power is exercised through a majority on every committee, including the Rules Committee, and through selection of the Speaker, who holds a very powerful office. There has always been considerable

bluffing and stalling and buckpassing under the Rules Committee system, but this applies equally to the 21-day discharge rule, as it has been in effect this year. For instance, FEPC could have been brought to the floor any time on at least a dozen occasions during the past 6 or 7 months by the Speaker and the committee chairman. I voted to adjourn until Monday to make doubly sure that FEPC could be brought up then, but as both sides in this argument today have stated, FEPC is not the real question involved in this rules fight.

This skirmish today arises from the fact that the Democratic Party, which has a paper majority in the House, does not have a responsible working majority capable of developing an intelligent working program for Congress. Tinkering with the rules will not change this situation. I prefer the old system, that centered power and responsibility, but, as has been stated repeatedly today, and not denied, that system was under the control of the Speaker and the majority party leadership in the House. I think that the continuation of the 21-day discharge rule will simply add to the confusion and make it harder to have any orderly program at all. Having a majority of each committee decide what shall come up on the floor means control of the time of all the rest of us by a very small minority in Congress.

We have been reminded today that our financial resources are not limitless, and that some group must have over-all responsibility for coordinating the actions of the various committees into a Federal financial budget. What has been forgotten is that our time resources are not limitless; the time of Congress must be budgeted. We have seen in the past year, after an unusually long and futile 10 months' session, that the new rule budgets neither time nor money. We can run up a deficit in dollars, but inexorable laws over which we have no control make it impossible to pay back time already spent. Whether we change our rules or not, we will be wasting time and money this session because of the composition of the Democratic paper majority in the House.

Federal Rent Control

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. JAVITS. Mr. Speaker, the following is a transcript of a broadcast over Columbia Broadcasting System by Housing Expediter Tighe E. Woods, January 16, 1950, at 11 p. m. This is a case-by-case history of why Federal rent control is absolutely essential to American families throughout the country. It shows what has happened where there has been premature decontrol of rents. Through this broadcast individual American families are able to tell their side of the story.

At 526 East Seventh South Street in Salt Lake City, Utah, Nicholas Franks lives with his wife and 6-year-old daughter. Nicholas Franks is a machinist for the Denver and Rio Grande Railroad. In the last few months his take-home pay has dropped about 40 percent. Any cut in family income is serious enough these days. But it is even more serious for the Franks family, because their rent has been increased. They used to pay $32.50 a month. Now they pay $45 a month, and the rent comes due every month.

Salt Lake City is only one of many cities where increases in rent have occurred. These are the cities where rent control has been wiped out, where rent control no longer protects tenants from unreasonable increases in rent.

But what has brought about this situation? How was rent control lifted in these cities?

Under the present rent-control law, Congress provided three ways by which controls can be ended by States and municipalities, by local rent-advisory boards, and by the Housing Expediter. When a State or local government ends rent control, it cannot be restored, no matter how high rents may go. When controls are lifted on the recommendation of local rent board, or when the Expediter ends them, they can be put back into effect if rents go up too high.

Since the present law went into effect, last April, four States have taken action to end controls—Nebraska, Texas, Wisconsin, and Alabama. In the same period, local governments have wiped out rent control in 200 towns and cities. Local rent advisory boards, which are made up of groups of representative citizens in each town where rent control is in effect, have eliminated controls in only five communities. As Housing Expediter, I have lifted rent control in 467 communities.

I have been criticized for lifting rent controls in such a large number of towns and cities. But I am under a mandate from the Congress to decontrol wherever possible. However, the Housing Expediter has the authority to put controls back into effect if rents rise unreasonably, but the action of the States or local government cannot be recalled.

In only three of the communities which I have decontrolled has it been necessary to restore controls. In one city, Spokane, Wash., which was decontrolled, about half of the dwellings covered in a recent survey had increases in rent. The increases averaged 18½ percent. We are now making a further study of housing in this city to determine whether controls should be put back into effect.

During the past few months, statements have been made to the effect that rents have not increased very much in communities where State and local governments have ended rent control. Until now we have not had accurate information on these towns and cities. But tonight I can give you the real facts.

Recently, the United States Bureau of Labor Statistics, which is an independent, fact-finding agency, made surveys of rents in six of the largest cities now without rent control as a result of State or local action.

They found widespread rent increases.

In Dallas, Tex., and Knoxville, Tenn., two out of every three of the families in the survey have had their rents boosted.

In Jacksonville, Fla., and Salt Lake City, rent increases hit about half of the families.

Forty percent have had their rents raised in Topeka, Kans.; 31 percent in Houston, Tex.; and in every one of those cities more rents are being raised, month-after-month.

These increases are not small. They are substantial increases.

In Dallas, these families are paying 35 percent more rent each month.

In Houston, 41 percent; 30, in Topeka; Knoxville, 27; Salt Lake City, 16; and 26 percent in Jacksonville.

But that is only a part of the story.

The people who are hit the hardest are those who are least able to pay higher rents.

Take Dallas for example.

In Dallas, almost three out of every four families included in this survey who earn less than $40 a week have had their rent increased approximately 50 percent.

The rent comes due every month. If you don't pay, you get tossed out. But you can't run the risk of being out on the street, because you can't find another place to rent. At least not at the price a family making $40 a week can afford.

The same thing is true in Topeka, Kans., where Mrs. Erlene Kistler lives. Mrs. Kistler is a widow. She has a 6-year-old daughter whose name is Rita. They live at 417½ West Seventh Street in Topeka. Mrs. Kistler has had a lot of trouble trying to find a place to live where they don't object to children. The apartment where she lives at present used to rent for $45 a month. Now the rent is $60, an increase of almost 35 percent. This winter Rita needed a new coat to wear. But the family budget is too small. Mrs. Kistler has had to make over an old coat of her own.

I told you that in Salt Lake City, where the Franks family lives, half of the families surveyed have had their rent increased. At the time the survey was made, the increases in rent in Salt Lake City averaged 16 percent. Of course, that is 16 percent on top of the increases they had already received under rent control. But there is another angle to the story of Salt Lake City that is important.

The Salt Lake Tribune of December 23 printed a news item in which Mr. Darrell Welling, executive vice president of the Salt Lake Real Estate Board, denied reports that landlords were contemplating a new rent increase on January 1. The news story said—and I quote: "Landlords, on January 1, will have a free market on their properties to work out problems with their tenants, Mr. Welling noted. Pledges signed by landlords not to increase rents more than 10 percent will expire at that time." That is the end of the quotation. Mr. Welling added that he thinks some landlords in Salt Lake City may decrease rents. We hope he is right.

I make this point about the rumors of more increases in Salt Lake City because similar conditions apparently apply to other cities where rent control has been ended by State or local governments. On the basis of the BLS survey, it appears that the longer a city has been without rent control, the greater the number of families who receive rent increases. Houston, Tex., had been decontrolled 1 month when the survey was made. Thirty-one percent of the tenants were paying increased rents. Dallas had been decontrolled 5 months when the survey was made. Sixty-seven percent of the families were paying higher rents. This clearly contradicts the contention of opponents of rent control that when a city ends rent control prematurely rents will only raise a little at first and then level off at reasonable rates.

The BLS surveys were made in only a few cities where controls have been lifted by local and State governments. But hundreds of families in other cities now without controls have reported similar increases.

In Omaha, Nebr., rent control was lifted by action of the State legislature. "Moon" Mullen who lives at 201 South Thirty-sixth Street in Omaha, is only one of many people there who are now paying increases in rents. "Moon" has three children. One girl is in high school. Their rent used to be $42.50 a month, now it is $80. The children have been needing new shoes for some time. But "Moon" can't afford to buy new shoes for them, now that his rent has been increased about a hundred percent.

Day after day dozens of letters come to me in Washington asking if there is anything I can do to help families whose rent has been raised. Here is just one example of the kind of letter I receive. It is dated December 20, and it is from a housewife in Oklahoma City:

She says:

"DEAR MR. WOODS: Please put rent control on again in Oklahoma City. Our landlord has raised the rent from $45 to $65 a month, and we can't pay it. We have one boy 11 years old and no one will take a child. We looked at a place Sunday which rented under rent control for $30 a month. Now it is $65. I don't know what we and dozens and dozens of families are going to do."

This housewife went on to say that she would have to move from her home on January 9. That was a week ago. I hope she was able to find a new place to live.

I wish I could have done something to help her. But I couldn't. Oklahoma City was decontrolled by action of the local city council.

There is another factor which now faces families in cities where rent control has been lifted prematurely. It is fear of eviction.

A moment ago, I said to you that hundreds of families have reported increases in rent. But for every family who reports an increase, there are thousands more who are afraid to do so for fear of being evicted. Time after time, as we talked to people in the cities I have told you about, we were met with this statement: "I can't let you use my name because I might be evicted if my landlord found out that I reported the increase."

Some people argue that rent control should be abolished right away. Landlords have been particularly vocal about it. And I am the first to admit that they have their side of the story. In a short time I expect to issue a statement on our present liberal policy for granting increases in rent to landlords.

Some people argue that rent control should be abolished right away. No one wants controls any longer than is absolutely necessary. But we still have rent control because the need for housing is so critical in many cities and towns that the premature lifting of controls forces tenants to pay exorbitant increases in rent.

I have already told you what has happened to rents in some cities. Let me repeat the amounts of those increases.

In Dallas, rent increases average 35 percent.

In Houston, 41 percent; 30 percent in Topeka; Knoxville, 27; Salt Lake City, 16; and 26 in Jacksonville.

If you want to know what it would mean to you to pay an increase in rent like families in these cities and others are paying, just take a piece of paper and pencil and figure out how much of a dent it would make in your own budget to pay an increase of 35 percent.

Last year, committees in the Senate and the House of Representatives held hearings on rent control and reported to the Congress that controls should be continued. Both of these reports made statements concerning the effect of lifting rent control which are very significant. The Senate report says: "If rent controls are relaxed, or lifted entirely so that rents continue to go up, we are likely to find that the farm groups, industry, retail trade, the whole economy would suffer a severe blow. * * * Any increase in rents today would be at the expense of diets, medical care, clothing, and other necessities of life of millions of American citizens."

This report to the Senate has proven to be "the handwriting on the wall." The prophecy has come true. You have heard what happens when rent control is lifted too soon. The families who are paying increased rents cannot afford clothing they need, and other necessities of life, such as food and medical care. This cut in their purchasing power has already had its effect upon retail trade and will continue to do so, because the increased rents come due every month.

As I said, we still have rent control because the shortage of housing in many cities is still so critical that the lifting of controls forces tenants to pay increases in rent that result in actual hardship. The removal of rent control is not the solution to our continuing housing shortage. That is like taking away a sick man's medicine to see whether he will get worse. The way to end the housing shortage and get rid of rent control is to build more homes. And when it is possible for the average family with an income of around $50 a week to get a place to rent at a price they can afford, then, and not until then, can we abolish rent control.

Your Taxes Can Be Cut

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. REED of New York. Mr. Speaker, the people are demanding some relief from the overwhelming burden of taxation which they have borne with patience during the spending orgy of the Fabian socialistic administration.

When the average burden of taxes from excises alone amount to about $700 per family in the United States to furnish boondoggling funds for the spendthrift administration it is more than the people will bear.

Under leave to extend heretofore granted, I am inserting an article by David Camelon which appeared in the American Weekly of January 22, 1950:

YOUR TAXES CAN BE CUT

CANADA HAS PROVED THAT IT'S GOOD BUSINESS FOR EVERYONE, INCLUDING THE GOVERNMENT, TO PUT MORE SPENDING MONEY IN THE POCKETS OF ITS PEOPLE

(By David Camelon)

The lady gasped at the list of the thousands of taxes she had to pay.

"Oo-o-o-o-h," she said with a shudder, "no wonder my budget won't stretch."

Wait, sweetheart. You could be wrong again.

We gave you the bad news in the American Weekly last week. It was a tough jolt. We told you all the taxes you pay every day. Hidden taxes—luxury taxes—nuisance taxes—taxes on everything you touch from the moment you wake up.

But maybe something can be done about it.

You want more spending money, sweetheart? There isn't a reason in the world why you shouldn't have it. How? By cutting taxes.

That way, you can have more money—the government can have more money—and everybody can be happy.

Sounds like double talk? It isn't sweetheart. Many of our best-informed men—men like Senator WALTER F. GEORGE, of Georgia, veteran chairman of the Senate Finance Committee—say that it is just plain common sense.

Why? We'll get to that.

First, let's take a look at Canada. Canada believed it made sense, too. But Canada didn't stop there. Canada acted. It cut taxes. It gave your cousins across the border more money to spend. And the idea, Canadians say, is working out fine for everyone—including the Canadian Government.

Suppose you were sitting by your radio in Canada one evening not so long ago. You wouldn't have heard President Truman asking for more taxes. You'd have heard Canada's Minister of Finance, the Honorable D. C. Abbott, announcing a program of tax reduction "such as no parliament has ever made before, here or anywhere else, I believe."

He spoke with pride of Canada:

"During the past year this community of free people has produced a record quantity of consumer goods, and at the same time has produced and installed a huge amount of new and improved capital equipment which promises still greater output in the years immediately ahead."

He said he was going to make sure that the people would have more money, so that they could buy the goods they were making. He said that was good for the people.

"Consumers should have more money to spend this year than last," he said. He added that that would happen partly as a result of the tax reductions which I shall be inviting this House (Parliament) to approve.

He pointed out that there were so many things in the stores for the people to buy that in some cases we can observe the occasional emergence * * * of bargain sales by retailers, something which we had almost forgotten to be a normal part of business.

He wanted you—if you were a Canadian—to have enough money in your purse to take advantage of those bargains.

Mr. Abbott said that taxes should cause as little harm and irritation as possible. He explained that he was cutting taxes because the people wanted him to. He said:

"I have been led to believe in recent months * * * that most of the Canadian people would support, and even welcome, an enlarged measure of tax reduction this year."

Here's what Mr. Abbott did:

He repealed the tax on transportation. (You still pay 15 percent.)

He repealed (a year ago) the tax on amusements. (You still pay 20 percent.)

He repealed the tax on telephone calls. (You still pay it.)

He reduced the tax on jewelry to 10 percent—and he applied it, not to the retail price, but to the manufacturer's price. That's a double reduction—because the manufacturer's price is, frequently, only half of the retail price. (You pay 20 percent of the retail price.)

He reduced the tax on cosmetics to 10 percent on the manufacturer's price. (You pay 20 percent of the retail price.)

He reduced the tax on luggage, bags, purses, fountain pens, cigaret lighters, and similar goods to 10 percent—again on the manufacturer's price. (You pay 20 percent of the retail price.)

He reduced and adjusted the excise taxes on several other things.

And for the third time since the end of the war, he reduced income taxes—by increasing personal exemptions, and lowering the rates.

The personal exemption for a single person was raised from $750 to $1,000. (Here in the United States a single person's exemption is only $600.)

The personal exemption of a married person was increased from $1,500 to $2,000. (If you're married, in the United States, your exemption is $1,200.)

Families with children got an even better break. In the United States, a family with two children would get a total exemption of $2,400. In Canada, in addition to exemptions for children, the Government pays a family $72 a year for each child. On this

basis, a married man with two children who made $3,000 a year in Canada would find the Government owing him a balance of $39.

And a married man with two children, making $5,000 a year, got a tax reduction of $177—or 28 percent.

You can buy a lot of pork chops—and pancake make-up—with $177, sweetheart. Particularly when the cosmetic tax has been cut.

By those changes, Mr. Abbott said, Canada had returned to the prewar level of personal exemptions. He estimated that an additional 725,000 men and women wouldn't have to pay any income taxes at all. In the United States, with a population 12 times as big as Canada's, that would be the same as excusing 9,000,000 more people from paying income taxes.

Sounds good, doesn't it?

And don't let anyone tell you Canada could cut taxes because her debt wasn't as big as ours. In proportion to her income, Canada owes more. Her national income, in 1947, was only 5 percent of ours, but her national debt was 6 percent. The war cost Canada money, too.

What has been the result of Canada's tax cuts? A responsible government official said:

"The tax program has already given the people more money to spend. Business is booming. From every side we get reports of increased business—increased income.

"We have avoided the business slump—and the increase in unemployment—that the United States experienced recently. We're tremendously optimistic. We are sure, now, that the revenue flowing from the increase in business and in our national income will more than offset the immediate loss of revenue from the tax cuts."

Why can't the same thing be done here? It can.

Senator GEORGE said:

"Canada is moving in the right direction. We can, and must, follow a similar path."

Among the first to go, Senator GEORGE said, must be the wartime excise taxes—those luxury taxes that Canada has already repealed or reduced. He said:

"Those taxes were imposed during the war largely to discourage civilian buying. The purpose was to save raw materials and labor for essential war work.

"They were deliberately repressive on business. They tended to produce unemployment in civilian fields."

High income taxes had the same effect.

In time of war, the Senator said, that may be necessary. But high taxes—taxes that act as a brake on business, that tend to produce unemployment—are precisely what we don't need in time of peace.

Follow the Senator through some figures here. They aren't hard to get—and they'll show you why taxes not only can, but must, be cut.

Our total taxes—Federal, State and local, are running close to $60,000,000,000 a year. Senator GEORGE didn't believe—apart from wishful thinking—that there was much real hope of making any material reduction in that $60,000,000,000 revenue in the next few years.

Even with that enormous revenue, the Senator said, the Federal Government will face a deficit at the end of its fiscal year next June 30 of from $5,000,000,000 to $6,000,000,000.

President Truman has asked for more taxes to cover that deficit. Senator GEORGE said:

"I regret to say that I feel the President's theory of covering a deficit by higher taxes is entirely erroneous. I know of no way to meet that deficit except by easing the tax burden and increasing the income of the people who must produce those taxes.

"I know of no way in which you can get more income and production in a sound economy by increasing the burden on the producers."

America's national income, he pointed out, is slightly more than $200,000,000,000 a year. With a total tax of $60,000,000,000, that means that roughly 30 percent of our national income goes to pay taxes.

If we should increase the already repressive taxes, the Senator said, the national income would drop. If it went down to $150,000,000,000, we would have to pay 40 percent of it to meet the tax bill.

"That would be a crushing tax burden on the people," Senator GEORGE said. "It in turn would constitute an even greater brake on business. We would see tax collections dropping—and the deficit increasing."

If, however, we did what Canada did—if we cut taxes now, if we took the brake off business and employment, the national income would, in Senator GEORGE's opinion, increase immediately. He said:

"The national income is simply what every person in the country gets for the goods and services he produces. If we lift the tax burden from the people who produce that income—from every man and woman—I believe that within 3 to 5 years our national income may rise to $300,000,000,000.

"With a national income that big, we would have to pay only 20 percent of it to meet the tax load. That in itself would be a tremendous spur to our business."

With lower taxes, the Senator said, the people will have an incentive to produce more—and will have more money to buy their increased products.

He endorsed another of Canada's tax-reduction moves—the elimination of double taxation on corporate profits. In announcing that move to Parliament, Mr. Abbott said:

"Today we find governments in this country, as well as in most other countries, taxing away at least a third of corporate profits.

"In addition, the personal income-tax rates apply in full to what is distributed out of the remaining two-thirds. The tax may be as high as 80 percent upon distribution to shareholders.

"It seems to me that under a system of private enterprise which depends for its existence on a steady flow of venture capital we cannot afford to neglect the implication of this defect in our tax system."

Mr. Abbott reduced the tax on corporate profits to 10 percent in the case of small business. And he allowed every individual to take a credit against his personal income tax equal to 10 percent of the dividends received from Canadian corporations.

He announced that this was only a start on the problem of eliminating double taxation on profits.

Such a move, Senator GEORGE agreed, will encourage Canadians to use their money to buy the tools and new plants necessary to keep production climbing—in the words of Mr. Abbott, to produce even more of the capital equipment which "promises still greater output in the years immediately ahead."

Senator GEORGE said we can do one of two things:

We can raise taxes, with the risk of depressing business and reducing our income; or we can lower taxes, taking a temporary loss in tax revenue, with the certainty that any loss will be more than made up by the stimulation to business, more employment, and greater national income.

Well, there you've got it, sweetheart.

Which would you rather do?

Amending the Rules of the House

EXTENSION OF REMARKS
OF
HON. WILLIAM L. PFEIFFER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. WILLIAM L. PFEIFFER. Mr. Speaker, on January 3, 1949, I voted against the rule change, as at that time I believed much undesirable legislation would be proposed to the House unless adequately screened by a responsible Rules Committee.

The Democratic Party's tremendous spending and tax program, designed to bring socialism to this country, in the first session of the Eighty-first Congress has proven that I was right.

The Democratic leadership now, through political maneuvering, has tried to couple the civil-rights program with this proposed rule change. They use the civil-rights issue only as a smoke screen, and I deplore such tactics. The Republican Party is pledged to support FEPC and other component parts of the civil-rights program. I have long been an advocate of this, and shall vote for it when it comes before the House. Failure to change the rules last Friday gave the Speaker of the House today opportunity to recognize the chairman of the Education and Labor Committee, in order to bring up the civil-rights bill. He chose, instead, to recognize another chairman and by his action it must be obvious to all that the Democratic leadership of this House has no desire to act on civil rights despite their many empty promises.

FEPC

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1950

Mr. WHITE of Idaho. Mr. Speaker, the effect of application of the provision of the proposed FEPC law as presented in a letter from Mr. Kern Dodge, a prominent engineer of Philadelphia, is submitted herewith for the consideration of my colleagues:

PHILADELPHIA, PA., *January 16, 1950.*

DEAR CONGRESSMAN: By all means, vote against any so-called civil-rights measures, especially those having to do with fair-employment practices. Such a bill would deny employer freedom of contract; deny the employer the right of selective judgment in procuring his employees; deny to fellow employees the right of selecting associates; deny the employer the right to hire, promote, or discharge employees upon the basis of their efficiency, merit, or faithfulness.

It would subject the employer to endless investigation, harassment, and possible fines and penalties, determined by a commission.

It would deny the employer the right of

trial by jury, and give him no right to a review of the facts found by the commission.

It would compel the employer to give testimony against himself and expose his private letters, books, and papers for the inspection and investigation of a horde of employees of the commission.

It would compel the employer to hire a person whom he did not wish to have in his employ, and deny him the privilege of selecting an employee of his own choice.

Such a commission would have the power to make rules and regulations which have the effect of laws, of which we have more than enough, and which hamstring business.

I am sure you would not vote for a bill which would require a person of a certain race or color to work for another against his will. Therefore, you should not vote for any bill which would require another person to employ someone to work for him against such employer's will.

This whole civil-rights program is being pressed by certain minority groups who are not satisfied with life in the finest country in the world, but who wish to remake it for their own special selfish benefit.

Yours very truly,

KERN DODGE.

How Congress Makes a Law

EXTENSION OF REMARKS
OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, we in the Senate of the United States work with the complex machinery of national legislation every day. An idea is born. We know that it must pass over a long and rocky road to become a law. This knowledge has become almost of second nature to us—so much so, perhaps, that in the turmoil of our busy days we are apt to forget how important it is that every American understand, at least in a general way, the "whats," "wheres," and "whys" of our legislative process. And it is helpful too, I believe, that every once in a while we in the Congress, as well as the American public, be reminded of all these complicated steps in our national law-making.

I feel that now, while the Eighty-first Congress is still in the early days of its second session, is a good time for all of us to review once again how we in the United States get a national law, and so here, in broad and easily understood terms, in the text of my regular biweekly broadcast of the week end of January 20–22, inclusive, to the people of Pennsylvania, is a discussion of the steps and pitfalls that lie ahead of any proposed legislation before it can become law. I ask unanimous consent to have my remarks printed in the Appendix to the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

(Radio address by United States Senator FRANCIS J. MYERS, of Pennsylvania)

I have intended in one of these regular radio reports to the people of Pennsylvania to paint in broad strokes a picture of the way a piece of legislation is born, and the fashion in which it ultimately grows up to become a public law.

Of course, to those of us who are Members of the House of Representatives or the Senate, knowledge of this sort is part of our stock-in-trade, but I have often been surprised, in reading over my mail, or in talking to Pennsylvanians who come to see me, when I realize that relatively little is understood about the way the Congress operates.

RESEARCH NECESSARY TO DRAW UP BILLS

Let us suppose that a matter comes to my attention with the indication that it would be desirable to pass a law relating to it. The first step, naturally, involves quite a bit of research into the existing laws we already have on the books to make absolutely certain that there is no legislative provision which covers the situation. When I am satisfied that no suitable legislation exists, the next step is one of collecting all of the factual background I can possibly get in order that I may be sure the proposal has merit.

In gathering these facts, it is frequently necessary to call upon experts in Pennsylvania who are acquainted with the matter, and who can explain what this will mean to the people of our State. It is also necessary, quite frequently, to call upon representatives of the local, or the State, or the Federal Government, for their comments and recommendations regarding the proposal.

Then, with all the facts before me, I go over the various means which have been suggested for accomplishing the desired result. Then follows the job of drawing up a bill, which, in appropriate legal terms, will carry out the intended purpose of the law. Members of the Senate are assisted in drafting this legal language by an official group known as the Legislative Counsel, a body of skilled lawyers, who are expert in drawing up legislation.

The steps I have enumerated thus far may, in the case of comprehensive legislation, consume weeks, or even months, before I am satisfied that we have come up with a proposal suitable for the purpose at hand. On the other hand, of course, there are occasions where the facts are clear from the start, where the remedy needed is a simple one that may be accomplished with the passage of a short, concise piece of legislation.

INTRODUCING THE BILL

In any event, once the bill is drafted, the rules of the Senate permit any Member to introduce a bill at any time, or at least there are very few occasions in the Senate when we may not interrupt debate long enough to introduce a piece of proposed legislation. This is accomplished by rising from your chair on the Senate floor and being recognized by the Presiding Officer, explaining that you wish to submit a bill.

Only under the most unusual circumstances does the Senate proceed immediately to consider and vote on the proposal at the time it is introduced. Instead, the Presiding Officer of the Senate refers the proposal to one of the standing legislative committees.

WORK OF LEGISLATIVE COMMITTEES

Now let me explain to you just what these legislative committees do. We have, in the Senate, a total of 15 such committees, and I will name each of them now in order that you can see the type of legislation which each of these considers. We have a Committee on Agriculture and Forestry, a Committee on Appropriations, on Armed Services, on Banking and Currency, a Committee on the District of Columbia, on Expenditures in the Executive Departments, on Finance, a Committee on Foreign Relations, and then on Interior and Insular Affairs, a Committee on Interstate and Foreign Commerce, and on the Judiciary, a Committee on Labor and Public Welfare, and one on Post Office and Civil Service, another on Public Works, and on Rules and Administration.

With the exception of the Appropriations Committee, each of these 15 committees is composed of 13 of the 96 Members of the Senate. As a general practice, every Senator serves on two such legislative committees. I, for example, am a member of the Finance Committee and the Senate Committee on Interstate and Foreign Commerce. In the Eighty-first Congress, in which, as you know, the Democrats outnumber the Republicans in both Houses, there are usually 8 Democrats and 5 Republicans to make up the 13 members of the committees, since this ratio is approximately proportional to the ratio of Democrats to Republicans in the Senate.

When you stop to think about it, it is obvious why we must have a committee system in the Congress. Let me illustrate this by pointing out that 2,675 separate bills were introduced by the 96 Members of the Senate in the first session of the Eighty-first Congress. It's obvious that no Member of the Senate could be familiar with all of the provisions of all of these bills. It's obvious, too, that there may be 3 or 4, or sometimes as many as 15 or 20, bills introduced by different Senators, all of which deal with aspects of the same problem.

So the primary purpose of our legislative committees is to provide the Senate with a relatively small group which becomes expert, say, in matters of the armed services. All of the bills that relate to the armed services are referred to that committee. It is the committee's duty to examine them all. The committee may decide it would be preferable to group a number of bills together, consider them all at once and report out a single piece of legislation which covers all of the situations visualized by those separate measures. On the other hand, the committee may have before it only one bill which relates to a given proposal, and in that event, the measure will be considered separately.

It is surprising how few of the bills referred to any committee are controversial. And under these circumstances, the committee will examine the merits of the proposal and perhaps vote to report the original bill pretty much in the form it was submitted, recommending, at the same time, that the Senate act favorably upon it.

HOW CONTROVERSIAL MEASURES ARE HANDLED

Where a number of bills are considered at the same time, however, where the matters involved are steeped in controversy over the way a situation should be handled, the usual practice of the committee is to appoint a subcommittee and conduct public hearings. To these hearings are invited the representatives of groups interested in the legislation being considered. These witnesses explain to the subcommittee why they favor or oppose the various proposals under discussion. Particularly when the subject matter is comprehensive in its scope and controversial in its nature, subcommittee hearings may go on for months and months in an endeavor to put all of the facts of the case before the subcommittee.

When at last the committee is satisfied that no new facts will be brought to light, the hearings are brought to a close, and the members go into what is known as executive session. Here they debate among themselves all the various proposals, rejecting those that are clearly unsuitable and attempting to work out provisions upon which all the members can agree.

During the course of executive sessions efforts are made to draft a single bill containing the proposals agreed to, and ultimately the 13 members vote to recommend the new bill to the Senate. Such a committee vote may produce any number of results. All 13

members may agree unanimously to the bill as it then stands. This has been especially true in the field of foreign policy, where Republicans and Democrats alike on that committee have agreed down to the last comma on virtually every measure reported from that committee. Unanimous agreement by the 13 members characterizes the vote in most committees on most legislation.

There are, of course, the few occasions—occasions that are always given tremendous publicity—in which a committee divides right down the middle and votes squarely along party lines, the Democrats voting one way, the Republicans the other. As I say, this doesn't happen often among the experts who know most about the legislation before them. When a committee does vote 8 to 5 to report a bill in a particular form, the five minority members almost invariably write a dissenting report, and you can generally count on a fight when such a measure hits the Senate floor.

I will say a brief word about the reports which accompany each bill as it is voted out of committee and sent to the Senate. These reports usually outline the provisions of the bill and summarize the committee's reasons for recommending passage of the measure. A minority report points a finger at the provisions in the bill which the minority does not endorse and gives the reasons for its opposition.

There is a final possibility that may result from a committee vote. The committee may vote to report out no legislation at all, thus bottling a bill up in committee and, in effect, killing any chance that the Senate might consider it at all.

When this happens, about the only way in which the Senate may bring the issue to a vote is through the extraordinary tactic of the Senate itself voting to discharge the committee of further consideration of the bill. You may recall that this tactic was proposed late last summer as a means of bringing the displaced-persons bill out to the Senate floor. Before that tactic had been attempted, however, the Judiciary Committee did vote to report out the bill.

THE SENATE CALENDAR

Once a bill has been reported out of committee, it is placed upon the calendar of the Senate. The calendar is simply a list of bills upon which committee work has been completed and that are all ready for action.

It may surprise many of you, but almost all the bills passed by the Senate are passed with the unanimous consent of the entire body. This is accomplished by what we refer to as calling the calendar. When this is done, we read down the list of bills, and if no objection is heard to the bill at the time its number is called, the measure is passed by unanimous consent. However, if only one Senator opposes a bill, he may enter an objection when the number is called, and the bill is held over to be brought up later for debate, and ultimately to be voted upon.

DUTIES OF MAJORITY POLICY COMMITTEE

Once a bill has been objected to and passed over, it remains on the Senate Calendar. Thereafter, it becomes the duty of the Majority Policy Committee of the Senate to determine the time at which the measure will be brought up for debate. In my capacity as the assistant majority leader of the Senate, or the whip, as the job is otherwise known, I am one of the eight Democratic Senators who serve on the Majority Policy Committee. Our job, as I've already indicated, is, first, to determine the sequence in which legislation is brought up for debate. The Policy Committee has the further function of mapping the general strategy which will be used in guiding the legislative program of the administration.

When the Policy Committee met shortly before the first day of this session of the Eighty-first Congress, we decided to bring up the oleo bill as the initial measure the Senate would consider.

Once a measure has been selected for debate, the efforts to obtain passage of the bill are usually assumed by the Senators who serve on the committee which processed the legislation, since they are the real experts on the measure, and the Senate necessarily must rely on their special knowledge of the facts. The committee members are, of course, assisted by the Senate leaders, and for that matter, by any other Senators who wish to participate in the debate.

FINAL STEPS

The bill, as you realize, must be agreed to in every respect by both the House and the Senate before it can be sent to the President for his signature, making it a Public Law. So, if the Senate is the first to pass the bill, it is referred then to the House of Representatives for consideration. If, on the other hand, the House has already passed the measure, but in a slightly different form from the Senate version, a conference committee, composed of a few Representatives and a few Senators, is appointed, and the compromise agreement is ultimately sent back to each House for its approval before sending it to the President.

Thus it is that a law is passed by the Congress.

The Quack

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24 (legislative day of Wednesday, January 4), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Quack," appearing in the Omaha Evening World-Herald of January 20.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE QUACK

If a faith healer were named medical czar of the United States, it is likely that the past presidents of the American Medical Association would have some salty things to say about the fellow.

A situation similar to that has arisen among economists, now that Leon Keyserling has become the No. 1 economist in the Truman administration. It is widely predicted that he will shortly be named chairman of the President's Council of Economic Advisers, of which he is acting chairman at present.

Mr. Keyserling is an ersatz economist. C. P. Ives, of the Baltimore Sun, in looking into the man's qualifications, discovered that he has practically no preparation or standing in the field in which he is now so prominent. He holds no academic degrees in economics. His sole published work in the field is described by Mr. Ives as "a second-prize essay on postwar economic policy in a promotion contest run by a brewing company."

His experience amounted to 1 year as an assistant in economics at Columbia University when he was 24 years old. Mr. Keyserling became a member of the American Economic Association, the professional society of working economists, only after he had been appointed an economic adviser to the President in 1947.

Four past presidents of the American Economic Association have paid their respects to Mr. Keyserling in uniformly uncomplimentary fashion.

Dr. Edwin C. Nourse, a former AEA head, made known his sharp differences with Mr. Keyserling when he (Dr. Nourse) resigned as chairman of the Council of Economic Advisers.

Senator PAUL DOUGLAS, Democrat, of Illinois, who once headed the AEA, crossed swords with Keyserling over the latter's insistence upon restrictive controls a year ago when practically everyone else knew that inflation had ebbed. A Senate committee headed by Mr. DOUGLAS has noted "how unsafe it is to base fiscal policy" upon economic predictions.

Dr. E. H. Ellis, who headed the economists' group last year, is the sharpest Keyserling critic. He has accused Mr. Keyserling of befuddlement or dissimulation and casuistry. "Honesty," says Dr. Ellis, referring to the policies of Dr. Nourse, "is apt to be better long-run policy than Keyserling's (congressional) testimony."

Another critic is Princeton's Dr. Jacob Viner, outstanding economist who headed the AEA in 1939, and who once worked for the Federal Government. He once told Keyserling at a public meeting that if a Government official speaks to the public, he has to speak his master's voice. When Mr. Keyserling objected to Dr. Viner being the keeper of my conscience, the Princeton professor snapped:

"I am not interested in your conscience, Mr. Keyserling. I have enough trouble with my own. I am interested in institutions—American institutions."

Such is the indictment of Economist Keyserling by some of the country's leading economists.

Whether it will sway the President of the United States in naming a new chairman for the CEA remains to be seen. Mr. Truman ordinarily is more concerned with loyalty than with competence. And Mr. Keyserling has been loyal.

The most effective way to rid the Federal Government of Mr. Keyserling and his odd theories would be for Congress to abolish the Council of Economic Advisers, on the grounds that it has become simply a political tool of the White House.

Formosa and the Truman Doctrine

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24 (legislative day of Wednesday, January 4), 1950

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Tears of the Crocodile," published in the Washington Post of today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TEARS OF THE CROCODILE

Among the myths that are being sedulously circulated as a result of the Formosa decision is that the administration has killed its own Truman doctrine. The funeral orations have been delivered by one after the other of the China interventionists in Congress. Some of them never favored the Truman doctrine, anyway, but that fact, far from moderating their wailing, has made their lamentations even more shrill. A flock

of commentators has seconded the dirge, and the only person who seems unperturbed by the outcry is the parent who is accused of the foul murder of his child, viz, President Truman.

Mr. Truman is not as hard-hearted as the serenity he maintains in the midst of this Irish wake would seem to indicate. We have consulted the child's birth certificate, dated March 13, 1947, and can vouch for the fact that whatever has been killed, it is not the Truman doctrine. The Truman doctrine, contrary to the burial notices, was not a declaration to "contain" Communist expansion. Indeed, a reading and rereading of the message does not disclose either the word "containment" or the word "communism." The message, inspired by Britain's announcement that it could no longer help Greece, laid down this general policy:

"It must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressure."

The first thing to notice about the declaration is its positiveness; it was for, not against. It emphasizes aid, to be given in one or more of a variety of forms, depending upon circumstances. However, the doctrine indicated what kind of aid was primarily meant; it was economic:

"Our help should be primarily economic and financial aid which is essential to economic stability and orderly political processes."

On the basis of the Truman doctrine, economic and financial aid and then military aid started to flow to Greece and also to Turkey. The reason was that Greece and Turkey were struggling to prevent the Russians from cutting the Mediterranean and encircling the Middle East. Ask any military strategist and you will find that this was all-important to American security. There is only one Mediterranean, only one Greece; and, as Secretary Acheson has said, the American interest differs with locality. In this sense the Truman doctrine has been administered—is still being administered. It is being applied all over the world according to the requirements of situations and geography and the limitations of American resources.

Out of the Truman doctrine, for instance, stemmed the Marshall plan in Europe and the Far East. The Marshall plan followed the wise maxim underlying the Truman doctrine of helping people who helped themselves. It would have been money down the drain to have any other rule. Wherever there was a contrary practice, as in China, the result has been worse than wasteful; it has been a boomerang. The Marshall plan, moreover, was followed by the North Atlantic Pact and the arms program—all tracing back to the Truman doctrine. They all sprang from the original concept of supporting free peoples who were struggling to keep themselves free which was expressed in the Truman doctrine. The conclusion is that the crocodile tears now being shed over the demise of the Truman doctrine are all eyewash.

Wheat for India

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by Mr. J. J. Singh, president of the India League of America. This letter appeared in the columns of the New York Times on December 25, 1949.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

INDIA LEAGUE OF AMERICA,
New York, N. Y., December 20, 1949.

To the EDITOR OF THE NEW YORK TIMES:

During the visit of Prime Minister Nehru to this country, several newspaper stories appeared indicating that a barter deal was in progress, whereby the United States would sell 1,000,000 tons of wheat to India in exchange for such raw materials as mica, manganese, etc., which the United States needs.

It is very regrettable that, according to information available, this barter deal has met snags and has bogged down. This means that the urgently needed wheat for the hungry in India is not available.

One of the snags is that India will not be able to supply mica, manganese, and other raw materials of a similar nature for several years to come. The reasons being (a) the next 3 or 4 years' supplies are already pledged, and (b) that with the devaluation of the rupee, 40 percent additional quantities have to be produced.

It seems very unfortunate that due to red tape and technicalities, valuable time is being lost and India's food situation is being allowed to deteriorate.

Surely, with the cooperation of the State Department, the Secretary of Agriculture, and the Commodity Credit Corporation, a way could be found to overcome some of the technical difficulties—and if a barter deal is not feasible at this stage, then wheat should be sold to India on a long-range credit basis. The sale has to be on a credit basis for the simple reason that India, like many other countries, does not have the necessary dollars to purchase and pay on the barrel.

Sale of a million tons of wheat to India on a long-range credit basis is a two-way street. It will help India and it will also lessen the burden of the United States taxpayer.

It is authoritatively reported that under the farm price-support program, the United States Government has bought, paid for, and is storing surplus farm commodities valued at millions of dollars. It is costing United States taxpayers $237,000 a day for storage and carrying charges on these farm products. By selling 1,000,000 tons of wheat to India, the American taxpayers' burden will be lessened.

India's economy is in a critical condition. And it is chiefly due to the lack of food. The Indian Government has had to buy, at very high prices, food in different parts of the world, to avert a large-scale famine. Such heavy expenditures for food grains have reduced India's capacity to import other essential capital goods to help India's economy.

A loan of a million tons of wheat would stabilize food grain prices in India and will feed millions of hungry mouths. This in turn will keep the masses satisfied and reduce the possibilities of Communist propaganda amongst the hungry people.

I do not believe in flaunting the danger of communism at every stage and turn. However, this aspect cannot be overlooked.

Strong and surging Communist forces are nearing the borders of India. The defection of the Governor of the Sikang Province to the Communists brings real danger to Tibet.

From all reports available, the Chinese Communists plan to move into Tibet in the very near future. Some reports indicate that infiltration has already taken place. This is to presage a fake internal revolution to depose the young Lama. The irony is that there is very little that India and the western democracies can do in this instance. No military or material aid is possible. Also, Communist China could probably make a good legal case for hoisting their flag at Lhasa. Tibet has been considered part of China since early seventh century A. D. The Chiang Kai-shek regime, too, has consistently maintained that position.

Once Tibet comes under the control of the Communists, serious troubles for India are likely to begin. Because it would be easier then for the Communists to infiltrate into India through the two small Himalayan kingdoms of Nepal and Bhutan whose northern borders join Tibet and southern borders join India.

It is true that the reigning house of Nepal is very friendly toward India (a treaty of friendship and commerce is being negotiated) and the western democracies, and the Government of the United States has a full-fledged mission stationed there. And Bhutan, which receives a large subsidy from India and whose foreign affairs, since August 1949, have been in the hands of the Government of India, is being more or less run by India. Yet, it must not be forgotten that ethnologically, the Nepalese and Bhutanese are Mongoloids like the Tibetans. This will make "infiltration" very easy.

Then, too, there are no democratic institutions in these kingdoms. The Communists are sure to take full advantage of that by appealing to the poor masses against the rule by the few.

Solutions are hard to find under such conditions. However, one of the apparent solutions is to encourage and strengthen the democratic forces in India. And one of the ways to achieve that end is for the United States to help India in putting more food into hungry mouths and in stabilizing food prices.

Such a gesture from this democracy will mean a lot to democratic forces all over Asia. It may even give India a chance to counteract Communist propaganda in Nepal and Bhutan, thus stopping the Communists on the border of Tibet.

J. J. SINGH, *President,*
India League of America.

Rural Electrification

EXTENSION OF REMARKS

OF

HON BOYD TACKETT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. TACKETT. Mr. Speaker, a couple of my colleagues have conscientiously protested my opposition to the activities of the Southwestern Power Administration, which is their privilege under our great American heritage. It is noted with interest that these eminent gentlemen purport to justify the activities of the Southwestern Power Administration by emphasizing the success of the rural electrification program. Perhaps these two good friends of mine are unconsciously influenced by the fact that the activities of the SPA deserve no praise and cannot be justified.

REA AND SPA ARE SEPARATE

When a boy on the farm, like my neighboring boyhood friends, I longed for the day when I could live in the small town nearby that I might enjoy some of the comforts and entitlements of life principally afforded by electric service. However, it is now possible to visualize

a near future when the people of the metropolitan areas will be living for that day when it will be possible for them to move to and reside within the wide open rural spaces where they will at the same time be afforded equal comforts of life to those within the metropolitan areas.

Hamstring the rural electrification program? No. I would do absolutely nothing detrimental to this great enterprise and will always use every honorable means at my command to further this most meritorious project. I am a devout advocate of rural electrification, and I am just as anxious as any person in this country to see every farm within the United States electrified at the earliest possible date.

Actions speak louder than words. Therefore, I suggest that some of the proponents of the SPA activities who would accuse me of being unfriendly to the REA program scrutinize my past activities concerning this subject. I have a public record of several years, and the people within my area know of my activities on behalf of the rural electric cooperatives. During my tenure in Congress I have consistently supported the REA program. In every one of my 62 speeches before civic organizations in Arkansas during the 45 days immediately preceding this last Christmas I highly praised the rural electrification program and, at the same time, lost no opportunity to advise the people that in my opinion the Southwestern Power Administration would eventually attempt to do just exactly what it is now doing by means of the SPA-REA contract. I sincerely feel that my efforts to prohibit the SPA from taking over the facilities and privileges of the involved electric cooperatives is my duty as a friend and representative of the farmers and electric cooperative membership within my district.

The REA and the SPA are distinct and separate programs, and the SPA has contributed nothing to advance or promote the high standards of rural electrification. The rural electrification program is a successful, meritorious, free, and independent organization—the respective electric cooperatives being owned, controlled, governed, and operated by and for the membership, with justifiable authority under our American way of life to freely engage in bringing electric service to the rural areas of our country.

The Southwestern Power Administration, on the other hand, is an agency of the Federal Government under the Department of the Interior with limited congressional authority to pool power and energy produced from Government multiple-purpose dams and distribute such power and energy as provided by law at rates to be approved by the Federal Power Commission.

I wholeheartedly concur in the statements of one of my fellow colleagues that rural electrification has been a long and hard struggle; that the remaining unserved 33 percent of rural Arkansas should be electrified under the splendid rural electrification program without delay; and that rural electrification is just now coming into full fruition. However, these facts do not in anywise justify the activities of the SPA. It cannot be contended that the SPA should be credited with having electrified 67 percent of the rural areas within the State of Arkansas, but, to the contrary, these achievements have been realized under the authority granted by the Rural Electrification Act of 1936. It is not necessary to allow the Department of the Interior, through the Southwestern Power Administration, to nationalize, federalize, and socialize the rural electric cooperatives in order to bring electricity to the remaining 33 percent of the unserved rural area of our State.

GENERATING PLANTS AND TRANSMISSION LINES

Yes; the rural electric cooperatives should be and are authorized and entitled to construct electric generating units and transmission lines that the cheapest possible electric energy may be made available to the membership in accordance with good business principles under our system of free enterprise. However, I insist that the Southwestern Power Administration is not justifiably entitled to similar authorizations if we are to maintain our principles of democracy, assist our rural electrification program, and uphold our belief in private ownership.

To allow the Federal Government, through its SPA agency, to establish and dictate policies for the rural electric cooperatives, and to use, control, and receive all benefits from electric generating and transmission facilities constructed by the cooperatives is nothing less than an authorization to federalize the rural electric cooperatives, permit the SPA to expand its legal jurisdiction, and place the Government in direct competition with its citizens.

THE FEDERAL GOVERNMENT AS A COMPETITOR

As brought to our attention by one of my colleagues, I likewise know of but very few, especially within our section, who do not believe in free, competitive enterprise. Perhaps it should be added that I know of even a lesser number in our area who believe that one of the competitors in free competition should be the Federal Government. I would not hazard the contention that the rural cooperatives or others engaged in the power industry could produce electricity as cheaply as the nontaxpaying Federal Government. No doubt we could buy our food and clothing a lot cheaper at Government-owned grocery and clothing stores.

Those proposing to place the Government, through its SPA agency, into the power field as a competitor in order to assure cheaper energy than the taxpaying electric cooperatives and others engaged in the power industry can produce could just as successfully contend that we should have Government-owned parallel and duplicating railway and streetcar tracks; airplane, boat, bus, and truck routes; telephone and telegraph lines; and radio and television channels. Petroleum, gas, and coal could be produced cheaper by the Government. No doubt all of these businesses are in the plans of those seeking to use the Government as a competitor to free enterprise. The ultimate results of such a plan can only mean Government operation and eventual ownership.

SPA-REA CONTRACT ABOLISHES COMPETITION

Prior to the approval of the SPA-REA contract the rural electric cooperatives within the Southwest have today three sources of electricity:

First. Government flood-control dams over transmission lines owned by the Government, private companies, or those that the cooperatives build, own and operate themselves;

Second. Private power companies;

Third. Electric generating plants that the cooperatives build, own and operate themselves.

Right now the rural cooperatives have the private companies and the Federal Government SPA agency right where they should want them. Both are doing everything possible to do business with the cooperatives. The Southwestern Power Administration and the private companies are competing for the cooperatives' business, and they fully realize the possibility of the cooperatives' building their own steam-power units and transmission lines should the electric rates not be sufficiently low to make justifiable such action on behalf of their membership. As long as this situation prevails it is the rural electric cooperatives within the Southwest that stand to benefit by not becoming involved in a long-term contract. They have their freedom of choice—the American way.

Once, however, these cooperatives lose their advantage by negotiating a long-term contract, permitting themselves to be tied irrevocably to the apron strings of the SPA for a period of 40 years, the opportunity to buy electricity upon a competitive market is gone and the right to produce and transmit electricity by means of their own facilities has vanished.

SPA is not in the power field with the rural cooperatives and others engaged in the power industry with my good graces. TVA was established not only for flood control and navigation but as a "yardstick" of electric costs for regulating private-power companies. The Public Service Commission in my State of Arkansas as well as the Federal Power Commission regulates the involved electric rates. The SPA must sell electricity from the Government flood-control dams at rates approved by the Federal Power Commission. The SPA renders only a power marketing service. The Corps of Engineers build and operate the flood-control dams, and could distribute the electricity from that source to the rural electric cooperatives and others engaged in the power industry over transmission lines built by the engineers, the private companies, or the cooperatives at a great savings to the taxpayers. Were the SPA completely out of the power field the rural electric cooperatives could still obtain electricity from the Government flood-control dams over transmission lines owned by the Government, the private companies, or those that the cooperatives build, own, and operate themselves. Alternative sources would come from private power companies or from electric-generating plants that the co-

operatives build, own, operate themselves, and tie in with the Federal power projects.

CONCLUSION

A memorandum as of the 17th day of January from the Washington executive manager of the National Rural Electric Cooperative Association to all managers, State presidents, State papers, and NRECA directors is a fair example of the misinterpretation of my bill by those who hope to see the rural electrification movement in the Southwest completely controlled by the Federal Government SPA agency. This memorandum can only serve to misinform our rural people who have the most to lose if the REA is taken away from them and put under the control of the Federal Government. Could it be that the Washington office of the NRECA is afraid to allow the affected people to know the truth?

The afore-mentioned NRECA memorandum out of Washington incorrectly charges, among other things, that my bill will:

First. Stop all REA loans for transmission and generation where lines would be tied into any other power source except where they are individually authorized by Congress;

Second. Stop advances (of funds) on all such generation and transmission loans already made except as they are hereinafter specifically authorized by Congress.

It is well known by the Washington manager of the NRECA that my bill in no way affects the authority of the REA to make any loans except for the building of electric generating plants or transmission lines to be used, leased, owned, or operated by others than the rural electric cooperatives. I merely want to keep the SPA from federalizing the rural cooperatives until authorized to do so by Congress. I am at a loss to know how anyone could object to Congress being given an opportunity to determine whether the Federal Government, through the SPA, should enter into the power field as a competitor with its citizens by regimenting and federalizing the rural-electric cooperatives.

The proposed legislation does not attempt to curtail the present authority of the REA to loan funds for electric service lines; for generating and transmission systems; for transmission lines to carry hydro power from Federal projects, generating plants, or from any other source; or for any other purpose than the building of generating plants and transmission lines to be used by others than the electric cooperatives.

As a freshman Member of Congress, of course I do not have at my disposal the excellent means of reaching the cooperative members throughout the Nation as does the Washington manager of the NRECA. In my district, however, it will be my pleasure and privilege to take this issue to my own farmers. If the rural-electric cooperative membership throughout this country could in some manner be given the true picture of the situation at hand, it would take no action by Congress to preclude the federalization efforts now being made through the SPA plan. A great majority of the people are aware of the Federal Government gradually encroaching more and more upon the lives, happiness, and freedom of the American people. My people do not want Federal regimentation; they will not stand for it; and so long as I am a Member of Congress I shall do all in my power to keep it from being forced upon them.

I hold no brief for the private electric utilities; recognize them as monopolies requiring strict Federal regulation and supervision; but I feel that all water, telephone, electric, fuel, and like utilities have a definite place in our economic picture, and should not be permitted to be abolished by the competition of the Federal Government. No monopoly could ever exist so dangerous and devastating to democracy as a Federal Government monopoly.

However, you may be assured that I do hold a brief, and a strong one, for the American system of free enterprise upon which this Nation was founded and has become the greatest upon the face of this earth. It alarms me and it should concern all of us tremendously when we see the Federal Government taking steps toward nationalization, which would result eventually in a completely socialized state. The founders of American democracy never intended that we employ such a system. The great strength of America today lies in the fact that our individuals and industries have been encouraged and inspired by the right of free enterprise—the right to earn a legitimate, honest dollar without working in direct competition with the Federal Government, or without being taken over, lock, stock, and barrel, by the Federal Government, as some of our "planners" would like.

The Southwestern Power Administration activities are of far-reaching significance—going beyond the electric-power field—going into the very heart of our right for free enterprise which was guaranteed to each and everyone of us by the pioneers who built our Nation and our Government. I, for one, want to preserve that right, and I shall do everything within my power to preserve it, regardless of politics and regardless of criticism by "do-gooders" who would like to see the Government take over everything, including the future rights of our children to which they are justly entitled by American democracy.

New Mining Bill To Secure Venture Capital

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. BARING. Mr. Speaker, having just come back to Washington from Nevada, where among other places the Committee on Public Lands held hearings on western problems, I heard a great deal about the troubles of the domestic mining industry.

High costs and comparatively low prices have caused a serious economic crisis which is surely and rapidly strangling to death the small and marginal mines of Nevada and elsewhere, causing a greater and greater dependence upon foreign sources of minerals—and, I may add, a largely unnecessary dependence. There are a number of contributing factors, among which are high taxes, low tariffs, lack of a Federal system of mine incentive payments such as is contemplated in the Murray-Engle bill, and failure of the Bureau of Federal Supply to apply the buy American clause of the Stock Pile Act of 1946.

Congress provided in the Stock Pile Act of 1946 a mechanism (the "buy American" clause) especially designed to prevent too great a dependence upon foreign sources of minerals and metals and laid down a policy to govern the executive branch of the Government in dealing with this problem. The first section of Public Law 520, Seventy-ninth Congress, second session, states clearly that one of the purposes of the act is "to encourage * * * the development of sources of these materials within the United States, and thereby decrease and prevent wherever possible a dangerous and costly dependence of the United States upon foreign nations for supplies of these materials in time of national emergency." This policy has been almost completely nullified by the executive. As not infrequently happens, Mr. Speaker, the Congress saw more clearly than the advisers of the President who in his message of approval of the Stock Pile Act stated his "reluctance to signing a bill which reaffirms the application to stock-pile purchases" of the buy American clause. This statement by the President ever since has controlled the policy of the executive agencies. I cannot believe the President intended to bring about the results which have stemmed from this unfortunate statement, and I feel he has been ill advised.

However that may be, Mr. Speaker, it is up to the Congress to reaffirm its stand and policy and to implement it.

One of the difficulties in getting private capital to develop and open new mines is the extremely speculative nature of the enterprises and, because of double taxation of any income at the mine and again when it reaches the investor. Only small tax advantages can be taken of losses, and at the same time the net income to an investor from a successful venture is so small as to make it extremely unattractive to risk one's capital in such ventures. Investment in tax-free securities or in safe, low-income industrial issues, or in bonds, has become the popular way of safeguarding one's capital, and the idea of making money through speculative ventures in new enterprises has well-nigh had to be abandoned. Mining has been the chief sufferer in this respect. It may be that the SEC regulations have restricted new investments to some extent, but the real trouble is the reluctance of the investor

to take the risk of "heads you win, tails I lose" in playing the tax game with Uncle Sam.

I believe that mining can be made attractive to the investing public by the right sort of tax relief. I now am talking of new ventures which hit the jackpot, not mines which are unable to make both ends meet. No amount of Federal tax relief can help those who have no operating profit. If, however, one stood a chance of keeping the jackpot when he hit it, one might well afford to invest in a number of projects and take the losses from the unsuccessful ventures.

Therefore, Mr. Speaker, I introduced a new bill, H. R. 6896, which strikes a blow against double taxation of the income from new mining enterprises. The effect of this will be to keep the mine free from Federal taxation for 5 years after its first commercial production, and to make the profits to the investor tax-free for 5 years after the first dividends are declared. This is a radical and drastic departure from other tax-relief plans, but the situation is desperate and requires drastic action.

I trust, Mr. Speaker, that the Members will give this new plan careful study and consideration. I know of no other way to induce private venture capital into this basic industry so as to extend our ore reserves. If the Government will not help, the stage must be set so that the industry can help itself, and improve our basic economy at the same time. This bill should be given hearings and cleared for the consideration of the House at the earliest possible moment. I hope for prompt and favorable action.

A Popular Start

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. RODINO. Mr. Speaker, under date of January 12, 1950, the editor of The Observer, of the town of Kearny, N. J., wrote a very timely and encouraging editorial entitled "A Popular Start." It suggests that Mr. and Mrs. John Q. Public will be pleased with the new administration which will guide the destiny of the town of Kearny under the able hand of Mayor Joseph P. Healey.

The projected program of Mayor Healey, one of my closest friends, has won the admiration and respect of his townspeople. The editor of The Observer is to be commended for his remarks which will do much to spur well-intentioned public servants to give of their best efforts.

Under leave to extend my remarks in the RECORD, I wish to include the editorial:

A POPULAR START

There was ample evidence this week that Kearny's new Democratic administration means to fulfill promises to provide improved municipal services. The sharp warning given to street department employees by Councilman Bergen, street committee chairman, has been received with complimentary reactions from all parts of the town.

The crack-down orders and subsequent warnings issued by Bergen along with Mayor Healey have been applauded by the public who pay the tax bills and who are deserving of better garbage collection service.

Administration officials promised there would be no political reprisals, but that department employees would be expected to perform the jobs assigned to them with courtesy and efficiency. Complaints that refuse collectors in past years had acquired a habit of arbitrarily leaving certain refuse at the curb have been justified and the new orders that everything is to be picked up and garbage cans completely emptied promises immediate improvement in a service that is close to home.

The mayor told municipal workers that harmony and cooperation with the street department's new policy will be required to improve this vital service. Employees of other departments are due to be told the same things very soon, all of which will continue to please Mr. and Mrs. John Q. Public.

Legislative Program of Disabled American Veterans

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. RANKIN. Mr. Speaker, on Tuesday, January 17, 1950, David M. Brown, national commander of the Disabled American Veterans, together with other officials of that organization, appeared before the Committee on Veterans' Affairs for the purpose of presenting their legislative program to the committee.

Under permission granted me to extend my remarks in the RECORD, I am inserting the very comprehensive statement of Commander Brown to the committee on that occasion.

Mr. Brown's statement follows:

(Statement of David M. Brown, national commander, Disabled American Veterans, before the House Committee on Veterans' Affairs, January 17, 1950)

Mr. Chairman, ladies and gentlemen of the committee: In accord with annual custom, it is my privilege as national commander of the Disabled American Veterans to appear before you today to present our legislative program. First and foremost, I would be remiss in my duty if I did not take this opportunity to express the deep appreciation of my organization to the chairman and to each member of the committee for the splendid and intelligent record you have established in behalf of the service-connected disabled veteran, his dependents and for his widow and orphans.

As is well known, the DAV is a single-purpose organization. We devote our activities to the wartime service-connected disabled, his dependents, and survivors of deceased veterans. We are indeed grateful for the many excellent laws your committee has had placed on the statute books. Your approach to this legislation has been considerate and understanding.

Of course, we are aware that there is a strong economy movement under way and all too often these movements are directed at veterans and veterans' benefits. Those of us who recall the effects of the vicious Economy Act of 1933 are most apprehensive. We of the DAV observe the billions of dollars being sent overseas. While the veterans of this country are as charitable as the next person, we do hope and pray that drastic reductions will not be made at their expense for the benefit of foreign nations and their nationals.

High in priority on our legislative list is the continuation of the 16,000 hospital-bed construction program. Appropriations have been made by a generous Congress for this construction, plans completed, and many sites acquired. Mr. RANKIN, chairman of your committee, introduced H. R. 5965, which would direct the Administrator of Veterans' Affairs to proceed with the necessary construction of additional facilities for the 16,000 hospital beds previously authorized. Your committee favorably reported this measure, but there was objection to it when it came up on the floor of the House in the closing days of the last session. Every member of the DAV and of its Auxiliary will support you in your efforts to have H. R. 5965 enacted into law. I hope this will be very soon.

Our insistence in this program is due to our thorough and complete knowledge of a disgraceful situation which exists even now where seriously ill disabled veterans are being denied hospitalization because of the lack of beds in Veterans' Administration hospitals. The need now and in the immediate future is not questioned by any unbiased medical authority.

Our insistence on this program is due to committee for having given favorable consideration in the Eightieth Congress to the measure which became Public Law 877 and established an allowance for the dependents of service-connected disabled veterans with a disability of 60 percent or more in degree. Again in the last session your committee gave further consideration to this and the degree of disability was reduced so that veterans with a service-connected disability of 50 percent are now eligible to an allowance for their dependents. We of the DAV respectfully recommend that early and further consideration be given to this subject so that the dependents of veterans with lesser degrees of disability than 50 percent may be included within the benefits of the act. Chairman RANKIN has introduced for the DAV the bill H. R. 6738 which would carry this recommendation into effect.

Being a single-purpose organization, the DAV took no position on H. R. 4617, the so-called general pension bill. We were very happy, however, that this measure carries a provision dealing with income limitations. Of course, we have no knowledge as to what the Senate Finance Committee may do with H. R. 4617, but we do hope action will be taken on some measure whereby income limitations with respect to eligibility for part III benefits will be raised. The DAV's mandate urges the Congress to increase the annual income limitation for widows without dependents from $1,000 to $2,000, and for widows with dependents from $2,500 to $3,500. The existing annual income limitation was placed on the statute books at a time when a dollar more nearly equaled 100 cents in purchasing value. Today the dollar is worth far less, so existing income limitation places an inequitable restriction on the eligibility of thousands of widows and children to receive pensions. Also, we of the DAV recommend that the Congress specifically exclude proceeds of commercial insurance policies when computing the annual income of widows for purposes of determining their eligibility for pensions.

While we of the DAV have bills affecting statutory awards pending before the committee, we are making a further study on the subject and hope to submit recommendations at an early date. Our concern is directed to those horribly disabled boys in an

eastern Veterans' Administration hospital with practically all the face, or the nose, or the jaw, or other parts of the face disfigured and destroyed by shot or fire. Also, we are giving consideration to statutory awards for the blind. We believe there exists an inequity under Public Law 182, Seventy-ninth Congress. Presently, a veteran is entitled to a statutory award of $42 monthly for blindness of one eye, having only light perception. However, if in addition to blindness of one eye, the veteran also has suffered the loss or loss of use of one foot or one hand, he is entitled to but one stautory award. The DAV will seek to amend this law so that any veteran having suffered the anatomical loss or loss of use of one foot or one hand and blindness of one eye, having only light perception, will be entitled to an award of special monthly compensation of $42 for each such loss.

At a later date we shall submit for your consideration our findings on the foregoing and other statutory awards.

We appreciate your efforts which resulted in enactment of Public Law 339, Eighty-first Congress. During the last session we suggested a straight 25-percent across-the-board increase in awards of compensation and pension. In view of the 8.7-percent increase granted by Public Law 339, we recommend additional consideration of this subject with a view to a further increase of 15 percent in monthly awards of compensation and pensions. Chairman RANKIN has introduced for us H. R. 6737 which would accomplish this result. We ask your favorable consideration.

In the field of insurance the DAV is supporting H. R. 5574 (introduced by Representative RANKIN and pending before your committee). It would amend the National Service Life Insurance Act of 1940, as amended, in several respects. Because insurance is such a technical subject and it would consume too much time to explain the provisions of H. R. 5574, I shall not take the time of your committee to do so at this time. At a later date, however, if and when hearings are held on insurance matters, the DAV's legislative and insurance representatives will attend such hearings and present appropriate supporting testimony. We of the DAV are hopeful that hearings will be held on insurance matters at an early date.

It is my understanding there is divided committee jurisdiction over housing matters. By national convention mandate, our organization is opposed to any increase in interest rates on GI loans to veterans, a subject which would be referred to your committee if consideration is given to it. You will recall that there were movements afoot in recent sessions of Congress to increase interest rates on GI loans from the existing 4 percent to 4½ percent. We specifically endorse legislation to authorize the Veterans' Administration to make direct loans to veterans for the purchase or construction of a dwelling whenever the veteran can show he is unable to secure a loan at not in excess of 4 percent from private lending sources. This subject has received some consideration from the Committees on Banking and Currency. Also in the field of housing, the DAV has recommended that disability compensation be excluded in computing income for purposes of eligibility for admission to and the rental for public housing units. I believe this subject will also be considered by the Banking and Currency Committee, however.

Closely related to the current economy movement are proposals to change the Veterns' Preference Act of 1944. I realize this subject will be considered by another committee, but I know each of you is interested in all legislative proposals affecting veterans. By several national convention mandates we of the DAV will oppose changes in the Veterans' Preference Act which would tend to lessen job opportunities for disabled veterans and we will continue to endorse proposed legislation providing additional retention credits to all service-connected disabled veterans who have achieved permanent status and who are entitled to and in receipt of disability compensation.

The foregoing specific objectives are but a part of our legislative program. Time does not permit presentation of each one at this time. At the conclusion of my statement I request permission to insert for the record more detailed information regarding our program. Our resolutions and mandates cover a wide range of subjects, but all stem from a desire on the part of the Disabled American Veterans to relieve the suffering of America's wartime disabled and improve his material welfare.

In conclusion, I should like to revert to the current economy movement. Apparently there is an organized and well-financed campaign under way to sell the American people on the adoption of the Hoover reorganization proposal in its entirety. In communities all over this Nation, citizens' committees are urging that the Hoover Commission report on the reorganization of the execuive branch of the Federal Government will bring about efficiency and economy in Government. It is safe to say that many of these people have never read the Hoover Commission report and do not have the slightest conception as to what it contains.

We of the DAV are particularly opposed to those sections of the report which would destroy the identity and status of veterans, as veterans. For example, the report recommends that all Federal hospitals be consolidated under a single Government agency. Under such a system there would be no distinction between a public-health hospital patient and a service-connected disabled veteran. Another section would establish a Federal corporation to deal with veterans' insurance. Other recommendations would destroy veterans' preference. Such recommendations do not constitute progress. There are members of this committee who recall the early World War I postwar years when it was necessary for a veteran to apply to one or a dozen different agencies for various benefits. The end result was confusion and chaos. The members of our organization and of our auxiliary will militantly oppose and attempt to deprive disabled veterans and the dependents of battle casualties of their rights and benefits under a guise of economy in Government. We of the DAV are confident that if and when recommendations are presented to you in legislative form, the members of your committee will be in the forefront in the Halls of Congress protecting the rights of veterans.

(Supplemental statement of David M. Brown, national commander, Disabled American Veterans, January 17, 1950)

By permission of the chairman and members of the House Committee on Veterans' Affairs, I submit this outline of resolutions adopted at the 1949 national convention of the Disabled American Veterans held at Cleveland, Ohio, for the information of the members of the committee.

1. The DAV urges Congress to enact H. R. 5965, or other similar legislation, and that we vigorously oppose the proposed reduction of the hospital building program as contrary to the expressed desire of Congress and the pressing need of America's war-disabled. Likewise, we militantly oppose any merger of the Veterans' Administration hospitals with hospitals operated by the Army or any other branch of the Government (Hospitals, Hospitalization, and Medical Treatment Res. 9, Legislative Res. 11) (H. R. 5965).

2. That a cost-of-living increase of 15 percent in all compensations and pensions be granted (Legislative Res. 18) (H. R. 6737).

3. That Congress be requested to amend Public Law 877, as amended, to include dependents of veterans rated 10 percent or more disabled (Rehabilitation Res. 17) (H. R. 6738).

4. That the annual income limitation on eligibility to receive pension be increased (Rehabilitation Res. 1).

5. That Public Law 182, subparagraph (k), Seventy-ninth Congress, be amended to provide awards of special monthly compensation for each anatomical loss enumerated therein (Rehabilitation Res. 29) (H. R. 285).

6. That a 10-percent disability rating be granted to all veterans who received gunshot wounds in combat and who are not compensated for these wounds and the residuals thereof by the 1945 rating schedule (Rehabilitation Res. 26) (H. R. 289).

7. That the Veterans' Administration rating schedule be amended to increase the rating for Hansen's disease, or leprosy, to 100 percent for life (Rehabilitation Res. 9).

8. That any veteran having a service-connected malaria condition be compensated 10 percent or more for at least 5 years from the date of the original rating and that if the residuals of such disease can be determined definitely as after effects of malaria, that Veterans' Administration rating boards be directed to consider such fact in fixing the rate of compensation for such veteran (Rehabilitation Res. 24).

9. That the widows and children of veterans of World War II receive pensions equivalent to those of veterans of World War I without regard to service connection (Rehabilitation Res. 2) (H. R. 904).

10. That section 602 (d) of Public Law 801, Seventy-Sixth Congress, as amended, be further amended to remove existing inequities in the law (Rehabilitation Res. 6) (H. R. 5574).

11. That the insurance service of the Veterans' Administration be required to consider service-connected disabilities as having been directly service incurred in considering applications for new insurance or reinstatement of National Service Life Insurance and that the time limit for making these applications be extended (Rehabilitation Res. 5) (H. R. 5574).

12. That Public Law 801, Seventy-sixth Congress, as amended, be further amended to require the Veterans' Administration to accept letters, affidavits, or other adequate evidence from friends or relatives of the deceased veteran as presumptive that the veteran had applied for additional insurance (Rehabilitation Res. 3) (H. R. 5574).

13. That Public Law 346, Seventy-eighth Congress, as amended, be further amended to authorize the Administrator of Veterans' Affairs to make direct loans to veterans for the purchase or construction of dwellings in all cases where the veteran is unable to secure a loan at not in excess of 4-percent interest from private lending sources (Legislative Res. 16) (H. R. 2436).

14. That Public Law 16, Seventy-eighth Congress, as amended, be further amended to authorize rehabilitated veterans who have used less than 4 years of their entitlement to enroll in other courses consonant with their occupation or vocation and that such courses shall not exceed the maximum period of entitlement (Rehabilitation Res. 30) (H. R. 4444).

15. That Public Law 346, Seventy-eighth Congress, as amended, be further amended to give the unremarried widow or one child of any serviceman who died in service or who died subsequent to discharge from a service-connected disability the same education and loan benefits as the veteran would have been entitled to if he had lived (Legislative Res. 6) (H. R. 3280; H. R. 1433).

16. That Public Law 663, Seventy-ninth Congress, be extended and liberalized (Legislative Res. 1; Rehabilitation Res. 32) (H. R. 6565).

17. That subsection 200 (e) of Public Law 846, Seventy-eighth Congress, be amended to provide stenographic assistance to those veterans' organizations chartered by act of Congress (Legislative Res. 1) (H. R. 912).

18. That there be established within the Veterans' Administration a board to review certain decisions of the Board of Appeals (N. E. C. Res. 3) (H. R. 294; H. R. 2690).

Coal Stocks Above Ground

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. JENSEN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter:

UNITED STATES
DEPARTMENT OF THE INTERIOR,
BUREAU OF MINES,
Washington, D. C., January 20, 1950.

Hon. MICHAEL J. KIRWAN,
House of Representatives,
Washington, D. C.

MY DEAR MR. KIRWAN: In accordance with the request of Congressman JENSEN that members of the Interior Department Appropriations Subcommittee be supplied with data pertaining to coal stocks above ground, enclosed are published reports of the Bureau of Mines, and a press release by the Department of the Interior, that, together with the fact that retailer stocks were 1,394,000 tons on January 1, 1950, give the latest information in this matter.

These data show that bituminous coal stocks above ground on December 1, 1949, totaled 45,624,000 tons, representing an average of 39 days' supply, as compared to 69,579,000 tons, representing 47 days' supply on December 1, 1948. Broken down as between industrial and retail dealer stocks of coal the figures are as follows: Industrial stocks—43,819,000 tons (51 days' supply) on December 1, 1949, as compared to 66,500,000 tons (53 days' supply) on December 1, 1948; Retail dealer stocks—1,445,000 tons (5 days' supply) on December 1, 1949, as compared to 3,079,000 tons (15 days' supply) on December 1, 1948.

Because of the concern regarding bituminous coal supplies for retail consumers, we requested retail coal dealers to submit their reports for December 1949 earlier than usual. Accordingly, we now have the retail dealer stock figure for January 1, 1950, which is 1,394,000 tons (4 days' supply at the December 1949 rate of dealer deliveries) as compared to 2,706,000 tons (9 days' supply) on January 1, 1949. Figures on industrial stocks on January 1, 1950, will be available on February 3.

For your further information there also is enclosed our latest report on anthracite stocks, which were as follows:

	Dec. 1, 1948	Dec. 1, 1949
Railroad (class I)	103,847	68,502
Electric power utilities	2,545,109	4,298,783
Upper lake docks:		
Lake Superior	243,202	159,358
Lake Michigan	205,842	163,244
Producers' stocks [1]	971,123	1,138,350

[1] Mostly in small buckwheat sizes.

Sincerely yours,

JAMES BOYD,
Director.

Social Security and the Welfare State

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. BIEMILLER. Mr. Speaker, I was happy recently to have the privilege of speaking before the Milwaukee Chapter of the American Association of Social Workers on the subject Social Security and the Welfare State. It was a particular pleasure to address this fine group, who constantly seek to solve in a constructive manner the social problems which beset our country, on a subject of such direct concern to them. This address, delivered in my home city of Milwaukee on December 13, follows:

(Address by ANDREW J. BIEMILLER, Member of Congress, before the American Association of Social Workers, Milwaukee Chapter)

The current controversy being waged about welfare must be particularly interesting to you in this group. How many times most of you must have heard arguments, entered into discussions, and participated in heated emotional debate over that one little word. And how triumphant you must feel, to find that the word "welfare" has, possibly because of all the excitement, finally come back into its own.

Again it means "the welfare of the people," the "general welfare" that our forefathers wrote into the Constitution. It no longer is saddled with the unpleasant connotation of "relief" or "charity" with which all of you are unfortunately only too familiar.

I was one of the severer critics of that sort of "welfare"—of the kind that "did good" to the poor, with the Lord Bountiful approach that really broke people down rather than built them up. But that approach is, I hope, a thing of the past. To any professional person the whole basis of welfare has always been construction, not destruction. Let us leave to the lovers of old-fashioned days, like Senator TAFT and ex-President Hoover, the concept of charity—both private and public—of a Government that doles out baskets to the worthy poor if they thank you prettily. Do you remember, during the first years of the depression, when millions were unemployed, when millions were ill-fed, ill-housed, ill-clothed? Do you remember Hoover's famous statement? "I am opposed," he announced, "to any direct or indirect Government dole." This, he pointed out, was a job for private charity.

TRUE CONCEPT OF WELFARE

If President Roosevelt had followed his advice, I am sure that Mr. Hoover's prosperity would still be around that mythical corner, from which he was always trying to summon it. But in 1934, we began to develop, or rather, regain a true concept of welfare, and of the responsibilities and obligations of a democratic Government for its citizens.

I am proud to regard our Government as a welfare state. And by that I mean a state devoted to the welfare of all its members, concerned with the needs and desires of its total population.

Abraham Lincoln, in the middle of the nineteenth century, once stated that the object of Government "is to do for the people what needs to be done, but which they cannot by individual effort do at all, or do so well." In the middle of the twentieth century, Mr. Justice William O. Douglas defined what he called the "human welfare state" as "a society that preserves the greatest possible freedom for the individual, yet secures the masses in their basic needs." It is in the framework of these two definitions that I want to discuss some aspects of current legislation and administration policies.

"To do for the people what needs to be done, but which they cannot by individual effort do at all, or do so well." Who could quarrel with that concept? What man, believing in democracy, could question that aim?

And, yet, many do. Or at least a few do in such a loud voice that they are sometimes mistaken for many. They argue that, first of all, that is a foreign idea, and, secondly, that it is not only foreign, it is communistic.

Next, it is in any case unconstitutional. Fourth, even if it were not unconstitutional, it was never in the minds of the founders of our country. Fifth, whatever it is, and notwithstanding all the other arguments, the welfare state destroys individual effort and incentive.

I should like to examine these arguments very briefly with you. I think that some of the things we find will be illuminating.

NOTHING NEW ABOUT WELFARE CONCEPT

Is the welfare state really a foreign concept? Well, we can go back to 1789, to the Constitution, where the Government is first charged with the responsibility of promoting the general welfare, and is given taxing powers to fulfill this duty. We can trace recognition of this responsibility in some fields even farther back. In the Northwest Ordinance of 1785 a section of every township to be established in the new territory was set aside for the maintenance of public schools within the township. In 1806 Thomas Jefferson, in his annual message to Congress requested a donation of Federal lands for a national establishment of education, and specified that these lands be income-bearing, not merely to be used for the site of the buildings.

These are not isolated examples. Land, which in that period of our country's development was more valuable than a money subsidy is now, was granted for all sorts of welfare purposes: For public buildings, for public transportation, and for various types of schools. Going on, we come to the Homestead Act of 1862 when hundreds of thousands of acres of land were divided into family-sized portions and allocated to individual citizens to enable them to maintain themselves. This was not only a public-welfare program, but in reality a social-security project, giving economic security and a way of life to tens of thousands of Americans who had not been able to compete successfully in the industrialized East. I shan't go into all the details of the development and extension of the system of Government subsidies for welfare purposes, but I would like to point out that by 1920—not 1934 as some would like to have us think—Federal grants were already being made to the States for 15 major welfare purposes.

So whatever the welfare state is, it can hardly be called un-American.

But perhaps it's an American brand of communism we are advocating. Let's examine that hypothesis—which has certainly had a great deal of publicity, even if very little factual substantiation.

DIRE PROPHECIES

Actually, our opponents do not go so far as to explain what they mean by this scare word. They belong to the horrible-consequence school of prophets. You know, where people mutter dire prophecies about "What will become of us?" and attach to all their warnings, words that have frightening connotations—but they never, never define what they mean. If they did, they might realize their own confusion.

Communism, according to its original protagonist—and to this extent even in its present style in the Russia of today—is based on government ownership and management of the means of production, of capital, of land, and of property. This can hardly be claimed comparable to our method of government. Private enterprise and private property is the very backbone of our system. But, mind you, belief in private ownership does not go so far—in a welfare state—that the means of production, and all capital and land and property, end up in the hands of a few individuals who run them at the expense of the masses. This would merely be substituting a dictatorship of the millionaires for the Russian kind of dictatorship.

So, whatever it is, the welfare state cannot be validly called communistic.

UNCONSTITUTIONAL CHARGE "IGNORANT"

The next cry is that it is unconstitutional. That I find almost the most ignorant of all the arguments. Not only is the very phrase "to promote the general welfare" explicitly in our Constitution, but concern for the welfare of its members has been interpreted to be the basic responsibility of government by the Supreme Court, the arm of government which was set up to determine the constitutionality of laws. An this interpretation dates as far back as 1837, although it has, as you all know, been reaffirmed and fortified by the famous decision of Mr. Justice Cardozo establishing the constitutionality of the first Social Security Act. In fact, although the usual public cry of those opposing the welfare state is that it is unconstitutional, I recently came across a confidential news letter to businessmen, which admitted—sadly—to its members that the only way to circumvent the Government from extending its activities to more and more fields of the public interest, would be by constitutional amendment.

So, whatever it is, it seems somewhat uninformed to call the welfare state unconstitutional.

CROCODILE TEARS

Perhaps we should examine the claim that it was not conceived of by our ancestors. Many crocodile tears have been shed about that. It is apparently not only unfilial, but immoral, for our Government in 1949 to be different from the one established in 1789. This is an argument particularly much used by lawyers and historians of the give-me-the-good-old-days school, who seem to think that by turning back the pages of history we would arrive at the best of all possible worlds.

I think they misjudge the founders of our country. Those were imaginative men who tried to establish a flexible pattern for a democratic way of life—who believed, above all, in human rights and the principles that "all men were created equal." On the basis of those beliefs, they fashioned a Constitution and laws that could best express them in the framework of the world they lived in at that time. But it is hardly likely that they conceived, in the eighteenth century, of a twentieth-century civilization. Remember, this was before the industrial revolution—before the use of steam and electricity—before the growth of modern factories—when our country was a land made up primarily of small farmers, when almost all household articles were made by hand—when the machine did not yet threaten the man. It would have been strange indeed, if our forefathers had attempted to legislate in such an economy for a situation they could not possibly conceive. The statement that our forefathers did not conceive of the type of government we now have is in a sense true—no more than they could have foretold the coming of the airplane or the atomic bomb.

But whatever the welfare state is, it is ludicrous to try to pretend it should be a colonial in modern dress.

The final complaint—and perhaps the most serious charge—is that the concept of a welfare state—of a government that attempts to give security to its people—is dangerous because it destroys individual effort.

EXAMINE FAIR DEAL PROGRAM

Since the term "welfare state" is used as synonymous with the present administration, I think the best way to examine oft-reiterated statement is by a review of the particular legislation which the President of the United States has presented to the Eighty-first Congress. These are the laws, proposed or passed, that are the basis for the complaints. And it is through this specific examination that we may get a glimpse of the features of those who are opposing these laws.

One of the basic planks of the administration's platform is a determination to do everything in its power to ensure civil liberties and to guarantee basic human rights to everyone. I don't think I need to argue the merits of this theory—especially to you. From the time of the Declaration of Independence, through the bloody Civil War this Nation fought to maintain this principle, the equality of every human being has been accepted by all but a few fanatics and bigots. But we all recognize that we have a long way still to go to carry this principle out into practice. And those who fight any attempt to implement this philosophy are the ones who say that Government action, for example, to prevent discrimination in being hired for a job, would destroy individual initative. I wonder how much individual initiative is encouraged by a lynching?

I wonder how much individual effort is required by a Negro to get a job at a factory that has a sign out front saying "whites only." It is also interesting that the gentlemen who oppose any Government action in equalizing opportunity for all its citizens happen to benefit economically by restricting job possibilities for one portion of its population.

Then there's the administration's proposal for farm price supports and for a fair program for farmers which would also benefit the consumer. This is criticized on the same basis that the Government subsidies take all incentive away from the farmers. I ask: When a farmer's crop fails, how much individual effort will he need to manufacture synthetic potatoes? Or when he has a bumper crop and discovers it will cost him more to dig them up than he will be paid, what form of iniative does he have to keep himself and his family alive?

WHO OPPOSES FARM SUPPORTS?

But let's glimpse the other side of the coin. Who is it who is most violent against Government price supports for farmers? It's curious—the opposition seems to consist of those who make their money at the farmer's expense—who make their fortunes out of the crop the farmer has to sell at less than cost.

There seems to be something familiar in this pattern, doesn't there? For example, there's the perennial cry against any legislation helping labor. The general implication is that labor unions are wicked, all-powerful monsters which are killing private enterprise. I wish the proponents of this theory would read some history beyond the days of George Washington, and learn a little about the growth of the labor movement. I wish they would study about the 13-hour days in the factory, the sweatshops, the hired strikebreakers, the starvation wages, instead of limiting their hindsight to the beautiful view from Mount Vernon.

How far do you think an individual worker would have gotten if, before unions and before Government protection of unions, he had gone to Henry Ford, or Andrew Carnegie, and said: "Look, I can't live on what you pay me. And you're making enough profit to pay me more." And who would benefit right now if the back of organized labor were broken? I detect a certain unconcern for "the will of the people" in the groups that oppose legislation to protect labor—possibly even a hope, do you think, that the golden time might return when an employer can say, "Take it or leave it: All I'll pay is 20 cents an hour. There are plenty of hungry men to do the job."

Labor legislation is decried by employers of labor. The housing legislation is even more violently decried—by housing speculators, of course. I don't mean things like the FHA. That is the type of Government legislation very pleasing to private contractors and real-estate owners; what I'm talking about is public housing. That is regarded as a vicious, undemocratic practice—by the people who make their profits selling and renting houses—they argue violently that public housing makes it possible for low-income groups to live as well as others, and that this is clearly destroying all incentive and individual effort. Can anyone here explain how much individual effort would be required by a tenement dweller to tear down the building he's living in, and build instead a decent house, where he can live for a monthly rental he can afford? And is there, do you think, any correlation between the protests of the apartment-house owners' associations and the profits they are making through renting substandard dwellings?

AMA IN ACT, TOO

Let's go on. The AMA, for instance, is spending a million dollars to carry on a campaign against a national health program. Their arguments against health legislation—dismissing for the moment their complete, and intentional, misstatements of facts—are primarily based on the belief that doctors would, under compulsory health insurance, lose their incentive. It is significant they do not talk of the patients. Apparently they think that people do not or, at least, should not, become ill if they can't afford it. I want to quote to you an editorial statement, printed this August in the New York State Journal of Medicine, the State medical society's official publication. This extraordinary confession goes as follows: "We readily admit that under the present system a certain number of cases of early tuberculosis and cancer, for example, may go undetected. Is it not better that a few such should perish than that the majority of the population should be encouraged on every occasion to run sniveling to the doctor?" This statement stands as a masterpiece of explanation. It needs no comment. But it does give an interesting insight into the thinking of the opponents of legislation planned to meet the needs of the people, rather than the pockets of physicians, doesn't it?

Do the features of the opponents get into focus?

Altogether, the pattern is slowly emerging. The faces of the ones opposing the welfare state are becoming clearer, aren't they? And they all have one feature in common, that of self-interest. It is the industrialist who opposes labor, the real-estate speculator who opposes public housing, the profiteer in farm crops who fights price supports, the employer of cheap labor who doesn't want Negroes able to choose their own occupations, the doctor who is afraid his fees will be cut. Very few of them are thinking of government as a society that preserves the greatest possible freedom for the individual, yet secures the masses in their basic needs.

SOCIAL SECURITY ACT IS FOCUS

I think, of all the legislation proposed or discussed or passed during this session, the amendments to the Social Security Act, passed by the House before we adjourned, best illustrate the point made by Mr. Justice Douglas, and best clarify the issues of the welfare state.

Sometimes, while this bill was being argued on the floor of the House, I thought I

was back in 1935—the moans and the groans with which the air was filled were so similar to the original arguments against establishing a social-insurance program. In fact, they were so much alike that they often sounded as though the gentlemen protesting might have been sound asleep during the intervening period, and just woke up to continue what they thought was an uninterrupted argument.

Manufacturers' associations, or at least their congressional mouthpieces, argued that the proposed amendments would wreck business, would take away incentive from workers who were not now covered—in other words, that people would work harder because they were facing the poorhouse at the end of their lives. They protested the amendments would increase unemployment, because they would decrease purchasing power—that was their interpretation of the effects of slightly increased employer contributions—they weren't interested in the similar increase of the employee's contribution. Finally—inevitably—with much the effect of a broken record—it would stifle individual responsibility.

I want you to answer this charge—not me. This group—above all others—ought to have had sufficient experience with the problems that gave rise to passing the original Social Security Act—and with the problems that make it necessary now to amend it.

OLD-AGE-INSURANCE PROVISIONS

Let's look at the provisions for old-age insurance. I imagine many of you have been talking to people who are receiving old-age insurance now. How much are they getting? How many of them are retired from firms that went bankrupt in the process of putting in the employers' contribution? And how many of them are able to live on even a minimum decent level on the insurance benefits they are now receiving? And don't forget, this is insurance, to which the worker has contributed as much as his employer, and which he only receives on the basis of work he has already performed. This is the type of retirement pension that every big firm in the United States takes for granted—for their executives. The only difference—and that is a big one—is in the number of zeros after the dollar sign in the monthly amount.

When you get to old-age assistance—when you look at the amounts to which the Federal Government contributes—on a percentage basis—for those who are not covered by the insurance provisions—then the arguments become even more ridiculous. The average monthly payment in Wisconsin to persons receiving old-age assistance is at this moment $41.50. Exactly how luxuriously can one live on that? If I, when I became 65, was dependent upon that munificent sum to live on, I think I would get rather annoyed at some millionaire industrialist who pointed at me as an example of shiftlessness.

As you all know full well, the other forms of assistance authorized under the Social Security Act—the aid to dependent children, the aid to the blind, the small amount for child-welfare services—they are all equally meager. They really never intended to cover the needs of all our people or to cover all the needs of any one person. It was a start, that's all. It was really only the basic recognition on the part of the Government that it was responsible for the welfare of its members, and that it would try to find ways of meeting this responsibility.

PRESENT PAYMENTS PITTANCES

That was the original act. Since then we have had experience and have learned of some of the basic needs that have not yet even been touched. We have been able to see that the insurance scheme which was intended to be the primary program—the one that would give workers a sense of security without making them feel like paupers—that if this program is not extended it would not serve its initial purpose. The majority of older people are still being cared for on an assistance basis, submitted to the indignity of a "means test," and granted a pittance, with the dispensing agencies acting in the capacity of lord of the manor. Also, in 1949 the cost of living is very much more than it was in 1935. So that the amounts allowed, even on a minimum subsistence basis, 15 years ago are completely out of relation to present conditions.

These were some of the considerations that led the administration to propose changes in the Social Security Act. The bill, H. R. 6000, as it passed the House before the end of the first session of the Eighty-first Congress incorporated these basic changes.

HOUSE APPROVED CHANGES

First of all, it increased the coverage for old-age insurance from the present 35,000,000 to about 46,000,000. This includes the following:

Persons who are self-employed. This provides the same security for small shopkeepers and people in business for themselves as for persons employed by others.

Secondly, the bill includes domestic servants. I think that the coverage of this group is one of the things that is most important about this bill, because here is a group who have heretofore had the least security, who have been the most dependent on the bounty, on the personal and unpredictable whims of the people for whom they work. And, to me, it is this attitude, this residual of a feudal philosophy, that is the most antipathetic to a democracy, to a state where every citizen is entitled to freedom of opportunity.

Third, salesmen are included—that notoriously neglected group of white-collar workers who seem heretofore to have represented a curious philosophy, suggesting we had a society which made insecurity the badge of office for any man who didn't work with his hands.

Fourth, employees of State governments have an opportunity of being covered in those States where existing retirement systems are not already adequate. And in this group are also included those Federal employees who are not covered by the present Federal retirement schemes.

Fifth, employees of nonprofit institutions are included, although in this instance employers' contributions will be made at the option of the agency. This section takes the first step in rectifying the omission that those most interested in public welfare themselves insisted on at the time of the passage of the original act. It was not, even then, that social workers thought those who worked all their lives for the betterment of others were not entitled to the same economic security as those they served, but because the leaders in the public-welfare field felt, at the time they were fighting to give everyone basic security, that they might jeopardize the good of all by including their own profession. They wanted to be sure, above all, that they would not be open, even in warped minds, to the criticism of pressing for something in their own interest.

Finally, agricultural-processing workers will be included. Some of us had hoped to include all agricultural labor, but in the final version of the bill, all those employed in such jobs as canning, food-processing, and other jobs which are connected with agriculture, but are essentially of a commercial or industrial nature.

OTHER PROVISIONS

Besides this increase in coverage, the bill does several other equally important things. Insurance benefits are increased, not—unfortunately—on the basis of actual increased costs of living, but to an extent to make the word "insurance" a little more realistic. For those currently receiving old-age benefits, the monthly amount will be raised from 50 to 150 percent, with the higher percentage increases for those now receiving the least. And, because the bill also increases the amount contributed to the insurance fund by both employers and employees, it will be possible to increase the monthly benefits of those who become eligible after it goes into effect to an average of almost double the present amounts.

Two other additions to the present old-age-insurance provisions are also noteworthy. Veterans will get a wage credit toward their insurance on the basis of $160 a month for the time they spent in military service, and everyone who is covered by the new bill will be insured against permanent total disability as well as old age: they will receive the same monthly benefit they would have been eligible for when they became 65—on the basis, of course, of their earnings up to the time they became incapacitated—whenever they become totally disabled.

Of course, the insurance provisions of the act are not the only ones affected by the proposed legislation. H. R. 6000 provides for increases in the Federal contributions to the States for all the assistance schemes for which the Government is now providing grants, and, further, makes allowance for additional grants for persons who are permanently disabled, but who do not qualify under the new category of insurance.

These additions indicate in general the main provisions of the amendments proposed by the House of Representatives to the Social Security Act. I have left out a great deal, and I have perforce much oversimplified a complicated piece of legislation. Many of you here have been technically trained to understand this type of legislation, and I am sure you will recognize the impossibility of analyzing such a bill in detail in the course of a discussion such as this.

ESSENCE IMPORTANT

But I would like to return to the essence of these amendments. This type of legislation represents what I consider one of the cornerstones of a welfare state. It represents the concern of a government with the needs of its members, and the needs of human beings for basic securities. It makes provision for these needs on a basis that recognizes human dignity, and gives to all the possibility of participation in securing these benefits.

And that is what I mean when I speak of the welfare state. That is what I think we should all be fighting for—and of all the professions I know of I think yours is the one which should be in the forefront of this fight. We must keep our Government and our country out of the role of being kind—when some of us want to—to what the rich used to call the worthy poor; we must bury any remnants of the system personified by Rockefeller giving dimes to beggars; we must change the connotation of charity back to its original meaning of interest and understanding of other people's problems, instead of a kind of smug largesse; we must not condone a pauper state; we must build up a welfare state.

We Pay the Interest on National Debts at Home and Abroad; How Long Can We Stand It?

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1950

Mr. WHITE of Idaho. Mr. Speaker, the Treasury reports today that the na-

tional debt as of January 20, this year, is $256,899,219,802.03 with an interest charge for the fiscal year of $5,700,000,000.

While we are paying this interest at home, we are contributing the money to buy farm commodities and machinery to give to the governments of the European countries—the so-called Marshall-plan countries. The word "governments" should be underscored, because we do not give the things we buy with the $8,750,000,000 we have appropriated for the ECA to the people of the Marshall-plan countries because our gifts are made to these governments, and the people must bring in their money and pay their governments for the goods we donate, and when the interest-money comes due on the national debts of these governments the money that has been paid in for the goods we have donated is in their treasuries and is ready for the European bondholders.

The following, taken from the book of the economist John Flynn, the Road Ahead, is enlightening:

In taking over the railroads, the coal industry, and others, they—the British—have bought the properties outright from the corporations and stockholders who owned them. They have paid for them with British bonds paying 3 percent interest. With each new industry taken over, the Government has added another mass of obligations to its already crushing national debt. Now the folly of this lies in the fact that, under the old order, the stockholders had no claim for profit if none were made by the industry. But all these stocks—pure risk investments—have been converted into Government bonds, which are a fixed charged upon the Government whether the industry makes a profit or not. And as all these industries have been operating at a greater or lesser loss, the Government has had to find in taxes the means of paying this debt. Indeed, it has been charged in the United States Senate that the British Government had got permission from the United States Commission to use $82,000,000 of the American funds granted Britain to pay interest on its debt which it was unable to meet because of the additions to it created by these nationalization schemes.

Tendency To Look Down on Political Career Real Weakness of the American System

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. MULTER. Mr. Speaker, this being an election year the air will soon be full of incrimination and recriminations on the political front. In some places a loud clamor will be set up by the holier-than-thou citizens whose only participation in things political is to complain.

The following editorial which appeared in the Brooklyn Eagle of January 22, 1950, written by Robert M. Grannis, is most apropos:

TENDENCY TO LOOK DOWN ON POLITICAL CAREER REAL WEAKNESS OF THE AMERICAN SYSTEM

At the expense of being considered naive, I am amazed to discover there are a lot of people with ambitions for public office who'd rather forget the whole thing than subject their lily white hides to contact with a system which they consider pernicious. As one man said to me the other day: "I figure you can't step into the gutter without getting dirty."

I don't know how dirty the American political scene is, but I do know there is a suspicion there are things about it less than clean. And I know that ethical standards have reached a point where a man has to toss a coin to decide which is the greatest menace to a decent civilization—the atom bomb or the cavalier attitude that prevails in many official places.

In my travels, I encounter people who insist that a man can't enter politics and make a career of it without the sacrifice of his principles. To me, that is so much rot, and one of the real reasons why any sort of happy-go-lucky standard of procedure is accepted without a quiver. Indifference of this sort paints all officeholders with the same brush and creates a cynical approach to the most important phase of modern existence. A nation, a State, or even a city, cannot prosper long, or hold up its head without good government as the major prop beneath it.

We have a nasty habit of looking at people in office as members of a certain party instead of as a duly-elected representative of the people. We are so ready to take it for granted that party considerations must come first that only the stalwarts here and there resist the tide and operate on the courage of their convictions.

I think it is disgraceful that any American should consider that a political career, here, is beneath him, beneath his dignity. In a sense his attitude so often expressed loosely, tossed to the four winds and blown hither and yon, is the real weakness of the American system and, in time, could lead to the utter decay of good government.

Public acceptance of a standard in anything is what actually calls the shots, and nobody can tell me today that most folks don't wear a silly smile when someone dares to suggest that Joe Doakes, who works for the Government, is a thoroughly honest guy. When Joe sees the smile he finds he is no less than human, and his resolve to stick to the straight and narrow and fight for what he knows to be right sinks a little lower. He begins to hear the small voice, hitherto silent, that suggests—why stick my neck out?

An honest man in office shouldn't have to feel that he will be made the goat if he refuses to fall in line with a loose trend of conduct. He shouldn't have to look in vain for the wholehearted support of the people who pulled the lever for him back on election day.

I'd like to see the day return when all of us believed that the finest career a young American can follow is a political career, which is another way of expressing service to the citizens of the Nation, and the highest type of service. But as long as there are a great many people who see only the dirty side of politics and go out of their way to spread the "good word" wherever they go, I'm afraid that day is far off.

I'm convinced that we get exactly what we are willing to accept, and if we are apathetic to what we envision as a downward trend in politics, we have no right to expect anything else. A good start would be to offer every encouragement to the square shooter in office, regardless of party, and make it clear that by his example we intend to set an over-all pattern. The sly smile is the sure road to ruin. Pride in the system is needed and some of the dark spots can be made to disappear.

District Home Rule

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. MONRONEY. Mr. Speaker, under permission to extend my own remarks in the RECORD, I would like to call the attention of the membership of the House to the letter written this week to all Members of the House on home rule for the District of Columbia.

This letter, from Robert Heller, chairman of the National Committee for Strengthening Congress, urges the consideration of the Kefauver bill, S. 1527, as one of the most important means of lightening the extraneous work load on the National Congress.

May I call the attention of the membership to the fact that this recommendation of ending the use of the National Congress for the purely local job of being city council for the District of Columbia was made by your former Joint Committee for the Strengthening of the Congress. It was not included in the reorganization bill because of its length and complexity. Now, many months of hearings have been held in the past on the measure, recommended by many leaders of the District of Columbia. I would appreciate the consideration of the membership in this important measure.

The letter follows:

NATIONAL COMMITTEE FOR
STRENGTHENING CONGRESS,
Washington, D. C., January 21, 1950.

The Honorable A. S. MONRONEY,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: We urge you to take every possible step, in this session, to enact S. 1527, a bill to provkie home rule in the District of Columbia. As a first step we ask that you sign Discharge Petition No. 19 as soon as possible, so that the bill may reach the floor of the House for vote without delay.

Congress must act promptly to get rid of its extraneous work load, if it is to give adequate attention to the tremendously important matters before it. Passage of S. 1527 is an essential step necessary to reduce that work load. The bill would vest power in a city council, composed of residents of the District of Columbia, to pass laws to govern the District. Congress would keep the power to override the city council at any time. Thus the interest of the Nation in its National Capital would always be protected. At the same time Congress would be relieved of having to take positive action in order to pass laws for the District. We enclose a more detailed statement of how the bill will work and why it should be passed.

The bill has already passed the Senate by overwhelming bipartisan vote. We believe that a solid bipartisan majority in the House likewise favors it. After it passed the Senate, however, the House District Committee voted not to report out the bill. If this is not now corrected by action of the whole House, Congress will have failed to relieve itself of a burden which is wholly unnecessary, undesirable, and contrary to sound government.

Passage of S. 1527 is therefore essential. Discharge Petition No. 19 will bring the bill to the floor of the House for vote. We urge

you to go to the Speaker's desk at the first opportunity and sign the petition. If you have already signed it, we urge you to ask other Members to sign also, and to support the bill in the House.

Sincerely yours,

ROBERT HELLER.

STATEMENT TO MEMBERS OF THE HOUSE BY ROBERT HELLER, CHAIRMAN, NATIONAL COMMITTEE FOR STRENGTHENING CONGRESS, IN SUPPORT OF S. 1527, THE DISTRICT OF COLUMBIA HOME-RULE BILL

WHY S. 1527 IS NECESSARY

Our letter of December 27, 1949, to Members of the House and Senate, pointed out the strengths and weaknesses in the operations of the last session of Congress. We emphasized that Congress, to discharge adequately its responsibilities to the Nation and to the world, must act promptly to reduce its extraneous work load. Passage of S. 1527, the home-rule bill, is an essential step in this direction. It will virtually eliminate the necessity for Congress to act as a city council on day-to-day matters which relate solely to the workings of the city of Washington. The bill also assures that Congress retains full authority to intervene in District affairs whenever the situation so demands.

In the last session of Congress alone, several thousand valuable man-hours were spent by busy Congressmen and Senators on purely District matters. These included such local trivia as the elimination of weeds, the regulation of podiatry, and the destruction of starlings. The time for Congress to relieve itself of the necessity to sit once every 2 weeks as the city council for the District of Columbia and consider such purely local matters is long overdue.

HOW S. 1527 WILL HELP THE CONGRESS

The bill would vest power in a city council, composed of District citizens, to pass local laws to govern the District of Columbia. The council would be composed of nine members elected by District residents and two additional members appointed by the President. Except for minor ordinances, any laws passed by the city council would, before becoming effective, lie over for 45 days while Congress is in session. During this period Congress could by concurrent resolution veto the proposed law. As a result, neither the District Committees of the House or Senate, or the House and Senate as a whole, would need to take positive action in order that necessary legislation for the District become law. Congress would always be in a position to modify or revoke the action of the District council. In fact it could abolish the council or modify its powers. In this way the interest of the Nation in the affairs of its National Capital would at all times be protected.

Establishing a local legislature to relieve Congress' work load is not new. It is substantially the same method that Congress has used successfully for years in governing the Territories, such as Hawaii and Puerto Rico, which are under its exclusive jurisdiction. The Territorial legislatures are at all times answerable to Congress, and Congress may step in and take over at any time. Congress is, however, relieved of the burden of passing day-to-day regulations for Territorial government. Enactment of S. 1527 would put this satisfactory method to work in the District of Columbia.

S. 1527 IS THE PRODUCT OF YEARS OF CAREFUL WORK AND HAS STRONG BIPARTISAN SUPPORT

The home-rule bill is the result of exhaustive study and work by congressional committees and by interested local and national groups, both partisan and nonpartisan. In the Seventy-ninth Congress, the Joint Congressional Committee on the Organization of Congress, in its report which led to the enactment of the Legislative Reorganization Act of 1946, urged that Congress divest itself of the duty of acting as city council for the District. A joint committee in the Eightieth Congress, headed by Representative AUCHINCLOSS, Republican, of New Jersey, and Senator BALL, Republican, of Minnesota, held exhaustive hearings and drafted the basic home-rule bill, H. R. 6227. This bill was reported out but reached the floor of the House too late to come up for final vote before the end of that Congress. The 1948 platforms of both the major parties urged home rule for the District. A Senate subcommittee, headed by Senator KEFAUVER, Democrat, of Tennessee, in the present Congress held further hearings and reported out the present bill, S. 1527. This bill is based in large part on the Auchincloss bill of the previous session, but embodies a number of improvements which add strength to the measure. It passed the Senate by overwhelming vote in May 1949, with heavy bipartisan support. Senators KEFAUVER, Democrat, of Tennessee, and TAFT, Republican, of Ohio, were the proponents of the bill for their respective parties on the floor. We have reason to believe that, when the bill reaches the floor of the House, a solid bipartisan majority will likewise vote for it.

YOUR ACTION IS NEEDED TO ASSURE PASSAGE OF S. 1527

Despite the strong support local and national groups gave S. 1527 in the House District Committee after the bill passed the Senate, the House committee voted not to report out the bill. If this action of the committee is not now corrected by action of the whole House, Congress will have failed to relieve itself of a burden which is wholly unnecessary, undesirable, and contrary to sound government. Congress can no longer afford to carry the burden of acting as a municipal council for the District in the second half of the twentieth century. The present arrangement is wholly incompatible with the kind of organization which Congress must have if it is to meet its national and worldwide responsibilities during the years to come.

Passage of S. 1527 is therefore essential. We ask you to sign Discharge Petition No. 19 and to support the bill on the floor of the House. We ask this in the belief that passage of the home-rule bill will be an important step forward in creating the stronger and more effective Congress the United States must have in order to meet the difficult problems that lie ahead.

The Lawyer

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24 (legislative day of Wednesday, January 4), 1950

Mr. MURRAY. Mr. President, the American lawyer has won a distinguished place in the development of our political and economic system. He has played a powerful part in the establishment of the institution of government, the dispensation of justice, and the protection and enforcement of the inherent rights of the people.

I take great pleasure in asking that the impressive eulogy of the American lawyer, written by my friend and former classmate at New York University Law School, Mr. Louis Lande, reprinted from The Lawyer and Law Notes, volume 3, No. 2, 1949, be inserted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the eulogy was ordered to be printed in the RECORD, as follows:

THE LAWYER

I am the lawyer.

I displaced brute force with mercy, justice, and equity.

I taught mankind to respect the rights of others to their property, to their personal liberty, to freedom of conscience, to free speech and free assembly.

I am the spokesman of righteous causes.

I plead for the poor, the persecuted, the widow and the orphan.

I maintain honor in the market place.

I am the champion of unpopular causes.

I am the foe of tyranny, oppression, and bureaucracy.

I prepared the way for the Ten Commandments.

I pleaded for the freedom of the slave in Greece and for the captive in Rome.

I fought the Stamp Act.

I wrote the Declaration of Independence and the rights of man.

I defended the slave. I was an abolitionist. I issued the Emanicipation Proclamation.

In every land, in every clime, I punish the wicked, protect the innocent, raise up the lowly, and oppose brutality and injustice.

I fought in every war for liberty.

I stand in the way of public clamor and the tyranny of the majority.

I plead for the rich man lest prejudice prevent him from getting justice, and I insist that the poor man be accorded all his rights and privileges.

I seek the equality of mankind, regardless of race, color, caste, sex, or religion.

I hate fraud, deceit, or trickery.

I am forbidden to serve two masters or to compromise justice.

I am the conservative of the past, the liberal of the present, and the radical of the future.

I believe in convention, but I cut the Gordian knot of formalism and red tape to do justice and equality.

I am the leader of mankind in every crisis.

I am the scapegoat of the world.

I hold the rights of mankind in the hollow of my hand, but am unable to obtain recognition of my own.

I am the pioneer. I am the last to renounce the past and to overturn the present.

I am the just judge and the righteous ruler.

I hear before I condemn. I seek the best in everyone.

I am the lawyer.

LOUIS LANDE.

WASHINGTON, D. C.

Zionism in Brooklyn

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. MULTER. Mr. Speaker, on January 22, 1950, the Brooklyn region of the Zionist Organization of America held its annual dinner. More than 1,200 persons attended, including leading Christians and Jews of the community. Hon. Maximilian Moss, president of the board of education of the city of New York, was the chairman of the evening. The meeting was addressed by Philip H. Lassar, president of the Brooklyn Zionist region, the Honorable Arthur Lourie, consul general of Israel, and Louis Lip-

sky, chairman of the American Zionist Council. The Honorable Albert D. Schanzer, on behalf of the organization, presented an award to the New York Herald Tribune for its outstanding work on behalf of the Zionist cause. Walter Kerr, foreign editor of the Herald Tribune, in the absence of Mrs. Ogden Reid, the owner and publisher of the paper, accepted the award.

The dinner was originally planned as a tribute to William O'Dwyer, mayor of the city of New York, who unfortunately could not attend because of illness.

The highlight of the evening was an address by Benjamin G. Browdy, acting president of the Zionist Organization of America, which is set forth in full as follows:

Mr. Chairman, distinguished guests, ladies, and gentlemen, I am glad to be here with you tonight to add my tribute to our guest of honor whose forced absence from this testimonial dinner we all regret, and to say a word or two about the situation in Israel and in the United States which confronts us today.

The Zionist movement has placed its reliance mainly on the Jewish people itself. Herzl kept on reiterating that the creation of the Jewish state is largely in our own hands, if only we will it. He called the Jewish masses to rally to the cause, realizing that it's their strength that can bring about the miracle of all ages—the Jewish state.

Hand in hand with the faith in the Jewish people, has gone the faith in the conscience of mankind. Herzl opened the first Zionist Congress with a fervent appeal to world public opinion in behalf of the Jewish people. Since then, the Zionist movement has never wearied in its attempt to influence and bring to our side the leaders of public opinion, of political power, and of government. In this endeavor we have scored some signal successes, particularly with those great leaders whose vast power has been paralleled by their tender and sensitive conscience. In the United States we have been particularly fortunate in enlisting the sympathy and the support of the Presidents of the United States from President Wilson to President Truman, and a great many other political leaders whose sense of justice and of fairness ranged them on our side.

I daresay, none has excelled in zeal and in devotion to justice and fairness for the Jewish people, our guest of honor, the mayor of the city, William O'Dwyer. No fair-weather friend was he. Rather he has been a friend in need. While some talked and talked, made promises which always lagged behind performance, he acted in our behalf with an energy and determination which I sometimes wished I could discern in many a high-placed Jew in Washington or elsewhere. I could give you many an instance of his unflagging support in time of crisis, but I think it will suffice when I recall the rescue action in the fall of 1947, when he undertook to save the UN resolution for a Jewish state, then practically abandoned by Washington, from complete collapse, and similar rescuing expeditions on which he launched in 1948, when the Bernadotte plan threatened to crush us, depriving the Jewish state of a large part of its territory.

I think the future historian, busy as he will be with the many phenomena of the life of our era, will note that in William O'Dwyer, the Jewish community of New York, the greatest Jewish community on earth, has found a warm friend and great champion. And I believe that the debt of gratitude which we owe Mr. O'Dwyer is yet to be repaid in full, and that he has yet a great role to play in the days that lie ahead.

I would be remiss in my duty as acting president of the Zionist Organization of America were I not to call your attention to the fact that as Zionists and as Jews we are heading for stormy weather. The Jerusalem issue is assuming alarming proportions. Some of our friends on whom we have relied for assistance are beginning to shift their positions, leaving us to wonder as to what we are to expect from them in the near future. The Jews of America have applauded the stand of their Government opposing the Soviet-Australian resolution calling for the internationalization of the ancient capital of Israel. However, only the other day the State Department announced that America will "participate constructively" in the Geneva meeting of the Trusteeship Council for the internationalization of Jerusalem. That the American Government should now lend itself to the implementation of a policy it fought so hard, is indeed a source of deep disappointment to us.

Mr. Acheson, in another statement issued by the State Department in reply to Representative JAVITS, assures us that he sees no danger in Britain's shipment of arms to the Arab states. American Jews, however, cannot share the State Secretary's equanimity on that score. On the contrary, they have reason to fear that the rearmament of the Arab states might serve as a prelude to the reopening of war with Israel, to a second round for which the Arabs have been priming themselves since their defeat on the field of battle.

In the days that lie ahead we shall have need of the strength of the Jewish people. On this, the Zionist movement has always relied and will continue to rely. But we shall also have need, and in an increasing measure, of the powerful help of our friends and allies, of whom Mayor William O'Dwyer is so shining an example.

To all of you I say: Let's rally around the Zionist Organization of America; let's build it into the greatest instrumentality for Jewish action both in Israel and on the American scene. Only after we shall have done that, will we be able to look forward to our future and the future of our children with confidence and hope.

Resolution of Young Republican Club of the University of Michigan

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and a resolution of the Young Republican Club of the University of Michigan:

JANUARY 18, 1950.

Representative GERALD R. FORD, Jr.,
House Office Building,
Washington, D. C.

DEAR JERRY: The following resolution was passed at a club membership meeting on the above date:

"*Be it resolved*, That the University of Michigan Young Republican Club goes on record as wholeheartedly supporting and standing firmly behind the development of the unpartisan foreign policy established and led by Senator ARTHUR H. VANDENBERG, of Michigan."

Very sincerely yours,
THE UNIVERSITY OF MICHIGAN
YOUNG REPUBLICAN CLUB,
LEONARD A. WILCOX, *Secretary.*

Your Dollars at Stake: The War on Trusts

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. KLEIN. Mr. Speaker, the history of the last century teaches us that unrestrained private enterprise ceases to be free enterprise early in the history of every industry.

The industrial revolution of the early nineteenth century brought in its train a new economy with new ills.

Traditionally, the democratic countries have attempted to remedy those ills, not by turning the clock back to the Middle Ages and not by destroying private enterprise, but by regulating private enterprise in the public interest, to keep it free.

In the February issue of Everybody's Digest I have found an article entitled "Your Dollars at Stake: The War on Trusts" by Ben Atlas, a widely known newspaper and magazine correspondent of Washington.

In this brief essay on the work of the Congress and the Department of Justice Ben Atlas makes a number of trenchant and telling points.

He shows, first, that private enterprise is not necessarily free; second, that bigness in itself is not good or bad—that it is the consequences of bigness which may be good or bad for the country; third, that bureaucracy exists in private industry wherever it has an opportunity to arise; fourth, that in spite of our antitrust laws and in spite of the work of the Department of Justice there is a constantly increasing concentration of economic power and resources which bring us face to face with two equally abhorrent alternatives in the future—some form of nationalization which must inevitably be socialism or communism, or an industrial fascism.

The Monopoly Subcommittee of the Committee on the Judiciary, under the enlightened leadership of our beloved colleague the gentleman from New York [Mr. CELLER], is striving to find the democratic answer to this dilemma.

There is a tendency on the part of Fascist-minded big industry to ridicule the subcommittee efforts as socialistic and on the part of the extreme left to ridicule it as ineffective. The fact is that all of us who believe in genuine free enterprise in an atmosphere of political freedom and democratic processes should support the subcommittee with enthusiasm.

Under leave, I am inserting the text of Mr. Atlas' article in the RECORD, as follows:

YOUR DOLLARS AT STAKE—THE GROWING WAR AGAINST TRUSTS

(By Benjamin J. Atlas)

When Tom C. Clark moved from the Justice Department to the Supreme Court bench last summer, most observers were surprised to learn that the mild-mannered Texan had piled up four times more antitrust suits than any previous Attorney General.

If Clark fooled the experts, his genial successor is confounding them again. Attorney General J. Howard McGrath and his lieutenants have been adding feverishly to the record number of cases with the help of the fattest congressional outlay for trust-busting in history.

While Washington dopesters are diverting themselves with a guessing game about who's next on McGrath's list, the jackpot question for most of us could well be: What's this biggest trust-busting jamboree about and what effect does it have on us?

Look in on any courtroom battle scene in a monopoly case and you'd be justifiably bored—but don't let that fool you. Scratch beneath the legal jargon of both sides and you'll find that the battle is right inside your door. The ordinary Joe Citizen is a fellow whose freedom both sides claim to be championing.

The king-sized struggle involves down-to-earth things in our daily lives. It's about such matters as how much we pay for bread, meat, and butter; what are our opportunities to get and hold jobs; who'll do the hiring and firing; what chances we have to start a business and survive.

When Attorney General McGrath slapped an antitrust suit recently against a small Ohio newspaper even a McGrath confederate couldn't refrain from commenting that the obscure publisher had one consolation—"He's in damned high-and-mighty company." The current line-up of defendants reads, as usual, like a blue book of American industry. The list resounds with names like American Telephone & Telegraph, United States Rubber, and Aluminum Co. of America.

As for protagonists on the Government side, rarely has there been a less spectacular crew of antitrusters. McGrath's cohorts are shrinking violets compared with the crusaders of the New Deal heyday. In the entire Government there's no personality like the late President Roosevelt's top trust buster, Thurman Arnold, whose flair for dramatizing issues made monopoly in his day a horrid word.

Today's antitrusters insist they don't need a Thurman Arnold. In the New Deal era the idea was to sell folks on the antitrust laws; our job is to enforce them.

The Antitrust Division under Herbert A. Bergson is a bailiwick of solemn lawyers who eschew public oratory and shy away from the press with more resourcefulness than Greta Garbo. Despite ample proof by many a defense lawyer that a well-timed public speech or press conference is sometimes worth more than weeks of argument before a dozing jurist, Bergson's team has doggedly followed a slogan, "If there's anything to say, tell it to the judge."

A fellow New Englander of McGrath's, Bergson has been a Justice Department work horse practically from the time he got his law degree at Harvard in 1933. Ever since he advanced to antitrust chief in 1948, his team has been made up more and more of Government careerists like himself, most of them about his own age—40—and all of them, like Bergson, as devoted to their task as the seekers of the Holy Grail.

Industry spokesmen charge that the Government is hell-bent on driving big business to the ground and saddling the Nation with a blundering bureaucracy. If little businesses are finding it hard to stay afloat, say some of the corporation lawyers, it's because the dinosaur in Washington is snowing them under with a plethora of taxes, regulations, restrictions.

The Government men checkmate this by pointing out that big business can also be a blundering bureaucracy with dime-a-dozen tinhorn executives and wasteful duplications. But Bergson adds that even where some industries grow too big for efficiency he doesn't care, "any more than I object to a man living in a mansion when a three-room apartment is all he needs."

"What is bad both economically and legally," declares the antitrust chief, "is when one reaches the point where he alone, or in conjunction with two or three others, is in a position to so dominate an industry that there is no longer room for competition. Then he, rather than the economic laws of supply and demand, controls prices and production."

To deal with juggernauts like that, the Government has been slugging with its heaviest weapon, the Sherman Antimonopoly Act. Fondly revered by antitrusters as the magna carta of free enterprise, this law has been on the books since 1890. The law's chief target is any industry which alone or in a group fixes prices to knock out competition.

Anybody convicted of violating the Sherman Act in a criminal suit is liable to a $5,000 fine or a year's imprisonment, or both, on each count. In civil suits won by the Government, the law empowers the court to hack the monopoly into smaller businesses, such as the courts tried to do in the famous split-up of Standard Oil.

Besides the Sherman Act, there's some important subsequent legislation, including the Clayton Act, the Federal Trade Commission Act, and the Robinson-Patman Act, all of which attack monopoly by imposing penalties on businessmen who try to smash rivals by unfair advertising, price discriminations, and other shenanigans.

The antitrusters, according to their critics, are using the laws as a year-'round hunting license to fire away wildly at big business without stopping to find out if monopoly exists. The language of the laws, they say, is so general that the courts, and not Congress, have in effect been doing the legislating.

On the contrary, says Bergson, the strength of the Sherman Act is its broad language making it as useful today as it was 60 years ago. Every antitrust case, he says, is a suit "by the Government on behalf of the public and on behalf of the law-abiding businessman who seeks to compete in a market free from artificial restraints."

If the antitrust suits have been popping with increasing frequency, it's because monopolies have been growing and little businessmen have been complaining about the pinch, says Bergson. Nine out of every ten trust-bust cases originate with a complaint from some hard-pressed businessman, and there's been hardly a day in the last few years when at least five complaints haven't come into the Justice Department.

Bergson's hard-working lads, referred to by private lawyers as "Bergson's beavers," confide that once they get on the scent of a law violator, there's less trouble than one usually suspects in digging up the facts. After all, explained one of Bergson's stalwarts, business, like government, is living in a bureaucratic age of "one yellow, three blue and four salmon carbon copies." So, antitrust agents have found quite legible samples of exchanges of correspondence that have become especially incriminating when the letters were carefully marked, "Please destroy after you read."

An antitruster tells of one particular case in which a businessman, "perhaps wishing to make the game of antitrust enforcement really exciting for us," directed a staff of stenographers and clerks to work overtime one night to destroy his files with a paper shredding machine. One of the stenographers in canceling a date with her boyfriend explained the highly exhilarating nature of the overtime work. The next day the entire staff appeared before the grand jury.

In the last 5 years, the antitrusters have won 151 cases either by court decisions or decrees, against 36 lost. More cases were filed in the last 10 years than in the previous half century, with one in every four suits won without coming to trial.

Although Bergson's boys have been getting results in the courts, they haven't been faring so well with public fancy of late. When the Justice Department filed a civil antitrust suit against the Great Atlantic & Pacific Tea Co., the grocery titan thundered back with a weekly series of full-page newspaper advertisements in 2,000 newspapers and stuffed reprints of the ad in every bag of groceries. The corporation's angry outcry, "Do you want your A. & P. put out of business?" reached the American kitchen with a clamor that fairly rattled the dishes.

At the A. & P.'s New York City headquarters, five trunklines were kept open to handle phone calls from sympathetic housewives. Checks and cash ranging from a dollar to $20 poured in by the hundreds from customers anxious to help support the defense. Civic groups in several cities voted resolutions endorsing the chain outfit's position.

When the Government planked an antimonopoly suit against du Pont de Nemours & Co., the corporation's executives opened a barrage of speechmaking that reached into hamlets all over the country. Crawford Greenewalt, du Pont president, rushed letters to stockholders and to 30,000 firms from which du Pont buys materials and Greenewalt himself got one of his most prized audiences at a National Press Club luncheon in Washington where a few hundred of the capital's newsmen and Assistant Attorney General Bergson were present to hear dire warnings about what the Government was doing to private enterprise.

Topping that for ingenuity was a National Press Club fete last summer arranged by a Washington public-relations firm for the American Society of Composers, Authors and Publishers, which has been up to its musical ears in monopoly and cartel suits. For 3 hours the audience of newsmen and Government officials was regaled with hit songs from the Broadway shows of Richard Rodgers and Oscar Hammerstein II, who were there in person to give out with a fast patter of humor that offset a dull speech from ASCAP President Fred E. Ahlert.

As the public hears more and more from antitrust defendants, a lot of people are seriously wondering if the Sherman Act is worth while in a fast-paced twentieth century economy. They're wondering whether trimming giant monopolies down to human size is worth the loss of efficiency, employment, and low prices, as critics of the antitrusters have been telling them.

The answer is in the records of courts, congressional committees and countless surveys. The monopolist selling below his competitor's prices today is likely to be the fellow hiking prices sky-high as soon as his rival gives up the ghost.

As a matter of court evidence, Bergson cites the A. & P. case. The grocery chain, he says, has paid a mere $175,000 in fines for criminal conviction in which the court found that the outfit's bigness "was not due to efficiency and enterprise but to the 'predatory application of its mass purchasing power' and the abuse of that power through boycotts, blacklisting, preferential rebates, price wars, and below-cost retailing in selected areas."

The court found, adds Bergson, that "A. & P. prices were reduced in as many as 30 percent of its 6,0000 stores only long enough to drive out local competition." By selling at higher prices in the rest of the stores, located in noncompetitive communities, "A. & P. was

able to accomplish this at the expense of its customers and at no cost to itself," says Bergson.

If antitrust suits are being filed at the fastest rate in history, it's because the Government is worried about an ominous trend of mergers in which control of the Nation's economy has been passing into fewer and fewer hands. Forty years ago the 200 biggest nonbanking firms owned about a third of all corporate assets. In 1928, their control swelled to nearly half of all assets, and today it's approaching two-thirds.

Four out of every five bars of soap bought by housewives are the products of only three companies. If you own a car, in 9 cases out of 10 your tires and tubes could only have come from one of four rubber companies. If you smoke cigarettes, four chances out of five the brand you puff comes from one of the Big Three of the tobacco industry. And so on.

What this means for the consumer, according to the records, is that he pays stiffer prices as the mergers move toward saturation where there can be no competition in pricing. As for business, its style is already badly cramped. Nineteen out of every twenty little businesses that start are doomed to flop as the small fellows come under the sway of the big threes and fours. As for jobs, they're governed by fewer and fewer Gullivers. And money for business? It's getting scarcer. Most of it, according to recent Government reports, is tied up by corporations in the process of swallowing lesser fry and spreading to unrelated businesses.

The story is told with monotonous repetition in the Government's array of antimonopoly charges. In suits against some of the kingpin investment banks of Wall Street, the Government has charged them with gang play in determining who gets loans and who doesn't. A suit against the Big Four meat packers charges a similar kind of action that has practically killed competition in the industry. Elsewhere the antitrusters are trying to open up trade in the shoe-machinery industry, break up combines in the movie industry, establish competition in the aluminum industry, divorce A. T. & T. from a manufacturing subsidy which practically monopolizes the output of telephones, and end integration of the three giant industries of du Pont, General Motors, and United States Rubber.

The antitrust laws are facing the worst assault in recent years. Ever since the Supreme Court handed down a decision forbidding industries from absorbing freight rates to fix prices, Capitol Hill has felt the pressure of what Representative WRIGHT PATMAN has described as the greatest lobbies in the history of our country to force enactment of a law nullifying the Court decision.

Antitrusters are getting some solace, however, both from their winning streak in the courts and from a hope that for every conviction hundreds of would-be violators are scared into conformity.

But trust-busting will have to improve even on that impressive record. Merger, PATMAN warned the House recently, must be stopped now or else the big corporations will become so big that there will be nothing left to do except for the Government to take them over—socialism in the United States, as in Great Britain, where they never had our antimonopoly laws. The other alternative, as the late President Roosevelt once said, is industrial fascism.

The average little citizen can logically ask, "Where do I come in?" Judging from the charges and counter-charges of the protagonists, the little man's question is shaping up as one of the biggest issues of our time.

Service or $ervice

EXTENSION OF REMARKS
OF
HON. RAYMOND W. KARST
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. KARST. Mr. Speaker, under leave to extend my remarks, I wish to insert the following excellent article from the January 1950, Postal Record, which is a monthly journal of the National Association of Letter Carriers:

SERVICE OR $ERVICE

SHALL SENSE OR CENTS DETERMINE A SOUND POSTAL POLICY?

In seeking legislation, postal employees are constantly confronted with the objection that their legislation cannot be given favorable consideration because there is a postal deficit. This hue and cry is not new. It has been in existence during practically the entire history of the Post Office Department. It is peculiar that none of the other departments of Government are ever accused of having a deficit. It stems from the oft-repeated statement that the Post Office Department operates one of the world's largest businesses. It is true that the Post Office Department operates a very large business. The revenue of the Post Office Department today amounts to $1,500,000,000. In 1790 the revenue amounted to only $38,000. Today the Post Office Department contracts for tens of millions of dollars yearly for rail, ship, airline, and trucking transportation.

On Monday, December 12, I attended a forum conducted by the Citizens Committee for the Hoover Report. Mr. George H. Mead, a member of the committee, delivered an address on the subject, Streamlining the Post Office. Among other things, he declared:

"We should not, however, measure the problem only in terms of that huge deficit. Four hundred years ago, European rulers thought of their postal monopolies as producers of revenue. Our founding fathers are cited as having felt that the service should pay its own way. Today there apparently is a growing concept that the whole country should share in the cost of the post office and recover only part of this cost by direct charges.

"The Hoover Commission felt, however, that Congress should decide whether the price of ordinary post office services should cover the cost of post office operation. The Commission did not recommend any changes in first-, second-, third-, or fourth-class mail rates. We said that the rates for certain special services—special delivery, special handling, money orders, and the like—should be sufficient to cover their costs. But in general we stuck to our task as we saw it: Streamlining the management of the post office. There were, and are, millions to be saved by adapting the best management practices of modern American business to this huge Government enterprise of carrying the mail."

It might be well to point out that the European rulers referred to by Mr. Mead either sacrificed service or profit. Where service is extended to everyone, there is no profit. The principle of a postal system with service the paramount consideration was first espoused in America by Benjamin Franklin. Postmaster General Robert E. Hannegan was true to the Franklin tradition in his report for the fiscal year ending June 30, 1946, when he stated, "During the past 100 years the financial ideal sought by the management of the postal establishment, which has been to make the institution substantially self-sustaining, has rarely been achieved, and then usually during war years. The service ideal as differentiated from the financial has been, as it always should be, held paramount. In the development of our country, in the furtherance of social improvement, and in the fostering of business enterprise, the long-time policy of Congress and the Post Office Department has been to recognize that service must be provided and extensions made even though the costs far exceed the revenues obtained."

Fundamentally, however, the Post Office Department is not a business. It is a service. Postal operations are always managed by government. There isn't a single country in the world where the postal service is owned and operated by private capital. There are obvious reasons why the government must operate the postal system. The transportation of mail is exceedingly important to the daily business life of a country. The result of a break-down in mail transportation for as much as a week would be chaotic. Communication is the cornerstone of unity. Even today in this great country of ours the postal service is the only universal public service. There are millions of people who do not have telephones; there are millions of people who do not have access to telegraphic service; there are millions who do not have running water; there are millions who are not served by public transportation; there are millions who do not have the benefit of electricity.

Indeed, the Government has deemed it necessary to subsidize the extension of electric power lines throughout the rural sections of America. For this purpose they have established the REA, a most commendable program. The Eighty-first Congress found it desirable to subsidize the extension of telephone service throughout the United States of America and they set up a system of subsidies for the extension of telephones. The postal service is the only universal means of communication in America. If a candidate for office, for example, wishes to contact every single one of his constituents he well knows that the only way he can do it is through the postal service. Every citizen in the United States has mail service every working day in the year. To bring this service to people in rural areas the Post Office Department has established rural free delivery. They have established post offices at practically every cross road town in America. According to the 1948 Report of the Postmaster General, there was a total of 41,695 post offices in the United States. Of these, 20,546 were fourth-class post offices; 13,195 were third-class post offices. These 33,890 post offices were operated at a loss. The volume of mail in these offices is not great enough to pay the expenses of operating these offices. They were maintained, however, for the purpose of bringing the mail to the American people.

Elsewhere in the Postal Record you will find a story of carrying the mail in Roaring Hells Canyon on Snake River. There are many other similar instances where mail service is maintained at a considerable loss to the taxpayers. Yet it is important; it is American; it is justified.

There have been a great many investigations relative to the operation of the Post Office Department. Every one of these investigations costs several hundred thousand dollars. Generally speaking, they are conducted by accountants who confine their analyses to figures and reports; they do not take into consideration the many ramifications of the postal service.

During its entire history it has been the traditional policy of Congress to regard the Post Office Department as a service to the American people. Likewise, it has been the traditional policy of Congress to branch into new fields of transportation and communication by experimentation in the postal service. In the early days encouragement was given to the operation of railroad lines by granting subsidies to the lines for transporting mail. That policy continues even to the present day.

The Pony Express, a glamorous story of romance (the details of which have been recited on pages of the Postal Record in previous issues) was established and operated by the Post Office Department without any thought as to whether or not the operation would be profitable. As a matter of fact, the operation of the Pony Express was very expensive, but it did bridge the gap from St. Joseph, Mo., to Sacramento, Calif., and did tie the business, social and cultural life of these early Californians to the other peoples of the United States of America.

The Post Office Department also helped finance the operation of the early stage coach lines. It helped break roads into the wilderness. Moreover, if it were not for the financial help and practical experience in flying airplanes gained through the operation of the mail service, our aviation industry would not have progressed to the point it has reached today. Many romantic and glamorous stories could be told about the operation of the air-mail service. Even today it is only by virtue of subsidies received for transporting the mail that many of the commercial air lines are able to keep their planes in the air.

The entire history of the postal service discloses that the foundation and the method of establishing postal rates definitely places emphasis on service to the American people. As evidence of this contention, it can be cited that mail within counties is transported free. This service is established to encourage the smaller newspapers. Again, religious, scientific and fraternal magazines are given preferential rates.

The Postmaster General has been endeavoring for the past 2 years to secure an increase in postage rates. Certainly no one can quarrel with him in his general objective of securing some additional revenue. Many of the postage rates today are but slightly increased over the rates charged in the twenties. With the cost of other commodities rising, certainly a comparative increase in postage rates is justified. We believe that to be self-evident. Rates, however, cannot be increased sufficiently to eliminate the so-called deficit. To attempt to do so would drive the most lucrative business out of the Post Office and at the same time saddle the Department with the high cost operations.

The postal service is an unusual organization. It is not always easy to decide what is the proper rate to charge. As we have pointed out previously, the postal service, strictly speaking, is not a business. Service must be maintained in localities where the operation is bound to result in a loss. The telegraph company, the express company, and transportation companies do not maintain service except where such service can and is operated at a profit. No business organization maintains branch offices except where branch offices render a profit. Yet the Post Office Department, in order to fulfill its fundamental purpose of bringing the mail to the American people, is compelled to maintain approximately 30,000 post offices that are operated at a loss. No one in America would suggest for a minute that these post offices be closed, yet some people insistently demand that the so-called postal deficit be eliminated.

In many other respects the Post Office Department is a very peculiar operation. It is peculiar as far as government organizations are concerned. In determining appropriations for the Post Office Department no one can describe or confine the operation of the service to a certain finite limit. The volume of business dictates to a great extent how much money must be used in operating the Post Office Department. Mail volume fluctuates, of course, in tune with the economic rise and fall of business and other circumstances. In deciding upon the rate to be charged, Congress must give careful consideration to public welfare. They must decide on a rate that is socially desirable. At the same time they must confine the rate to an amount that will not bring about a decline in the volume of business reaching the point of diminishing returns. Obviously, if the rate on a certain class of mail were increased to an amount that would compel mailers to distribute their commodity through some other channel, it would result in the loss of all of that business in your larger centers of population where the unit cost of delivery is small, but more important, it would mean that the Post Office Department, being a public service operated by the Government, would have to retain the delivery of that commodity in Hells Canyon and in other scattered rural areas—places where the unit cost of the delivery of that product is extremely high.

The late Clyde Kelly, of sacred memory, a distinguished Congressman from Pennsylvania, probably understood the subject of postal policy better than anyone of recent history. Through his activity, legislation was passed whereby credit was given to the Post Office Department for handling certain types of mail.

In the Postmaster General's report of 1948 the following credits were shown:

Penalty mail	$53,195,697
Free registry	23,412,641
Free for blind	90,929
Free-in-county publications	772,837
Differentials in second-class postage favoring religious, educational, scientific, philanthropic, agricultural, labor, and fraternal organizations	* 459,129
Franked mail	1,202,962
Estimated excess on cost of aircraft service over postage revenues on air mail	17,088,124
Total	96,222,339

It can well be noted, however, that there are many fields of operation where it is difficult to determine the loss and no attempt has been made to take credit for the loss in these particular directions. Clyde Kelly knew this well and in his many speeches and writings he developed this thesis at length.

There is no attempt to show that the railroads of this country are subsidized by the Post Office Department. The Post Office Department is the only shipper who is required to pay for the hire of railway cars two ways even if the car is empty on the return trip. There is no attempt to assess the cost of operating post offices in the far-flung corners of the United States. There is no attempt to estimate the cost of rural delivery. A complete study would go far beyond the so-called free services and less-than-cost items carried in the Report of the Postmaster General. It is rather absurd to expect the Post Office Department to operate as a business. The Post Office Department has saddled on it by other agencies many services for which they receive little or no reimbursement.

First, they are required to maintain a country-wide information service on civil-service examinations for the Civil Service Commission. Secondly, they sell United States savings bonds for the Treasury Department. Third, they sell documentary stamps for the Treasury. Fourth, they sell migratory-bird stamps for the Department of the Interior. Fifth, they perform custodial services in Federal buildings in which post offices are housed. They are partially reimbursed for the sale of Treasury bonds and bird stamps. They receive no reimbursement whatsoever for the other services.

The Post Office Department has no right to bargain on the rates paid the railroads. This is handled and determined by the Interstate Commerce Commission. They have no right to bargain or determine the amount paid to the air-line companies. This is determined by the Civil Aeronautics Administration. Outside of a limited control for the establishment of parcel-post rates, the rates themselves are determined, not by the Post Office Department but by the Congress of the United States. It is rather peculiar, too, in analyzing a Government operation to find that there is so much hue and cry relative to the so-called postal deficit. The postal deficit is merely the amount paid by the Government for operating the Post Office Department. All of the revenues collected by the Post Office Department are turned over to the Treasury of the United States. The Post Office Department then must go before the Congress of the United States and secure an appropriation which has been rigidly confined to 59 separate items. I am happy to report that this has been reduced to five items in the 1951 budget. The difference between the amount that the Department collects and turns in and the amount appropriated by the Congress of the United States represents the so-called deficit. The Commerce Department of the United States spends in excess of a billion dollars, but this expenditure is never referred to as a deficit. The Agricultural Department of the United States spends $2,000,000,000; this is never referred to as a deficit. The Department of the Interior spends over a billion dollars, but this is not referred to as a deficit. The Federal aid to State and local governments in 1949 amounted to almost $2,000,000,000, but this is never referred to as a deficit. After listening to the voluble protests on the postal deficit, one would almost come to the conclusion that the expenditure for the Post Office Department was the major portion of governmental expenditure.

Let us briefly analyze Federal expenditures. Thirty-four percent of the $42,000,000,000 expended by the Federal Government goes to the military; 16 percent is sent to Europe; 13 percent goes to pay interest on the Federal debt; 13 percent goes to provide care for the veterans of previous wars; and 6 percent goes to social security and other welfare expenditures. Only 18 percent of the money spent by the Federal Government goes to provide for the normal operations of Government. The cost of operating the Post Office Department is a small part of this, one-fifteenth of the 18 percent, to be exact. The history of progress and the stability of the Nation rests upon the maintenance of sound, efficient, orderly communication and transportation. Throughout history and to date the Post Office Department has been the backbone of both communication and transportation. Even if the money spent by the Post Office Department were two or three times greater than it is, it is money well spent to maintain this great Nation of ours.

The Post Office Department is operated as a service. It is up to Congress to establish rates that it feels are fair and equitable. It is also the responsibility of Congress and the responsibility of the officials of the Post Office Department to secure sufficient funds to operate the postal service so that the American people are given the service that they are entitled to. The depression and the war have left serious scars upon the standards of service that have been maintained throughout the years. The instructions sent out by the postal officials in Washington generally uphold a high standard of service. Unfortunately, the philosophy of many of

the people carrying out those orders does not uphold the philosophy of good service. We have many chronic curtailers, who in reality are assassins of the postal service. The Hoover Commission criticizes the Department on the grounds that many people in it are conscious of expense but not of cost. The expense-conscious administrator curtails today but spends tomorrow. There is only one way to deliver mail efficiently, that is to deliver it immediately. Every time a piece of mail is rehandled it increases the unit cost. Poor mail service costs the American public thousands and thousands of dollars. Certainly, a doctrine that the postal service should be operated fundamentally to give good service to the American people is absolutely necessary. Poor service gives great distress to conscientious postal employees.

The Truman Tax Program

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. REED of New York. Mr. Speaker, I hope that the taxpayers of the country can look behind the tax curtain set up by the President to obscure the view of what he is really doing to the economy of the country. If the Congress were to adopt the various proposals which he has outlined it would send business into a tailspin and throw hundreds of thousands of people out of work. I hope that the citizens, who are after all the sovereign power of this Nation, will bring pressure to bear on their representatives sufficient to make sure that the wild and reckless tax proposals of the President are not carried out. The few crumbs in the way of excise taxes promised the public are only bait to set the trap for more taxes for the administration to spend.

Under leave to extend my remarks, heretofore granted, I am inserting the following editorial which appeared in the New York Herald Tribune of Tuesday, January 24, 1950:

THE TAX PROGRAM

In his message on the state of the union President Truman promised a tax program which, in providing adequately for present fiscal needs, would "reduce present inequities, stimulate business activity, and yield a moderate amount of additional revenue." It seemed a neat trick in the prospectus; now that the mystery has been unveiled it seems rather a neat trick still, though its adroitness is much more apparent in its political than in its economic implicatons.

Evidently, the real problem was concerned only indirectly with the financial and economic soundness of the American system. The real problem was to win the 1950 elections. This imposed certain conditions: no drastic curtailment of the "welfare state"; no important increase in taxes; a show, however, of economic orthodoxy at least sufficient to forestall criticism; an adequate amount of lip service to the popularly attractive aim of releasing private enterprise to produce where government cannot do so. These seemingly contradictory requirements have not proved too difficult for the administration experts.

Orthodoxy is served by taking another billion out of the corporation income tax (few voters will mind this, since few will be aware of its effects, and it is sweetened anyway by the proposal to reduce somewhat the burden on middle-sized corporations). The administration's interest in private enterprise is demonstrated by a willingness at least to reduce the excise taxes (especially those of which the voter is most aware). But to avoid any suggestion that this is risking the spending state, the reduction has to be made up by tax increases elsewhere. Here a little terminological adjustment (easy for any expert in modern government) proves helpful. What is wanted is to soak increased taxes on all available sources or groups which are so small or so unpopuar that nobody will mind. By describing this process as "removing the inequities of under-taxation" it is made much more palatable.

It is wonderful, in this connection, how the only tax inequities which ever interest a Government expert are those of "under-," not over-taxation. Such staggering inequities as those of double taxation on corporate dividends, or the State governments' unpleasant habit of taxing what one pays in Federal taxes, are passed over in silence. But since few love the oil men, the insurance companies, the larger corporations, the rich testators, or the Hollywood glamor merchants, it is just removing the inequities to sock them again. So the skillful structure has been built. Like so many other Truman programs, it is designed to do everything and avoid the political consequences of any of them. But the fact that in reality it does next to none of them is still likely to be rather painfully obvious.

For the principles ostensibly underlying the Truman tax program there is much to be said. The main elements in the present deficit may prove temporary. There is reason for attempting to meet it only in part at present. To revamp the tax structure so as moderately to increase the yield, to remove its real injustices, to make it an effective encouragement for private production and to put it on a sounder permanent basis would, if all this were done with a firm grasp over long-range fiscal and economic policy, be a high act of statesmanship. To pretend to do these things without suffering the pains of any of them is perhaps skillful politics; it is certainly little more.

Truman Doctrine Has Been Effective

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Tears of the Crocodile" which appeared in the Washington Post, Tuesday, January 24, 1950:

TEARS OF THE CROCODILE

Among the myths that are being sedulously circulated as a result of the Formosa decision is that the administration has killed its own Truman doctrine. The funeral orations have been delivered by one after the other of the China interventionists in Congress. Some of them never favored the Truman doctrine, anyway; but that fact, far from moderating their wailing, has made their lamentations even more shrill. A flock of commentators has seconded the dirge, and the only person who seems unperturbed by the outcry is the parent who is accused of the foul murder of his child, viz, President Truman.

Mr. Truman is not as hard-hearted as the serenity he maintains in the midst of this Irish wake would seem to indicate. We have consulted the child's birth certificate, dated March 13, 1947, and can vouch for the fact that whatever has been killed, it is not the Truman doctrine. The Truman doctrine, contrary to the burial notices, was not a declaration to contain Communist expansion. Indeed, a reading and rereading of the message does not disclose either the word containment or the word communism. The message, inspired by Britains' anouncement that it could no longer help Greece, laid down this general policy:

"It must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressure."

The first thing to notice about the declaration is its positiveness; it was for, not against. It emphasizes aid, to be given in one or more of a variety of forms, depending upon circumstances. However, the doctrine indicated what kind of aid was primarily meant; it was economic:

"Our help should be primarily economic and financial aid which is essential to economic stability and orderly political processes."

On the basis of the Truman doctrine, economic and financial aid and then military aid started to flow to Greece and also to Turkey. The reason was that Greece and Turkey were struggling to prevent the Russians from cutting the Mediterranean and encircling the Middle East. Ask any military strategist and you will find that this was all-important to American security. There is only one Mediterranean, only one Greece; and, as Secretary Acheson has said, the American interest differs with locality. In this sense the Truman doctrine has been administered—is still being administered. It is being applied all over the world according to the requirements of situations and geography and the limitations of American resources.

Out of the Truman doctrine, for instance, stemmed the Marshall plan in Europe and the Far East. The Marshall plan followed the wise maxim underlying the Truman doctrine of helping people who helped themselves. It would have been money down the drain to have any other rule. Wherever there was a contrary practice, as in China, the result has been worse than wasteful; it has been a boomerang. The Marshall plan, moreover, was followed by the North Atlantic Pact and the arms program—all tracing back to the Truman doctrine. They all sprang from the original concept of supporting free peoples who were struggling to keep themselves free which was expressed in the Truman doctrine. The conclusion is that the crocodile tears now being shed over the demise of the Truman doctrine are all eyewash.

Controversies in Congress

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the

Punxsutawney Spirit of January 18, 1950:

CONTROVERSIES IN CONGRESS

This session of Congress will consider some of the most controversial legislative proposals in history. Yet no one seems to expect that much definite action will be taken one way or the other.

The fireworks began with Mr. Truman's State of the Union message, which contained nothing new, nothing that had not been anticipated. The President asked, as he has on many occasions in the past, for broadened social security, the compulsory Federal-health-insurance bill, some tax increases and adjustments, his civil-rights program, repeal of the Taft-Hartley law, and the Brannan farm price plan. The response to his speech divided pretty much along party lines. The Democrats, with a number of exceptions—particularly the southern bloc, which is prepared to fight the civil-rights proposals to the bitter end—praised his program as being just what the country needs. The Republicans, almost to a man, denounced it, some vehemently—about 100 GOP Representatives signed a round-robin statement to the effect that Mr. Truman is firmly committed to the eventual socialization of the United States.

A change in the President's mannerisms and attitude was noted. The rather somber humbleness he first showed on taking office has gone. In its place, he shows utter confidence that he is right and his opponents are dead wrong.

If, as is expected, Congress turns down or defers most of the President's program, will it be a defeat for the administration? That brings up a very curious situation. Some of the canniest commentators have been saying that Mr. Truman does not really want the program to pass at this time—that, indeed, its passage would actually amount to a severe set-back to administration plans and strategy. The reasoning back of this point of view is simple enough. The Democrats, like the Republicans, are looking to 1952. Recent events certainly indicate that Mr. Truman will run again, though he has not said so. Therefore, the argument goes, Mr. Truman wants the stage set so that he can go to the country, point to congressional refusal to give him what he wants, and base his campaign on that. His advisers seem to feel that this would be sound politics, and that it would enable the President to paint his opponents as black reactionaries and tools of special interests.

Practically everything that this Congress does and says will be colored by the race for the Presidency that is to be run almost 3 years hence—as well as by the elections of next fall. As has often been noted, Senator TAFT's campaign for reelection will command principal national interest in 1950. On domestic policy, he is the unquestioned leader of his party. If he wins, he will have the inside track for the 1952 nomination.

The Trial of Alger Hiss

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. VELDE. Mr. Speaker, it was gratifying to follow the recent trial of Alger Hiss and note the unfailing efforts of Federal Judge Henry W. Goddard to render justice in an impartial and unbiased manner. His judicial aptitude deserves the acclaim of the American people. Likewise does the brilliant performance of Assistant Attorney General Thomas F. Murphy deserve mention and praise.

The recent trial brings to mind the gross impropriety and acts bordering on judicial misconduct so apparent in the first trial conducted by Judge Samuel Kaufman. These acts were pointed out by me and other Members here on the floor of the House a little more than 6 months ago. At that time I enumerated six examples of judicial impropriety on the part of Judge Kaufman which were flagrant violations of our principles of American justice. By referral to the record, we must all agree that there was no repetition of these improprieties in the second trial. Some Members suggested at that time that impeachment proceedings could be brought then. But upon the announcement that Kaufman would not act as trial judge in the second trial, most of us thought it would be wise to forego such proceedings for fear of the effect it would have upon retrial of the case. We were all interested in determining the guilt of Alger Hiss in a trial which would exemplify our traditional spirit of justice and fairness to both the people of the United States and the defendant.

The authority and duty of the Congress to survey the conduct of the Federal judiciary was exercised with this spirit in mind. Our chief question now is: Would impeachment proceedings against Judge Kaufman serve now the purpose of further protecting the integrity of our courts? In answering this question we must be reminded that this was the first trial of national significance heard by Judge Kaufman and he had little judicial experience otherwise. In addition to that, the pressure from members and friends in the executive department of government and other nationally known personalities must have been terrific—in fact so terrific that only a seasoned and experienced judge could withstand it as Henry W. Goddard did. So I maintain that since justice has finally been done, impeachment proceedings against Judge Kaufman should not be further considered. The American people have long been noted for their tolerance and understanding of the difficulties of the inexperienced and are steeped in the spirit of forgiveness of the mistakes of their fellow men. Vindictiveness for political purposes does not befit us as representatives of the people. So I urge that we drop consideration of this matter now and turn our attention to other serious threats to our internal security and the peace of the world.

The trial and conviction of Alger Hiss remind us that our security is still being threatened by subversive forces within our country and within the executive department of Government itself. The diabolical plans of the forces of communism are exemplified by several as yet unprosecuted cases of treason, espionage, sedition, and perjury. Last November, the Un-American Activities Committee unanimously recommended that the files in the case of Dr. Joseph W. Weinburg, known also as Scientist X, be turned over to the Department of Justice for further consideration with the view in mind of indictment and prosecution for perjury. So far this case has not been brought to a Federal grand jury nor has any report been made by the Justice Department. While we demand that the Attorney General's office act fairly in the consideration of this case, we also demand that he act promptly.

There are numerous other Russian espionage agents and subversives still running loose in this country busily engaged in activities aimed at overthrowing our Republic with force and violence. The Un-American Activities Committee on several occasions has had before it Steve Nelson, alias Steve Mesarosh, who is alleged to be an active member and organizer of the Communist Party in the United States and a former member of the executive council of the American Communist Party. On these occasions Nelson has openly defied the committee and refused to answer questions directed to him regarding his activities in conjunction with atomic bomb scientists at the University of California in the years 1942 to 1945 and his subsequent activities as a Communist agent in western Pennsylvania. The contempt he has shown for the committee is most certainly a travesty on American justice.

Such performances cannot be tolerated by a free people and will, I hope and pray, be eventually brought to light and vindicated. I personally have no intention of letting these cases become lost in the bewildering jungles of bureaucracy and shall, from time to time, remind the Justice Department, publicly and privately, that the cases are pending, until action is taken.

Korean Economic Aid Bill

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by President Syngman Rhee of the Republic of Korea:

STATEMENT ISSUED AT SEOUL BY PRESIDENT SYNGMAN RHEE ON RECEIPT OF THE NEWS OF THE DEFEAT OF THE KOREAN ECONOMIC AID BILL

I have just learned with the greatest regret that the United States Congress by a close vote failed to pass the enabling act for ECA aid for Korea yesterday. Despite the most unexpected defeat of this bill, I remain confident that the Congress and Government of the United States of America, upon further and more careful reflection will not fail to grant to Korea this aid which is most essential for the development of a sound domestic economy, enabling the Korean Republic to continue its successful resistance to the persistent, militaristic Communist threat. The Republic of Korea is the only country of Asia today which is determinedly, wholeheartedly, and daily fighting off, and succesfully fighting against the armed attempts of Communist imperialism to invade and overthrow. Some Asiatic

nations waiver, some recoil in fear, one great nation has gone down in defeat, but the Korean Republic continues to resist and fight with unflagging determination, courage, and success. Past American aid, added to strong Korean hearts, has made this remarkable success possible. But continued ECA aid, to establish a strong basis for our economy, is essential to sustain those strong Korean hearts in this difficult transition period. Let those who say that the risk is too great, that the U. S. S. R. is too powerful, that money for Korea is water down some rat hole, remember Berlin. There was risk, there was a powerful Soviet army itself, potential basis for attack in itself, but with courage, the United States, the United Kingdom, and France took the great risk; Berlin and even all western Germany were saved by courageous risks despite enormous expense. Korea, the only free spot of northeastern Asia continent, can and will be held by courageous Korean men and women for the free world and for an independent Korea if the United States continues to risk a few more millions of its hard-earned wealth. Despite yesterday's vote in the United States Congress, I remain certain that further and wise consideration will be given to the cause of an independent Korea to insure that this Republic and these people will have the chance to remain within the orbit of the free world.

The Dairy Farmer Begins To Worry

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement by E. E. Pfeiffer:

BIOCHEMICAL RESEARCH LABORATORY,
Spring Valley, N. Y., January 20, 1950.
Representative KATHARINE ST. GEORGE,
House Office Building,
Washington, D. C.

DEAR MADAM: I would like, in the enclosed brief material, to call your attention to the situation of the dairy farmer, not only in Orange County, but in many other counties of the northeastern States. I am a dairy farmer myself and also a consultant to other farmers.

In addition to the facts on the milk-price situation, there are two things which I would like to bring to your notice.

So far, I have not met a single farmer who is in favor of the Brannan plan for agriculture.

Nor have I met a single farmer who is in favor of the recent development known under the name of "statism."

Coming from Europe (I was raised in Switzerland and came to this country as a Swiss citizen), I had the opportunity, as an agricultural consultant, to travel widely there before the last war. I have seen a lot of "statism" abroad and I think that if the present development goes in the direction of something only nearly similar to what was then already developing in European countries, it will be contrary to good American traditions, of which I am a great admirer.

It may perhaps be due to this background of experience that I have followed political trends in the United States with keen interest during the more than 10 years I have been here. As a naturalized citizen, having become this about a year ago, I naturally place great value on the maintenance of all that has made our country great.

Faithfully yours,

E. E. PFEIFFER.

THE DAIRY FARMER BEGINS TO WORRY

In the daily press and magazines we read so much about how well the farmer has been doing over the last years. This may be true for those who grow corn and wheat and mine their soils. The dairy farmer has to care for the maintenance of his soil's fertility and works conservatively. Generalized statistics do not reflect the actual situation, at least not that of the Eastern States dairy farmer.

The writer operates a dairy farm in Orange County, N. Y., and is a consultant to farmers in several Eastern States. He knows the figures of these farms. The following is quoted from the balances of a farm where the owner makes a living from dairying, i. e., these are actual figures reflecting facts.

Comparing the average annual milk price which was received by this farmer for his milk, the average feed cost for 18 percent protein feed in dollars per ton, the total labor cost and the total feed cost, the picture is as follows:

	Average milk price per 100 pounds	Average feed price per ton	Total feed cost per year	Total labor cost per year
1946	$5.772	$65	$3,532	$1,739
1947	5.135	76	2,855	2,858
1948	5.774	105	3,685	3,957
1949	4.55	80	[1] 5,739	3,371

[1] Unusual increase caused by the drought.

Using 1946 as a basis and setting it as equal to 100 percent, the increase and decrease in prices and costs looks as follows:

	Increase and decrease of milk price	Feed price per ton	Total feed cost	Total labor cost
	Percent	*Percent*	*Percent*	*Percent*
1946	100	100	100	100
1947	89	117	81	164
1948	100	162	104	230
1949	79	123	[1] 163	196

[1] Unusual increase caused by the drought.

While in 1943 one could still hire a dairyman for $80 per month, the wages increased to $100 in 1945, to $120 in 1946, to $150 per month in 1948, and stayed at $150 in 1949. Right now it would be difficult or almost impossible to get a good dairyman below that wage in our area. Evidently the dairy farmer is in a squeeze. The milk price declines. Feed and labor costs decline more slowly, or not at all.

The dairy farmer works 11 hours a day, 7 days a week. His pay is among the lowest. With strikes still going on in order to increase or adjust the wage level to the high cost of living, the dairy farmer does not appreciate being the first one to whom the price squeeze is applied. Of course, we all agree that the cost of living should be reduced, and the dairy farmer, more than anyone else, wants the city people to have cheaper milk. But the reductions should be fair, taking into account both the producing and the selling ends. The production cost, feed, and labor costs, should parallel the milk price. The milk price is determined by the law of demand and production, but the basis for this calculation is not a parity basis which meets reality. Then too, the milk-price control is outside the range of the dairy farmer. He gets paid 3 weeks after delivery and actually does not know in advance how much he will receive while producing the milk.

Our Government urges the employment of as many people as possible; 64,000,000 are spoken of as a goal. With the present price squeeze, the only way out the farmer can find is to work more with less help. At 11 hours per day, 7 days a week, this solution does not sound attractive. The authorities who determine the milk price are cordially invited to come to our farms and try to make a living as dairy farmers.

We dairy farmers have already reduced manpower to the minimum in order to make a go of things. The other way out is to increase milk production so as to make up for the decrease in milk prices. Here, however, there is a biological limit even with the most skillful management. The writer has increased the production on his farm over the reported period by 30 percent, with the same number of cows.

There is another gripe we eastern dairy farmers have right now. Last summer we had a prolonged drought. Even the population of New York City is beginning to know something about drought. To the farmers in this area it did not only mean that some wells and springs went dry, it meant that we had to start feeding our winter reserves already in August. The increased cost of feeding is thus reflected in the above-mentioned figures. In the reported case an increase of about $1,500 was due to the drought. The milk price does not reflect this emergency. Some wise man of the USDA published in September that there was no need of support on account of the drought "since the drought was over, inasmuch as it had rained in September." It rained over the New York City watershed, too, didn't it?

The dairy farmer begins to worry.

E. E. PFEIFFER.

Conviction of Alger Hiss

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news release:

Congressman DONALD L. JACKSON, of the Sixteenth Congressional District, this week applauded the perjury conviction of Alger Hiss, former State Department employee and adviser to President Roosevelt at the Cairo Conference. Hiss was found guilty on two counts of perjury against him in a New York Federal court, after a first trial some months ago had resulted in a hung jury. JACKSON also lauded the effective work of Congressman RICHARD NIXON, of California, candidate for the United States Senate and member of the House Committee on Un-American Activities.

In his statement, delivered on the floor of the House last Monday, Representative JACKSON said:

"The present administration's keen and unfailing sense of bad judgment has been again sustained with the conviction of Alger Hiss which stamps him publicly as a liar and a spy. The former bright boy of the State Department * * * the confidante and one-time adviser of highly placed administration officials * * * was last Saturday found guilty in a New York Federal court on two counts of perjury. The finding by the jury was made in spite of frantic efforts on the part of many highly placed officials to prevent the case being brought to trial.

"Hiss was a leading exponent of the policies which have led to disaster in China. Together with others of like mind in the Department of State, he advocated abandonment of our Chinese allies. He was part and parcel of the international conspiracy which sought a world-wide vote of no confidence in the Chinese National Government. He was a mental carpetbagger who served the cause of world communism with energy and enthusiasm. His conviction will meet with the approval of all good Americans.

"Congratulations and the thanks of all America are due Judge Henry W. Goddard, who presided at the Hiss trial, to the jury which made the finding, to Prosecutor Murphy, and to our own distinguished colleagues, Representative RICHARD NIXON, of California, and Senator KARL MUNDT, of South Dakota, who almost single-handed forced the present administration to bring the Hiss case to trial.

"The American people themselves," JACKSON concluded, "will decide whether or not such trials are worth while or whether the President was being honest or just political in branding investigations of this kind as 'hysteria and a red herring.'"

Tariffs and Monopoly Power

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Mr. O. R. Strackbein, executive secretary of America's Wage Earners' Protective Conference, before the subcommittee of the House Judiciary Committee on the study of monopoly power:

STATEMENT OF O. R. STRACKBEIN, EXECUTIVE SECRETARY OF AMERICA'S WAGE EARNERS' PROTECTIVE CONFERENCE, BEFORE THE SUBCOMMITTEE OF THE HOUSE JUDICIARY COMMITTEE ON THE STUDY OF MONOPOLY POWER, NOVEMBER 9, 1949

This conference is composed exclusively of national and international unions affiliated with the American Federation of Labor. Among them are unions that are organized in the glassware and pottery industries, in hat and millinery manufacturing, in fisheries, photoengraving, wallpaper, etc. The aggregate membership is upward of 500,000.

We wish to call to the attention of the Committee on the Study of Monopoly Power certain aspects of our national tariff policy that have a direct bearing on the question to which the committee has addressed itself, namely industrial bigness and monopoly power.

We think it important that we do this because the policies of a government, aimed in one direction and having perhaps admirable objectives, may produce effects in other directions that are of a quite opposite character.

Thus, our Government has certain antimonopoly policies; and this very hearing is dedicated to learning more about monopoly and bigness so that remedial measures may be recommended. The purpose, we assume, is to prevent further concentration of business into aggregates that will smother small and independent enterprise and lead to other undesirable results, such as the need of excessive public control.

This means, we take it, that the Government is concerned about the future of small- or medium-sized independent enterprise. Presumably, present trends toward concentration of business and, in fact, the great size already attained by some of our corporations, are a source of worry. The Sherman and Clayton Acts, the Federal Trade Commission Act, the Robinson-Patman Act, and the various governmental efforts to aid and protect small business, to the contrary notwithstanding, the fact remains that the trend of business continues in the direction of still greater size in ownership and management. In recent times the growth of parallel labor organizations to great size and power, as a counterpoise in the field of bargaining, has also attracted attention. The fear is that between these two forces, freedom of the individual and freedom of enterprise will be crushed.

Against this background we wish to pose the current policy of our Government as it bears upon international trade. To a very important degree, in our estimation, the effects of this policy will be to discourage, hamper, injure and in some cases to destroy small industries, while, on the other hand, it will encourage, help, and promote the large, mass-production enterprises. In other words, the execution of the policy will give impetus to the very forces about which this committee and other parts of the Government avow growing apprehension. This is not to say or to imply that such effects are contemplated or sought by those who have formulated our international trade policy or by those who are charged with carrying it out.

The relationship between the current policy to reduce tariffs and to encourage imports, on the one hand, and the growth of already gigantic industrial enterprise, on the other, is not apparent at first blush. Quite to the contrary, protective tariffs have long been associated in the minds of economists and others with the growth of trusts. In fact, the tariff has been called the mother of trusts. Could it then possibly be true that the reduction of tariffs will help the so-called trusts or big business and do harm to the smaller industries and the smaller companies in big industries?

We raise this question at this time before this committee because the policy of reducing tariffs in order to increase imports is finding powerful added support from those who are seeking an escape from the condition of dollar-shortages that afflicts many foreign countries. The dilemma is real and the problem is unmercifully difficult. Either we import more, much more, or we continue to make grants of billions of dollars to the dollar-short countries; or else we cut these countries off to shift for themselves. These are the alternatives that are generally held out to us. The least painful of the alternatives, then, seems to lie in a further reduction of our tariff so that imports may flow more freely into this country. Therefore our Government embarks on a vast educational program to condition the minds and hearts of the American people to the kinder reception and more willing purchase of imported products.

The increased imports would put more dollars into the pockets of those who export the goods to us; and this would reduce the dollar-shortage overseas and thus help the rest of the world to balance its trade with us. Incidentally, it would help us to maintain our present volume of exports, a good part of which is now paid for by the American taxpayer. We could, by receiving more imports, so the argument goes, reduce or eventually perhaps eliminate this indirect subsidy that our exporters now enjoy.

The logic of this argument seems inescapable.

Before answering the questions that we have raised, and before addressing ourselves to the alternative of the present policy, we wish to offer a very brief analysis of our exports.

It is perhaps not generally known that some of our large industries, notably those in which capital concentration has reached huge proportions, regularly export a larger volume of products than the total output of some of our other industries. A suitable example is found in the automobile industry. Average annual exports, classified by 5-year periods, of this industry from 1925 to 1940, have been as follows:

United States exports: Automobiles, parts, and accessories

Annual average:	
1926–30	$406,164,000
1931–35	146,503,000
1936–40	417,439,000
Actual:	
1948	929,294,000

Source: Statistical Abstract of the United States, and Summary of Foreign Commerce of the United States.

Compare these export figures with the gross annual product of other industries, as reported by the Bureau of the Census (Census of Manufactures):

	1939 value of product
Concrete, gypsum and plastic products	$257,598,000
Cement	192,611,000
Glassware, pressed and blown, including glass containers	255,589,000
Flat glass	102,389,000
Books, printed or published, or both	236,752,000
Hats and millinery	206,857,000
Professional, scientific, surgical, medical instruments	180,014,000
Jewelry, costume jewelry and miscellaneous products	176,509,000
Toys and sporting and athletic goods	151,404,000
Liquors, distilled, rectified, or blended	105,224,000
Wines	32,782,000
Pottery and related products	98,864,000
Fish and shellfish, canned or cured	81,071,000
Silverware and plated ware	62,771,000
Cutlery and edge tools, except silver and plated ware	59,924,000
Leather luggage (suitcases, bags, briefcases, etc.)	36,591,000
Wallpaper	24,969,000
Feathers; plumes and artificial flowers	18,504,000
Small leather goods	14,334,000
Umbrellas, parasols and canes	11,520,000

From this table it is clear that the exports of automobiles, parts, and accessories during the 5-year period of 1936–40 averaged higher in value per year than the total output of the entire glass industry, including all glass tableware, scientific and laboratory ware, bottles, and window and plate glass. Again, these exports were as great as the total output of the cement and the hat and millinery industries combined. Once more, they were as great as the combined product of the last nine industries listed in the table, namely, pottery and related products, fish and shellfish, canned or cured, silverware and plated ware, cutlery and edge tools, leather luggage, etc.

Another of the exporting giants is the petroleum industry. We show the exports below:

United States exports: Petroleum and products

Annual average:	
1926–30	$524,364,000
1931–35	231,352,000
1936–40	345,619,000
Actual: 1948	656,831,000

Other heavy exporters of industrial products are the iron and steel industry, manufacturers of electrical machinery and apparatus, and of agricultural machinery and implements. Important but less heavy shippers to other countries are the meat packers and manufacturers of office machinery and appliances. The table immediately below gives the export figures for these various products:

United States exports

Product	Annual average			Actual, 1948
	1926–30	1931–35	1936–40	
Iron and steel products	$248,844,000	$90,091,000	$319,876,000	$861,623,000
Electrical machinery and apparatus	102,711,000	62,635,000	105,605,000	490,383,000
Agricultural machinery and implements	109,901,000	26,750,000	68,027,000	381,926,000
Meat products	77,988,000	28,724,000	26,409,000	56,752,000
Office appliances and equipment	44,969,000	21,268,000	29,370,000	86,942,000

Source: Statistical Abstract; Summary of Foreign Commerce.

Examination of the foregoing statistics reveals that the average annual exports from 1936–40 of the four leading export industries listed in the foregoing and preceding tables, namely, producers of automobiles, petroleum, iron and steel, and electrical machinery and apparatus, were as great as the total annual product of the following industries in 1939: glassware, bottles and flat glass; book printing and publishing, hats and millinery, pottery, fish and shellfish canning and curing; liquor and wine, and cutlery and edge tools.

Of course, other comparisons could be made. Other industries could be used as examples. However, the predominant position in our exports of the large mass-production industries, wherein resides much of the bigness and monopoly power which are the subject of complaint and inquiry, is very clear and indisputable. Most of the industries that we have presented for comparison with the giants of export are those which would receive much of the impact of stimulated and increased foreign competition, such as is contemplated.

Very few of these smaller industries are afflicted with monopoly power. They are industries that are devoted predominantly to the production of consumers' goods, and are widely scattered throughout the United States. The individual establishments are generally very small in comparison with the plants of the large iron and steel companies, the large electrical equipment manufacturers, the automotive vehicle producers, etc., which are our heavy exporters of industrial products.

The question is how the proposed program of increased imports, fostered by further reduction of our tariff, would promote bigness and monopoly; or, to say it differently, how could the surrender of protective measures which purportedly nurtured the trusts during their growth, now, after they have matured, advance their entrenchment and add to their power?

The answer should be clear. The economies of mass production have enabled the large industries not only to meet foreign competition in our home market (with some exceptions) but to compete successfully in foreign markets with foreign producers. The further reduction of our tariff would not injure these titans, if at all, in any degree comparable to the injury that would be inflicted on the smaller industries that manufacture the principal classes of goods whereof imports would be stimulated.

Failure to open wider our market for a miscellany of goods manufactured in the countries that suffer from a dollar-shortage, would in time, no doubt, decrease our export trade, assuming a contraction of our foreign aid program. The greatest exporters would undoubtedly suffer most from such an ebb in our overseas trade. In the industrial field the mass-production industries, the prime examples of bigness and wielders of great power, whether monopolistic or not, would absorb most of the impact.

However, the need for export markets as exemplified by the United Kingdom, Germany, Japan and other industrial nations, is not limited to the American outlet. There are other important markets. Should those countries regain the overseas markets outside this country which they enjoyed before World War II, much of the present pressure for exports to the United States would slacken.

The exigencies of war delivered many of these overseas markets to us. Our exporters were virtually the only ones in the world who could undertake to fill the partial vacuum created in those markets by the withdrawal of England, Germany, Japan, and other industrialized countries as suppliers of manufactured products. We did export more extensively than ever before, and while we were unable to meet the great demand and found it necessary to ration our exports, we came into a predominant position as suppliers.

It is perhaps natural and human that our exporters should seek to retain these war-gained markets. However, if this retention should impede the postwar adjustment and hinder the restoration of multilateral trade and therefore the basis for correcting trade balances, the price might be too high.

By insisting upon retention we will delay the necessary adjustment and at the same time will aggravate the problems confronting our occupation forces in Germany and Japan in seeking to restore the exports of these countries to their prewar channels.

It is in very considerable degree the failure to restore these overseas markets to their prewar suppliers that creates the demand for a substitute market in the United States. In bowing to this demand as a matter of policy we will contribute to the bigness and monopoly power of our mass producers and sacrifice the smaller producers of a wide miscellany of goods.

All the concern over bigness and monopoly and all the solicitude for small business professed by our Government will ring hollow if our gates are opened yet wider to imports that come into competition with our producers of miscellaneous goods. Our tariff has already been reduced an average of 50 percent. Should our smaller producers be asked to shoulder the whole burden of the necessary adjustment? Should the taxpayer be asked to continue his subsidy of the large exporters?

This committee is concerned with influences that make for monopoly power and result in oppressing the smaller independent enterprises. We strongly urge that it pursue the question raised here and consider the wisdom or unwisdom of the policy now being pressed in the field of foreign trade by other branches of our Government.

The question in the end is: If some of our industries must get hurt, should our policy be so shaped that the injury would fall principally upon the smaller producers?

Oklahoma Pioneers

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call attention of the House to the honors paid to the pioneers of Oklahoma on the national radio hook-up of American Broadcasting Co.'s program recently.

On Friday, January 20, our pioneers who came West from the State of Virginia were recognized for their daring on the Lone Ranger series, in a broadcast called The Banner of Virginia.

The broadcast had to do with a group of Virginia veterans of the Civil War who had settled in the rich lands of the then Oklahoma Territory, and who were reminded by the Lone Ranger of the glorious heritage left them by such men as Gen. Robert E. Lee. The broadcast was coincident with the one hundred and forty-third anniversary of Lee's birth, which was on January 19.

In the broadcast, the Lone Ranger reminded these pioneers of their great traditions and urged them to resist the enemy—whether it be ruthless desperadoes or bad weather. The future—he advised them—was incredibly promising if they would work out a new State from the pioneer life they found. How significant these words to the Oklahoma pioneers.

We in Oklahoma appreciate the recognition given our pioneers and the veterans of Virginia by George V. Trendle, creator of the Lone Ranger show and civic leader of Detroit; also to Mr. Frank Stricker, chief writer of the radio series which, in its nineteenth year, dips into the history of the West for its story themes.

Practical Aid to Education

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Greenfield (Ind.) Daily Reporter:

PRACTICAL AID TO EDUCATION

One of the greatly publicized objectives of the present administration in Washington has been to inaugurate greatly enlarged Federal aid to education.

This would mean the expenditure of great sums of Federal moneys and has been quite a debatable issue, chiefly for three objections:

1. Elementary education has been declared a local problem, which should be financed primarily by the local community benefited, and perhaps in a secondary way and where necessary, with lesser amounts of State assistance.

2. The fear has been expressed that strings tied to Federal money would inevitably take school control away from local authorities and place them under Federal domination.

3. Areas which have already made the necessary expenditures and sacrifices, if necessary, to maintain their own schools at an adequate level, would have to pay again into funds for either areas that have been derelict in this regard and reused to pay proper amounts at local levels for the purpose.

However, it was granted that schools in certain areas are in need of improvement.

How idealistic, impractical and fraught with political bait the Federal declaration in this regard is, happens to be demonstrated in incidental fashion by the coal strike emergency.

Schools all over the country are closing because of lack of coal. The Federal Government has the legal machinery to correct the situation. The cost would be nothing. It would be practical and cheap Federal aid to education. Up to now not a finger has been lifted in Washington to get schools a supply of coal. No emergency exists.

Seek and demand added millions in the name of better schools, but no move to get even an extra hod of coal to keep the ones open which now exist.

Ain't that sumpin'?

Take-Home Pay Isn't All We Earn

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, David K. Steenbergh, publisher of the Feed Bag, a national trade magazine, has written a timely editorial which was contained in the December issue of that publication. Mr. Steenbergh calls attention to an important matter so far as pay is concerned, and as part of my remarks I am including it at this point:

The eyes of the working world, which includes most all of us, are focused on take-home pay. The rate of pay per hour, gross wage per week or monthly salary no longer means anything. Withholding taxes and social-security assessments are simply classified as "deductions" and the worker no longer assumes any conscious responsibility toward meeting the constantly rising cost of government.

We do not believe this was the intent of Congress. It merely shifted the cost of collecting taxes from Government to industry. In so doing, however, it destroyed individual responsibility to Government and thereby made possible the vast spending sprees of the New Deal and the Fair Deal, of FDR and Truman.

Historically, March 15 was established as the date for payment of all taxes due the Government on income received during the previous year. Imagine if you can, then, what would happen if all workers had actually received their gross wage or salary for 1949 and were now forced to scrimp, save, scrape, and borrow to pay their taxes by March 15, 1950. The hue and cry would quickly bring an end to reckless government spending, the New Deal and the Fair Deal notwithstanding.

Industry did not want the job of collecting income and social-security taxes for the Government. To do so has required the employment of thousands of additional bookkeeping and clerical workers with no saving anywhere, as the United States Treasury Department also now has many more employees. Emphasis on take-home pay rather than gross income has accelerated the demand for higher and higher wages and salaries. All this has boosted the cost of doing business and increased the price of all the things we buy.

This effect is bad enough but not nearly as serious as the resulting lack of responsibility to and for the Government. Taxes which do not pinch the individual pocketbook fail to impress the average worker. He sees no connection between his income—of which he considers only his take-home pay—and the rapidly rising cost of reckless and wasteful Government spending.

The really great men of our country have and are warning us that deficit spending is rapidly leading our Nation to bankruptcy. Deficit spending will continue, however, until the majority of our citizens realize the personal stake they have in the rising cost of Government and the staggering national debt.

As now collected, income taxes are hidden taxes. They were never intended to be and Government reform will not come until they are uncovered. If we are employers, let's explain their tax interest and its relation to Government spending and debt when we supply the withholding tax reports to our employees. If we are employees, let's examine our withholding tax report carefully and note what taxes we are paying as related to our actual earned income.

Take-home pay is important to all of us but how long can it be sufficient to meet our needs if the Government continues to take a larger and larger percentage of our earned income for unnecessary and wasteful expenditures at home and abroad.

DAVID K. STEENBERGH.

It's High Time

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. SMITH of Kansas. Mr. Speaker, from time to time we read and see quoted editorials from the New York Times, Wall Street Journal, Chicago Tribune, Kansas City Star, and other metropolitan newspapers. These editorials express certain opinions and receive a lot of attention. There is a feeling that these opinions are the last word in editorial comment because they came from the big papers. The small-town paper from Main Street is generally overlooked. I hope that my colleagues will read the following editorial coming from the pen of Byron L. Lehmbeck of the Meade Globe News. It is so typical of the way rural America is thinking these days.

IT'S HIGH TIME

All that stuff your mammy and pappy done told you about thrift and enterprise is just so much hooey.

If you don't believe it just review the rules of the great game "robbing Peter to pay Paul" that has been going on for years in this country.

For example, it has been and is the popular thing to berate, belittle, and damn the thrifty and enterprising. If you are a person that is a producer, one with initiative, resource, stamina, ambition, vision, perseverance, or with any of the other qualities that are necessary to get ahead you have been classed as being a conniver of the first order.

If you are a Paul, however, a person who has become indolent, shiftless, and careless you are classed as being the salt of the earth. You are the bright boy who has seen the light. You'll be taken care of from the cradle to the grave, and at Peter's expense.

The Pauls and those advocating that Paul be top man are making life rough for the Peters. The Peters are the ones who must work harder and longer to meet the many taxes and expenses imposed upon them.

But how long are the Peters—the person who trys to lay up something for a new car, a home, or to educate their kids—going to be able and willing to work to pay the Pauls? When, and if the Peters are forced or get tired and quit, it's going to be a sad day for all of us.

At the present time there is too much effort being made to discourage enterprise, thrift, endeavor, and planning by those who are able and willing.

As an old boy out in Utah recently summed the issue up, "The present course is like cutting down the fruit trees, one after the other, to make the fruit easier to pick. Soon there will be no trees—and no fruit."

It's time to make an about face. It's time to reward thrift, industry, and foresight. It's time to penalize shiftlessness, indolence, arrogance, and the desire—yes, demanded by the Pauls—of something for nothing.

It's high time the issue was clearly put: socialism versus freedom.

An Occasion for Great Pride

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I take pleasure in calling to the attention of my colleagues the following editorial from the Watsonville Register-Pajaronian.

We can all be thankful that the United States of America is still a working democracy.

AN OCCASION FOR GREAT PRIDE

We're about to bust our buttons with pride in our city today.

There was a real Vishinsky-type oration at the high school study hall last night.

Of the twenty-five-thousand-odd people who live in the Pajaro Valley, around 24,968 of them stayed home or went elsewhere.

But what makes us proud is this: this speaker, who hates the capitalist system and thinks Russia is just fine, was permitted to speak to anyone who wanted to hear him—without heckling, without violence, without demonstration.

In contrast to some cities like Peekskill, N. Y., whose citizens have made themselves notorious by senseless rioting against speakers they disagree with, Watsonville is a very bright spot indeed this week.

Not that we're asking for more of the same—but there's a valuable lesson for other communities in what happened, or didn't happen, Thursday night. These Stalin-

loving screwballs thrive on demonstrations, bans, and hecklers; they die for lack of audiences when they're let alone. Gerald L. K. Smith, the Christian Front rabble-rouser, drew big crowds in San Francisco when he was denied the use of public buildings and demonstrated against. When he was ignored, his appearances became a colossal flop.

We think the same thing will work here, just fine. Watsonville has preserved the right of free speech, which extends even to the right to be ridiculous. By so doing, it has tremendously strengthened the cause of democracy.

Our congratulations, therefore, and hearty thanks to the members of veterans' organizations and others who—like ourselves—are vigorously and unalterably opposed to Communist tyranny and dedicated to freedom and democracy. Their restraint and good judgment, in refraining from raising a fuss and making a martyr out of the speaker, have immeasurably weakened his cause and strengthened ours.

The fallacies expounded by Mr. Lohr during his speech are too numerous for rebuttal all at once. In fact, his words were so like those of other Communist apologists that they are entirely familiar to most of us, and carry their own rebuttal.

One familiar phrase made us prick up our ears: "the stench and rottenness of the system under which we are compelled to live." We're not sure just where Mr. Lohr came from. But even were he a native-born American, we're reasonably sure he isn't compelled to live in the United States. There should be little trouble in getting a passport for one of the "people's democracies" like Poland, China, or the Soviet Union, and hardly any compulsion to come back.

Another random thought, that came as we watched Mr. Lohr denounce our decadent democracy. Over his shoulder, hanging on the wall, was the American flag which guaranteed him the right to speak his warped thoughts.

How many citizens of the people's democracy of the Soviet Union, we wondered, went in automobiles last night to little Red schoolhouses, to hear a speaker freely denounce Stalin and praise capitalism?

There, we think, lies the overpowering strength of American democracy and freedom. There lies the answer to any speaker who prattles of the glorious freedom of Communist dictatorship.

The best way to insure ourselves against losing the fight against communism, we're convinced, is to let 'em pop off; reason their arguments out; and come to your own conclusion—would you rather live in a country where free men can speak their minds, even to the point of foolishness, or in one where an improper thought will send you to a Siberian salt mine?

The kind of good sense demonstrated by Watsonville citizens Thursday night is the best insurance that freedom will continue to exist.

Peekskill, N. Y., papers please copy.

Women Speak Out Against Socialized Medicine

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, there is a growing concern on the part of the women of this country that Congress should not adopt a socialized-medicine program. A very interesting letter has just been received from Mrs. George D. Richardson, president, the City Federation of Women's Clubs of Brodhead, Wis. It is so pertinent and timely that I am including it as part of my remarks:

BRODHEAD, WIS., *January 18, 1950.*
Representative LAWRENCE H. SMITH,
Washington, D. C.

DEAR REPRESENTATIVE SMITH: The City Federation of Women's Clubs of Brodhead, Green County, Wis., a group of 250 legally qualified voters, have delegated me to write you what we are thinking, and this is perhaps the consensus of most voters in the Middle West. Green County, with 25,000 intelligent citizens, is one of the richest and finest dairy and farming areas in the United States of America. We are nationally famous for cheese. We consider that there is a definite coal shortage in our area and we urge you to do something about the coal situation right now.

We also want to go on record as follows:

We definitely do not want socialized medicine.

We do not want Federal supervision of schools.

We do not want the Brannan farm program.

We do not want more taxes.

We would like to keep our liberties and not give up our heritage, our American way of life, by being asked to walk in the footsteps of countries where such methods have failed.

We deplore the tremendous governmental spending.

We do approve the recommendations of the Hoover Commission.

Some of our ancestors came to Wisconsin as early as 1670 and from that time on, without hand-outs, by their courage, ambition, integrity, perseverance, and pride of achievement managed to earn a living, then came comforts and prosperity, and we believe we can still carry on that program. Description of Green County, I know, was not necessary for you, Mr. SMITH. This is a copy of the letter sent to President Truman. Do you approve? If it meets with your approval perhaps a movement could be started among club women all over the State. Could you offer suggestions?

Now, should I be sent to the guillotine for this, please ship the remains back to Green County; at least, they will erect a monument saying, "She died trying."

Very respectfully yours,
LEONE RICHARDSON.

Flow of Foreign Oils Into United States

EXTENSION OF REMARKS
OF
HON. WINGATE H. LUCAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. LUCAS. Mr. Speaker, we in the oil-producing States are becoming increasingly concerned about the tremendous flow of foreign oils into the United States. The people of Texas—my own State—are being penalized in the sum of $30,000,000 in State revenues because these alien oils have taken so much of the domestic market. It is time that our Government take cognizance of the seriousness of the situation and provide protection to domestic producers, before domestic production is eliminated, because that is exactly what will happen unless action is taken. Then America will be a have-not nation with regard to petroleum. I urge my fellow Members to study the following statement in order to understand the gravity of the situation we are in.

THE PRESENT OIL SITUATION

Since World War II there has been a rapid development of the production of oil in foreign areas at a rate greater than could be absorbed by foreign markets. The resulting surplus has been an important factor in the following changes in the operations of the domestic petroleum industry.

1. Oil production: Domestic production, according to Government statistics, averaged 5,380,000 barrels daily during the last half of 1949. This was a reduction of 10.3 percent as compared with the same period in 1948.

2. Producing capacity: Domestic capacity under sound conservation practices averaged 6,380,000 barrels daily during the last half of 1949, according to authoritative estimates by industry experts. This represents an increase of 6.3 percent over 1948 productive capacity.

3. "Shut-in" production: The difference between capacity and actual production shows that the domestic industry was "shut-in" by an amount averaging 1,000,000 barrels per day or 17 percent during the last 6 months of 1949.

4. Oil imports: Imports of foreign oil during the last half of 1949 averaged 680,000 barrels, according to Government statistics. This was an increase of 23.6 percent over the imports during the same period of 1948.

5. Oil exports: Government statistics show that exports averaged 290,000 barrels daily during the last half of 1949, a decrease of 23.3 percent as compared with the previous year.

6. Oil producers' income: On January 1, 1950, the United States Department of Interior reported that the total income of domestic crude oil producers in 1949 was $507,000,000 less than in 1948.

Decreased oil activity in the United States and reduced income from oil production affect American labor, Federal and State tax revenues, the prosperity of hundreds of communities in oil-producing areas, and the income and general welfare of the Nation. The experience of the industry proves conclusively that a loss in income means decreased drilling activity and a lessened ability to maintain producing capacity to meet national oil requirements. As this takes place, the Nation shifts its dependence for oil supplies from thousands of domestic producers to foreign oil controlled by a few large oil concerns operating on a world-wide basis.

World Federation

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, at the request of Alan Cranston, president of the United World Federalists, I am including herewith a petition from various interested citizens in Palo Alto, Calif.

PALO ALTO, CALIFORNIA,
January 1, 1950.

Believing that the achievement of a World Federation, with limited and defined powers, is essential to the preservation of the

peace and that the United States should take the lead in working to this end, we, the undersigned, citizens of Palo Alto, Calif., urge the Congress to pass House Concurrent Resolution No. 64, introduced last fall, which reads:

"*Resolved*, That it is the sense of the Congress that it shall be a fundamental objective of the foreign policy of the United States to support the United Nations and to seek its development into a world federation open to all nations with defined and limited powers adequate to preserve peace and prevent aggression through enactment, interpretation, and enforcement of world law."

G. A. Casaday, minister, Congregational Church; Arnold Rumwell, attorney at law; D. J. MacLachlan, major, United States Army retired; Russel V. Lee, M. D.; A. Guerard, Professor Emeritus, Stanford; Mrs. David Starr Jordan; Everett C. Thomson, pastor, First Presbyterian Church, Adron Beene, attorney at law; Byrl R. Salsman; Oscar F. Green, rector, All Saints Church; Grace R. Helliwell, librarian; A. Marvin Stuart, minister, First Methodist Church; Don Edwards, executive vice president, San Jose Abstract & Title Insurance Co.; W. Stanley Pearce, insurance agent; Andrew W. Spears, attorney at law; Charles E. Allen, assistant to the chairman, Hoover Institute; John H. Leecing; F. Danford Lion, minister, Unitarian church; Henry L. McIntyre, secretary - treasurer, United Helicopters, Inc.; Eugene Santschi, Jr.; Mary Curry Tresidder.

Information Relating to Federal Excise Taxes

EXTENSION OF REMARKS
OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. O'SULLIVAN. Mr. Speaker, like many other Members of Congress I have received a great number of letters urging me to work and vote for the repeal of Federal excise taxes. Many persons do not realize the amount of Federal excise taxes and upon what items Federal excise taxes are collected at the wholesale level and at the retail level.

In order to apprise the people of the amount, nature, and extent of such taxes. I wish to quote the following from the December 2, 1949, La Salle Washington Letter, written by Harold K. Howe, manager of the Washington office of the La Salle Steel Co., which figures in the hasty check which I made, appear to be quite authentic. He states that the total excise taxes collected during the fiscal year of 1949 was $7,506,017,641.55. He lists the following items as those upon which Federal excise taxes are paid at the wholesale level:

Beer, wines, and distilled spirits, 75 cents to $2 per quart (plus special occupational taxes for brewers, distillers, wholesalers, and retailers from $22 to $222 per year).

Cigars, $2.50 to $20 per thousand.

Cigarettes, 70 cents to $1.68 per carton.

Oleomargarine, colored, 10 cents per pound; uncolored, one-fourth cent per pound (plus occupational taxes for manufacturers, wholesalers, and retailers from $6 to $600 per year).

He then points out that he has ignored the taxes on narcotics, opium, and marihuana.

Playing cards, 13 cents per pack.

Lubricating oils, 6 cents per gallon.

Gasoline (Federal tax only), 1½ cents per gallon.

Tires, 5 cents per pound.

Inner tubes, 9 cents per pound.

Automobile and motorcycle accessories and parts, 5 percent.

Automobile truck chassis and bodies, 5 percent.

Other automobile chassis and bodies and motorcycles, 7 percent.

Electric power and light, 3⅓ percent.

Mechanical refrigerators, air conditioners, etc., 10 percent.

Radio sets and parts, 10 percent.

Matches, 2 cents to 5½ cents per thousand.

Sporting goods, 10 percent.

Photographic equipment and films, etc., 15 to 25 percent.

Firearms, shells, and cartridges, 11 percent.

Musical instruments, 10 percent.

Luggage, 10 percent.

Electric, gas, and oil appliances, 10 percent.

Phonograph records, 10 percent.

Electric light bulbs, 10 percent.

He also lists the following items as those upon which Federal excise taxes are paid at the retail level:

Jewelry, 20 percent.

Furs, 20 percent.

Luggage, 20 percent.

Toilet goods, 20 percent.

Admissions (movies, etc.) 1 cent on each 5 cents paid.

Ticket brokers, 20 percent.

Roof gardens, cabarets, etc., 20 percent.

Club dues and initiation fees, 20 percent.

Sugar, ½ cent per pound.

Telephone and telegraph service, 15 to 25 percent.

Safe deposit boxes, 20 percent.

Pipe-line transmission, 4½ percent.

Bowling alleys, pool tables, $10 each alley or table.

Coin-operated devices, $10.

Coin-operated gaming devices, $100 per year.

Passenger transportation, 15 percent.

Property transportation, 3 percent of freight paid.

Coal transportation, 4 percent of freight paid.

One may readily see that when people are demanding that they be freed from the paying of all Federal excise taxes they probably are demanding something which they do not really want and could never expect to secure.

One can readily understand that if $7,506,017,641.55 excise-tax revenue was eliminated that the national budget would be just that much more out of balance, and consequently, the reason for President Truman's approach in his annual tax message of a repeal of certain Federal excise taxes is quite proper and should be understood easily by everyone.

I have heretofore pointed out to many of my constituents that a number of the more burdensome Federal excise taxes placed on articles during the war period might have been repealed if the Eightieth Congress had done its plain duty to the people, and had not entered into an unholy alliance to relieve some of the big Federal income-tax payers of their proper share of the tax burdens.

In informing my constituents of this conduct of the Eightieth Congress, I said in part in a letter to them as follows:

I have received recently a number of communications in reference to the prospect of having Congress repeal the present burdensome excise taxes on everything but true luxury items, and I refrained from answering them until it had been definitely established that the first session of the Eighty-first Congress could do nothing about repealing these Federal war tax measures.

None of us would have been further plagued at this time by such taxes if the repudiated, Republican controlled Eightieth Congress had done its plain duty to the people and others who have been worried and burdened far too long by such Federal excise taxes.

Lest you might feel that the facts do not bear out my last statement I want to submit to you that when the Democratic controlled Congress passed the bill providing for wartime Federal excise taxes in the year 1943 there was a proviso in the bill that the collection of such taxes could not be made 6 months after the cessation of World War II hostilities. On December 31, 1946, His Excellency Harry S. Truman, President of the United States declared that hostilities had ceased. Therefore under the law passed by the Democratic administration in 1943, the collection of these Federal wartime excise taxes would have ceased automatically on June 30, 1947.

The Republican-controlled Eightieth Congress decided not to let this happen and rushed a bill through the House of Representatives in January of 1947 which bill was enacted speedily into law in March 1947 making these excise taxes permanent.

President Truman recommended to the Congress that this bill extend the excise taxes for 1 year only, for the purpose of making a study to determine if any of these excise taxes should remain law, but the Eightieth Congress was adamant and made these excise taxes permanent.

The record shows that on January 28, 1947, at page 692 of the CONGRESSIONAL RECORD a vote by yeas and nays was taken on H. R. 1030, a bill to continue war excise taxes permanently, and it passed with the helpful votes of the Republican majority including the votes of all of the then four Republican Representatives from Nebraska.

The record shows further than on February 2, 1948, at page 926 of the CONGRESSIONAL RECORD a vote by yeas and nays was taken on H. R. 4790, a bill to reduce individual income-tax payments and for other purposes, and it also passed with the helpful votes of the Republican majority including the votes of all of the then four Republican Representatives from Nebraska.

President Truman vetoed this bill, H. R. 4790.

The record then shows that on April 2, 1948, at page 4053 of the CONGRESSIONAL RECORD, a vote by the yeas and nays was taken to override President Truman's veto of H. R. 4790, and it passed also with the helpful votes of the Republican majority, including the votes of all of the then four Republican Representatives from Nebraska.

This information I hope brings the reader up to date on why he has been plagued and harried with Federal war excise taxes and who is to blame for same at this time.

This Republican strategy was not understood clearly for a time, but later it developed that they decided to make these excise taxes permanent so that they could pass an income-tax reduction bill which would enable many greedy and selfish people to prune some $5,000,000,000 a year from their then income-tax payments to the United States Government. These doings demonstrate how the reactionary Republican legislative mind

functions. To give the rich relief they saddle some of their tax share onto the middle and poor classes of people, and then the budget balances; don't you see? I am sorry that you now find that you have been since March 1947, along with myself and other good Democrats and Republicans, a budget balancer for the rich people.

Of course to sugarcoat their financial pill they permitted 7,000,000 poor and ordinary taxpayers to get slight income-tax reductions so that rich taxpayers could get the lion's share of income-tax reductions.

What President Truman wants to do is put the income-tax saddle back where it belongs, so that some of these excise taxes may be repealed, but the reactionary Republicans have shouted No! No! No! for the past months in Congress, and have introduced a bill to repeal all of the excise taxes, but have made no provision for getting this much needed tax money from any other source. They want to heartlessly and heedlessly put the budget further out of balance by fooling the people who have to pay and put up with burdensome excise taxes into thinking that they are their friends and not their slippery thinking enemies.

I feel that President Truman's recent tax message to Congress was an excellent one and should receive the support of every Congressman who is endeavoring to be truly helpful in tax matters. I am sure that it will be interesting to watch the way that some Congressmen will respond to the President's sound and sensible approach to the elimination of some of the war excise taxes and the aid which will be given by them to find other proper tax sources so as to try to balance the budget.

A Permanent FEPC

EXTENSION OF REMARKS

OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. DOLLINGER. Mr. Speaker, the importance of the fight now being waged for FEPC is best described by the text of a report by Walter L. Kirschenbaum, a delegate of the Greater New York Council for a Permanent FEPC, which is submitted herewith for the consideration of my colleagues:

Fellow fighters for civil rights: I was honored and privileged to represent this council in Washington, D. C. You can feel proud that those of us who represented the New York delegation gave leadership to the mobilization, and at times inspiration. I say this in all due modesty, in view of the great sacrifices that were made by the delegates and by those who arranged the mobilization.

There was a great deal in the press prior to our departure for Washington indicating that certain groups of political bigots were determined to take the mobilization over, and to use it for their own nefarious purposes. I think I can report here that the latter group suffered the worst defeat in the city of Washington since the retreat of the other redcoats in the War of 1812. By and large the vast majority of our fellow delegates from the other cities and States gave a vivid demonstration of faith in democratic ideals. All of us conducted our business, both in work sessions and on the Hill, in a spirit which threw the lie into the faces of the Ku Klux Klan, who said that we were a group of Communists, and we likewise threw the same lie into the faces of the Red Ku Klux Klan who had announced that they would take us over.

There is not a New York Senator nor is there a New York Congressman who does not know that his constituents are wholely in favor of FEPC, and, with few exceptions, we have received the assurances of our senatorial and congressional delegations that they will vote for an FEPC law.

Tomorrow what were merely skirmishes will blossom into full-fledged battle. The New York delegation has already told our Congressmen that we expect every one of them to be in Washington tomorrow to vote against any change in the rules, and for them to be in Washington Monday, January 23, to vote for FEPC. We reaffirm that position here tonight. We shall reaffirm that position next election day should any member of the New York delegation fail to vote against the rules change and fail to vote for FEPC. The New York delegation in Washington helped weld together the forces of the fifty-some-odd organizations who sponsored the mobilization and who are dedicated, as we are, to that fundamental principle that civil rights in the United States for the Negroes, the Puerto Ricans, the Jewish, Catholic, Protestant, and other minority peoples must be matched by civil rights for everyone, everywhere in the world. We did not appease and we did not compromise with those who would qualify on the subject of civil rights.

The mobilization did not pass any resolutions because we did not come to Washington to write words—we came to Washington to write history. We did not speak from the floor to one another at the mobilization, but we went up to the Hill to speak to our congressional leaders and to make them fully responsible for the fulfillment of the President's civil-rights program.

Our mobilization spoke to the colonial peoples; spoke to the people behind the iron curtain; spoke to every man who has been turned away from a job because of race or religion or color; spoke to the student who is forbidden to enter a college or a university or a school because of race, color, or religion; we spoke to these people and to others and we told them that those of us who believe in civil rights and who will fight for civil rights have not forsaken them. We do not offer them demagogy; we do not offer them chauvinistic appeals, but we do offer them the handshake of friendship and the resolute determination of free men and women in fighting our battles in a democratic manner without fear and without compromise. It was with that spirit that the New York delegation went up on the Hill. We did not go meekly, but we went with determined spirit to get FEPC and civil rights passed, once and for all, and we will not relax in our determination.

In closing, I want to reiterate that the fight which we waged in but a few brief days was accomplished because it was led, not by those who have made civil rights a crusade for their own political party but because it was led by men and women, both young and old, both Negro and white, who have faith in democratic principles, and will never surrender to the racial bigots on the right or the political bigots on the extreme reactionary left.

Let it be clearly understood that the mobilization was not the property or the monopoly of any political party or any private organization, but was the collective efforts of all the ingredients that go to make democracy. It was a mobilization for human rights, and we in the New York delegation were proud to be part of that fight.

Ninety Percent of Parity

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. LECOMPTE. Mr. Speaker, the Farm Bureau is probably the largest organization of farmers in the United States. In Iowa there is a Farm Bureau organization, and an active one, in every county. Recently the Farm Bureau members of Lucas County, Iowa, met at an annual county meeting and on this occasion adopted a set of resolutions setting forth the position of the members of this county with respect to National and State issues.

I ask consent to extend my remarks and include the resolutions so that all Members of Congress may know the attitude of these progressive and leading farmers with respect to national issues and problems. The resolutions are as follows:

LUCAS COUNTY FARM BUREAU RESOLUTIONS

NATIONAL RESOLUTIONS

I. We believe there should be some type of price-support program and we favor 90 percent of parity with parity being adjusted in line with a 10-year moving average.

II. We believe that it is necessary to have the farm program developed through a bipartisan approach.

III. We believe it is important to keep control at a minimum.

IV. We believe a cheap food philosophy established in the minds of the consumer would be dangerous to the long-time interest of farmers.

V. We believe food and wages should be on a comparable ratio.

VI. We do not favor having the income of farmers dependent to a large extent upon the direct appropriations from Congress.

VII. We favor the use of compensatory payments in support of perishables. (Nonstorable commodities.)

VIII. We favor satisfactory compliance with soil-conservation practices to be eligible for price support.

IX. We do not favor abandoning the parity concept for the income-support standard plan.

X. We favor a voluntary prepayment health insurance plan.

XI. We favor increasing Federal aid for the construction of more hospitals.

XII. We favor more Federal aid for medical research.

XIII. We believe we should revise our health programs and adopt a county health unit program in Iowa.

XIV. We favor increasing Federal aid for training facilities for doctors.

XV. We favor the changing of mail routes so that the principles of free delivery become an actuality to all rural families.

XVI. We favor the establishment of a Federal agency for the purpose of setting up telephone cooperatives.

STATE RESOLUTIONS

I. We favor increasing the State aid up to 50 percent of the total cost of operating the schools on the need basis for the continuation of a better educational program for the benefit of the children of Iowa.

II. We recommend for your consideration the replacement of the present wool-purchase program by a "nonrecourse loan" or a "guaranteed advance."

COUNTY RESOLUTION

We believe that there are many miles of Lucas County roads that could be and should be annulled so that the money spent on these roads could be spent on unimproved roads that would accommodate many more families and get them out of this mud.

FARM BUREAU RESOLUTION

We favor the farm bureau continuing the high level of emphasis on the legislative and educational programs and increase emphasis on the service for member program.

Who Is Responsible?

EXTENSION OF REMARKS

OF

HON. JOHN B. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks I am including an article entitled "Who Is Responsible?" from the January issue of the Brotherhood of Maintenance of Way Employees Railway Journal. This article will bring serious reflection to all those interested in railway safety.

WHO IS RESPONSIBLE?—A SPEEDING STREAMLINER, ROARING THROUGH THE NIGHT, LEAVES THE RAILS, THERE IS A CRASH AND DEATH VISITS WORKERS SLEEPING IN DILAPIDATED BOXCARS

On November 1, 1949, the Interstate Commerce Commission released their report on the investigation of the accident on the Cincinnati, New Orleans & Texas Pacific Railway which occurred near Graysville, Tenn., on September 9, 1949. In determining the cause, the Commission stated: "It is found that the accident was caused by a broken wheel."

Examination of the track structure revealed occasional nicks in the rail head throughout a distance of 11.5 miles. Inspection was made at Oakdale, 40.7 miles north of Graysville, and no indication of defective equipment was found. The train (second No. 53) was traveling approximately 50 miles per hour when the rear truck of the forty-fourth car was derailed. A short time later a general derailment occurred which literally demolished three of the extra-gang outfit cars standing on the spur track south of the station.

KILLED WHILE SLEEPING

A broken wheel on a car in transit in the majority of cases results in a derailment; but when it involves the death of a maintenance-of-way employee, sleeping in his outfit car, more than our curiosity should be aroused.

It was 3:04 a. m. and the extra gang workers were asleep when cars of the southbound train tore into the sides of their outfit cars. One would not have to be an eyewitness to the crash to imagine the wild confusion among those who were shaken by the terrific impact which ripped the ramshackle cars apart. Nerves of steel could not withstand the shock. Still in the cause of railroad progress thousands of workers have traveled and slept in such pitiful accommodations, all because the problem of human relations is assumed to be an equation not to be solved.

Management has always argued that the employees must get a good night's rest in order to perform their duties efficiently. We ask how this is possible when the records reveal several instances where outfit cars were reduced to rubble while the employees were sleeping. This occurred on the St. Louis-San Francisco Railway in June 1947 and again on September 9, 1949, at Graysville, Tenn.

Must every chapter of railroad progress be written with the blood of an employee who, through the negligence of others, becomes a martyr? Railroad workers are drilled in the theory "safety is of the first importance in the discharge of duty"; but if the employee is no longer on duty, is his care left in the hands of the Creator? The employee killed in the accident was just an extra gang laborer, but he was also a human being, and his death was unnecessary.

NEGLECT OF DUTY

We are unable to predict the intentions of the Southern Railway to remove all wooden under-frame cars from service in the maintenance of way department, but the incident should serve as an inspiration toward that end. What occurred at Graysville cannot be termed an unavoidable accident, or act of God—it must be written in the records as neglect of duty.

It cannot be denied that the railroads have made great strides in their modernization programs and huge sums have been spent for new equipment. The expenditures for such rolling stock was of necessity, but in the end the revenues realized cushioned the initial cost. There is quite a contrast to the picture involving the welfare of the employees. Many roads are still clinging to the practice of permitting the penny to hide the dollar of efficiency in promoting the welfare of the employees. Every request for a wage increase or improved working conditions has been met with vigorous opposition by the carriers. Human relations is an unproven theory and safety has definite boundary lines.

Volumes could be written of the efforts made by the representatives of the employees to obtain safe and suitable outfit cars. In practically every case management argued the cost first and then bolstered their arguments to prolong the issue of the impractical problem with which they were faced but unable to define.

In February 1947 the War Assets Administration offered for sale 871 special troop-sleeping cars at $2,880 each which were built by the Pullman Standard Car Manufacturing Co. There was also another type steel sleeper offered for sale at $3,780 each, as well as several hundred kitchen cars for $3,240. Every effort was made by our general chairmen to induce their management to purchase some of these cars for maintenance-of-way service, but only a few of the railroad companies saw fit to do so.

COSTLY LESSONS

It is not our intention to criticize the policy of any carrier but the managerial prerogative has in many cases been exercised to the detriment of the employee. Outfit cars with wooden center sills do not harmonize with Diesel locomotives and steel gondolas on roads with a streamline design. At Graysville, one maintenance-of-way employee was killed and two injured. There is one consolidation, three of the boxcar booby traps were damaged to the extent that they cannot again be placed in service. Experience is a dear teacher and the railroads evidently wish to learn the hard way.

Veterans Ladies' Auxiliary on Compulsory Health Insurance

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks I include the following letter received from Ladies' Auxiliary, Veterans of Foreign Wars of United States, Sergeant Harold O. Young Post, No. 2394, of Melrose, Mass.:

LADIES' AUXILIARY, VETERANS OF FOREIGN WARS OF UNITED STATES,
SERGEANT HAROLD O. YOUNG POST, NO. 2394,
Melrose, Mass., January 20, 1950.

Congressman ANGIER L. GOODWIN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: Whereas the American veteran in two world wars has defended the American free-enterprise system which has made possible the development in this country of the highest standards of medical care and the finest medical institutions attained by any major country in the world; and

Whereas, having experienced the shortcomings of impersonal, assembly-line medical care inherent in the form of Government-controlled medicine necessary in time of war, the veteran understands the dangers of imposing such a system permanently on the entire population; and

Whereas compulsory health insurance would impose an unjust tax on the veteran's pay check for medical care to which he is now entitled free of charge as a reward for his service to his country; and

Whereas compulsory health insurance would force a tax of 3 percent on the income of the employed veteran, rising to a tax of at least 6 percent within a few years, creating new financial burdens which would increase the costs of necessities of life and lower the standard of living for veterans and other citizens: Now, therefore, be it

Resolved, That the Ladies' Auxiliary to Sergeant Harold O. Young Post, No. 2394, Veterans of Foreign Wars, does hereby go on record against any form of compulsory health insurance or any system of political medicine designed for national bureaucratic control.

Respectfully yours,
MARY E. CONLEY, *President.*
EVELYN MACMONAGLE,
Secretary.

Elimination of Expensive Combination Loans to Veterans

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. HOLIFIELD. Mr. Speaker, I ask unanimous consent to extend my remarks and include a memorandum in opposition to the so-called combination loans to veterans. The memorandum

was prepared by Mr. Omar Ketchum, director of national legislative service of the Veterans of Foreign Wars.

The elimination of combination loans (Sec. 505 (a) of the Servicemen's Readjustment Act of 1944) has been recognized by Congress as imperative. The Administrator of FHA should coordinate his administrative procedures with the intent of Congress, as recently set forth in the housing legislation of the first session of the Eighty-first Congress.

MEMORANDUM BRIEF IN OPPOSITION TO FURTHER COMMITMENTS BY FHA AND VA OF GI HOME LOANS UNDER SECTION 505 (A) OF THE GI BILL OF RIGHTS

I. STATEMENT OF PRINCIPLE

A great injustice was perpetrated against the veteran on June 22, 1944, when section 505 (a) of the Servicemen's Readjustment Act of 1944 (GI bill of rights) was enacted into law along with an otherwise highly commendable and monumental piece of legislation. This particular section was inspired by well-meaning legislators who visualized it as a proper vehicle through which the efforts of veterans to purchase homes would be greatly facilitated.

In view of the Congressional intent for elimination of this uneconomical and burdensome section 505 (a) loan, as evidenced by provisions for such elimination in S. 2246 approved by the Senate Banking and Currency Committee, and H. R. 6070 approved by the House of Representatives; and further in view of the fact that in actual practice the operation of this section has been most unfortunate and costly to the veteran, further commitments by the FHA and VA involving its continued application should and ought to cease for the reasons herein set forth.

II. THE SECTION 505 (A) LOAN

Section 505 (a) of the GI bill of rights authorized the Veterans Administration to approve a second loan (actually a second mortgage) by a veteran to cover the remainder of the purchase price or cost of a home, or a part thereof, where the principal loan (first mortgage) had been approved by the Federal Housing Administration.

III. HOW THE SECTION 505 (A) LOAN PREJUDICES THE VETERAN

(a) *It causes him to pay a higher interest rate for his loan*

The FHA-insured first mortgage carried an interest rate of 4½ percent plus an insurance premium of one-half of 1 percent or an effective interest rate of 5 percent. Lenders, logically, sought to insure the greater portion of the loan under FHA leaving the minimum for the VA guaranty, the interest rate for which was fixed by law at 4 percent. The exercise of the section 505 (a) loan therefore resulted in an increased interest rate to the veteran of approximately 0.8 percent over the straight GI loan of 4 percent.

(b) *It causes him to pay more in brokerage fees and other charges*

FHA-insured loans—remember, this is the greater portion of the veteran's loan—permitted certain brokerage and other charges which are not allowable on GI loans guaranteed by the Veterans' Administration.

(c) *It causes him to pay more in financing costs*

The section 505 (a) FHA-VA combination loan involving two mortgages results in double recording and notarial fees, title policies, and of course double appraisals.

(d) *It causes him to lose part of his $160 gratuity payment from the VA*

On an FHA-VA combination loan for the purchase of an $8,000 home, the VA guaranteed portion cannot exceed 20 percent of the total, or $1,600. Under the GI bill of rights, the VA makes a gratuity payment amounting to 4 percent of this, or $64, which is applied to payment on the loan. However, on a straight VA guaranteed loan for the full $8,000, the guaranteed portion is $4,000, and the gratuity payment is $160. Thus, the veteran loses $96 right at the start on the section 505 (a) FHA-VA combination loan.

IV. HOW HAS THE CONGRESS MET THE CHALLENGE OF THE SECTION 505 (A) LOAN?

On August 22, 1949, the House Committee on Banking and Currency reported favorably the bill, H. R. 6070, providing among other things for the elimination of the section 505 (a) loan. In its report to the House (H. Rept. No. 1295, p. 8), the committee stated:

"This existing authority for an FHA-insured first mortgage at 4½ percent interest plus the insurance premium, in combination with a VA-insured second mortgage at 4 percent results in an increase in the interest a veteran pays in excess of that provided for in the GI bill."

The House passed H. R. 6070 on August 25, 1949, including the provision to eliminate the section 505 (a) loan.

On August 11, 1949, the Senate Committee on Banking and Currency reported favorably the bill, S. 2246 (companion bill to H. R. 6070), and in its report to the Senate (S. Rept. No. 892, pp. 52–53), the committee stated:

"Your subcommittee has found that the present second-mortgage type of home-purchase plan raises financing costs to the veteran at least 10 percent above the costs of a 'straight' 4 percent first-mortgage GI loan. This is true because of the higher rate of interest (4½ percent) and insurance premium (one-half of 1 percent) charged for the underlying FHA-insured first mortgage, because of duplication of costs and because of brokerage and other charges permitted on FHA-insured loans which are not allowable on GI loans guaranteed by the Veterans' Administration. All of the veterans groups which gave testimony on the bill concurred in the desirability of eliminating this burdensome form of financing for veterans."

The bill, S. 2246, is on the Senate Calendar scheduled for consideration by the Senate upon the reconvening of the Congress in January 1950.

On October 25, 1949, Public Law 387, Eighty-first Congress, was enacted which extended FHA and FNMA authorization; and in addition provided an unlimited secondary market in FNMA for all GI section 501 loans where the original principal amount does not exceed $10,000 per dwelling unit. This, of course, should enhance the opportunities of veterans seeking a straight GI loan without the onerous aspects of the combination loan.

V. THE FEDERAL HOUSING ADMINISTRATION AND THE VETERANS' ADMINISTRATOR SHOULD HEED THIS INTENT OF THE CONGRESS AND DECLINE TO ACCEPT FURTHER APPLICATIONS FOR SECTION 505 (A) LOANS

There is ample precedent for the Administrators to refuse to process further applications for combination FHA-VA loans.

The basic authority for the section 505 (a) loan (Servicemen's Readjustment Act of 1944, as amended) reposed discretion in both the Administrator of Veterans' Affairs and by indirection the Administrator of the Federal Housing Administration as to the approval and processing of such loans. Such discretion is evident from the language used by the Congress in providing the basic authority:

"SEC. 505 (a) In any case wherein a principal loan, for any of the purposes stated in section 501, 502, or 503, is approved by a Federal agency to be made or guaranteed or insured by it pursuant to applicable law and regulations, and the veteran is in need of a second loan to cover the remainder of the purchase price or cost, or a part thereof, the Administrator, subject otherwise to the provisions of this title, may guarantee the full amount of the second loan: *Provided*, That such second loan shall not exceed 20 percent of the purchase price or cost: *And provided further*, That regulations to be promulgated jointly by the Administrator and the head of such agency may provide for servicing of both loans by such agency * * *."

The Reconstruction Finance Corporation recently announced that it would not approve further requests for loans to the Luztron Corp. despite the authority contained in existing law for such loans. The RFC was prompted in its decision by repeated statements made by Members of the Congress on the floor of the House of Representatives and before the House Banking and Currency Committee during the first session, Eighty-first Congress, evidencing an intention to inquire into the need for and the propriety of such loans. The RFC thereupon announced that it would heed the intent of the Congress in this respect, and refrain from exercising its discretion until the Congress noted a change in intent in this regard.

Regardless of this or any other precedent, the authority of an official of the executive branch to refrain from exercising a discretionary authority, even when the exercise itself is discretionary, is fundamental in our legal system. The Supreme Court of the United States has reiterated this doctrine repeatedly in denying petitions for writs of mandamus compelling an official of the executive branch to exercise a discretionary authority (55 Corpus Juris Secundum 220 and cases cited).

As there is no question as to the authority of the administrators to cease processing further applications for section 505 (a) loans, there remains but the decision and will of the administrators to so do. This, we submit, for the reasons set forth above, should and ought to be resolved in favor of the veteran home buyer; and we therefore urge that the Federal Housing Administrator and the Veterans' Administrator deny further applications from lenders for approval of section 505 (a) loans.

Respectfully submitted.

OMAR B. KETCHUM, *Director,*
National Legislative Service, Veterans of Foreign Wars of the United States.

Where Are We Headed and What Is It Costing Us?

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. HOEVEN. Mr. Speaker, during the recent congressional recess, I had the opportunity to visit with my constituents in each of the 12 counties of the Eighth Congressional District of Iowa. They expressed grave concern over the high cost of government and almost everyone asked the same two questions: "Where are we headed in government?" and "What is it costing us?"

So that my constituents might have the facts regarding their share in the cost of government, I have prepared the following itemized statement showing the share of each individual county in the Eighth Congressional District of Iowa of the $42,439,000,000 spending budget proposed by President Truman for 1951. I also set out the cost of the national debt to each county of my district. The President estimates that the national debt will be $263,800,000,000 at the end of the fiscal year 1951. The cost to the counties of the spending budget is based on 1948 consumer income figures and the cost of the national debt to the counties is based on population estimates as of January 1, 1949, and per capita debt of $1,759. The following figures will give my constituents some idea as to their share in the cost of government under the Truman administration this year. It should also throw some light on their question of "Where are we headed in government?"

County	Share of fiscal 1951 Federal expenditures of $42,439,000,000	Share of Federal debt of $263,800,000,000 at end of fiscal 1951
Buena Vista	$4,734,000	$39,401,600
Clay	4,693,800	31,837,900
Cherokee	4,526,100	39,401,600
Dickinson	2,796,100	19,876,700
Ida	2,595,000	17,765,900
Lyon	3,258,800	26,033,200
O'Brien	4,801,000	31,486,100
Osceola	2,326,800	18,645,400
Plymouth	4,371,900	39,753,400
Sac	4,056,700	30,782,500
Sioux	4,620,000	48,020,700
Woodbury	37,006,900	184,870,900
Total	79,787,100	527,875,900

Substitute for FEPC

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. TRIMBLE. Mr. Speaker, my colleague the gentleman from Arkansas [Mr. HAYS] has offered a substitute for the administration's FEPC proposal which should appeal to all those who feel that in these desperate days in world affairs we should do all we can to create good will among our people. My colleague believes that the use of force by the Government between the employer and employee will not work. I agree with him in his fears.

In his approach to this difficult problem, the gentleman from Arkansas [Mr. HAYS] has proposed that we rely upon conciliation and mediation as the method for achieving worthy objectives in employment. This proposal has been widely discussed and has attracted much favorable comment. As an example, I wish to call the attention of Members of the House to a syndicated column written by the distinguished newspaperman, Marquis Childs, which appeared in the Washington Post of Saturday, January 21. Under permission to extend my remarks, I include the following excerpts from Mr. Childs' column:

The all-out adherents of the administration's fair-employment-practices law will, of course, denounce the substitute put forward by Representative BROOKS HAYS of Arkansas as milk and water. HAYS does not provide powers of punishment to be directed by the Federal Government against those who discriminate for reasons of race, color or creed in hiring and firing.

The Hays substitute would set up a Minorities Employment Bureau in the Department of Labor. This bureau would be authorized to set up local, State and regional advisory councils to aid in carrying out a policy of nondiscrimination.

In other words, the reliance would be on education and persuasion. Any fair-minded person must admit to doubt as to whether prejudice can be legislated away by punitive powers exercised by the long arm of the Federal Government. On the other hand, we have let this matter of prejudice fester for a long time and the process of education is slow. One of the chief arguments for the administration measure is that without a stick behind the door there will be no progress.

Eleven States now have fair-employment-practice laws of one kind or another. As has been aptly said, the States are laboratories for testing legislation. It would seem to me that a wise preliminary move would be to canvass carefully the results that have been achieved. From what I have been able to learn, those States that have the power to punish employers have not used the punitive provisions.

Why is that so? Has any substantial progress been made in breaking down prejudice in employment? The answers to these and a number of related questions should be helpful to Congress.

Representative HAYS also has a substitute antilynching bill. It provides that where both the community and the State fail to take action when a lynching has occurred, Federal officials may go before a Federal judge and argue that the State has failed in its duty. If the judge finds this is true, then the Federal Government would take jurisdiction with authority to apprehend and try the lynchers.

It seems to me that these are both valid compromises that an honest man could vote for without any suspicion of evasion or face-saving. They both recognize that the power of law is limited, a lesson this country should have learned through the tragic experiment of prohibition when alcohol was presumably legislated out of existence.

The Real Issue This Fall

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. MASON. Mr. Speaker, the battle is on. The issues are drawn. Union bosses are using their power to tax union members in order to collect war chests for the 1950 congressional elections. They state they propose to defeat labor's foes and elect labor's friends. That slogan sounds good, but when analyzed it simply means: Defeat any Congressman—no matter what his record—if he voted for the Taft-Hartley bill, and elect anyone—no matter what his qualifications—if he will promise to vote for repeal of the Taft-Hartley Act.

Mr. Speaker, the scarcest thing in Congress today is not brains, it is courage, grit, backbone, intestinal fortitude, guts. And if the powers that be have their way—and by powers that be, I mean the leaders of organized labor—courage in Congress will be more scarce after the 1950 election. Make no mistake about it, that is the issue this fall.

This issue has been so well expressed by Samuel J. Kornhauser, of the Cleveland bar, in connection with the campaign of misrepresentation against Senator TAFT, that I include his article as a part of my remarks:

WHY LABOR LEADERS ASSAIL SENATOR ROBERT A. TAFT

(By Samuel J. Kornhauser, of the Cleveland bar)

The struggle to unseat Senator TAFT, already moving toward its climax a year hence is no ordinary election campaign. On its result may hinge the future course of America.

The captains and kings of union labor are amassing resources and mustering their forces, the tumult and the shouting are in full cry. Men whose vision is not blurred by passion and prejudice, nor perverted by inordinate ambition, see in this savage onset a portent of disaster to our country. During more than 2 years much has been said and written for and against the Taft-Hartley Act, yet there is reason to doubt that the general public has an adequate understanding of the inherent implications of the issue raised, and particularly of the underlying motives which give rise to this strenuous opposition to Senator TAFT.

What, then, is it that has evoked the frantic ejaculations of these captains and kings of union labor? What is there in this law to justify the charge that it creates slave labor? What is there about Senator TAFT which should lead anyone to stoop to such slanderous epithets and innuendoes as have been hurled at him from places high and low?

TAFT-HARTLEY LAW

In the 2 years which have elapsed since the Taft-Hartley law became effective, not a single instance can be found of loss by workingmen of any right or privilege, designed for their well-being, which they previously enjoyed. Not only is freedom of organization, and protection against employer coercion, left unimpaired, not only is collective bargaining fully maintained, but they are in fact strengthened by the new legislation.

Even the prohibition of the closed shop did not remove the obnoxious practice which that term signifies, for the union shop may continue to exist under this law; and the difference between a closed shop and a union shop is merely the difference between tweedledum and tweedledee.

Employees, by resort to the union-shop indulgence, may, if they choose, still compel their employer to retain only union members in his service. This subterfuge makes union membership the price which a man must pay in order to hold his job. Further, the check-off, that is, collection of union dues and assessments by the employer through compulsory deductions from wages, which are paid over to the union officials—that invaluable contrivance by which union income is made secure—has remained without substantial alteration, and without lessening the grip of union leaders on the members.

THAT OATH

Then, take all the sound and fury because of the anti-Communist oath required of union officials. How is the workingman injured because his union leaders are called

upon to swear that they are not engaged in treason against the United States? A man elected President must take an oath to protect and defend the Constitution before he can serve in the office. Congressmen, judges, indeed all important public officials take a similar oath. Almost everywhere, directors of corporations qualify by swearing fealty to the Constitution of the United States, and to that of the State in which they perform their duties. An immigrant, to become a naturalized citizen, must forswear allegiance to any foreign government or potentate, and make oath to support our Constitution. Why, then, should any decent citizen complain when asked to manifest by solemn affirmation that he is not allied with Soviet Russia, nor with any persons whatever bent on overthrowing our Government by force or other unconstitutional or unlawful means?

UNTENABLE ASSERTION

Moreover, during more than 2 years under the Taft-Hartley law union membership has increased, wages have been substantially advanced, and there has been no bar to strikes, which have occurred as usual whenever union leaders willed to call men out. Indeed, no conscientious labor leader has yet asserted that the workingman has in any respect suffered privation because of this law. And the outcry against it does not come from the wage earners themselves who are unable to see any difference in their status and opportunities since its enactment.

Recently Mr. Carey, national CIO secretary, subjected himself on the Meet the Press radio program to the incisive questioning of several well-informed, unhampered journalists. Mr. Carey was too honest to defend his opposition to the Taft-Hartley Act and to Senator TAFT by the usual claptrap about "slave labor" and hostility to wage earners. When cornered by persistent questioners, the only excuse he could give for advocating repeal of the law and defeat of Senator TAFT was that this legislation had "made it more difficult to organize labor in the South"—not generally, mind you, but only in the South. And though he was obliged to acknowledge that during the past 2 years union membership had increased even in the South, all efforts to elicit further comment and explanation brought forth nothing except constant reiteration of his original sterile answer. His inability to present even a vestige of tenable ground for his hostility to the law and the Senator made his performance a significant manifestation of the infirmity of the union position.

TRIBUTE TO TAFT

As to Senator TAFT, himself, it is acknowledged by unbiased men of all parties and interests, who know his facts, and are free to express them, that intellectually he has no superior, perhaps no equal, in the Senate, and that his character, courage, and patriotism rise to exalted heights. When Mr. Carey was asked if he believed that only Congressmen who supported the views and demands of labor unions should be elected, he quickly conceded that all shades of public opinion should be represented in the National Legislature. But when pressed to explain why, under that theory, the widely held opinions which Senator TAFT espouses should be deprived of his able voice in the Senate, Mr. Carey was entirely at a loss for an answer. He remained mute, and his silence was an abject confession that the ostensible objections to the Taft-Hartley law and to the Senator are a mere pretext.

THE REAL REASON

What, then, is the real reason for the frenzied resistance of Green, Murray, Lewis, and their collaborators to this law and its sponsor? They know well that the workingman has not been shorn of any legitimate privilege. The fact is that their envenomed attacks burst forth not because something was taken from union members, but because something of inestimable value to the rank and file was bestowed by the first steps taken to secure genuine self-government in labor unions.

These intrenched labor lords see in this law a serious threat to their continued autocratic domination. Though, in effect, the act does not presently reduce their vast power, they fear, and not without ample reason, that if the Taft-Hartley law remains, further legislation will surely follow which will thoroughly break their grip. There is your underlying reason.

DEMOCRATIZING LABOR

The act goes but a short way toward democratizing labor organizations; but it is an entering wedge aimed at arbitrary dominion. It recognizes the principle that workingmen shall not be subjected to restraint and coercion from any source, neither from those who head industry, nor those who head labor. But what has most aroused the fear, and consequent hatred, of the labor lords is that section of the law by which it is sought to bring the internal operation of labor unions into the light. In this they see, as well they may, the greatest threat to their excessive power.

Here again, the law makes only a moderate and insufficient advance. Unions are required to file copies of their constitution and bylaws, to report the names, compensation and allowances of their three principal officers, the manner in which they were elected or appointed, the amount of initiation fees and dues levied, the qualifications and restrictions as to membership, the procedure relating to elections, assessments, imposition of fines, authorization of strikes, audits of financial accounts, and expulsion of members. Finally, they are compelled to file annual accounts of receipts, expenditures, assets and liabilities, and also furnish them to the members.

WHY THE ANGER?

Now, in all this there is nothing which should cause any untainted labor leader to fly into a rage. If their affairs are honestly and properly conceived and conducted, there is nothing to hide. Corporations are required to submit similar data, and more, and their stockholders are provided by law with ample means to make their will effective. But it is not these publicity provisions which in and of themselves disturb the labor leaders so greatly, for they impose relatively little restraint and, such as they are, can be easily evaded. What engenders their animosity is the realization that if this law stands it will be expanded until the hidden practices by which their arbitrary rule is maintained will be completely exposed to the view of the union membership and the public, and they well know that if this occurs they will be ousted.

If union members were supplied with indubitable proof that they were being victimized by their own officers, that they were being beguiled by crafty manipulations, pretense, and chicanery to elect chosen serving men of their leaders as officers and delegates; if they were shown the graft by which the insiders feather their nests, and the collusion between unscrupulous unionists and equally unscrupulous employers by which the loot is divided between them; if they were made safe against violence to themselves, their homes, their wives and children, so that they became free to speak and vote as they pleased, how long would they leave the Greens and Murrays and Lewises in the seats of the mighty? And a man like Carey could speak frankly and be unashamed.

REIGN OF TERROR

We talk glibly about labor being for this and labor being against that, when in point of fact it is the labor leaders, who, having herded the men under their sway, originate policies and make decisions, first and foremost to maintain power and profit for themselves. It is these labor lords, and not the great body of robust, right-minded American workmen, who inspired this crusade against Senator TAFT, and they resort to every available expedient to defeat him. It is their purpose to strike terror into the heart of every public official, to establish that no matter how honest, well-meaning and salutary the views and efforts of a man in office, or seeking office, may be, if he is against labor-union autocracy, he will be marked for inescapable slaughter.

And that is precisely what will happen if Senator TAFT becomes the victim of labor-leader vengeance. There is nothing in the law which bears his name which interferes with the legitimate functions of the honest union official; it strikes only at the guilty who, in turn, have selected him for conspicuous immolation to serve as a horrible example.

THE ISSUE

Exploitation and extortion are no less obnoxious whether they emanate from industrial barons or labor-union chiefs. It became necessary, in due course, to curb the unbridled power of captains of industry; now, it is equally imperative that arbitrary control by labor leaders, which is at once a menace to workingmen, to the public in general, and to American institutions shall be conclusively ended. Those institutions will perish unless we demolish the separate dominion in our midst which we have allowed to grow up and become formidable.

The election of Senator TAFT involves an issue which is not confined to the people of Ohio; it is a vital concern of the whole American people. So far as Senator TAFT, himself, is concerned, 25 years from now, it will matter little whether or not he retained his seat in the 1950 election. But for the babes of today who will then be men and women aspiring to rear families and to gain the satisfactions of a good life, for them it will be of the utmost importance what kind of America they inherit.

He's Fed Up With Displaced Persons

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two letters to the editor of the Record-Herald and Indianola Tribune of Indianola, Iowa.

HE'S FED UP WITH DISPLACED PERSONS

FARMER NEAR SWAN WRITES ABOUT HIS EXPERIENCES

EDITOR'S NOTE.—Several weeks ago the Record-Herald and Indianola Tribune was informed by Mrs. W. B. Schooler, our correspondent at Hartford, about a young married couple from a displaced-persons camp in Europe who had come to make their home with Mr. and Mrs. C. E. Hunt on a farm near Swan.

Before a reporter and photographer could find time to go to Swan to interview Mr. Hunt and his newly acquired farm laborers, it was learned that Mr. Hunt was not too well satisfied with the arrangement. Recently, after the couple had left his farm, Mr. Hunt

wrote a letter telling of his experiences with displaced persons.

The letter follows:

FERNDALE FARM,
C. E. HUNT & SONS,
Swan, Iowa.

DEAR FRIEND DON: I am sending you my experience with a married couple from a DP camp in Europe. You may publish it.

Last February, I wrote the C. W. S. (Church World Service) at New York City giving my assurance and asking for a farm or country boy of 16 to 18 years of Protestant faith willing to come to an Iowa farm, willing to work and live with us as a member of our family. That it was our wish and intention as soon as he was capable, for him to rent the farm. Until such a time, we expected to furnish every requirement the same as a son. I guess I wanted and expected a Sam Bober. C. W. S. thanked us for our assurance.

The first of July we received a letter from a young woman of 24 and a newly acquired husband, 25, telling us they had signed our assurance. They were in Battic DP camp, United States zone, Augsburg, Germany, where they had been for 4 years. Frankly, we thought our prayers had been answered. They arrived here October 2, when the oaks and maples were at their best, the weather perfect, and with Iowa's wonderful crop everywhere. We welcomed them with open arms. A fine chicken dinner with everything to ice cream and angel food cake. They had cost me $115. We never got one "thank you" nor heard a single word of gratitude for America in all the 3 weeks they were with us. They spoke Russian when together, yet they could write and read American and she could speak it very well.

WOULD BUILD HOME

We extended the same proposition to these folks, to live with us 1 year, board free, that I would build a new home for them next summer and I expected them to work out the $115. Beginning January 1, they were to start sharing the income of the farm, one-fourth of calves, we had 25 females, one-fourth of pigs, one-fourth of crops off the farm, less one-fourth of seed and gasoline, I to furnish everything. Also they were to have half the cream after groceries were bought. We expected to work along with them for at least 1 year.

The first week they could do very little since they were not farm folks and had not lived in the country. The second week we got some services, but we had discovered they had no intention whatever of becoming farmers and signed our assurance only to get to America. The third week we got very little work from them. They had become so disagreeable, insulting, even to calling me a liar when I told them I had paid $30 for their baggage and living from New York. They were large, robust and did not look like they had been hungry in their lives nor had seen a hardship. He was 6 foot 2 inches and weighed about 185. They complained of farm work, that it was ruining their health and that they would not do such work—and believe me they did very little. We always had to call them to get up; and several mornings she lay in bed while my wife prepared breakfast. They had good clothes. Her dresses were of velvet and several of them woolen. She had five pairs of good shoes that we saw, a new blue raincoat, sweaters, and so forth. They told me they had no money except $4 of the $30 I sent to C. W. S. for them, yet I am told they cashed an $80 postal money order the day they left, which was just 3 weeks after coming.

REGRETS GIVING ASSURANCE

America does not want such people and I shall regret to my dying day that I gave an assurance. That was used only as a means to get to America. They had lived some 4 years in this displaced-persons camp provided by the generosity of America, three square meals every day, a bed at night, with no cost and very little work required. They, like many others, were fed up on "Rich America." They expected big wages, short hours with no manual labor.

They told us they wanted $1.50 per hour or $150 per month with board, and that they would buy a fine American car in 90 days, the only thing they seemed to want. The more you give people, the more they want and expect. It destroys their backbone and leaves a wishbone. I am wondering when the United States is going to wake up to this fact.

Sincerely,

C. E. HUNT.

Mr. DON BERRY,
Indianola Tribune.

DEAR SIR: Just finished reading the letter account of the DP couple that the Mr. Hunt was so generous with and can't resist commenting.

We never know just why some folks are so generous to someone with a sad story from across the sea; no doubt they do have every intention of doing a very fine and noble deed.

Being the mother of a son who paid almost all for our right to keep this America a fine place to live with a 70-percent lifetime disability at Pearl Harbor, and a husband who earned a DSC in War I, having myself cared for four motherless boys besides my own family of seven during the war so their daddies could go into uniform, I can't understand why Mr. Hunt or any other Iowa farmer would seek someone needing aid across miles of ocean, when these same men who wore their shoes full of mud for days, went hungry, sick, gave up their families and homes so we here, yes, in Warren County, Iowa, we at home were safe and sound by these fine boys, the same boys, lots of them, have never had the chance offered them to get a start that was given this family from across that did nothing for us.

The past year I have been working in a large company in Des Moines that has taken in many of these DP's. I have never heard one yet say, how wonderful, how grand to live here. They complain how dirty, how hard, little pay, on and on, wish they were in Chicago, or back in New York, one told me he hoped to go back across in 2 years. Can't we find deserving folks in our own State? Yes; I think in our own Warren County.

MRS. ARTHUR CLARK,
Warren County Democratic Vice Chairman.

P. S.—This all brings to my mind a request of wartime for farmers to take Japanese into their farm homes and relieve their own sons to go to the front. We were asked to take such. Please don't ask for the terms of my answer. Soon after, I attended church. There sat an able-bodied Jap, who had come to live in a sonless family, while my son, along with many others just as fine, had gone to make it fine and grand for someone whose grandfathers surely had not been pioneers of this good old United States. A healthy by war free man, in the seat my son, as treasurer of that Sunday school, had given up to go to war.

Let's take care of our own first.

Our Departing Hat Shops

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Boston Daily Record of January 23, 1950. Here is a succinct and cogent statement of what threatens New England jobs and New England prosperity and ought to give pause to those who favor reciprocal trade extension at least without the peril-point provision. The editorial follows:

OUR DEPARTING HAT SHOPS

It's no secret that bureaucrats have short memories, particularly when scant recollections are convenient for them, but hardly anybody expected them to forget the wrecking of the New England shoe industry so soon.

Before the war the so-called reciprocal trade treaties, which were reciprocal mainly in former Secretary Cordell Hull's imagination, exported the Lynn and Haverhill shoe business to Japan and Czechoslovakia and caused ruinous unemployment.

Later Japan waged war against us, using the dollars she piled up through our senseless generosity, and Czechoslovakia slipped behind the iron curtain, where she can scarcely be regarded as a boon companion for Uncle Sam.

Ignoring all this now, the bureaucrats in Washington are busily engaged in an even more nonsensical program calculated to set up various European countries in the hat-making business—at American expense, of course.

The United Hat, Cap, and Millinery Workers and other labor organizations are understandably incensed, since they don't relish the possibility of eating in bread lines while the British and other people are tasting the caviar of prosperity.

Maybe this latest exportation of New England jobs will stir our Senators and Congressmen, especially the ones who gave the reciprocal trade idiocy an extended lease on life.

But don't expect too much from them. It's your job that's threatened. Theirs are safe for a year at least.

Brinks Robbery

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star of January 22, 1950:

ROBBERS AND RICHES—CRIME STORY OF LAST WEEK USED TO POINT MORAL OF WEALTH NO THIEF MAY TAKE AWAY

(By the Reverend Frederick Brown Harris, D. D., Litt. D.)

Audacious and cunning thieves are loose in the land. The entire Nation is aghast at a sensational robbery which, in the huge loot snatched and made away with, involves the greatest amount of currency ever to be thus bagged at one haul. A million and a half dollars is an immense amount to fall into the hands of desperate connivers who defy the laws of God and man. The alerted armed constabulary symbolizes the Nation's grim determination to track down robbers and other criminals and to enforce law and order. That network of detection suggests wealth that always is in danger of being filched from its rightful owners and appro-

priated by those whose twisted moral sense brands them as public enemies.

But there is another armed representative of We, the People, who ceaselessly paces to and fro at his marble post and who speaks of a national heritage whose opulence no scheming robber can molest. That lonely figure silhouetted against the storied stones of Arlington is not there to prevent thieves from confiscating the mammoth block of flawless marble or disturbing the last rest of a soldier known only to God. It was for visions that the unknown warrior fell, and upon such treasure can be put no mark of the dollar.

An astounding robbery such as has captured the headlines this past week brings to vivid remembrance wealth that is in no danger of being so confiscated. In the immortal Pilgrim's Progress, John Bunyan deals with deathless experience which the passing years never can outmode or outdate. There we come upon Mr. Little Faith, who was held up by highwaymen in Dead Man's Lane. Poor Mr. Little Faith. It seemed, as one looked at him, that the thieves had taken everything that they could get their hands on. As a matter of fact, they had. But the remarkable things about that hold-up was that when the victim recovered his senses and was able to investigate the extent of his loss he found that his assailants had taken only his spending money: "The place where his jewels were they never ransacked. So these he kept still." Highwaymen can do little to disturb the inner peace of a man like that, who finds his jewels still intact even though his spending money has been snatched from him. Not in our marts of trade nor in our guarded vaults are the symbols of our highest wealth.

In this Capital City, set on a high hill of hope in the gaze of the whole world, on Mount St. Alban's is the expanding and rising Cathedral of St. Peter and St. Paul.

St. Peter, who had heard uttered the Master's great word about riches that moths and rust and thieves cannot touch, long afterward in writing to the scattered and persecuted Christians spoke of the inheritance that is incorruptible and that fadeth not away. And St. Paul has a great word regarding that wealth not reachable by robbers' hands. Having suffered the loss of all things, he, too, wrote to an infant church. The letter was penned when he himself was a prisoner in Rome. Judged by all the commercial standards of Corinth, the members of that church were paupers. Their names were not in the Who's Who of the city. Yet it was to them that Paul wrote, "All things are yours." For, he assured them, in substance, you can claim the past with all its great names. They all belong to you. You can claim the world with all its entrancing beauty. You can claim life with all its unfolding and enlarging capacities. You can claim the present and transform even a cup of pain and loss into a chalice of victory. You own the future. You can even claim death, for it is but your servant to usher you into a glory that eyes cannot see or mind conceive.

That indeed is a great passage about riches and robbers.

In lilting verse the story is told of the robbers who came to rob a wealthy man. They picked the locks of his palace gate. They seized his jewels and gold and priceless ornaments. All this was taken by the robbers who came to rob him.

"But loud laughed he in the morning red,
For of what had the robbers robbed him?
They robbed him not of a golden shred.
Of the radiant dreams in his wise old head.
And they're welcome to all things else, he said,
When the robbers came to rob him."

The Late Gen. H. H. Arnold

EXTENSION OF REMARKS

OF

HON. JAMES I. DOLLIVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement by Paul A. Johnson, of Denison, Iowa:

"The difficult, we do immediately, the impossible may take longer" was the motto that was above his desk in his Washington office. Those young men that flew to win a war for their country worshiped. Gen. "Hap" Arnold as much or more than they had their athletic coaches they had played under in school.

He remembered these fellows. They were individuals to him, not mere cogs in a war machine. When our son graduated at the Victorville school, General Arnold was there and presented the pilot's wings to the graduating class. Among the prized letters in the memory book we have of Bob is the letter sent us. It may have been one of the difficult things he felt had to be done, sending letters to the parents of those young men that gave their all. Reading this letter again we know why Bob thought he had a commander that could do the impossible.

Part of it was as follows: "It is with regret that I have learned of the untimely death of your son First Lt. Robert Allen Johnson on December 7 in an engagement in the North African theater of war operations. While a cadet in the Victorville Army Flying School he attained a fine record. As an officer he repeatedly demonstrated courage and trustworthy performance of duty winning the praise of his superior officers and the friendly respect of all who knew him well."

Written in the midst of his most busy and trying time, this letter did help some to soften the blow of knowing that our son would not return to us.

We will not forget General Arnold and his kind words.

Our Blunders in War Built Russia's Power

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edward J. Meeman from the New York World-Telegram of January 21, 1950:

OUR BLUNDERS IN WAR BUILT RUSSIA'S POWER—ERRORS MADE SOVIET STRONG ENOUGH TO SWALLOW BALKANS AND CHINA

(By Edward J. Meeman)

When Hitler attacked his ally, Stalin, in 1941 the Scripps-Howard newspapers said editorially:

"When crooks fall out, justice is the gainer.

"It was the 'treaty of friendship' signed by those two bloodthirsty and power lustful dictators in the summer of 1939 which kindled the flames that swept across Poland, Finland, Denmark, Norway, Holland, Belgium, France, and the Balkans, and subjected the British people to inhuman assault.

"It will be poetic and moral justice if Hitler and Stalin are now consumed in the conflagration of their own making.

"They are both enemies of our way of life. They have both maintained in this country fifth columns of agitators, propagandists and saboteurs, seeking to destroy the unity and security of the American people.

"These two dictatorships by force and terror have extended their conscienceless rule over hundreds of innocent people. The fact that they have fallen out over the loot before their conquests were completed is a great break for our friends of the British Commonwealth of Nations, and a great break for us.

"While our enemies, the Nazis and Communists, are fighting each other, let's redouble our efforts to produce guns and tanks and planes and bombs for the British—and redouble our efforts to make our own defenses impregnable."

That was a realistic appraisal of the situation.

But the makers of American foreign policy forgot realism. They forgot that Soviet Russia was our enemy and did not cease to be when Hitler attacked her.

So the result of our tremendous expenditure of men and resources was not victory. The result was simply to destroy one enemy and make the other stronger.

Hanson W. Baldwin, military editor of the New York Times, is writing a history of World War II. In preparation for it he is recounting "Our Worst Blunders in World War II," in articles in the Atlantic Monthly for January and February. He says:

"There is no doubt whatsoever that it would have been to the interest of Britain, the United States, and the world to have allowed—and indeed encouraged—the world's two great dictatorships to fight each other to a frazzle. Such a struggle, with its resultant weakening of both communism and nazism, could only have aided in the establishment of a more stable peace. It would have placed the democracies in supreme power in the world, instead of elevating one totalitarianism at the expense of another and of the democracies."

Out of the great misconception that Soviet Russia had become our friend grew many blunders.

Of these, Mr. Baldwin puts "unconditional surrender" first. He says:

"In the First World War Wilson took care to distingush between the Kaiser and militaristic Junker class and the German people. The opportunity of driving a wedge between rulers and ruled * * * was muffed by Roosevelt and Churchill. Unconditional surrender was an open invitation to unconditional resistance, it discouraged opposition to Hitler, probably lengthened the war, cost us lives, and led to the present abortive peace."

Another major blunder was in not invading Europe through the Balkans, rather than western Europe. Had our armies been in central Europe we would not have lost those lands to the Reds and found ourselves later pushed around in an isolated Berlin. Says Mr. Baldwin:

"Russia had to have our help; we did not to the same extent, require hers. * * * In retrospect, how stupid we were. A man being strangled to death struggles with all that's in him: Russia could not quit.

"In the same manner and for much the same reasons we reversed the policy we should have followed in the Pacific war. Instead of recognizing that Russia * * * would have to participate in that war if she was to serve her own interests, we 'bribed' her to enter it."

And so we invited Russia to start taking over China. We sacrificed the very thing

that caused us to send an ultimatum to Japan—the freedom and independence of China.

Yet some people still think Roosevelt and Truman led us to victory and peace.

Strikes in Potash Plants Threaten Massachusetts Farmers

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include the following letter from the Massachusetts Farm Bureau Federation calling attention to a scarcity of potash available for Massachusetts farmers in fertilizer needed for the spring producing season by reason of pending strikes:

MASSACHUSETTS FARM
BUREAU FEDERATION, INC.,
Waltham, Mass., January 18, 1950.

Representative ANGIER L. GOODWIN,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE GOODWIN: All users of commercial fertilizer in Massachusetts are gravely threatened by the fact that we have almost no potash available for the spring producing season.

Potash is one of the three major ingredients of every commercial fertilizer. It is necessary for our pasture lands and vital to the growing of all fresh vegetables. The impairment of the quality and nutritional values of foods produced with a lack of potash can and will adversely affect public health. We cannot get potash because there are strikes which have been going on since November 19 in the three potash companies in Carlsbad, N. Mex., which produce practically all of the potash used in New England and 85 percent of all the potash consumed in the United States. These three plants operate on a 24-hour-day basis at the full capacity of their facilities. Every day that they have been on strike and every day that they continue to be on strike has lost for us forever that day's production and we need every bit of production that was possible for them to put out. If there is no other way to protect the American public, the Taft-Hartley Act must be invoked.

This is one of the most serious things that has come to my attention in a long time and I ask you to do everything in your power for the time is growing pitifully short.

Respectfully yours,
CARLETON I. PICKETT,
Executive Secretary.

China

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an editorial by William Green, president of the American Federation of Labor which appears in the January 1950 issue of the American Federationist which is the official monthly magazine of the American Federation of Labor.

I think it is most heartening that the leader of this important labor union, of which I am a member, should express himself so forcefully, so eloquently on a matter of such grave importance to our national security and to world peace. He makes it clear beyond the shadow of a doubt that, as a leader of the American Federation of Labor, he understands far better than does Mr. Truman the true nature of the Communist challenge. President Green is well aware of the threatening implications of the conquest of China by Stalin's Communist agents. I hope that my colleagues will ponder the full meaning of his words, bearing in mind that he speaks for many millions of the working men and women of our country. Our Department of State is supposed to provide leadership. It is their function to anticipate trouble rather than simply to act after the trouble has occurred. In this instance the trouble is hard upon us and still they are doing nothing. This editorial constitutes additional evidence that once again the people of America are way ahead of Mr. Truman and the State Department in understanding the great issue which confronts us.

CHINA

Stalin has carried out the plot against China which he initiated at Yalta. The concession which Stalin won at Yalta gave him Manchuria and a foothold in China. He has moved steadily and relentlessly ahead until now Communist troops control China with her 475,000,000 people. With possession of this heartland of Asia, Stalin can expand in any direction. His position is well-nigh impregnable. Formosa is still left—the key to attack on the Philippines, Japan, and our own west coast.

There were those who told us Chinese Communists were different from those of Moscow—that they were "agrarian reformers." But now we see their leader Mao responding to the call to Moscow and received with greatest ceremony. He is being integrated into Moscow control.

With immense territories in eastern Europe and in north and eastern Asia, Stalin has achieved what czars, Napoleon, and Alexander the Great dreamed of, as he moves toward world dominion. Wherever he rules he sets up a regime which is in exact contradiction of what we have called progress for the past 2,000 years. Individuals do not count. There is no freedom and no personal rights. Each must conform to the pattern which Stalin approves or go to concentration camps or a quicker road to death.

The people of China have been friends of the United States for many years. They have come to our schools, lived among us, worked with us to learn our way, but they have never come here as spies to get from us the means to injure and betray us. They are weary of wars that have wasted their land, their substance, and their people. Without modern arms, Chinese Nationalists were unequipped to meet Communist armies in combat. Communist armies, led by Stalin's agents and generals, now are in control of much of China and are poised for southeast Asia, which holds resources invaluable to our economy.

We face the issue of political recognition of this government by conquest or nonrecognition because we do not approve for moral reasons. We have had experience with appeasement and have learned that it eventually costs millions of lives. We have also refused to recognize other governments which failed to conform to our ideas of human justice and welfare.

There are at stake grave moral issues. Nationalist China was one of the five major world powers which underwrote the United Nations Charter. One of the purposes of that organization is "to develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples."

Can we honorably recognize a government set up by aggression instituted and led by the agents of a foreign government? Our last convention included in a program for action to help China the following: "Have our Government give all-out support to the Chinese delegation to the United Nations in its effort to have the United Nations investigate and pass judgment on the Russian role in (a) fostering and financing civil war in China against the legitimate government recognized as such until a few days ago by all nations including Russia itself, in (b) flagrantly flouting its solemn treaty obligations in China, and (c) deliberately endangering world peace."

The least that we can do for a great people—the Chinese people—is to refuse to recognize the government set up by Russian aggression and conquest.

The House Rules

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mrs. KELLY of New York. Mr. Speaker, by 53 votes, the House of Representatives defeated a reactionary proposal which, if passed, would have had the effect of choking the wishes of the majority. The resolution was an autocratic attempt to keep controversial issues from reaching a vote on the floor of the House of Representatives. It is incomprehensible that so many members voted in favor of this curbing resolution.

My vote, naturally, was against this attempt of the House Rules Committee, supported by many Republicans and southern Democrats, to restore its old power to pigeonhole legislation.

For many years, this method of bottling up legislation has been a major impediment of true democratic method. It was repealed in the first session of the Democratic Eighty-first Congress and was hailed as a major step in improvement of parliamentary processes. The attempt to return to the antiquated practice was repulsed by the Democratic Party.

It is to be fervently hoped that the House of Representatives will never return to this system which kept Representatives from performing their legislative duties in an unimpeded and democratic manner.

Oleo

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star of January 22, 1950:

OLEO'S MAJOR VICTORY

The Senate's overwhelming vote for repeal of Federal taxes on oleomargarine is a victory for the housewives of the country as well as for a long-oppressed industry. There is no way of knowing just how much influence the "housewives' revolt" had on the final vote in the upper House, but it must have been considerable. For the consumers of margarine who resented being forced to work yellow coloring into their oleo because of the punitive 10-cent tax on factory-colored margarine have become increasingly articulate in recent years.

The oleo forces included other resentful and powerful groups, too, not the least of which were the farmers whose cottonseeds and soybeans provided the oils from which the butter substitute is made. The oleo-butter fight long since had ceased to be a war between farmers (of the dairy variety) on the one hand and processors of animal fats on the other—as it was more than half a century ago when oleomargarine was compounded largely by packing-house byproducts. In recent years the fight found farmers ranged against farmers, with the vegetable-oil farmers rebelling against discriminatory taxes imposed on margarine for the protection of dairy farmers from competition.

First the House and now the Senate have recognized the unfairness of the restrictive Federal taxes on margarine and have, in effect, restored free competition to the field of butter and butter substitutes. There are minor differences to be adjusted between the House and Senate bills, but, in the main objective, they are alike. Withdrawal of Federal taxes does not mean that the fight for complete emancipation of oleo is entirely won, however. Sixteen of the States still outlaw the sale of yellow margarine, as compared with 32 States in 1901. Five States abolished yellow-margarine bans in 1948 and four more States lifted restrictions last year. The winning of the margarine fight in Congress no doubt will spur the campaign to remove all State restrictions of an unfair nature. That will be a happy day for all who believe in free competition between dairy and other farm products.

Final Chapter in American Treachery Against Wartime Ally

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Sarasota Herald-Tribune of January 12, 1950:

WHERE IS AMERICA'S PRIDE?

Formosa, if Secretary of State Dean Acheson has his way, will go down in infamy as the final chapter in American treachery against our wartime ally, the Republic of China. Despite the death and suffering of thousands of Americans who fought for China during World War II, despite the millions of dollars supplied by our taxpayers, and despite the pledging of American support to the Chinese Government, the leftists in our State Department and other Government departments have succeeded in undermining Chiang Kai-shek and aiding the Communists in their conquest of the vast portion of the world's land and population that is China.

Those Sarasotans and other Americans who fought in China know that the Chiang government was far from perfect. But they also know how close Chiang came to unifying the war-lord-ruled provinces and of the valiant fight for year after year against the Japanese invaders. They know how supplies destined for China's defenders were diverted to the Communists by our State Department and General Stilwell, the American commander in Asia. They know that while our own pilots were dying to fly supplies over the Hump, while our soldiers were suffering disease and hardship to advise Chinese combat troops, the State Department was lauding the Communists as agrarian reformers and Stilwell was saying that he wished he could shoulder a rifle with the Communist troops.

The full story of America in China is a sordid one, despite the glorious chapters written by General Chennault and our other fighting men. It is a story that other governments which we seek to hold as allies are sure to read and study. They will learn that American and British leaders, without even consulting China, bargained away to Russia at the Yalta Conference huge areas of China's territory including Manchuria. They will read that to force Chiang to take Communists into his government, our leaders withheld ammunition for the guns we had furnished China as an ally.

Now, unless the arguments of the Joint Chiefs of Staff win President Truman's favor over those of dapper, appeasement-minded Secretary Acheson, the world will read that we are finally to desert Chiang and abandon the rich island of Formosa, because the Communists "might want to attack it." Perhaps the world will see a parallel to the case of Mihailivitch, of Yugoslavia, who was honored as a hero for a while in our Government propaganda, and then abandoned to execution by the Communist leader, Tito. With the record in view, can we expect the leaders of India, Indonesia, and other nations in the path of Communist world expansion, to align themselves with us? Can we expect them to take refuge from the Red firing squads behind our promises?

We should by now have learned from Munich, from Yalta, from Berlin, that appeasement is simply surrender by installments. We should have learned that our only victories in the cold war with Russia have been won when we stood our ground and displayed our force.

Formosa is a vital link in our defense lines from the Philippines and Okinawa to Japan. It lies a hundred miles off the China coast, readily defensible. It was liberated from the Japanese by American forces, and our legal position in defending it would be clear. The line must somewhere be drawn against the Communists in Asia. Our national honor and our security require that the west boundary of Formosa be on the American side of that line. If we clearly announce to the world that the American Navy and Air Force will prohibit passage of invasion troops across the Straits of Formosa, that warning will be respected.

Rather than casting aside Formosa and our allies of so many years, we should cast out the appeasers and the Communist sympathizers of our Government who are nullifying the victories won by the courage and sacrifices of our armed forces.

Iowa Newspaper Comments on Arizona's Fantastic Project

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. ENGLE of California. Mr. Speaker, the interest of other States in the water controversy between Arizona and California has been aroused by the discussions over the proposed Central Arizona project. The Mason City Globe-Gazette under date of January 2, 1950, has an editorial entitled "A Fantastic Project," which in my opinion is an appropriate title and designation of that project. The editorial reads as follows:

A FANTASTIC PROJECT

Two bills which will be before the next session of Congress will have slight favor if our Senators and Representatives take the time to examine their nature. One is S. 75, the other H. R. 934.

These companion measures would authorize an irrigation project in Arizona at an outlay out of Federal funds of at least $738,000,000, or a cost per acre of $1,858, 11 times the average of other western irrigation projects.

Nor is that the whole of the story.

The project would give to 420 large land owners benefits averaging $550,000 each. It would not open public land for entry and development by veterans and other worthy Americans.

Plans call for lifting water from the Colorado River a total height of 895 feet. Incidentally, it would deprive Californians of water to which they are entitled under existing Government contracts.

The proposal has every appearance of being a scheme for bringing enormous benefits to a few Arizona land owners at the expense of the Nation's taxpayers. The deal should be nipped in the bud.

State Department Hypocrisy or What?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Star of January 17, 1950:

HYPOCRISY OR WHAT?

Secretary of State Acheson must have a short memory. Either that or his recent

restatement of United States policy on China is a barefaced piece of self-righteous hypocrisy.

Acheson, who now says, "Anyone who violates the integrity of China is the enemy of China," was Assistant Secretary of State 5 years ago when the United States, Russia, and Britain signed the Yalta agreement. That agreement violated the integrity of China.

Acheson today proclaims that as the second basic rule of United States policy we must "keep our own purposes perfectly straight, perfectly pure, and perfectly above board." But the Yalta agreement secretly violated the rights of China, an ally in the war against Japan, as a bribe to Russia, a nonbelligerent.

Was it pure and aboveboard to make concessions at China's expense, behind the Chinese Government's back, and then promise President Roosevelt would take measures to obtain the concurrence of Chiang Kai-shek so that the claims of the Soviet Union would be unquestionably fulfilled?

And on what were those claims based? On czarist Russia's violation of Chinese territorial integrity in the latter part of the nineteenth century. China was weak, and Russia and Japan growled at each other over the remnants of the collapsing Manchu empire.

The Liaotung Peninsula, which includes Dairen and Port Arthur, was ceded to Japan by China in 1895. Then in 1898 Russia forced Japan to withdraw and took over. Finally in 1904, following what the Yalta document calls the treacherous attack of Japan, the Japanese kicked the Russians out and settled down until the end of World War II.

(In connection with the treacherous attack, it is interesting to note that Russia, too, was preparing for war, but the cautious czar wired his far-eastern commander: "It is desirable that the Japanese, and not we, be the ones to start military operations. * * *")

It's all a sorry story of cynical big-power imperialism, and little can be accomplished merely by condemning it out of 50 years' hindsight. But no good and much harm is done by our perpetuating such cynical practices in an agreement like the Yalta deal—and then talking about traditional pure and aboveboard purposes.

"You cannot sit around in Washington or London or Paris or The Hague and determine what the policies are going to be in these areas," says the righteous Acheson of today.

Nor Yalta, Mr. Secretary.

Real Democrats Given Wrong Name

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit an editorial, reprinted from the Gazette, of Farmerville, La., of January 5, 1950, as follows:

REAL DEMOCRATS GIVEN WRONG NAME

(Reprint from the Gazette, Farmerville, La., January 5, 1950)

It is noticed in many press articles and comments of columnists that the word "Dixiecrat" is used in referring to the genuine Democrats of the South and elsewhere, who are battling against the present trend toward centralization and domination of everything by the Federal Government. And it is regrettable that some of those enlisted in that fight seem to be content to let it go at that. All should resent it, for it is out of place and smacks of Civil War sentiment of eighty-odd years ago—long settled.

The so-called States' rights element in the Democratic Party are not Dixiecrats nor any other sort of crats except real, old-fashioned Democrats who have become quickened of the spirit of patriotism and love of country to arouse the whole land—North, South, East, and West—against this head-long rush toward the precipice of socialism into which England has fallen. If we, at last, go over that horrible precipice, we shall not return, for it has no bottom.

Why should we be dubbed "Dixiecrats" anyhow? The term sounds provincial and sectional; and we are neither, for we fight for the right of every State to enjoy home rule and to exercise the functions of government reserved to it by the Constitution of the founders. The principle of home rule, community independence, and self-government, and the withholding from Washington of undelegated powers and bureaucratic control of our very lives is a vital one to every State in this Union—North, South, East, and West.

The so-called Dixiecrats are the real, simon-pure Democrats. And the rest of the country is fast finding that out. They are beginning to see that what we contend for is as vital to them as to us; as important for serious reflection to one section as to another.

The Democratic Party of our fathers has always been a national party, seeking equal and exact justice to all, reserving to each and every State and community the right and responsibility of doing all for itself, except certain Federal functions, comparatively few, stipulated in the Federal Constitution. To any power, anywhere, assuming a contrary attitude, seeking to destroy this principle, the democracy, of old, always cried out, "Thou shalt not."

This new-fangled name "Dixiecrat" has been coined by the enemies of real democracy and hurled at real Democrats. To refer to real Democrats in a certain State or a certain section as "Dixiecrats," is out of place, a misnomer, and should be resented. It should be resented by every true Democrat everywhere, no matter where he lives. It should be resented by every true American citizen.

We have a faith that, sooner or later, the element in the party of Jefferson and Jackson, which is now hypocritically trying to tear it from its proper moorings, will scatter as chaff before the winds of an aroused, indignant people, without regard to party label, which no longer means very much. Surely the people of this great country have too much common sense and patriotism to allow a group of vote-seeking "gimmecrats" to drag them down the hill their fathers climbed.

Every Democrat in this country, regardless of where he lives; yea, every American who believes this rush toward socialism should be arrested before it is everlastingly too late, should resent the name and slur of "Dixiecrat." It is all wrong. We are only genuine Democrats, and we shall remain such and fight within the lines of the national democracy to redeem it from the ills of recent years.

An Employer Does Have the God-Given Right To Choose Whom He Will To Work for Him

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1950

Mr. JONES of Missouri. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting the following letter from the St. Louis Area Council of Christian Churches, which, in my opinion, sets forth one of the more objectionable features of the proposed FEPC legislation. I concur in the expressions contained in this letter:

THE ST. LOUIS AREA COUNCIL
OF CHRISTIAN CHURCHES
St. Louis, Mo., January 18, 1950.

The Hon. PAUL C. JONES,
United States Representative from Missouri, House of Representatives Office Building, Washington, D. C.

DEAR SIR: From time to time I am sure you are interested in the churches' reaction to certain types of legislation. Some church groups, I am sure, have been working hard for the passage of House bill H. R. 4453, known as FEPC legislation. Our group—about twenty churches in the St. Louis area affiliated with the American Council of Christian Churches and the International Council of Christian Churches—are solidly against the passage of such a bill.

FEPC would rob the employer of the right to choose whom he would to work for him. This right was upheld by Jesus Christ when he approvingly quoted the employer as saying, "Is it not lawful for me to do what I will with mine own?" (Matthew 20: 15). An employer does have the God-given right to choose whom he will to work for him. There is a kind of discrimination that is not wrong.

We realize that there is a kind of discrimination that is wrong. We hold no brief for the one who hates another or for one who discriminates solely because of the color of the skin. However, we are convinced that this discrimination is not as prevalent as some of our liberal friends would have us believe.

FEPC, if adopted, would act as an effective extension of the police state. To set up a Government agency as the arbiter of employment in private business is to add one more control to the already burdensome load which is being borne by the private-enterprise system. This private-enterprise system, which in our modern world is so distinctively American, is the only economic system which is stamped with the approval of the word of God. And that private-enterprise system is the economic system which has made our Nation great.

We cannot correct discrimination against employees by establishing discrimination against employers. FEPC would only tend to increase tensions between classes and groups and could really benefit only those who desire to sow discord and confusion among our people. In this connection it is interesting to note that the Communist Party is always one of the very active proponents of FEPC legislation. They must have some stake in it.

It is our hope that you will carefully respect the convictions of our constituency and

do what you can to defeat this proposed legislation which strikes at the very heart and life of our glorious democratic way of life.

Sincerely yours,

Rev. CALVIN H. HARRAH,
President, the St. Louis Area Council of Christian Churches.

Hordes of Jews Flee Red Terror by Underground

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following International News Service report on the underground operation which enabled thousands of persons to escape from Russia and her satellites. This news item appeared in the Washington Times-Herald of January 21, 1950.

HORDES OF JEWS FLEE RED TERROR BY UNDERGROUND

SOMEWHERE IN FRANCE, January 20.—An "alias army" of tens of thousands of Jews, some of whom hacked off their fingers to escape slow death in slave camps, have escaped from Russia and her satellite lands in a highly successful underground operation.

Their story can be told today in part for the first time—how they dealt Premier Stalin what they term perhaps his first big internal defeat.

AIDED BY FUNDS FROM UNITED STATES

It has been a well-kept postwar secret, this operation which ended early last year. The Jews, most of them Orthodox, escaped to western Europe from Russia proper through faked papers.

Funds obtained in the United States aided the inexpensive machine.

Tens of thousands escaped from Soviet satellite lands to find religious freedom and relief from persecution.

Men like Samuel Davidson, Isaac Goldin and Nissan Pinson brought with them "case histories" which reveal Soviet slave camps, religious persecution and widespread Soviet official corruption which partly aided their emigration.

The young Jews include former Soviet officers and peasants who fought the Germans.

RELIGION OFFICIALLY FREE

Goldin is a former Russian officer. With money used in the right Soviet spots he was allowed to escape as a repatriate.

Goldin said religion officially is "free" in Russia.

"For instance," he said, "circumcision, a fundamental of Judaism, is officially legal. But the man who performs the operation is arrested.

"Again, a teacher of religious law faces deportation to the Arctic regions."

Goldin said Zionism, which the Communists claim has such a great friend in Russia, still is officially banned. So is the teaching of Hebrew. Despite all Soviet obstacles, Goldin said, thousands of Jewish families are able to bring up their children true to their religion.

Davidson is 45—but looks 60. He spent 8 years near Murmansk in the Arctic region, in a camp where he said thousands of Jews have perished for only one sin; they remained true to their religion.

Davidson said the religious prisoners are fed a diet of bread and colored water called tea. No vegetables, no meat, no fish. The condemned deportees, he said, work from dawn until after dark chopping wood.

Nissan Pinson told how he organized a synagogue service in Moscow in 1945 after getting out of the army. This was still the "honeymoon period" between the Allies and Russia, and Pinson was cheered by the simulated appearance of religious tolerance in Moscow.

"Many Red Army men and women showed up for the service," he said, "but they subsequently began disappearing. The remaining believers long since have ceased speaking to each other for fear of police agents who always are on the watch."

SOME CAUGHT, EXECUTED

Finally Pinson, with the aid of false papers, led a group of Jews to another country and subsequently to the transitory camp in the suburbs of a modern French city.

It was a risky trip and the underground route was closed when Soviet border vigilance increased and after some Jewish operators were captured and presumably executed.

Pinson said at many way stations the Jewish group he led bribed train officials and government agents.

Near Lwow, former Polish city seized by Russia, Pinson said one mother became too ill and had to be left behind. He added:

"But she would not keep her child with her.

"She gave her son to her friends, saying 'at least my son will have a chance to live'."

Aid to Korea

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. JAVITS. Mr. Speaker, no more eloquent statement was made in the debate on this bill in the House than that of the President of the Republic of Korea himself, issued under date of January 20, 1950, and which is appended hereto:

I have just learned with the greatest regret that the United States Congress by a close vote failed to pass the enabling act for ECA aid for Korea yesterday. Despite the most unexpected defeat of this bill, I remain confident that the Congress and Government of the United States of America, upon further and more careful reflection will not fail to grant to Korea this aid which is most essential for the development of a sound domestic economy, enabling the Korean Republic to continue its successful resistance to the persistent, militaristic Communist threat. The Republic of Korea is the only country of Asia today which is determinedly, wholeheartedly, and daily fighting off, and successfully fighting against, the armed attempts of Communist imperialism to invade and overthrow. Some Asiatic nations waiver, some recoil in fear, one great nation has gone down in defeat, but the Korean Republic continues to resist and fight with unflagging determination, courage, and success. Past American aid, added to strong Korean hearts, has made this remarkable success possible. But continued ECA aid, to establish a strong basis for our economy, is essential to sustain those strong Korean hearts in this difficult transition period. Let those who say that the risk is too great, that the U. S. S. R. is too powerful, that money for Korea is water down some rat hole, remember Berlin. There was risk, there was a powerful Soviet Army itself, potential basis for attack in itself, but with courage, the United States, the United Kingdom, and France took the great risk; Berlin and even all western Germany were saved by courageous risks despite enormous expense. Korea, the only free spot of northeastern Asia continent, can and will be held by courageous Korean men and women for the free world and for an independent Korea if the United States continues to risk a few more millions of its hard-earned wealth. Despite yesterday's vote in the United States Congress, I remain certain that further and wise consideration will be given to the cause of an independent Korea to insure that this Republic and these people will have the chance to remain within the orbit of the free world.

Spain

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star of January 22, 1950:

SPANISH REVERSAL

When experience has shown a governmental policy to be both a failure and morally insupportable, it is time to change the policy. That is what Secretary Acheson has done with respect to our Spanish policy, and he has done it with a degree of forthrightness which merits commendation.

Pursuant to a resolution adopted by the UN General Assembly in 1946, we have not assigned an Ambassador to Madrid. Our position has been that this country, as a firm supporter of the United Nations, could not send an Ambassador to Madrid in contravention of the Assembly's recommendation. That is a contention, however, which does not tell the whole story.

The prime movers in the UN campaign against Spain have been the Communists. They have been supported by non-Communists, but the main drive came from the delegates who were under the Kremlin's thumb. Their motives in trying to overthrow the Franco regime have not been even remotely related to the motives of the non-Communists who played the game with them. This became evident soon after the 1946 resolution had been adopted, and attempts were made to reverse the 1946 decision. Although a majority favored reversal last spring, the effort failed for lack of the required two-thirds vote.

It was in this setting that our Government put forward its worst diplomatic foot. Although it was clear that the policy was wrong, and that it had failed, this Government could not bring itself to join the other countries voting to rescind it. Instead of taking a position on a matter of some importance, it sought refuge in the timid device of not voting at all. That is not an attitude which becomes the most powerful

Nation in the world, a Nation which boasts of its moral leadership and to which smaller countries are bound to look for guidance.

The gist of Secretary Acheson's announcement is that we will no longer seek to dodge the Spanish issue. We will not take the lead. But when the question of rescinding the 1946 resolution again comes before the Assembly we will vote in favor of lifting the ban and permitting the member nations to do as they see fit in the matter of exchanging Ambassadors or Ministers with Spain.

There is still some foot-dragging in the Acheson announcement. He frowns on Spanish participation in the European recovery program, for instance, because the Franco government is unacceptable to many western European nations. Considering our role in ECA, that looks like a case of the tail wagging the dog. And when one recalls the effort made to bring into ECA some of the cutthroat regimes behind the iron curtain, it is a bit hard to swallow any implication that Franco should be debarred on grounds of political morality or immorality.

There may be practical reasons, however, which justify this Government in its unwillingness to attempt to introduce Spain into the western European community. Franco is a dictator and he did come to power with the aid of Hitler and Mussolini. If, because of these facts, he continues to be persona non grata with our allies in western Europe, we should not attempt to force him on them. No argument in behalf of Spain could justify a policy on our part which would disrupt the western European coalition. The attainment of a proper relationship between Spain and its neighbors can be left to the processes of time. Meanwhile, it is good to know that we have abandoned a policy which denoted moral disapproval of Franco at the price of implying moral approval of governments whose conduct makes the Franco regime seem like a model of good democratic practices.

Order of Sons of Italy for FEPC

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks I enclose the following resolution recently adopted by the grand lodge of Massachusetts, Order of Sons of Italy in America, calling for the enactment of a Federal fair-employment-practices bill:

Whereas there is now pending in the United States Senate S. 1728, and

Whereas this proposed legislation makes provision for Federal fair employment practices and tends to eliminate the evils of racial, religious and national discrimination from our democracy: Now, therefore, be it

Resolved, That we, the grand executive council of the Grand Lodge of Massachusetts, Order of Sons of Italy in America, in meeting assembled on January 4, 1950, at Boston, cognizant of the great need for this legislation and representing, as we do, some 22,000 members in the Commonwealth of Massachusetts, do hereby unanimously endorse S. 1728 and urge its immediate enactment; and be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, and to the Senators and Representatives in Congress from the Commonwealth of Massachusetts.

Internationalization of Jerusalem Unnecessary and Impractical

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. JAVITS. Mr. Speaker, the following is a news report and editorial from the New York Times of January 20 and 21, respectively, giving a survey of the situation by distinguished churchmen deeply interested in the security of the holy places. These facts are more important than reams of argument:

[From the New York Times of January 20, 1950]

FACT BODY OPPOSES UN ON JERUSALEM—GROUP OF SIX CHRISTIAN LEADERS HOLDS INTERNATIONALIZATION IS DANGEROUS, UNNECESSARY

A fact-finding mission of six Christian leaders, just returned from Jerusalem, announced yesterday its conviction that internationalization of the Holy City was dangerous and unnecessary.

The group recommended, instead, the establishment of a United Nations commission with no territorial sovereignty to assure the free accessibility of the Christian world to the holy places of Jerusalem.

Guaranties should be given to such a commission by both Jordan and Israel, the report said, assuring the freedom and sanctity of the sacred places within their territories. This is all that the Christian world has a right to require of two sovereign states, which we believe will in time compose their differences.

This making of the peace will be accomplished all the more if Israel and Jordan are encouraged in their negotiations by the western powers.

Members of the investigation mission, who traveled under auspices of the American Christian Palestine Committee, 41 East Forty-second Street, included Dr. Samuel Guy Inman, member of the Federal Council of Churches' Commission of International Goodwill; Dr. Charles J. Turck, president of Macalester College, St. Paul, Minn., and president of the National Council of Presbyterian Laymen; Mrs. M. E. Tilly, member of President Truman's Commission on Civil Rights and field representative of the Southern Regional Council.

Also Dr. John W. Bradbury, editor of the Watchman-Examiner, national Baptist magazine; Dr. Ralph W. Riley, president of the American Baptist Theological Seminary, and Prof. Victor Obenhaus of the University of Chicago, national chairman of the Council of Social Action, Congregational Christian Church of America.

The group's findings were made public at a conference in the Commodore Hotel, with Dr. Inman and Dr. Bradbury as spokesmen. They announced that copies of the report had been sent to Secretary of State Dean Acheson, Roger Garreau, president of the United Nations Trusteeship Council, and Francis B. Sayre, United States delegate to the council.

The report said that the overwhelming majority of religious leaders interviewed in Israel had felt that the internationalization plan would not work.

"Many held it was impractical and certain to add confusion and impede peace negotiations now in progress," the report declared, and added:

"Total internationalization is not necessary for the protection of the holy places. Neither the Arabs nor Israel has any other plan or purpose than to protect and preserve them. Moslems have kept these places inviolate for many centuries, and virtually all of them are now in Arab hands. There is not the slightest evidence that Israel will molest or limit the use of any religious institution or shrine."

RELIGIOUS FREEDOM COMPLETE

The group said it found "complete religious freedom" in Israel and that the religious leaders interviewed "all declared they were in no wise interfered with in their functions."

"The prevailing conviction was," the report went on, "that when the bitterness created by the recent war will have diminished, Israel and the Arabs would yet come to an agreement in these controversial matters providing external interference did not complicate the problem."

The mission denounced as "utterly false and without any factual support" reports that the Israelis had desecrated religious institutions, churches or shrines since the fighting ceased. It pointed out that the Government of Israel had established a Department of Religious Affairs to deal "constructively and fairly with the complex religious communities in her territory."

The report referred to the plan advanced by Mr. Garreau, which provides that the international zone should include principally the Wailing Wall, sacred to the Jewish faith, and those holy places sacred to Christians, and said the plan, while an improvement over previous proposals, was "still too inclusive."

CRITICIZES PROPOSAL

"It is hardly justifiable to exclude so obvious a holy place as the Mosque of Omar of the Old City from an internationalized zone, and the entire Mount Scopus where absolutely no legally established holy places are to be found," the report observed.

"To advance such a plan on the ground that the territory to be taken from Israel and Jordan must be equalized is to condemn the plan by demonstrating that the major consideration is not concern for the holy places."

The group called on on the United States Government to press for a reconsideration of the United Nations Assembly decision on internationalization. Formulation, instead, of a just and workable plan for guaranteeing the sanctity of the holy places would enhance the United Nations prestige and power, the report asserted.

The group noted that, during its 3-week investigation, it had observed conditions in both Jewish and Arab areas and that it had discussed the internationalization problem with representatives of the Israeli Government, the Coptic Church, the Greek Catholic Church, the Copt Catholic Church, the Roman Catholic Church, and Protestant churches. It talked with Arabs, both Christian and Moslem, as well as with city officials and administrative officers.

[From the New York Times of January 21, 1950]

THE JERUSALEM DILEMMA

The Trusteeship Council of the United Nations has now convened at Geneva with the thankless task of working out an internationalization plan for Jerusalem in conformity with the general assembly's ill-advised resolution of last December. There is always the possibility, however remote, that the Council may come up with a proposal acceptable to Israel and Jordan, the two countries most directly concerned. The latest draft, put forward by Roger Garreau, president of the Council, is certainly a step in the right direction.

Meanwhile six eminent Christian leaders, just back from the Holy Land, have expressed

the opinion that the whole concept of internationalization of Jerusalem is dangerous and unnecessary. We agree with them that the only necessity is for guaranteeing * * * assuring the freedom and sanctity of the sacred places within the two countries. There should be no difficulty in obtaining such guaranties once the idea of internationalizing secular territory is ruled out, or at least brought down to the narrowest possible limits. To achieve this end, it is likely that the Assembly will eventually have to modify its uncompromising position in accordance with the justice and the realities of the situation.

Coal Shortage at Pontiac, Mich.

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. DONDERO. Mr. Speaker, further information has reached me from Mr. J. Byron Judd, secretary-manager of the Pontiac Lumber, Fuel and Builders' Supply Exchange, regarding the coal shortage at Pontiac, Mich., and vicinity.

There are 17 dealers in the area. They have on hand, as of January 19, counting coal and coke in transit, 5,647 tons. The average daily requirements in that city of 80,000 people and many thousands living in the immediate area is approximately 900 tons daily. This indicates only a 5-day supply on hand.

During the calendar year 1949 the coal and coke receipts were 32.5 percent less than the year previous and 30.5 percent less than the previous 5-year average. The total coal and coke inventory for January 1, 1950, was but 18.5 percent of the inventory for January 1, 1949.

In view of this record, this fuel exchange warns that a critical coal shortage is not only imminent but actually exists. The dealers have been rationing consumers with 1-ton and half-ton deliveries.

This condition is a dangerous threat to the health and welfare of the people in that area. The President should act and act immediately with the powers which Congress has given him to relieve this emergency.

Mr. Judd's report follows:

PONTIAC LUMBER, FUEL, AND BUILDERS' SUPPLY EXCHANGE,
Pontiac, Mich., January 19, 1950.

Hon. GEORGE A. DONDERO,
House Office Building,
Washington, D. C.

DEAR GEORGE: It is observed you, with some other Members of the Congress, were present at a round-table conference in Washington January 9 on the invitation of the American Retail Coal Merchants Association to listen to the general problem of the retail-coal merchants operating in the bituminous-coal-burning areas of the Nation. On behalf of the retail coal merchants of Oakland County, I desire to express their gratitude and appreciation for your obvious interest in the problems of supply to satisfy consumer coal service demand for the past many months.

Supplementing what was reported at the January 9 conference, I desire to report the coal supply-and-demand picture as presently exists in this local area as revealed by a survey completed this date as follows:

Trade area, Pontiac City, Mich.—Total 17 dealers and 17 reporting

	Tons
Total inventories domestic coal and coke	4,312
In transit 25 cars coal (estimate 52 tons per car)	1,300
In transit 1 car coke (estimate 35 tons per car)	35
Total on hand and in transit January 17, 1950	5,647

In calendar year 1948 Grand Trunk Railway reports these same 17 dealers received 2,903 cars of coal and 174 cars of coke, an estimated total of 141,351 tons. Assuming this was normal annual requirements for this area and that the month of January normal requirements as generally admitted is 19.5 percent of the total annual requirements for spaceheating, we find January normal requirements for this area are 859 tons per day. If these actual stocks of coal and coke on hand and in transit and the estimates of requirements are accepted, this survey reveals, if all coal and coke in transit would arrive within 5 days, we would only have presently a 5-day supply.

It should be further realized coal supplying this market is normally in transit from 7 to 11 days.

That coal and coke rail receipts in this area for calendar year 1949 were 32.5 percent less than year previous, and 30.5 percent less than the previous 5-year average. Also that in the 6-month period, May 1 to October 31, 1949, the coal and coke rail receipts were only 46.7 percent of the same comparable period previous year. It may be further stated this condition is the major factor why these 17 local dealers report coal and coke inventories January 1, 1950, were an average of only 18.5 percent of inventories January 1, 1949.

It may be stated the inventory of one dealer January 1, 1949 was more than the combined inventories of all 17 dealers January 1, 1950. Another dealer January 1, 1949, 75 percent of all dealers January 1, 1950.

Survey completed of inventories, etc. in other Oakland County areas about reconcile with the prevailing conditions in Pontiac area. Four county areas have no coal or coke for delivery while three areas are in somewhat better position than Pontiac area.

You may consider all statements furnished as reliable and according to authentic record.

On behalf of the citizens who are dependent on retail coal services and the retail coal merchants of Oakland County, we venture the opinion, according to the record, that a critical coal shortage is not only imminent but does actually exist in this area. We therefore solicit your influence to not only correct this current condition but also attempt by legislation or otherwise that in the future our experience may not be repeated.

Dealers generally, for many weeks, have been rationing consumers with 1-ton and ½-ton deliveries and definitely dealers and consumers alike know that an emergency does actually exist impairing their health and economy.

Thanking you in advance for your consideration and that your influence and action may be helpful in correcting this intolerable condition.

Very respectfully,

J. BYRON JUDD,
Secretary-Manager.

A Look at the Compass

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, as Republicans prepare for the 1950 and 1952 campaigns, it might be well to get our bearings and locate the harbor for which we are steering.

Some of us here in Congress, remembering Mr. Truman's flippant remark that our efforts to uncover and expose the Communists in his administration were only a "red herring," are encouraged by the conviction of Mr. Alger Hiss; made more determined in our effort to oust the Communists and communism from positions of power and influence in Mr. Truman's administration.

Five-percenters and adherents to the Pendergast type of machine politics are bad enough, but Communists are, if that be possible, more dangerous.

Of almost equal danger is Mr. Truman's socialistic program, his determination to purchase the political support of first one group, then another, either by appropriations of Federal funds or the enactment and enforcement of discriminatory laws.

In the morning Times-Herald is an editorial by George Rothwell Brown which gives at least one view of the present situation.

The editorial which suggests "metooism" is still powerful in the Republican Party is as follows:

POLITICAL PARADE

(By George Rothwell Brown)

President Truman stands as of today the undisputed master of a thoroughly cowed House of Representatives.

Under terrific pressure from the White House and its allied labor bosses, a temporary coalition of radical Democrats and Republicans courting the votes of minority groups who deserted their party leadership by the score, has opened the door of the Rules Committee to the FEPC bill, and probably to more of the welfare state, involving a threatened multi-billion-dollar Treasury raid.

The conviction of Alger Hiss, fair-haired protégé of the Roosevelt New Deal, on charges tantamount to those of treason at a time when he was a State Department official, probably will have the psychological effect of greatly discrediting the whole Communist program in this country, high at the top of which stands FEPC.

If the FEPC bill should be approved by the House—and it was to obtain this action that most of the Republican deserters ran out—the southern filibuster against it in the Senate would be strengthened by the reaction to the Hiss verdict.

Once this controversial question is out of the way it may be possible for the coalition of conservative House Republicans and southern Democrats to unite their forces once more in opposition to the rest of the President's socialistic program.

But this coalition, the sole remaining hope of stopping the welfare state in the House has been seriously torn asunder.

It is upon the continuation of this smash-up of the conservative allies that the permanence of Mr. Truman's bossism of the House of Representatives depends.

So far as the Republican Party is concerned the failure of the effort to restore a legislative traffic power to the Rules Committee threatens with disaster its entire campaign for control of Congress in this year's elections.

The wide-open split thus revealed in the party has rendered utterly farcical the attempts now being made in Washington by the GOP National Committee and State and congressional leaders to determine a party policy upon which all its candidates could stand united in the approaching campaign.

With such a large percentage of Republican Members of the House voting to pave an easy roadway for the enactment of a Federal FEPC law and the whole welfare program, it is extremely improbable that the conservative businessmen and industrialists of the country will be willing to contribute any important money to the Republican campaign fund.

Why should they?

Save for one possible course of action, it will now be difficult for the Republican Party as a party to go into this year's congressional campaign on a platform of opposition to the socialistic welfare state.

It may still be possible to prevent the renomination of those Republicans who voted on this vital issue with the Truman-Rayburn-McCormack axis, by putting up a conservative Republican against them in each of the Congressional districts involved in this mass desertion.

If the British people repudiate Socialism in in their February elections, indicating a world-wide reaction against left-wing radicalism, it may be easier for real Republican candidates to defeat these welfare-staters than perhaps they realize.

If such a large part of the party in the House of Representatives is permitted to embrace "me-tooism" unchallenged, the Republican Party can hardly hope to survive the 1952 presidential election.

The processes of demoralization will be accelerated. As against 64 members who went over to Trumanism on this crucial vote, only 49 deserted their party leadership on January 3, 1949, when the destruction of the traffic power of the Rules Committee was first accomplished.

The rot within the party thus appears to be spreading.

The way is now open for a motion this week to bring the President's FEPC bill to the floor for a vote, subject to the recognition by Speaker RAYBURN of the chairman in charge of that measure.

American Jewish Committee for FEPC

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks I include a resolution recently adopted by Boston chapter, American Jewish Committee, urging enactment of a Federal fair employment practices bill:

THE AMERICAN JEWISH COMMITTEE,
New York, N. Y., January 18, 1950.

It is the unanimous opinion of the membership of the American Jewish Committee, Boston chapter, that fundamental to our American democracy and to our American economy is the right to employment opportunity without reference to race, color, or creed; that this right can be properly protected throughout the Nation only through the establishment of a Federal law, in conformity with the platforms of both major political parties: Therefore be it

Resolved, That the Congress at the present session enact the bill known as the Fair Employment Practices Act (S. 1728).

Which Road for the United States—Right, Left, or the Middle Way?

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to insert the following copy of my radio address over WMEX, Boston, Mass., January 23, 1950:

We hear some people splitting hairs over the question; "When does the first half of the first half of the twentieth century end and the second half begin, on January 1, 1950, or January 1, 1951?"

There are others who point to a new method of reckoning which reduces the century-yardstick to the smaller proportions of years, days, or even less. They insist that an entirely new age in the history of man opening the doors to an unknown future began in the fateful month of August in 1945.

It is not the day or the year that is important, but the fact that we face great changes in our way of life. There are some who would avoid responsibility in this matter because it requires serious thought and special effort. There are others who clearly see that we must grapple with these strange problems for which there are no ready-made answers. Within the flexible framework of our democratic institutions we must devise new methods which will provide the greatest security and freedom for all.

It will not be easy to bring these opposites into a workable relationship.

Your Government with a green light from you is trying to do it.

It is watching the experiments going on in other democratic nations and is learning much from their mistakes. Australia and New Zealand have ousted their labor or socialist governments. There is a possibility that the English may do the same, or falling short of that may increase the Conservative minority to the point where it may serve as a restraining influence upon an extreme program.

And yet much that has been put into practice will never be repealed by the Conservatives. The pendulum swings from side to side but we cannot ignore the fact that the housing of the pendulum is moving forward with the times.

In the United States we have accomplished much in the way of readjusting our society to present-day realities. To do this we have had to experiment. In the process we have started some programs which now need expansion. Others which served an emergency purpose have been discarded. We have not been afraid to meet change with change. We have made a few mistakes which can and will be corrected, but they are the mistakes of positive action which clears the way. We can look back for a moment over the past 17 years and honestly say that the comeback from the low point of 1933 has been remarkable.

Our Nation is now a world power. More goods are being produced, more people are employed, and the standard of living has increased. The base of this progress has broadened to include greater numbers of our people and it will continue to do so.

I do not mean to paint a perfect picture of the present situation for that would be false. Even though they may be reduced, the expenditures for our Military Establishment and for economic aid to other countries will continue to be heavy. These are necessary to protect our own security and to promote world recovery and world peace.

We also have problems at home.

This is an election year. The various measures requested by President Truman will be approved or rejected on the basis of public opinion toward them as interpreted by individual Congressmen. These will vary from district to district but the composite will reflect the majority opinion of the people of the United States.

I believe that this year will also be one of pause or digestion before we set our sights toward the second half of the twentieth century.

The Congress as I see it will take the following action during the current session. I will try to make an objective estimate, asking you to bear in mind that it will not coincide with my own position and my own votes on some issues.

Taxes on income will not be increased.

Health insurance and temporary-disability insurance will be debated but that's as far as they will get.

The bill proposing a Fair Employment Practice Act will be hotly contested and defeated.

Repeal of the Taft-Hartley Act will be blocked.

No special old-age pensions for veterans will be provided.

Neither the Columbia River Authority nor the St. Lawrence Seaway will muster a majority vote.

Federal aid to education looks dubious.

The Brannan plan for farm aid will not pass.

On the affirmative side of the ledger, Congress will probably appropriate more money for public housing and public works.

Rent control on a limited scale will be retained.

More money for arms but less for economic aid will be voted to aid western Europe.

Some excise taxes such as those on travel tickets and on cosmetics will be cut.

The draft law will be extended but restricted as to its use.

Some postal rates may be revised upward.

The most significant development will concern old-age insurance. More people will be included and benefits will be increased.

Which brings us to the key question of our age which is the quest for security. And it is not a matter of if, but how.

The one worry uppermost in the minds of most people is how to find personal security against the economic hazards of old age, sickness, disability, and unemployment.

Man has had to deal with these problems since the beginning of time. Why is it, then, that so many millions are unable to cope with them in this the greatest wealth-producing age known to man?

Once upon a time most people were self-employed on their own small farms or with the tools of their trade. Those were the days of individual craftsmen. But now we are faced with an entirely new situation. Three-quarters of all who work for a living in the United States today are employees. The ownership and control of the means of production have passed out of the hands of the individual. Today every individual needs and wants a job—a steady job at

decent wages. In most cases he cannot create this for himself, but must depend on others to provide it for him. And he does not believe that the right to property shall stand in the way of his right to employment.

Our founding fathers emphasized the "unalienable" rights of man—the individual's right to life, liberty, and the pursuit of happiness. The right to liberty guarantees certain protections and privileges which may be called political, such as free speech. The right of the individual to pursue his happiness, to find fulfillment as he may choose, guarantees his spiritual and cultural freedoms.

But what does the right to life mean? Simply protection from violence? No. In the complex economic society of today, where the average man cannot support himself with his own hands, without help from others, it means something more.

Take my home city of Lawrence, in Massachusetts. It is an area, including adjoining communities, of some 125,000 people. They are largely dependent for their livelihood upon the operations of several large textile mills. Not only the income of the workers, but that of every storekeeper, businessman, and public servant, is affected by the level of activity at the mills. These in turn depend upon sources of raw materials and markets far removed from Lawrence, over which management and workers have little control.

There is not enough food produced in this industrial area to feed the people for 1 day. You cannot feed cattle or grow crops on hard-surfaced city streets. Therefore, when workers are laid off because the mills have no orders, they cannot eat, which means that they cannot live. The rights of liberty and the pursuit of happiness, necessary as they are, cannot make up for the right to life which is threatened by unemployment.

We are recognizing the fact that man has economic rights which must be protected if the right to life is to have real meaning. To implement this expanded concept, we have started a program to provide unemployment compensation and old-age security.

The former was a lifesaver for Lawrence in the spring and early summer of 1949, when 24,000 people were out of work for weeks on end. Without this transfusion to support purchasing power, the life of the whole community would have been threatened.

Fortunately, the mills have picked up considerably since then. Some thousands are still out of work, and many of these are included in the figure of 12,179 claimants who had exhausted their benefit checks at the end of 1949. A lesser number may not have any unemployment compensation accruing to them in 1950.

I hope that the Congress will pass legislation which I will support, to improve our unemployment-compensation program so that it will take care of such local emergencies.

The people of Lawrence, caught in the rip tide of economic forces beyond their control, were given a helping hand through unemployment compensation. They believe in it because it protected their right to live.

It is, in this day and age, "promoting the general welfare," which were the words used by our forefathers in the preamble to the Constitution of the United States.

Now the word "welfare" is open to many interpretations and it is sometimes misused to scare people.

As we Americans see it, "welfare" means basic protections against unemployment, sickness, disability, and old age provided by cooperation between management and labor.

It means the stabilization of employment to the highest possible degree. It means every encouragement to a dynamic American economy. It means insurance paid for by all of the people, and paid out by the Government as an agent of the people, only under clearly specified conditions.

Some people think we have only two choices: capitalism of the right, or socialism of the left. But I believe that the road we are taking is the middle one of voluntary cooperation.

There is a better distribution of income in the United States today than ever before. Power is fairly well balanced throughout our economic structure. Even in Washington, with a Democratic President and a Democratic Congress, a coalition of Republicans and southern Democrats gives conservatism some voice in our national affairs. Neither capitalism nor socialism dominates the American scene.

In our scheme of things Government is not a god but just a combination of umpire, first-aid man, and substitute employer.

Our aim is to keep it in that subordinate role.

Most Americans are ambitious and want to advance themselves. It is this vitality which spurs us to accomplishment and sometimes—sometimes leads to excesses. The only thing we have to fear from this is mass unemployment, which will not be tolerated.

However, warned by a previous experience which should be our last one of that kind, the Congress will authorize those temporary and compensatory techniques to fill the void, if and when necessary.

Labor, the farmers, liberal groups all these are organized and are facing the future today. Only the business groups seem to be lagging behind, failing to assume their share of the initiative.

Collective bargaining is the first step toward the humanization of industry, but it is not enough. The worker needs the security of belonging. Experts in such matters tell us that while material efficiency has been increasing for 200 years, the human capacity for working together has, in the same period, continually diminished.

Management has a great opportunity in helping us to keep to the middle road by promoting its own insurance and pension plans, by applying the annual-wage method where feasible, by scheduling maintenance work in slack seasons, and by privately insuring against lay-offs as a supplement to Government unemployment insurance.

By building this genuine and effective good will, it will help to create that loyal friendship between employer and employee which will protect and encourage the full development of all three human rights to life, liberty, and the pursuit of happiness.

What the Truman Program Is Costing

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, from the January 14 issue of the Sturgis Journal, published by Mark P. Haines at Sturgis, Mich., comes an editorial on the subject of what Mr. Truman's program is costing the Nation.

The editorial carries a picture, which cannot, of course, be reproduced in the CONGRESSIONAL RECORD, showing three stacks of $1 bills, representing the increase in the per capita cost of running the Federal Government.

From there on the editorial is as follows:

WHAT IT'S COSTING

At left is a stack of bills totaling $101.14. This was what it cost every man, woman and child to run the United States Government in the fiscal year 1941.

The middle pile shows what it will cost each of us in 1951 as proposed by Mr. Truman's budget. The figure is $282.17—almost triple the 1941 amount.

At right is $1,758.66—what each of us can claim as his share of the national debt at the end of fiscal year 1951 (June 30, 1951) if Mr. Truman's budget is adopted.

Mr. Truman's budget calls for an outlay of $42,439,000,000 in the 1951 fiscal year beginning July 7. Mr. Truman has a reputation for underestimating expenses in his budget messages. For fiscal 1950, Congress will be asked to approve $5,863,816,000 in supplemental appropriations.

Estimated Federal income for 1951 is $37,306,000,000, leaving a deficit of $5,100,000,000 for the year, Mr. Truman blames the Republicans for the deficit, saying that the 1951 deficit is equal to the tax cut put through when the Republicans controlled the Eightieth Congress.

Over 70 percent of Mr. Truman's budget is wrapped up in spending for past, present, and future cold and hot wars. These are the items of national defense, veterans' program, foreign affairs, and debt interest. Congress will find it hard to cut these expenses.

But on the domestic side, economy-minded solons of both parties will have better chances of reducing Mr. Truman's budgetary program. For example, his $300,000,000 request for aid to education includes a new system of Federal college scholarships which are desirable but not wise in these days of deficit spending. Another request which the administration will find difficult to enact is that of a housing program for the middle-income class.

Critics of Mr. Truman's policy of deficit spending are not confined to the Republican Party. Senator HARRY F. BYRD, Virginia Democrat who is a long-time advocate of Government economy, has proposed a $36,000,000,000 budget to Congress. Senator PAUL H. DOUGLAS, Illinois Democrat, thinks $3,000,000,000 can be shaved from the President's budget without any trouble. The Committee on Economic Development says a $6,000,000,000 reduction is possible.

Mr. Truman is not expected to ask for added revenue which would balance the budget. A balanced budget will not be possible for several years, according to the President.

The moderate increase is expected to apply to individual income, corporation, estate and gift taxes while at the same time some of the wartime excise taxes will be lessened or removed.

Old-Age Pensions

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution of the United Brotherhood of Carpenters and Joiners of America, local union No. 275, Newton, Mass., January 14, 1950:

OLD-AGE PENSIONS

We, the undersigned, members of Local Union No. 275 of the Carpenters and Joiners

of America, citizens of the United States of America, do wish to commend the efforts of the General Welfare Federation of America for the efforts they are exerting, and the work they are doing, to secure legislation authorizing old-age pensions for all citizens 65 years of age and over.

We commend them for the part they have had in causing the passage of H. R. 6000, passed by the House of Representatives in the Eighty-first Congressional First Session, and now before the United States Senate for their consideration.

In expressing these commendations, we do now, and hereby, request that the said G. W. F. of A., Inc., continue their good work, and that in their efforts that they advocate nothing less than a $100 monthly pension.

We further pledge our cooperation to the extent of our ability.

ERNEST C. RUGGLES,
President.
ANGUS MACLEAN,
Treasurer.
JOHN SBARDELLI,
Secretary.

How We Can Help Prevent Tuberculosis

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an excellent article written by 15-year-old Nancy Allworth, of Corvallis, Oreg., High School, which won first prize in that school in a contest sponsored by the Oregon Tuberculosis Association:

[From the Corvallis (Oreg.) Gazette-Times of January 18, 1950]

HOW WE CAN HELP PREVENT TUBERCULOSIS

Tuberculosis, or TB, is a contagious disease that is caused by a germ called tubercle bacillus. It may be spread by direct or indirect contact, or through milk. The germs usually do most of their activity in the lung; however, they can attack any part of the body. This action, while in process, will not be noticed by the victim, who could be any individual on earth. To be more specific, it could be you.

Everyone can, and should, try to help prevent tuberculosis. If you might be at a loss as to how you can help, begin brushing up on your knowledge of it by reading some of the numerous publications put out by health and tuberculosis organizations. It may save you time and money in the long run; they are free.

First, learn all you can about tuberculosis: its cause, its symptoms, its effect, and its prevention and cure. Next, put what you have learned to work. Here are some simple hints to help you out:

Every year a tuberculosis chest X-ray unit comes or should come to your town. If it does not, you be the one to look into it; if it does, don't neglect to have an X-ray and don't let your friends neglect it either. If you should discover that you have tuberculosis, you are lucky that you had the X-ray. Too many people have it and never suspect it until it is almost too late. Sometimes it is. Be careful of how you treat yourself and other people. Consider the happiness and health of others as much as you do your own. You may be endangering your and their lives by neglecting tuberculosis symptoms.

Articles that you, or any other tuberculosis victim, have used are contaminated; so the best thing to do with them is to burn them. If they are not disposable, do the next best, which is baking or boiling them for 10 or 20 minutes.

Let us peek into the hall of a typical city high school and view an everyday occurrence.

Our scene will take place at Jane's locker, Jane is one of our characters, a sophomore girl. The remainder of our cast is made up of Betty, Jane's classmate, Joe, the first germ, and George, the second germ.

Joe and George are sitting uncomfortably on the end of the sticky lipstick in Jane's locker.

"If she only knew," chuckled Joe.

"I almost wish she did," moaned George, who was holding his nose. "The perfume in this stuff is terrible, I'll be asphyxiated if someone doesn't come."

Betty, rushing down the hall, sees Jane near her locker.

"Jeeps! Jane, may I borrow your lipstick? I forgot my compact and purse and everything."

"Sure, Betty, I've got a little cough but I don't think it's anything. Oh, by the way, wasn't that dumb stuff we learned in health about all those old diseases? I don't see why we have to learn it, anyway."

"Bother! You made me smear this all over my face, uh, huh! Isn't it boring though?

Meanwhile Joe and George, the TB germs, have picked up their overnight bags and hopped onto another likely victim.

This instance, excluding the germs, is a familiar one in almost any high school, but there can be germs. How can we stop this?

Begin now. You be the one who refuses to loan your personal belongings even to a friend. If everyone did this, fewer germs would be spread. You be the one who does not borrow other peoples' things.

If you have a cough without apparent reason, don't hesitate to see a doctor; you may be the cause of hundreds of cases of TB without realizing it.

Our standards for preventing TB should be built around a rule similar to the golden one. Your rule may read something like this: Be considerate of others by covering sneezes and coughs, avoid lending or borrowing, and do everything in your power to make our world freer of a dreaded disease. Remember, we are the ones who can cut another chunk out of a diminishing number of mortalities due to tuberculosis.

Little germs so apparently small
Can bring sad death to one and all.
Just keep your habits clean and true,
And they'll refrain from both'ring you.

NANCY ALLWORTH,
Grade 10, Corvallis High School.
CORVALLIS, OREG.

Monopoly Program

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. CELLER. Mr. Speaker, the Subcommittee on Study of Monopoly Power will soon resume hearings. They will be two-pronged. One phase will be upon three distinct bills prepared by the staff of the subcommittee. The introduction of these bills is justified by the two sets of general hearings heretofore held.

The other phase will be a third series of hearings on specific industries. While the two previous sets were generally on the subject of monopoly, undue restraint, and concentration in industry and commerce, the subcommittee may, starting in February, address itself to a number of specific industries where such undue concentrations and financial power are alleged to threaten our economy, such as, for example: First, United States Steel; second, newsprint; third, du Pont complex; fourth, Lever Bros., that is, Unilever of Netherlands and Unilever of Great Britain; fifth, monopoly in the legitimate theater; and sixth, distilling industry.

With reference to the legitimate theater monopoly, charges have reached us that a group, headed by Schubert Enterprises in New York, control over 60 percent of the chain of legitimate theaters of the country, and the tribute exacted from producers, authors, directors, actors, composers, and so forth, are unfair, affecting drastically the whole sphere of the theater. It is also claimed that a theater ticket racket stems in part from this combination.

All the foregoing, of course, involves a great deal of research and investigation. The subcommittee may not have time to consider all these charges and complaints in addition to others. During the remainder of the Eighty-first Congress, the subcommittee shall proceed with its work to the fullest possible extent within the limitations of time and, of course, appropriations.

The subcommittee on study of monopoly power has set Wednesday, Thursday, and Friday, February 1, 2, and 3, 1950, for hearings on three specific bills:

First. H. R. 6679, introduced by Mr. WALTER, to increase criminal penalties under the Sherman and Clayton Antitrust Acts.

Second. A bill to require the Department of Justice to report to Congress on the nature, number, and reasons for consent decrees and pleas of nolo contendere in antitrust cases.

Third. Amendments to the Webb-Pomerene Act, which Mr. CELLER will introduce.

A number of witnesses, scheduled to be heard last autumn, were unavoidably unable to attend. Of these, Secretary of Commerce Charles Sawyer will be invited to appear; also Charles Luckman, recently resigned president of Lever Bros., and Henry J. Kaiser.

The subcommittee will also study the recent recommendations for changes in the Sherman and Clayton Acts proposed by the Federal Trade Commission.

Civilian Defense

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1949

Mr. CANFIELD. Mr. Speaker, I am glad to see that the New York Times in a leading editorial today recognizes the need of a federally coordinated system of civilian defense of American cities.

The House will recall I wrote President Truman last September, shortly after his report of an atomic explosion in Russia, that further neglect in building up such a defense would be unconscionable. Later, I addressed the House stressing the meager efforts that had just begun and pointing to the New Jersey program inaugurated under the leadership of the far-sighted Governor Driscoll.

I still contend that Dr. John R. Steelman, assistant to the President, is too busy to be acting chairman of the National Security Resources Board, in charge of civilian defense, and all governors and States are not cooperating in the present program.

The Times editorial follows:

CIVILIAN DEFENSE

It is a dismaying fact, more than 4 years after the end of the Second World War, that we still need a civilian defense organization. Many thousands of Americans got some psychological satisfaction and did some real service during the Second World War by enforcing black-outs, practicing first aid and watching for enemy airplanes. The enemy airplanes did not come during that war. If there were to be another war, they would come. Melancholy as the task may be, we have to be ready for them. Civilian preparedness is part of the entire preparedness of the country to defend itself.

This subject comes up with the appointment of Dr. Paul J. Larsen, formerly a director of atomic research at Los Alamos and Albuquerque, to be chairman of the newly reorganized Civilian Mobilization Office of the National Security Resources Board. Health, housing, censorship and the strategic placing of industry and Government facilities will all be parts of Dr. Larsen's job. This phase of preparedness, too, has its role in preventing war, since it is intended to lessen the effectiveness of any enemy attack. At the same time, it need cause no alarm in any other country. A group of American civilians try to minimize dangers to other American civilians in case of an alien invasion will be no menace to anybody.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to place the following very interesting editorial from the Chelsea Record, Chelsea, Mass., on January 21, 1950:

The proposal for Federal aid to education will be before Congress again this year. The House is supposed to get a chance to consider the measure, passed by the Senate, which would appropriate $300,000,000 for the purpose, leaving the use of the money up to the individual States.

There is a growing inequality of educational opportunity among various sections of the Nation. It is due to the plain economic fact that some sections have far more resources of wealth than the national average and other sections have far less than average wealth. The education offered to children in the areas less well off may in the future have a great effect on the areas now more wealthy. The question to be decided is whether the entire Nation would not be benefited if Federal funds, obviously coming from taxes collected in the wealthier areas, were used to improve educational facilities and opportunities in the less wealthy sections. This question, standing by itself and on its own merits, ought to get a thoughtful answer.

Imports Peril New England Hat Firms

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. SADLAK. Mr. Speaker, on February 9, 1949, this House passed the so-called reciprocal trade agreements without the peril clauses, which would have provided safeguards to American industry and to industry in my district, the State of Connecticut, when such would be jeopardized by the effects of these agreements. At that time the unemployment situation in Connecticut indicated a tendency of increasing from week to week, and, as a matter of fact, the number of unemployed in February 1949, as indicated by the weekly reports of the commissioner of labor, listing the number of unemployment benefits, approximated 50,000 unemployed. By October 1949 the number of claimants for unemployment benefits exceeded 100,000. At the present time the number of claimants, according to the last report by the Employment Security Division, Department of Labor, lists 48,431—a drop of 53,840 for the previous week. Added to this total must be the number of claimants who have exhausted their unemployment benefits in Connecticut, and such total of exhaustions approximate 55,000. In view of these facts, it seems to me that the article that appeared in the Boston Daily Record on January 23, written by Mr. Dan Markel, entitled, "Imports Peril New England Hat Firms," is a matter which, I feel sure, will be of great interest to my colleagues in the House. Under leave to extend my remarks, I include the article:

IMPORTS PERIL NEW ENGLAND HAT FIRMS

(By Dan Markel)

WASHINGTON.—Hat makers of New England and Pennsylvania and chinaware and pottery workers of the Midwest and California are battling State Department boosts of foreign imports and its direct purchases abroad.

For the 40,000 organized hat makers and 50,000 chinaware producers it's a fight for life.

State Department trade deals with foreign countries, principally Italy and Communist-controlled Czechoslovakia, have jeopardized their industries.

For hats or hat bodies costing $30 to $48 a dozen the duty used to be $13 plus 25 percent of value per dozen.

The generous State Department has fixed a new rate of $8 plus 12½ percent per dozen.

That means for the $48 per dozen hat bodies the old rate was $25; the new rate $14.

OTHER GRADES CUT

Similar cuts have been made on other grades.

In secret contracts the State Department already has purchased $280,000 worth of dinnerware in Germany for its embassies and consulates around the world.

It did this following tariff cuts amounting to virtually 50 percent on such items as vases, statuettes, steins, cups, lamps, clock cases, plaques, and other earthenware and china articles imported from abroad.

Senator HUGH BUTLER, Republican, of Nebraska, exposed the secret purchase deals, and said the State Department now is negotiating a third.

America's diplomats, he pointed out, will no longer dine off American chinaware.

UNITED STATES FIRMS IGNORED

BUTLER emphasized that the secret State Department chinaware deals were engineered without American producers even being granted an opportunity to bid. And at a time when unemployment, cancellation of orders, and a slow-down of American production is occurring.

The vitrified-china industry wrote to the British Embassy here inquiring whether the British would consider using American china in its Embassy services. It got a tart reply:

"As the United Kingdom is itself the manufacturer of some of the finest chinaware in the world, we are not in the market for china manufactured elsewhere."

Grants-in-Aid for Public Health

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. BIEMILLER. Mr. Speaker, there has been a good deal of public discussion about the effect of Federal grants-in-aid on the initiative and independence of local agencies.

With permission to extend my remarks in the RECORD, I include an article on grants-in-aid for public health, by Dr. C. E. A. Winslow, the distinguished editor of the American Journal of Public Health, in the October issue of that magazine.

The article terms the first 10 years of Federal grants for public health "a record of an outstanding public service and a guide for future policy." It adds that Federal grants have not resulted in a decreased sense of responsibility, but exactly the reverse.

The article follows:

GRANTS-IN-AID FOR PUBLIC HEALTH

A recent bulletin of the United States Public Health Service (Public Health Bulletin, No. 300, USPHS 1949) telling the story of Ten Years of Federal Grants for Public Health, is significant as a record of an outstanding public service and as a guide for future policy.

The first Federal Social Security Act of 1935, among its general provisions, authorized substantial Federal grants to the States for assistance in the development and support of State and local public-health services. Formulation of the basic policies under which this program was carried out we owe largely to Dr. C. E. Waller in charge of the Division of Domestic Quarantine of the United States Public Health Service from 1931 to 1939. Grants for general health services actually began in 1937; for venereal disease control in 1939; for tuberculosis control in 1946; and cancer control, mental hygiene,

and hospital planning and construction are now also specifically included.

Allotments to the Public Health Service for such grants-in-aid have increased from under 8,000,000 in 1937 to under 22,000,000 in 1946 and over 35,000,000 in 1948.

Small as these appropriations are in relation to the total Federal budget, the results accomplished have been nothing less than spectacular. During the period 1935 to 1946, the number of State health departments reporting specific identified projects in various specialized fields, in or prior to the designated year, increased as follows: Tuberculosis control, 19 States to 46 States; venereal-disease control, 28 to 45; industrial hygiene, 4 to 38; public health nursing, 30 to 46; public health education, 16 to 43; dental hygiene, 16 to 43; cancer control, 5 to 27; nutrition, 7 to 29. The significance of such broadening of scope is great, and the major stimulus to such development has come from the grants-in-aid. In the same period, and largely under the same stimulus, full-time local health units have increased from 561 to 980.

It is encouraging to note that the Federal program has not, as some had feared, tended in any way to diminish local initiative. Under the system of administration in force (using in most cases a matching requirement), the increase in State and local funds has exceeded the increase in Federal funds. In 1937 a grand total of $22,000,000 was spent for all State and local services, of which 37 percent came from Federal sources (including both the United States Public Health Service and the United States Children's Bureau). In 1946 the grand total was $109,000,000, of which only 28 percent came from Washington. Federal grants have not resulted in a decreased sense of local responsibility, but exactly the reverse. They have primed the pump for more and more fruitful drafts on State and country resources.

The Bulletin under review is a purely factual one, and very properly contains no discussion of the basic philosophy of Federal grants-in-aid. This is a subject, however, on which this Journal, as the organ of the public health profession (which is on the receiving end of the process) may properly express an opinion. Every now and then an address is delivered, or an essay is written, which views with alarm the fearful prospects of Federal domination of State policies supposedly involved in grants from Washington. It happens that the writer of this editorial has for more than 30 years been a member of a State public-health council which has been the recipient of Federal grants, and is in position to testify that such fears are wholly illusory. Experience has shown that Federal fund-granting agencies are normally highly conscious of the fact that each State has two Senators, who are quite readily accessible to a word from the State capitol. It is reasonably certain that if there are faults in the actual operation of the program, they lie in too much, and not too little, deference of Washington agencies to local opinion.

We sometimes meet with statements which contrast the alleged bureaucratic control supposed to be involved in Government grants with the freedom of initiative characteristic of the contributions of voluntary agencies. This contrast again is fallacious. We do not for a moment imply that voluntary agencies have, in practice, exercised undue pressure. Such is not the case. That they could exert such pressure, if unwisely directed, is, however, clear. Their managing boards are, in actual fact, largely self perpetuating and the general public has no control over their conduct. Governmental agencies, on the other hand, are responsible to the citizenship which supports them. They are highly susceptible to pressure from individual citizens or groups of citizens. It may be suggested that those who lie awake at night in fear of Federal domination have at the bottom of their minds a different concept of government, which assumes that domination by someone is essential and that such domination can best be exercised by themselves. In a democracy, as we conceive it, the government is our Government. It cannot tyrannize over us because we control it, and we accept the underlying faith of the founding fathers in the ultimate soundness of the democratic process.

The American Parents Committee

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I include the following article from the New York Times, which describes the legislative objectives of the American Parents Committee. I am familiar with the program of the committee and am cognizant of its work here in Washington and throughout the Nation to improve conditions affecting children. Mr. George J. Hecht, chairman, and the Washington representatives of the American Parents Committee are doing an effective and worth-while job in this worthy cause:

NINE-POINT CHILD AID ASKED OF CONGRESS—PARENTS' COMMITTEE OUTLINES ITS PROGRAM FOR 46,000,000 UNDER CABINET-RANK UNIT

WASHINGTON, January 2.—A nine-point program for the advancement of stated goals in the child-welfare field was announced today by the American Parents Committee. The committee added that the proposals were designed especially for the attention and action of Congress.

In a final analysis, the program is a request for enactment of legislation to improve the health, education, and welfare facilities for the Nation's 46,000,000 children.

Organized 3 years ago to put forward a national program for the benefit of children, the APC is headed by George J. Hecht, publisher of Parents' magazine. As chairman, Mr. Hecht has the assistance of these vice chairmen:

Dr. Henry Noble MacCracken, former president of Vassar College; Dorothy Canfield Fisher, author and educator; Walt Disney, motion-picture producer; and Robert L. Johnson, president of Temple University and chairman of the citizens committee for the Hoover Report.

Legislative goals for which the APC will press include:

1. The national school health services bill, calling for an annual $35,000,000 grants-in-aid program for school health examinations and treatment of all school children. This measure already had been passed by the Senate.

2. The public school construction bill, which asks $5,000,000 to match the States for a Nation-wide survey of needs, and other sums for emergency school construction. This has been voted by the Senate.

CONTROVERSIAL MEASURE BACKED

3. The Federal aid for education bill, which provides $300,000,000 for grants-in-aid to the States under a formula which gives a larger proportion of funds to the needier States. This bill has passed the Senate, but is blocked in the House by a controversy over whether Federal funds could go to the parochial schools for services such as bus transportation.

4. The national child research bill, which proposes a grant of $7,500,000 annually for research in child life and development. Hearings have been conducted in the Senate, but not yet by the House.

5. To the bill on revisions in the social-security system, and already passed by the House, the Senate will be asked to add: Increased benefits for dependent children and needy mothers under the insurance program; increased grants-in-aid for needy children when the father is unemployed; and benefits for dependent children and mothers in the program of total and permanent disability insurance.

6. The local public health units bill, which has for its purpose an increase in the number of public health units until the entire population is served, thus insuring to children safe-drinking water, milk inspection, sanitation inspection, and other health benefits. This bill has been endorsed by the Senate.

MORE FUNDS FOR CHILDREN'S BUREAU

7. To carry out basic purposes for which the Federal Children's Bureau was established by Congress in 1912, an increased appropriation will be urged, above the $600,000 currently appropriated to the Bureau, and aside from its grants-in-aid program, to total $2,250,000.

8. An increased appropriation, also, for the national school-lunch program. An increase from $83,500,000 to $100,000,000 is sought by the APC.

9. Establishment of a Federal Department of Welfare with Cabinet status. This the committee's Federal statement emphasized was long overdue, and represented a movement to help all individuals and particularly to improve the effectiveness of the many child-health and welfare programs administered under the Federal Security Agency.

Are the TV Boys Color-Blind?

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

ARE THE TV BOYS COLOR-BLIND?

(By Robert F. Jones, FCC Commissioner)

WASHINGTON.—Although the 3,500 pages and 100 exhibits of the color television hearing are significant sometimes for lack of sound scientific data from witnesses and parties from whom more might be expected, the hearing isn't half over and, therefore, it's a little early for the inside story that color's rigor mortis has set in. Some folks may be intoxicated by their own propaganda or they may be tuning an eager ear to their wishful thinking but the record at this stage doesn't justify the reckless conclusions bandied about by some members of the industry who haven't had the courage to enter a formal appearance for their individual companies.

In the hearing, aside from proponents of color and their witnesses, only DuMont, Philco, and American Television, Inc., appeared and testified in behalf of their own firms. Allen B. DuMont complained that the current color hearing was the first hearing of its nature not requested by the industry. When questioned on this point, he buttressed his

contention further by saying, "I don't believe there has been any general discussion, say, between the Commission, the RMA (Radio Manufacturers Assn.) and the TBA (Television Broadcasting Assn.) and other organizations before the hearing was called." David Smith of Philco, testifying for RMA, followed the party line in his direct testimony that the industry wanted color. When it seemed that RMA and the industry were tossing brickbats at color while they sanctimoniously said they were for it, Commissioner Frieda B. Hennock asked Smith the $64 question: "How are we going to get color television, we in the Commission? Where are we going to get it from?" Smith replied for RMA, "I think you are going to get it from industry, Miss Hennock."

I've heard a lot in the last 16 years about a nebulous supergovernment of the vested interests. I've heard victories asserted in the name of the common man in every national election since I entered public life. For several years preceding the current congressional investigation of lobbyists, I heard of the sinister conduct of "the interests" in seeking self-serving legislation; but I never heard of any manufacturer chiding a Senator or Representative in Congress because a hearing was held on a bill affecting his economic interest before it was cleared with the National Association of Manufacturers or the United States Chamber of Commerce.

RMA'S APPROACH OUTDATED

To understand how outdated is RMA's approach, one has only to review some recent American history. When Sam Insull's perverted sense of public service dominated the private utilities industry, he had about the same notions as Smith expressed for RMA. But the utilities have long since learned that they cannot set the low-water mark for public service. And I do not believe that the private television industry will make the same mistake despite the views expressed by Smith for the RMA that the Commission must get new developments of the television art from the television industry exclusively.

The colossal engineering feats of Hoover and Grand Coulee Dams, not to mention the enormous engineering plans for further development of the Columbia River Valley in the northwest, the Central Valley in California, and the Missouri Valley are testimonials that the Government is capable of doing a comprehensive engineering job. One only has to look at the stormy career of the TVA to understand that the Government's development of the Tennessee Valley was accomplished in spite of the bitter opposition of private interests. On a number of fronts in the Southwest, West, and Midwest, private utilities have had the lesson dramatically brought home to them in the last 16 years that Government doesn't have to and hasn't waited for private enterprise to furnish the engineering answers.

Let us get clearly in mind that I'm talking about developmental engineering jobs and I'm not proposing that Government go into the broadcasting business in competition with private broadcasters. Although it was written about the same time that the Bonneville Power Act put the Government in the power business in the Northwest, the Communications Act provided that broadcasting was the business of private enterprise alone. That philoscphy I heartily indorse and I'm emphatically not advocating a change.

I am what some would term an old-fashioned conservative. In public and private life I have stood for private enterprise, lock, stock, and barrel and have stuck by my guns when it was easier politically to ride the popular tide of putting Government into business as a recrimination against some faults of business and businessmen. During my 2 years as a bureaucrat, I believe my record bears out this philosophy in dealing with licensees whose problems are properly before the Commission. You'll invariably find me on the side of strict interpretation of the act for the same reasons I tried, as a Member of Congress, to cut appropriations and write into appropriation bills limitations upon the unbounded activities of some Government agencies. The motive is simple—I believe and have believed all along that the least government is the best government.

It does not follow, however, that the Government doesn't have a job to keep private enterprise honest and to make it abide by some fair rules for the game. The antitrust laws, the Fair Trade Act, the Food and Drug Act, and the Securities and Exchange Act are pertinent examples of the Government's proper role as a referee. Who would say that we would have any of these acts fostered by both Democratic and Republican administrations if we had to clear them with Wall Street, the National Association of Manufacturers, or the United States Chamber of Commerce? These statutes dealt with proper subjects for legislative action and no one but the President had the veto power. The color hearings are likewise quasi-legislative proceedings and the act does not give any veto power or signal-calling to the RMA, Joint Television Advisory Committee, Institute of Radio Engineers or any other organization of industry. As Commissioner Walker pointed out to Dr. DuMont in the hearings, the mandate to the FCC is clearly drafted in the Comunications Act that "the Commission shall from time to time as public convenience, interest, and necessity requires study new uses for radio * * * and generally encourage the larger and more effective use of radio in the public interest." The current color television hearings fall squarely within this statutory mandate.

INDUSTRY ROAD BLOCKS

What is all this noise about then? We have some color proposals and we have the industry practically unanimously throwing up road blocks in front of the Commission's hearing schedule to dispose of them. I say road blocks because they've posed field tests, studies and time limits from 6 months to the wild blue yonder before they can be ready to recommend standards for color.

Their intention to veto the color hearings was pretty well spelled out early in the hearings when no noticeable effort was made by the manufacturers and their alter egoes—the RMA, JTAC, and IRE—to program, plan, or report methods to the Commission by which they would build the receivers for public reaction, and for laboratory tests of color signals and color systems. Once having posed these questions, without turning a hand toward furnishing the wherewithal to answer them, it is not surprising that RMA is having labor pains forming a new National Television Systems Committee. Do they propose answers by February 27 when the hearing resumes? Apparently not. They appear merely to want time to draw up another color system with the FCC to serve as the practical nurse from now until labor is over.

You may ask why does the RMA want Commission blessing of a new NTSC? The answer is simple. The FCC engineering bureau hasn't grown with the phenomenal use of the radio spectrum. The Commission has, therefore, relied upon engineering committees whose personnel is drawn largely from the radio industry to solve its problems.

Compare, however, the Interior Department. Whether I agree with it or not, the Interior Department has a hydraulic engineer hanging from every crag in the West and an electrical engineer in every potential power market because they recognized early that they couldn't rely upon private utility engineers to carry out their conception of the development of the natural resources of power and water of the West and Midwest.

There were obviously going to be conflicts between private and public interests. The radio spectrum is one of the most precious natural resources the American public has today and I believe we are now at the crossroads, deciding whether we should let private interests exploit it for private profit and time each new development of the art for their balance sheets; or whether we should ourselves do the job that the statute imposed upon us for the public interest alone.

What does failure to build color receiving sets to determine public reaction, failure to schedule tests of the proponents' systems mean in the face of the Commission's order of November 21 urging manufacturers to build color receivers and cooperate in the tests to get the answers to the questions they themselves have posed? It means they are giving the Vishinsky veto to the color hearings. They're making the last stand for a supergovernment. What they may not win by direct methods, they apparently hope to win by acting in a semiofficial status as FCC engineers—paid for by the industry.

If Henry Kaiser had to get the approval of his automobile from the automotive industry before he could sell a car, do you think he'd have sold one yet? Or suppose the Government back in the early twenties had thrown its weight against the public's desire to buy and play with crystal sets, against receivers with morning glory loudspeakers and howling signals, on the theory that none should be sold until the superheterodyne and FM were invented. This is precisely what RMA wants to do with color proposals. The tycoons of television would be dwarfs today if Government had done this in the beginning. The radio pioneers are very short-sighted if they try to let reservoirs of knowledge run dry in this color hearing.

Religious Bigotry

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. CLEMENTE. Mr. Speaker, at a time when religious feeling is running high it is regrettable that the alleged ill-treatment of Texan Protestant missionaries in Italy is being used to stir up bigotry into action. The following letter has been circularized throughout parts of Texas, and it is in the interest of justice and fair play that its false and malicious character be now exposed:

MARY MOTHER OF GOD
NOCTURNAL ADORATION SOCIETY,
New York, N. Y., January 9, 1950.

Rev. J. WOOD,
Crescent Hill Church,
Brownfield, Tex.

SIR: We have read the protests you made concerning the illegal missionary activity of your workers in Italy, and of the just punishment they have received from the faithful. Worse is in store for you, as you will soon find out.

Let me assure you that you, together with all other false heretics and agents of hell, will surely burn forever in purgatory for your damnable acts. His Holiness, the Most Holy Father Pope Pius XII, Vicar of Jesus Christ on Earth, has said there is one true church and one only—and not your false, so-called Church of Christ—which is the Devil's own church.

You have absolutely no right to be in Italy. The Italians are members of the true church, and they don't need your lousy Protestant missionaries to confuse and mislead them, so you had better stay out of where you don't belong.

Furthermore, unless you repent and confess your sin and come back to the true Roman Catholic Church the agonies of perpetual torture in purgatory and hell await you—together with Mrs. Roosevelt, Bishop Oxnam, and all others who dare attack the Holy Roman Church and our Holy Father Pope Pius XII.

I am asking the holy sisters and nuns of the Immaculate Heart of Mary Mother of God to pray for you, and maybe you will be converted to the true faith. If the Roman Catholic Church were not true, it would not be the largest, richest, biggest, and best church on earth, which it most surely is. Furthermore, hundreds of thousands of former false Protestants are daily being converted to the church by Monsignor Sheen and others.

Yours in the Bleeding Heart of Mary,
FRANCES XAVIER O'TOOLE.

The Official Catholic Directory which lists every recognized Catholic ecclesiastical organization, and which lists as well every Catholic priest in good standing in the United States, has no record of a priest by the name of Francis Xavier O'Toole. Nor is there any such organization as the Society of the Immaculate Heart of Mary Mother of God. A further check with the chancery office of the archdiocese of New York confirms the Official Catholic Directory.

What then can be said of any religious group or any individual connected with a religious group who will make use of a letter which is not only malicious but libelous in character and false in its representation of Catholic teaching, without bothering to investigate its authenticity. Surely there can be little point in appealing to civil rights for Americans overseas, if those who are pleading for those rights contravene the fundamental right that Catholics as well as Protestants have to their good name.

In the publicity which has surrounded the so-called Frascati case, the impression has been conveyed to the American people that Protestants have no rights in Italy. As against this impression, Dr. Guido Comba, secretary-treasurer of the Waldensian Church of Italy, told a news service correspondent last week that Protestants in Italy have the same legal standing as Catholics. "Our church has never been molested in any of its charitable activities," Dr. Comba said. "All the institutions owned and conducted by the Waldensian Church can do their work without interference by anybody." There are over 200 Waldensian pastors in Italy who go about their regular work without interference. There are 17 Waldensian institutions in Italy: 5 orphanages, 4 homes for the aged, 2 hospitals, 2 colleges, 2 hostels for boys, an industrial home, and a home for incurables. Surely it cannot be said that Protestants are not allowed to have their institutions in Italy.

It is not Protestant missionary activity or charitable works which occasion bitterness in predominantly Catholic countries. Rather it is the method or methods used by missionaries. It seems almost naive that Italians whose Catholic culture has produced a Michelangelo, a Dante, a Thomas Aquinas, a Palestrina, and a Francis of Assisi, should sit idly by and show no emotional reaction when Texan missionaries hold that culture up to ridicule and tell the Italian people that they have been living in error all these many years.

There certainly is some point to the comment made by Carl Victor Little, who is a Protestant, and who conducts a column in the Houston Press. He expressed the hope that the State Department would return home the group of American Protestant missionaries, including the 11 Texans, who have complained that they were ill-treated by the people in some Italian villages.

These missionaries—

Mr. Little wrote—

supported by money raised in Texas, have been preaching in communities in the Italian hinterland that have been Catholic since the dawn of Christianity, that their concept of the gospel is the only true one.

We wonder what those Texans who were missionarying in Italy expect the plain, uneducated people to whom they are preaching to do, serve them spaghetti and give them a bouquet? Mr. Little asked.

These innocents abroad, the Texans, go right into the backyard of the papacy and denounce the Vatican and all its works. Then they cry and protest to the State Department, because the peasants greeted them with a shower of stones, but, according to a dispatch there were no injuries except perhaps to their delicate feelings. We wonder what would happen if a group of Italian missionaries from Rome would come to some sections of Texas and tell us Protestants that we have been talking through our theological hat and that ours is not the only true belief after all—

Mr. Little continued.

A shower of stones would more than likely be the minimum that these hypothetical Italian missionaries would receive for their trouble in trying to save the heathen of Texas—

He concluded.

Mr. Little certainly has a good point in what he says. The attempt to make use of a phony letter whose object is to foment bigotry and discord, has little place in the American scheme of things, and it is a matter of profound regret that any use of this letter has been made at all, without an attempt being made to determine whether such a society existed and whether its name was used with permission.

A Transparent Evasion of the FEPC Issue

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. KEATING. Mr. Speaker, failure of the Democrat leadership to give the green light yesterday to FEPC legislation is capable of two interpretations. At best, it is an admission of division and disunity within the party that demonstrates its unfitness to govern. At worst, it is evidence of a callous repudiation of solemn and oft-repeated pledges.

Let us hear no more anywhere about a GOP-Dixiecrat coalition bottling up the civil-rights problem. The Republicans want to vote and wanted to vote yesterday. The country expected us to do so. The transparent dodge of this issue yesterday by the administration leaders will not fool anybody. They have dangled this civil-rights bait before the voting public long enough. For depriving us of the chance to vote on this issue, the responsibility rests squarely on the Democrat Party.

Tomorrow, on Calendar Wednesday, they will have an opportunity to right the wrong they committed yesterday. The country expects them to live up to their platform pledge. The Republican Party is prepared to demonstrate its sincerity, if given a chance by those who control the scheduling of legislation.

Real Fights Ahead

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. THOMPSON. Mr. Speaker, my attention has just been invited to an able and understanding editorial in the Raleigh (N. C.) News and Observer, entitled "Real Fights Ahead."

It presents a clear picture of the Rules Committee problem which confronted the House last week, and which still puzzles some of our Members, and even more of the general public.

I commend it to those of each group as enlightening and informative reading. It follows:

REAL FIGHTS AHEAD

"Who won the election in 1948, anyhow?"

That is the way Speaker SAM RAYBURN stated the issue on yesterday's vote to change the rules of the House of Representatives. So far as the House is concerned, the issue was not overstated.

The effort of a coalition of Republicans and southern Democrats to return autocratic powers to bury legislation to the House Rules Committee, which they control, has been defeated.

The real fights lie ahead, however. It is true, as its proponents gleefully admitted, that if the proposed change in rules had been adopted, President Truman's entire program would have been thrown overboard. It does not follow, however, that the President's program has been saved in its entirety. It will have to be saved, so much of it as can be saved, item by item and bill by bill.

Fortunately, yesterday's vote broke party lines on both sides of the aisle which, theoretically at least, separates the two parties.

The administration was supported by 171 Democrats, 64 Republicans, and 1 Laborite and was opposed by 98 Republicans and 85 Democrats.

There will be shifting alinements on individual bills. Many southern Democrats are

so much opposed to parts of the President's program that they were willing to vote, in effect, against the whole program in order to make sure of defeating part of it. Some of the 55 who favored changing the rules will vote for individual items on the President's program.

On the other hand, Republican leaders will be able to corral more of their followers against individual items on the President's program than they were able to muster in yesterday's vote.

The Democratic Party and Democratic government stood to lose a great deal in yesterday's vote. About all it has gained is chance to fight again, item by item, bill by bill. It is disheartening that on a vote that might have meant so much, one-third of the Democratic members deserted their party leadership. * * *

Needless to say this vote is not typical of the record of the North Carolina delegation in the Eighty-first Congress when that record is viewed as a whole. It is safe to predict that in the votes to come the North Carolina delegation will make a much better record.

And there are real fights ahead.

Franking Privileges

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. EDWIN ARTHUR HALL. Mr. Speaker, the 11-year fight against EDWIN ARTHUR HALL as a Representative of the people by the newspapers of Binghamton is still raging.

I have never failed to strike back when attacked and I never will fail whenever the ruthless foes of our types of representation challenge me.

The latest beef these ancient enemies are featuring is their same old gripe about the franking privilege.

To the folks back home who have voted for me year after year in the face of this stirring issue, it must seem slightly threadbare and tiresome to have them keep harping on this question.

They cite a cost to the taxpayers of twenty-six million annually that Government mail runs and then single me out as the greatest abuser of all. Actually my franked mail is slight by comparison.

For their information, I will frank messages telling the true side of the story every time these newspapers smear me with false innuendoes, ridicule, and genuine viciousness.

They know I can reach more people than they can, because most of their readers turn to the sports page and the funnies anyway and cannot be bothered with their editorial tripe. To the contrary, every voter reads my direct letter.

This is why these newssheets in my native city would give their eye teeth to deprive me of the franking privilege. You see they just want to cut me off from all contacts with the people I represent.

It is O. K. for them to distort my position on every subject under the sun and to make fun of the elected representative of the people. But they are determined to give me no quarter to give the public the real truth.

For over a decade they have waged in my direction the greatest character belittling campaign ever directed against a public official, at least in our part of the country. But as long as I can enjoy the privilege of striking back with the only weapon a Member of Congress now has left to defend his reputation, my voice shall not be silenced.

Let them editorialize, write poison-pen letters, set up their stooges to attack me. It will avail them nothing, especially in view of the fact that their sports pages and funny section are much more enlightening.

They deplore the fact that I use the frank. A sure way, then, for me to use the frank less will be for them to lay off. This will save us all a lot of frustrated energy.

So if they are really sincere and not just shedding crocodile tears for public benefit, let them desist.

The Special Services Program of the Veterans' Administration

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. DOYLE. Mr. Speaker, during the recent congressional recess, I had the pleasure of speaking to the meeting of the nineteenth district hospital commission, American Legion, department of California, at my home city, Long Beach, Calif., December 11, 1949. I also had the very great benefit of listening to an address to the large number in attendance by Douglas Dashiell, assistant chief, Veterans' Administration, on the subject The Special Services Program of the Veterans' Administration. It was recognized that the important subject matter he related was so clearly and succinctly stated and was of such valuable import to all Members of Congress, and the general public as well, permission was granted that I should ask to have this splendid address printed in the CONGRESSIONAL RECORD.

I respectfully commend the reading of it by all.

Madam Chairman, distinguished guests, Legionnaires and members of the American Legion Auxiliary, during World War II, the motto of a well-known general hospital under Army control was happiness, kindness, and efficiency. In the Veterans' Administration we take pride in the fact that our hospitals provide medical service second to none. But, no hospital can achieve the goal of a medical service second to none, unless it serves its patients with the humanizing element paramount in all of its phases, for medicine used in its broadcast sense is founded in human sympathy. No man can live alone, since we are servants of each other. We are under constant and lasting obligations to one another. The policies of the Veterans' Administration embody this motto; since its goal cannot be achieved without kindness to the patients, happiness for the patient, and efficiency in serving the patient, first, last, and always.

Gen. Omar N. Bradley, now chairman of the Joint Chiefs of Staff and formerly administrator of veterans' affairs gave recognition to this fact when he emphasized that sick and wounded veterans have certain human needs to be cared for, over and above the minimum physical needs.

Medical service second to none is based upon a well-thought-out plan of operation of the medical team. This concept represents the functioning of groups of professional and associated, qualified lay employees working in close coordination to the end that the most complete and efficient care, consistent with rigid standards of governmental economy, be employed in the treatment of hospital patients and in the care of home members. This medical team consists of these groups: (1) Doctors, nurses, and allied professional people; (2) medical rehabilitation; (3) Special Services; and (4) volunteer workers.

Today, I shall briefly discuss one of the programs of the Veterans' Administration which is designed to satisfy the human needs of our hospitalized veterans, namely, the third member of the medical team—Special Services.

The Special Services Division—on coequal staff status with operating agencies such as, Claims, Insurance, Personnel, etc.—includes the following services or fields of activity: Recreation and entertainment, sports, library, chaplaincy, and canteen services. Each section is staffed by specialists in the particular field. All special services activities are coordinated with and integrated into the over-all hospital program, as set forth by the manager and chief medical officer of a hospital.

The primary purpose in the operation of the special services program in the Veterans' Administration is to raise the morale of patients in the hospitals and members in the domiciliaries by furnishing those things which can make their stay more pleasant and thus facilitate their recovery. Special services, as such, is something new in the Veterans' Administration. During World War II, special services was a very important branch of the Army and the Air Force. In the Navy, the same services, known as welfare and recreation, received just as much emphasis and made an equally worthwhile contribution to that branch of the service. With the influx of veterans of World War II into Veterans' Administration hospitals and homes, and the accelerated program of veterans affairs, it was a logical step to incorporate the special services program into the Veterans' Administration. Veterans of World War II were used to a highly geared program of recreation and entertainment. They were used to the finest of sports facilities and equipment. They were used to new books, new motion pictures, church services for all faiths, modern PX's. Above all, they were not used to depending upon the charity of individuals at will as to whether or not they received these things.

The aim of Special Services is twofold: To assist in giving the patient a will to get well, and, at the same time, to keep his interest alive in the normal activities of life so that he may be better prepared to take his place in normal living when he is released from the hospital. That latter point is an important one to remember, for it is fundamental in our thinking and planning that our efforts be constantly aimed at returning the veteran to his community, to assist him in taking his place in that community as a valuable citizen.

Now, let's take a look at the Special Services program in progress in the Veterans' Administration. Naturally, each activity is designed and conducted to meet the needs of the patients and members for whom it is intended. This is a tremendous challenge when you analyze the personnel which our

beneficiaries represent—the presence of Spanish-American War veterans and young men of World War II, the present of nurses of World War I and younger ex-service-women of World War II, and the varying degrees of physical and mental health.

RECREATION AND ENTERTAINMENT

The recreational program comprises both active and passive recreation. Practically every patient and member is reached by this program. If his condition prohibits freedom of conduct or physical ability to go and come as he pleases, the activities are brought to him. We stress patient participation throughout the program. The Recreation Service plans and supervises programs in the fields of motion pictures, radio, hospital newspaper, music, hobby clubs, games, dramatics, and personal appearances of both professional and amateur groups. Trips into the community are a fine morale booster. The recreational program is planned and supervised by our professional staff, and a great number of volunteers are utilized in its execution.

SPORTS

A second field of activity included in Special Services is sports. The mission of the Sports Service is to provide patients and members the opportunity to participate in an enjoyable and healthful voluntary sports program. Patients and members engage in impromptu sports activities of their choice. They learn to participate better in, and to gain a fuller appreciation of sports in which they are interested. Patients compete with others of their own approximate level of athletic ability. All patients are cleared in writing by the appropriate medical service prior to participation in the sports program, in order to determine activities in which the patient may safely participate, limits of participation, and any other information needed to safeguard the patient. In addition, both patients and members are provided opportunities to attend off-station sports activities with spectator appeal.

LIBRARY SERVICE

Library service is a third responsibility of the Special Services Division. Various phases of hospital library service include:

Book truck service to wards which contacts all patients. These trucks, carrying 75 books and 150 magazines, are accompanied by a trained librarian who exchanges books and magazines, recommends reading, and notes requests for reference material and books not on the truck.

Messenger service from the library to the bed patient in the delivery of material requested on truck schedules or reserve material.

Reserve service by which books requested, which are not immediately available, are flagged in circulation and are forwarded to readers when available.

Reading room service, where readers have opportunity to examine or read books, magazines, and newspapers in comfortable surroundings.

Reference service, which requires the answering by the librarian of all types of reference questions and the forwarding of desired information to the bed patient.

Medical library service to the medical and auxiliary medical staffs.

Interlibrary loan service, by which books located in one station library are available to other libraries.

Other library services, such as projected book—the projection on ceiling or wall of complete books filmed on 16 millimeter film—thus bringing considerable enjoyment to the bed patient.

Distribution of cross-word and jig-saw puzzles which many readers request as mental relaxation.

CANTEEN SERVICE

The Veterans Canteen Service is an instrumentality of the United States established by law in the Veterans' Administration. It supplies merchandise and services to specified classes of persons, and is financed by appropriated funds accounted for in the form of a revolving fund.

A hospital station canteen operation consists of:

1. Retail stores.
2. Warehouses.
3. Soda fountains.
4. Restaurant or cafeterias.
5. Barber shops.
6. Beauty shops.
7. Laundry, tailor, dry-cleaning and pressing services.
8. Shoe-repair services.
9. Vending and amusement machines.

Our canteen service provides the patient with those articles of use and convenience which, because of his hospitalization, he is unable to procure otherwise. When the patient is ambulatory, he has the opportunity of going to the store, of going himself to the canteen to make his purchases. When he is bedfast, a portable canteen, or ward cart, is brought to his bedside on a regular schedule. Careful attention is given to the choice of items made available in the canteens, as well as to the display of the merchandise in an attractive manner. The emphasis, as indicated before, is on surrounding the patients with as much normalcy as possible. Because the canteen service is a business organization, it is strictly controlled by adequate audits and inspection. Prices are kept low and any profits that accrue revert to the Federal Treasury.

CHAPLAINCY SERVICE

For administrative purposes, the chaplaincy service is a part of the Special Services Division. In the endeavor to give attention to our patients as individuals, careful thought has been given to their spiritual needs. A chaplaincy service was established in which recognition is given to the three major faiths—Protestant, Catholic, and Jewish. A quota is maintained to insure equitable representation for all so that every patient may follow his religious inclination. The chaplaincy service is organized to provide one full-time chaplain for (approximately) every 500 patients, with part-time chaplains as needed. The major emphasis in this highly important service is placed on bedside ministry. In this personalized and individualized service the chaplain has the opportunity to learn intimately the spiritual needs of the patients and to bring them courage and the solace of the church.

May I summarize by saying that these special services are designed and conducted to combat the evils of inactivity and to provide some of the conveniences, stimulations, and comforts of every-day life. When supervised and conducted by adequately trained personnel—both staff personnel and voluntary personnel—Special Services can go far in aiding the veterans to recovery, increasing their vision of opportunities by provision of incentives, and help restore them to their rightful places in the community.

No official of the Veterans' Administration could discuss the hospitalized veteran without paying tribute to the splendid contribution which volunteer workers have made, and are making to the service of veterans.

A source of vast potentiality that has been brought forward by the war, though it is as old as human nature, is volunteers. No more valuable aid to therapy exists than those who come because they want to and are not paid, who bring in the breath of the outside world and keep a hospitalized patient from losing his contact. There comes with such people the visible evidence of the love and affection of America for its veterans—patients see from day to day not only doctors, nurses, orderlies, technicians, professionals in the field allied to medicine previously mentioned, who must perforce, under the best of circumstances remind a man that he is ill, but the butcher, the baker, the candlestick maker, lawyer, merchant chief, the champion boxer, local athlete, well-known artists, prominent people, pretty girls, stars of the amusement world. Leaders of organizations have selected good citizens, old and young, to visit and work with the men and women of our hospitals and home. Volunteers from the local community by and large are of more value than casual visitors, for they come often enough to get acquainted and form a lasting influence. Both are valuable.

With regard to the function of volunteers, we are operating on the principle that a volunteer plays an essential part in the total job of aiding in the recovery of a patient, that he has certain specific functions with regard to doing specific jobs with certain patients, and, in addition he has general functions which have to do with the background, environment, and other connections of the patient before and after the treatment, and an important relationship to the community at large.

The compensation which a volunteer receives is not financial, but it behooves everyone concerned with the volunteer in an administrative and promotional capacity to keep in mind the very important consideration of satisfaction, appreciation, and other forms of compensation which the volunteer worker must have if his work will remain steady and show gradual improvement.

Effective utilization of volunteer assistance is a prime essential for a working voluntary service program. The planning and the coordination of the volunteer program, orientation and indoctrination of the volunteer, on-the-job instruction, and proper supervision of the volunteer are essential factors in the establishment of a voluntary service program. These factors are the responsibility of each staff member supervising the activities of volunteer workers in the special services phases of the voluntary service program. The career of the volunteer in the hospital program is in the hands of VA staff members supervising the volunteer. This career will have significance for the volunteer only if the supervisor gives meaning to the assignment, clarifies the responsibility involved, and works closely with the volunteer.

Each VA Special Services staff member is asked to analyze his program with respect to its further development through the use of volunteer assistance, and with respect to the qualifications and requirements necessary for volunteers participating in specific assignments.

By supplementing the work of the VA staff members, you are enriching and expanding the organized accomplishments of the Veterans' Administration. In great number, you have shouldered a heavy burden of hospital visitation and work. You have generously given of your time and of your money. You have built and kept alive the fire of service. Your efforts have not been in vain, because you have done the job courageously, and the veterans have benefited thereby through your devotion. For this, you are the recipients of the gratitude of the Veterans' Administration.

In the realm of rendering service, let us give recognition to the fact that the Veterans' Administration represents our Nation's plan and determination to care for our veterans. This great governmental agency is symbolic of the principle of serving those who served. It is the official assurance, as expressed by the representatives of a great people, that America has not forgotten and will not forget a job well done.

There will always be hospitals. There will always be patients in those hospitals. There will always be members in the homes. There will always be the need for that extra measure of personalized attention that means so much to living human beings.

The job of helping to restore lost opportunities to a whole generation of Americans calls for the active support of all Americans.

It has been a privilege to meet with you today. Thank you.

Senator Byrd's Budget Would Save Taxpayers Six and One-half Billions

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1950

Mr. MACK of Washington. Mr. Speaker, on January 9 President Truman recommended to Congress a spending budget for the fiscal year 1951 totaling $42,400,000,000.

On that same afternoon Senator HARRY F. BYRD, of Virginia, an authority on Federal fiscal affairs, submitted for the record his own budget proposals for 1951 totaling $36,000,000,000, which was $6,400,000,000 less than the amount requested by the President.

Inasmuch as all Federal spending must be met in full by taxation, and all Federal taxes come from the residents of the 48 States, the District of Columbia, and the several Territories, the following tabulation is offered to show (a) what the Truman budget would cost the people of each State; (b) what the Byrd budget would cost the people of each State; and (c) the amount which the people of each State would save in taxes if Congress were to adopt Senator BYRD's proposals instead of the President's:

	Percent of Federal taxes borne by State	Cost of Truman budget	Cost of Byrd budget	Saving under Byrd budget
United States total	100.00	$42,439,000,000	$36,000,000,000	$6,439,000,000
Alabama	1.17	496,536,300	421,200,000	75,336,300
Arizona	.37	157,024,300	133,200,000	23,824,300
Arkansas	.72	305,560,800	259,200,000	46,360,800
California	8.32	3,530,924,800	2,995,200,000	535,724,800
Colorado	.80	339,512,000	288,000,000	51,512,000
Connecticut	1.67	708,731,300	601,200,000	107,531,300
Delaware	.40	169,756,000	144,000,000	25,756,000
Florida	1.29	547,463,100	464,400,000	83,063,100
Georgia	1.40	594,146,000	504,000,000	90,146,000
Idaho	.32	135,804,800	115,200,000	20,604,800
Illinois	7.59	3,221,120,100	2,732,400,000	488,720,100
Indiana	2.29	971,853,100	824,400,000	147,453,100
Iowa	1.58	670,536,200	568,800,000	101,736,200
Kansas	1.15	488,048,500	414,000,000	74,048,500
Kentucky	1.20	509,268,000	432,000,000	77,268,000
Louisiana	1.22	517,755,800	439,200,000	78,555,800
Maine	0.44	186,731,600	158,400,000	28,331,600
Maryland	1.68	712,975,200	604,800,000	108,175,200
Massachusetts	3.40	1,442,926,000	1,224,000,000	218,926,000
Michigan	4.71	1,998,876,900	1,695,600,000	303,276,900
Minnesota	1.86	789,365,400	669,600,000	119,765,400
Mississippi	.71	301,316,900	255,600,000	45,716,900
Missouri	2.53	1,073,706,700	910,800,000	162,906,700
Montana	.35	148,536,500	126,000,000	22,536,500
Nebraska	.86	364,975,400	309,600,000	55,375,400
Nevada	.13	55,170,700	46,800,000	8,370,700
New Hampshire	.29	123,073,100	104,400,000	18,673,100
New Jersey	3.29	1,396,243,100	1,184,400,000	211,843,100
New Mexico	.28	118,829,200	100,800,000	18,029,200
New York	14.67	6,225,801,300	5,281,200,000	944,601,300
North Carolina	1.59	674,780,100	572,400,000	102,380,100
North Dakota	.34	144,292,600	122,400,000	21,892,600
Ohio	5.78	2,452,974,200	2,080,800,000	372,174,200
Oklahoma	1.17	496,536,300	421,200,000	75,336,300
Oregon	1.04	441,365,600	374,400,000	66,965,600
Pennsylvania	7.62	3,233,851,800	2,743,200,000	490,651,800
Rhode Island	.56	237,658,400	201,600,000	36,058,400
South Carolina	.76	322,536,400	273,600,000	48,936,400
South Dakota	.36	152,780,400	129,600,000	23,180,400
Tennessee	1.37	581,414,300	493,200,000	88,214,300
Texas	4.38	1,858,828,200	1,576,800,000	282,028,200
Utah	.34	144,292,600	122,400,000	21,892,600
Vermont	.18	76,390,200	64,800,000	11,590,200
Virginia	1.49	632,341,100	536,400,000	95,941,100
Washington	1.65	700,243,500	594,000,000	106,243,500
West Virginia	.92	390,438,800	331,200,000	59,238,800
Wisconsin	2.10	891,219,000	756,000,000	135,219,000
Wyoming	.18	76,390,200	64,800,000	11,590,200
District of Columbia, Hawaii, and Alaska	1.48	628,097,200	532,800,000	95,297,200

The formula used in estimating each State's share of Federal expenditures consists of three factors: First, the percent of individual income taxes collected from each State; second, the proportion of corporate income taxes borne by each State, measured by the State's percent of the national income; and, third, the proportion of excise and miscellaneous taxes—excluding social-security taxes—borne by each State, measured by the State's percent of total population. Thus we get a picture of Federal taxes borne by rather than collected from, each State, which we believe more nearly reflects the true distribution of the Federal tax burden. Each of the three factors is weighted according to the percent each tax bears of the total Federal tax revenue—1949 figures: Individual income taxes 47.52 percent, corporation taxes 30.42 percent, and excise and miscellaneous taxes 22.06 percent. Total 100 percent.

Brave Finland

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the Portland (Oreg.) Journal of recent date paying just tribute to the people of brave Finland:

BRAVE FINLAND

Voting in the 13° below zero weather did not give the Finns shivers in Tuesday's election despite a campaign of intimidation conducted by the Soviets.

Once more, and by a greater majority than ever, little Finland has turned a cold shoulder at the polls to Communist candidates, notwithstanding political aid from Russia. Before Tuesday's election for the Finnish Parliament, which chooses the President of the country, Moscow, with much fanfare, charged the Finnish Government with harboring and aiding escape of 300 war criminals. Pravda earlier poured out poison against the rightist trend in Finnish politics.

In Tuesday's election a tough-minded old man, who refused to be a "yes man" when Finland twice lost wars to Russia, was elected President. In addition to carrying 107 electoral votes, the largest party bloc in Finland, Juho Paasikivi, who heads the right-wing party of the Conservative Liberals and the Swedish-speaking Liberals, also was pledged the 67 votes of the Social Democrats, giving him a total of 170 against two opponents with 150.

There was heroism in the Finnish election.

The Hiss Verdict

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 25 (legislative day of Wednesday, January 4), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Hiss Verdict," published in the Indianapolis News of January 23, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE HISS VERDICT

There must be some very red faces in Washington today, as a result of the conviction of Alger Hiss, former State Department official, on two counts of perjury by a New York Federal court jury. The reddest face of all, undoubtedly, should be that of President Truman, who brushed off the charges that Mr. Hiss had betrayed his country by passing important secret documents to Soviet spies; the case was, Mr. Truman said airily, only a "red herring," and he may live to

regret those words—if he has not already done so.

It would be enlightening, also, to know the reaction of Justice Felix Frankfurter who not only was responsible for introducing Mr. Hiss into the Government service, but also was one of the two Supreme Court Justices who broke legal precedents by appearing as character witnesses in the first Hiss trial. Mr. Justice Frankfurter will be in an interesting position if and when the case is carried on appeal to the Supreme Court.

The verdict of the jury in New York removes much of the uncertainty from what has been, from the first, a confusing and complicated case. In the tradition of American justice, Mr. Hiss has been given every opportunity to establish a reasonable doubt of his guilt. In the eyes of the American people, as well as of the jury that listened to the evidence, Alger Hiss stands convicted. And the people of the Nation are asking: "What is to be done about other trusted Government officials against whom similar charges have been directed?"

Two points of significance appear in the wake of the trial. The first is that it took the legislative and judicial branches of the Government to uncover this sordid story of betrayal in the executive branch. The second is a warning to the American people, and a revelation. The Nation's security has been menaced by one whose highest trust should have been to guard it. That must not be allowed to happen again.

Hiss Case Lessons

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 25 (legislative day of Wednesday, January 4), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Hiss Case Lessons," published in the Indianapolis Times, of January 23, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HISS CASE LESSONS

The conviction of Alger Hiss should cause some soul-searching in the White House and the State Department.

This man was found guilty of perjury—of trying to lie himself out of charges that he betrayed his country and its government, under which he held positions of responsibility and trust.

Yet it has taken 11 years for justice to triumph over political pressures in this infamous case.

The diligent prosecutor who won the case before a Federal court jury must have wondered sometimes which side the Government was on.

President Truman called the congressional investigation which brought to light the charges against Alger Hiss a "red herring."

Two justices of the United States Supreme Court testified as character witneses for Hiss at his first trial last year.

Ambassador at Large Philip C. Jessup testified in behalf of Hiss at both trials.

Secretary of State Acheson publicly expressed confidence in Hiss as recently as January 1949, although by that time most of the evidence which has resulted in the conviction was known.

Nor was that Mr. Acheson's first introduction to the Hiss case. When existence of a spy ring in the State Department was reported to the Government in 1939, an investigating official was told that Dean Acheson and Justice Felix Frankfurter would vouch for the Hiss boys. (Donald Hiss, brother of Alger, is a member of the Acheson law firm.)

It is admirable for a man to stand by a friend in trouble. But an official sworn to uphold and defend his Government has a duty that transcends friendship.

It is pertinent to ask where Secretary Acheson now stands on this issue.

For it would be assuming too much to conclude that Alger Hiss was the only person in the State Department or elsewhere in Government service who transmitted official secrets to agents of Soviet Russia.

It would be assuming perilously too much to conclude that the State Department and other Government agencies are now free of traitorous enemies within.

Imprisonment of Alger Hiss will do little to protect this country unless there is drastic change in the attitude of high officials who sought to belittle the charges against him and to help him escape punishment.

Hiss Is Guilty

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 25 (legislative day of Wednesday, January 4), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Hiss Is Guilty," published in the January 23 issue of the Palladium-Item and Sun-Telegram, of Richmond, Ind.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HISS IS GUILTY

A Federal court jury Saturday found Alger Hiss guilty of perjury on two counts. He will be sentenced Wednesday.

The finding of the jury labels Hiss as more than untruthful in his testimony, before a New York grand jury. It confirms him as a former Government official who stole State Department secrets.

Whittaker Chambers, self-confessed former Communist courier, said it was Hiss who gave the secret State Department papers to him to be copied for transmission to Communists.

In charging the jury before it retired, the Federal judge said that they need not be convinced that Hiss gave the stolen documents to Chambers. Rather it was up to the jury to decide whether or not Hiss was guilty of the thefts.

But the jury also found that Hiss was guilty of lying when he said he had not seen Chambers after January 1, 1937. Evidence presented by the prosecution convinced the jurors that Hiss had seen Chambers after that date, and knew him well.

The conviction of Hiss is a historic decision.

It is historic because it establishes the connection between the Communist spy system and our own State Department in a crucial period in world history.

Later this same Alger Hiss was an adviser to President Roosevelt in his conferences with Josef Stalin during World War II. It was at these meetings of Roosevelt, Stalin, and Winston Churchill, England's Prime Minister, that the fate of millions of people was decided.

From these decisions came many of the concessions to Communist Russia which led to a policy of appeasement and stalemates between our own country and the power-seeking Red regime of Russia.

The Hiss conviction confirms the successful operation of Red spy rings in the Nation's Capital. It also lends more importance to the dangerous clique of fellow travelers who have leaned and still lean toward bowing before Communist government leaders rather than establishing a strong American policy looking toward the preservation of our own democratic principles.

Many of those friends of Russia still operate and wield their influence in Government circles to the disadvantage of the American people.

Other Accused Subversives

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 25 (legislative day of Wednesday, January 4), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Next?" appearing in the Columbus Evening Dispatch of January 25, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEXT?

Whittaker Chambers does not regard the conviction of Alger Hiss as a closing of the book on the subject of traitors for communism in the United States Government. Last week-end, on being notified of the Hiss conviction, Chambers stuck his neck out again and reminded reporters that Hiss wasn't the only person in Government whom he had accused of working for the Soviet Union in the same Communist group as Alger Hiss.

Mr. Chambers stoutly recalled that he had accused the following, and that nothing has been done about them as yet:

Lee Pressman, a former Government attorney, later general counsel for the CIO (belatedly fired) and a strong supporter of Henry Wallace.

John Abt, another former Government attorney and Wallaceite.

Charles Kramer (born Kravitsky) a former employee of a Senate subcommittee.

Nathan Witt, still another former Government attorney and former executive secretary of the National Labor Relations Board.

Abraham George Silverman and Henry Collins, both former Federal employees.

All right. What about these worthies? Some of them have been on the carpet before, but they took refuge in that familiar refusal to comment lest they degrade or incriminate themselves. Certainly Alger Hiss was no lone wolf. Certainly, in view of the strenuous efforts made to defend him, conceal for him, and dissemble for him by persons too high to be making off-hand statements, there was more than just Hiss in this business. Are other clues to the mess to be found through Pressman, Abt, Kramer, Witt, et al.?

Mr. Chambers is willing to put himself in difficulty if not jeopardy again to cast more light. Is the Government willing, too?

Justice for Poland

EXTENSION OF REMARKS
OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, January 26 (legislative day of Wednesday, January 4), 1950

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio program which was broadcast from Station WSPR in Springfield, Mass., on January 8, in which Attorney Joseph A. Nowak and I took part.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

INTRODUCTORY REMARKS BY ATTORNEY JOSEPH A. NOWAK

Friends of Poland, the title of this series of weekly programs, "Justice for Poland," is symbolic of the aspirations of a brave people for their freedom and independence. That freedom and independence of which they were despoiled because of the policy of appeasement of Stalin that was adopted by our diplomats. Congressman HARDIE SCOTT of Pennsylvania best expressed the weakness of our diplomatic behavior at Teheran, Yalta, and Potsdam, when he said in the House of Representatives at Washington recently, "The American people saw and deeply felt the suffering of the Polish people. We, in the name of the Atlantic Charter, promised that at the end of the war, both Germany and Russia would leave Polish soil. We solemnly promised that Poland again would be free. But that solemn promise was never kept. On the contrary Poland was betrayed. She was not only the sad victim of the onslaught of her enemies, but she also has been the victim of the cruel deceit of her friends. At Yalta, the fifth partitioning of Poland was sanctioned, at Potsdam it was confirmed by President Truman. Yes, we won the war. But we have yet to win the peace. We have failed to win the peace because our national leadership lacked that courage and devotion to the principle of freedom that characterized the life of Casimir Pulaski. Our national leadership was willing to compromise principle for expediency. And on the altar of expediency the freedom of the people of Poland, indeed, the freedom of the people of half the world was sacrificed."

The plight of the displaced persons of Poland is another result of the weakness our diplomats displayed at those conferences, but as to that I will let you hear from our speaker of today who has seen those displaced persons, been with them and knows of them.

He is the scion of an old and prominent Massachusetts family. After graduating from Harvard University in 1924, he entered the field of journalism and worked as a reporter for the Boston Transcript and in New York for the Herald Tribune. He served in the Massachusetts General Court and in 1936 was elected to the United States Senate from Massachusetts. When our country was attacked during World War II, he left the Senate and joined the Army of the United States. He fought in Libya, Italy, France, and Germany. He was promoted by grades to the rank of lieutenant colonel. In Italy he had the opportunity to observe the heroic attack made upon Monte Cassino by the courageous Polish Army under General Anders, which spearheaded the Allied Armies victory and opened up the road on the march to Rome. There he saw those men exultant in victory. Later, when the news of the betrayal of Poland at Yalta became known he had the sad experience of seeing tragedy in the eyes of those men. There he saw those men despondent in abandonment. There he saw them become displaced persons. Friends of Poland, I feel highly honored to present to you for your consideration the transcribed address of the speaker of today, the junior Senator from Massachusetts, the Honorable HENRY CABOT LODGE, JR. Mr. LODGE.

ADDRESS BY HON. HENRY CABOT LODGE, JR., OF MASSACHUSETTS

It is always a great pleasure for me to have the opportunity of being on this Justice for Poland Hour, to discuss the matters of interest to you and to me, and to all citizens who believe in and cherish the idea of justice. It is particularly appropriate to discuss today the subject of displaced persons. It is a timely subject for it is expected that the Senate will shortly have before it a new bill dealing with this important question. But not only is the subject of displaced persons a timely one, it is conspicuously a most fitting one to discuss on a radio program whose fundamental theme is justice.

I believe that Congress should enact a liberalized displaced persons law, seeking to make more workable and more practical the law which Congress passed in 1948. These unfortunate men, women, and children, whom we call displaced persons, have been waiting and praying for many years for an opportunity to start a new and decent life. They have been living under subhuman conditions. Many of them could make a splendid contribution to our common country.

This country of ours has a glorious tradition as a haven for the oppressed, and the land of hope and opportunity for those less fortunate than ourselves who subscribe to our ideals and principles, and who turn to us for a helping hand in their struggle toward a new and better life.

Somehow, many people seem to have obtained the incorrect idea that the United States already has taken a larger share of the displaced persons than is actually true. As a matter of fact this country, according to the best information I can obtain, has accepted only about 15 percent of all the displaced persons who have been resettled in new homelands.

The House of Representatives passed a bill liberalizing our displaced persons law last year, and it is with reference to this bill that the Senate is expected to act at this session. This bill will permit the admission of an additional 134,000 persons, distributed properly throughout all the 48 States, in rural and urban areas, in all walks of life.

Because my time is brief, I would like to dwell on one particular provision of this bill, which I think alone justifies our giving it the stamp of justice.

Through the years there have existed strong cultural and political ties between the people of America and the people of Poland. During World War II, members of the Polish armed forces fought with heroic determination to vanquish the common enemy. They fought with conspicuous valor in the skies over England; they fought at Narvik; they fought on the Maginot Line; they fought with stubborn fortitude at Tobruk; they fought in the terrible hell of Monte Cassino. On the slopes of this Italian town alone 3,600 of these brave men gave their lives, and I was at that cemetery myself last summer.

They gave their lives, and in so doing they saved the lives of many of the Americans in General Clark's Fifth Army; they saved the lives of many Britishers in the Eighth Army; they saved the lives of many Frenchmen in the French Expeditionary Corps. They gave their lives in a common cause, but they have not reaped the fruits of a common victory. In the eloquent and very moving words which form the title of the book written by the former Polish Ambassador to the United States, Jan Ciechanowski, they suffered "Defeat in Victory." Not for them the return to their homes and loved ones; not for them the freedom which their allies are now enjoying; not for them the dignity of independence for which they fought and for which so many of their valiant comrades sacrificed their lives.

Many of these Polish soldiers have refused to return to Poland. This refusal is, of course, due to the somber fact that Poland is enslaved today as totally and brutally as she was enslaved by the Nazis. The men of the Polish Army who fought Hitler's panzer divisions in September 1939, and went on to fight the battles which I have just mentioned, have lost their country. These men, the flower of Polish manhood, have not seen their native land or their loved ones for over 9 years. Many of them will never see their loved ones again. No man is wise enough to say when or at what cost Poland will be liberated. Since the enslavement by Stalin's henchmen, cumulative crises have created a world crisis so vast and so complex that this original sin is all but swallowed up in the gathering clouds of conflict. The fate of Poland must wait upon the fate of the world—it will not be decided until a general settlement has been arrived at.

In the meantime, however, there is something we can do to express our sympathy for the Polish people, our interest in the Polish tragedy, and our desire to bring them some measure of comfort and justice. All citizens who pay more than lip service to the idea of justice have been deeply sympathetic with the plight of the displaced persons, and I have always so felt that it was urgent and just that members of the Polish armed forces should be included in that group. We give preference to our veterans in this country, we should certainly not discriminate against the veterans of a martyred ally, who are in truth displaced. Virtually the only foreign veterans who are displaced are the Poles.

Since Poland is still under the domination of a despotic power it is time to give tangible evidence of our desire to help these people. It is time to give active recognition to the part these men played in achieving the peace which is their just heritage, but the sad truth of the matter is that we have done nothing for the Polish soldiers. England has offered them temporary haven, but they are living under conditions which are not very different from those under which all the other displaced persons are living. Many of them are very unhappy, their living conditions are bleak, their ration is austere, few of them, I am told, have settled down to a normal family life in England. Many of them want to come to the United States, where they feel they can have a future. It seems to me a matter of simple justice that they be permitted to do so.

I was gratified that the House of Representatives included a provision in the displaced-persons bill, which they passed during the first session, permitting a generous quota, 18,000 of these veterans, to enter the United States under the law. Incidentally, if I may be permitted to add a personal word, it was my brother, Representative JOHN LODGE, of Connecticut, who successfully sponsored this amendment in the House and, as soon as he had done so, I addressed an appeal to the Senate Committee to retain that language in the bill, which so far has been done. Let me say also that I am the author of a bill which passed the Senate, which will authorize the enlistment into the United States Army of a few selected young Poles, who will then become officers in our Army.

The displaced-persons bill is now in the Senate committee, and it is expected that this committee will report a new bill to the Senate in January. I shall support the Polish provision of the displaced-persons bill because I think it is just and fair. It is more than a gesture and more than words alone. It is a concrete action which will prove that

UNIVERSITY OF MICHIGAN LIBRARIES

we in America have not forgotten the debt we owe these valiant men, and in a very constructive way it represents definite assurance that we have not deserted the idea of justice for Poles.

Doubt as to Soundness of Old-Age System

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, January 26 (legislative day of Wednesday, January 4), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Casts Doubt on Soundness of Old-Age System," from the Chicago Tribune of January 25, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CASTS DOUBT ON SOUNDNESS OF OLD-AGE SYSTEM—BROOKINGS STUDY URGES PLAN BE SCRAPPED

WASHINGTON, January 24.—The Brookings Institution in a study of the cost of financing of social security released tonight, seriously questions the financial soundness of the present social-security system and of the administration's proposals for its expansion. It recommends a pay-as-you-go system in which each generation would take care of its own dependents.

The study says the actuaries in the social-security administration estimate annual benefit payments in the year 2000 at from $13,200,000,000 to $20,600,000,000, and non-Government experts place the figures twice as high.

RECOMMENDS CHANGES IN SYSTEM

The present offers an opportunity to reconsider the fundamentals of the social-insurance system that may not come again, the report says. Mushrooming benefit costs, expanding annually for the next 50 years, may result in a burden of taxation beyond the capacity of the economy to support without a substantial increase in the price level, the report continues. Increases in prices may impair if not destroy the real utility of the elaborate and administratively costly system.

The study recommends fundamental changes in the system, because of the magnitude of future costs and the uncertainties in foreign and domestic conditions confronting the Nation.

ABANDON IT ENTIRELY

"The way to avoid the dilemma of the current pattern of old-age and survivors insurance, with its pseudo resemblance to private insurance, is to abandon it entirely," the report says. "In its place should be instituted a system that assumes responsibility for the full current load to the extent that provision seems socially desirable and can be made within our present capacity to pay. Then we can be on a genuine pay-as-you-go basis.

"Each year benefits will be paid to those in need of them and current taxpayers will supply the required funds. There will be no reserves, no level premiums, no taxes being increased according to a schedule contained in an act of Congress attempting to forecast the distant future and to bind children and grandchildren. Our generation would take care of its own and trust future generations to do likewise."

EARLIER SYSTEMS FAILED

Lewis Meriam and Karl T. Schlotterbeck, who conducted the study, recalled that in the early years of the century many private and municipal retirement systems went on the rocks because they had promised old-age benefits which, as the systems matured, proved too costly to finance.

The report said that because the present system started without any benefit load and will not take on its full load for 50 years, the present collection of taxes on all covered workers produces far more revenue than is immediately needed to pay benefits.

The reserves thus created are borrowed and used by the Government for current expenses, and the assets of the reserve fund are simply promises that the Government at some future time will obtain the cash by one means or another and place it in the fund, the report asserts. Such reserves do not give financial security, it adds.

Long continuance of the present international uncertainties and the resulting necessity for heavy expenditures for national defense and aid to friendly foreign nations would seriously jeopardize the utility of the social-security program, the study asserts. It also says that an upward spiraling of wages and prices, resulting from unsound governmental financing would seriously impair the purchasing power of all the fixed money benefits.

The National Defense Budget

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include a speech recently made at Boston by the able and distinguished Secretary of Defense Louis Johnson, in which he answered an inquiry submitted by the distinguished Senator from Massachusetts [Mr. LODGE], received from a department store clerk, and also dealing with other vital phases of the national defense. The inquiry of the clerk submitted by Senator LODGE read as follows:

Mr. Secretary, my job pays me $38.45 per week, less Federal income tax. Why do you need $68 from people like me? What are you doing with the money? Why not get along with less?

I believe it will be very helpful to those interested in the cost of national defense to read the views of Secretary Johnson, and particularly his analysis of the defense budget and efforts being made by his Department to effectuate policies of economy consistent with our military needs and requirements in a world which is seething with turmoil and danger.

In my opinion, Congress is keenly aware of the urgent need of conducting governmental affairs with economy, efficiency, and accountability. Secretary Johnson has ably set forth his own opinions as to how these ends can be secured in his Department without impairing the national security.

His speech is thoughtful and pointed. It evidences his desire, shared by many, to keep expenditures for national defense at the minimum level compatible with our security in a troubled world and is a definite contribution to current discussions on national economy. The distinguished Secretary has ably presented his viewpoint.

ADDRESS BY HON. LOUIS JOHNSON, SECRETARY OF DEFENSE

Eleven years ago—to the very day, by strange coincidence—it was my privilege, as the Assistant Secretary of War, to address the Annual New England Conference of the New England Council here in Boston. At that time, the facilities afforded by your forum, served as the means of my delivering a message destined to have an impact throughout the whole world. And what I have to say to you today though it may not on the surface seem as explosive, I trust may prove of like significance.

On that November 18 in 1938, we were living in ominous times. The ink had just dried on the Munich agreement. The world was beginning to realize its sordid implications. The Sudetenland of Czechoslovakia had been handed over to Germany as an act of appeasement. A ruthless and intensive program of Nazi suppression and massacre of minorities had quickly followed. President Roosevelt, outraged by this shocking behavior, had declared that he could "scarcely believe that such things could happen in a twentieth century civilization." Secretary of State Hull, foreseeing the road to war that was being thus paved by these Nazi acts of aggression, publicly had warned that the world was at the crucial crossroads of its history, and had urged all to return to the ways of peace before it was too late.

The Axis powers, however, heeded no warnings. Drunk with their triumphs and determined in their mad plan of world conquest, they continued their aggressive ways—augmenting their military forces—mobilizing their industry—and embarking upon a production program which, above all, was intended to give them world supremacy of the air.

Realizing the potential scope of this increasing Nazi menace, and anticipating the role that the United States might have to play in an impending world crisis as the arsenal of democracy, President Roosevelt decided to meet the threat in characteristic American fashion—then and there—on the assembly lines of our factories, by the joint efforts of progressive management and free labor.

It became my duty to advise the country and inform the world that the United States had accepted the production challenge of the Nazis, and that we would start forthwith converting our pruning hooks and plowshares into airplanes, engines and propellers, to preserve our national integrity and the freedoms we cherish. Your invitation to me at that time to address you in Boston, 11 years ago, seemed a most fitting and appropriate occasion to launch the announcement of our grim determination to prepare ourselves to meet world conditions.

Among other things that I said to you then, and I give you my exact words, were: "To meet the tremendous pace that the rest of the world is setting we must double, yes treble, and perhaps even quadruple our present Air Force with the best airplanes that can possibly be purchased."

Up to that time our goal had been an Air Force of 2,500 planes. My remarks were thus interpreted as meaning that we were going to expand toward 10,000 planes, an unheard-of figure in those days. This statement of mine received wide notice. It was featured throughout the free world as a welcome announcement indicating a new and hopeful development in American policy. But in many circles, both here and behind the Siegfried line, I was criticized for what was characterized as "warmongering." In

the main, however, what I said to you on that occasion did receive most kind and generous support—especially here in New England—among people everywhere whose opinions I deeply respected.

Outstanding in my memory of that event, a recollection I will forever treasure, was the laconic comment of my Commander in Chief, the late President Roosevelt, which he wrote across the copy of my speech after he read it. He simply noted: "L. J. Grand."

Today, however, I shall discuss another challenge. It may not be as spectacular as the one I discussed in 1938, but it is for us today of equally grave importance. It will not be in the nature of an exhortation to meet any production figures of overseas airplane factories, but will be in the form of an answer to a simple inquiry from a woman clerk in a Washington department store. Her message was relayed to me by your own junior United States Senator, HENRY CABOT LODGE, JR.

And, if I may digress for a moment, let me take this opportunity to tell you that we in the Department of Defense look upon Senator LODGE and upon your senior Senator, LEVERETT SALTONSTALL—both of them battle veterans—as men who always place the national security above considerations of party, both of them stalwarts with rare insight into the intricacies of our problems, and always ready to render their utmost support to all efforts to assure the national security in these crucial times.

And, let me add, that likewise in the entire Massachusetts delegation to the House, led by Congressman JOHN W. MCCORMACK, majority floor leader, the cause of national defense—regardless of party ties—has found many of its strongest adherents in the Congress. And this is true of the congressional delegations of the other New England States. In fact, I would be remiss indeed if I did not take the opportunity of my visit to Boston to express the appreciation of the Department of Defense to all those patriotic political leaders from New England, who are doing so much in Washington to help us in meeting our defense needs.

But let us get back to the challenge of that department-store clerk. In effect, this is what she said:

"I have a job which pays me $38.45 a week. Out of that I have to take a weekly deduction to pay my Federal income tax. I have been told that $68 a year out of my Federal income tax goes toward the support of the Pentagon. Sixty-eight dollars is a lot of money and means an awful lot to me. So I humbly ask you, Mr. Secretary, why do you need $68 from people like me? What are you doing with the money? And why don't you try to get along with a whole lot less?"

Here is a $64 question with a $4 bonus, that goes to the heart of national defense. The department-store clerk is certainly entitled to an answer and so is every American taxpayer. My remarks to you today are directed to such an answer.

We spend $68 contributed by women like the Washington department-store clerk, and proportionate and equitable amounts paid by all of our American taxpayers, first, because we need adequate national defense, and second, because its cost in the United States comes high.

We need national defense because in the world of today, as in the year 1938, there are forces at work against us—forces which tend to capitalize on national, military, and economic weaknesses to achieve their sinister aims. In the long run, aggressive communism as practiced today must lose, because like nazism and fascism and all of its other tyrannical forebears it panders to bestiality and destroys human dignity, because it is economically unsound and spiritually bankrupt. Its fanatical zealots have not yet been convinced of the inherent folly of their blind drives for conquest, and between now and the time it has run its full course to limbo it is capable of spreading misery, suffering, and war in its march. We must, therefore, be always alert to its dangers. We must be unfaltering in our aroused determination not to fall victim to any of its aggressions, now or in the future. We must stand on guard, ready to resist—with force, if need be—any attack that may be leveled against us.

Such a state of readiness in the world today, demands a mobilization of armed forces larger than we ever had before—except in time of war; and the cost comes high. Our defense needs must be realistically related to existing global conditions and to the array of forces most likely to be pitted against us. Our military planners are skilled in the art and science of warfare, and in their assumptions work on the premise that those likely to be on the other side may be just as smart, just as calculating, just as capable of making right decisions as we are. Our probable adversaries undoubtedly recognize that just to plan aggressive war against us is not enough. Before attacking they must give themselves a possibility of victory—with more than an even chance. Otherwise, they know they doom themselves to certain defeat.

We can assume, therefore, that no one will attack us who is logical in his planning, if he knows in advance that the probabilities of victory are too doubtful. We therefore must present to the world the spectacle of an Army, Navy, and Air Force so unified, and so strong, that an attack against us would be exposing an aggressor to certain defeat.

Our planning however, must go beyond this reasoning. We must also take into consideration a possible attack against us which to a prudent aggressor would seem foolhardy. To assure our security, we must calculate the risk of a dictator, who in self-centered frenzy will toss aside the counsel of logical prudent planners and go berserk, Hitlerlike, and depend on his own inspiration as the guide to his military conduct. Of course, the ultimate defeat of that type of self-inspired, military-untutored dictator would be inevitable. No war can be indefinitely maintained by flashes and hunches. Yet, based on little more, such wars have taken place and, in the process of waging that type of losing war, dictators have brought in their wake death and destruction to millions, among them many precious American lives. The American planner therefore has to take into his close consideration the possibility of that kind of poorly calculated war by a potential enemy, also.

We have another factor to consider, and that is the effect of heavy spending on armament on the economic system of our country. What will preparedness or even victory in battle avail us, we must ask ourselves, if our free democratic system is crushed in the process?

So, in the American defense plan, we must figure on armed forces large enough to protect America from all foreseeable danger but yet, at the same time, not costing so much as to jeopardize our national solvency—and that is indeed a very delicate job. It calls for compromise and restraint by all. It means adjustments and readjustments among the services with the full knowledge that no service will get all that it honestly believes that it needs. It means adjustments and readjustments between the defense and the over-all national budget in the complete realization that no taxpayer can get all the relief he needs to keep himself solvent and still risk his capital in new enterprise.

After all these calculations have been made in the consideration of our defense budget, we find that presently it costs somewhere between thirteen to fifteen billion dollars a year to support the kind of military forces we basically need. True, some other country needing the same amount of armament could get it for a lot less, but the pay and the standards of living—both of the men in the services, who must prepare themselves if need be to use our weapons and equipment, and of the men and women in the factories who must produce our armament, come much higher in the United States. That factor pushes up considerably our cost of national defense.

There is another hurdle. The United States has no design on any other nation, and has no intention of attacking first. That principle is basic to our national democratic psychology, and properly so. Our planners must therefore be defense-minded. That does not mean that they must think in terms of Maginot lines on the land, sea, or in the air, or that they should rely exclusively upon the deterrent effects of any single type of weapon of destruction. But it does mean that we must build around a strategy which will parry the first blow and keep it from becoming a Pearl Harbor or a series of Pearl Harbors, while being able to let loose against the enemy almost simultaneously our full might in a crushing counteroffensive. We must plan to have enough reserve resources in men and matériel to exploit, swiftly and finally, the strategic success of that counteroffensive, through a powerful army safely transported to overseas theaters of operations by a powerful navy, and supported in its landings and in its operations by the added might of adequate tactical air forces.

But "Why don't you try to get along with a whole lot less?" asks the department store clerk.

First, let me say categorically that we not only are trying to get along with a whole lot less, we will get along with a whole lot less. Moreover, we will get a lot more for our money. It will be a matter of less money and more defense.

We are already effecting many savings, savings in overhead, savings in operations and installations no longer needed, savings by reducing waste and duplication; and we are doing so without reducing the capabilities of our armed forces to defend America in the kind of war that we are most likely to be called upon to face in this modern world.

We in the Defense Department are appreciative of the need for national economy. To become dollar conscious is not only good economics but good military discipline for our military and naval men. We now have courses in economics at West Point, at Annapolis, at our National War College, at the Industrial College of Armed Forces, and other schools. Our men in uniform in all echelons are being made to appreciate the cost of national defense and the relations of those costs to the financial structure of our whole economy. They are now applying to their budget planning in particular, and to their peacetime administration in general, the doctrine of the economy of force which has been a fundamental principle of war throughout the ages.

Its application to military manpower problems is well understood by our fighting men. It has been hammered continuously into their minds in all their service schools, in maneuvers and map exercises, and in the conduct of battle operations. They know well that whether leading hordes of Genghis Khan, a select band of Gideon's men, French poilus, Russian cossacks, or American doughboys, the successful military leader—first and foremost, always saves his troops, keeps his men healthy, strong and aggressive—and commits no more of his troops to action than are absolutely necessary to achieve his objective.

This principle of economy of force also has its application to logistics. For in all wars supplies have played a vital though too often an unpublicized role in the success of battle. In our military and naval training today we devote a great deal of attention to logistics. Since there cannot be enough tonnage available, for instance, to take care of all possible needs of overseas forces in war, the logisticians must ration it among the respective users, and each user, in turn, must get the

UNIVERSITY OF MICHIGAN LIBRARIES

most out of the tonnage space allotted to him. That means calling only for what is most needed, and then using judicially what one gets.

The military and naval minds of our country that have won our wars with the full realization of the meaning of economy of force as applied to manpower and to munitions power, are, I am happy to report, learning today to apply that doctrine also to the use of America's money power. In the past, there often crept into military and naval budgets exaggerated demands for specific appropriations because, it being a foregone conclusion that Congress would cut the amount, there was a feeling such a practice of asking for more was justified to assure at least the minimum required for adequate defense. We hope to correct that situation. From now on we expect to present a scientific budget on behalf of the armed forces which will be more definitely indicative of rock bottom needs and I am confident that disciplined minds of our services, brought up on the doctrine of economy of force, will make a decided contribution toward holding down costs. They will make cuts, but they will make them on the basis of sound military and economic analysis. Arbitrary cuts just to effect savings for savings' sake have not been ordered, and will not be ordered. However, no project will be regarded so sacred that it will not have to submit itself to close scrutiny to justify its allotment of funds and, on the other hand, none will be so prejudged that it will not have an opportunity to prove its value. We have set our sights for a budget of $13,000,000,000 next year as against the $15,000,000,000 given us by Congress this year. We shall make every effort to achieve such a savings but we shall still remain adequately prepared to face any military crisis.

We are going to get along on this lesser amount because we know our economic system cannot afford to pay much more. In doing so, we hope to win the full confidence not only of the department store clerk who sent this inquiry, but of all of our American taxpayers no matter how large their tax burden. We are determined to give to each of you your full money's worth, and money for defense well spent, no citizen will begrudge.

Even reduced to $13,000,000,000, the cost of defense is still high. But it is necessary at this time. All of us, however, look forward hopefully to that day of lesser armaments when war and the threat of war will no longer occupy as much of our time and thought, and absorb so much of our resources, as they do now. That time, however, has not yet been reached. When and if it comes, I pledge you that our armed forces will be the first to ask for reductions themselves. They are learning how closely tied together are the national solvency and the national defense of our country. They can be depended upon to do their utmost to help achieve what is best for the national interest.

We have an economic system and a way of life of which the men and women in service—military and civilian—are very proud. Most of those now in uniform have seen service overseas. They have seen other systems at work. They have had intimate opportunity to determine for themselves how superior the American democratic system is in comparison with the others in achieving for all its citizens—security, happiness, freedom, and better standards of living. The men in the services understand the issues we face. Rest assured that the Army, the Navy, and the Air Force will cooperate in every way in meeting the challenge of these trying days. They are prepared to do more with less, and they will be prepared to give more and more—and, if need be, their all—for the defense of our country.

Social Security Funds

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. CLEVENGER. Mr. Speaker, last fall I was 1 of 14 Members to vote "no" on the social-security bill. Certainly I voted my convictions as I always try to do, regardless of the political implications involved. Certain it is too that we should stop this "Ponzi" operation that bilks Americans by the millions for billions of their treasure and finally must pay them from the wages of the Americans then gainfully employed. A private concern would wind up in jail for such an operation. The Security and Exchange Commission would put them out of business.

Why not an honest pay-as-you-go system without this hocus-pocus that savors of the old shell game at the county fair?

The following editorial is from the Cleveland Plain Dealer of December 8, 1949:

THIS IS FANTASTIC

The Federal Social Security Administration has discovered a neat way of making money. It takes the employer-employee contributions to the social-security fund and invests them in Government bonds. These bonds pay up to 2½ percent in interest annually. With $10,000,000,000 of social-security money so invested, the profit is approximately one quarter of a billion dollars annually.

These are the facts related in an article distributed by the North American Newspaper Alliance. Social Security Commissioner Arthur J. Altmeyer is the authority for them.

At this point, no doubt, the public is supposed to stand up and applaud the faithful public servants who are handling the social-security money so prudently and actually making a profit with it instead of piling up a deficit.

But where does the quarter of a billion dollars in interest, which the social-security funds earn, come from? Why, from the Government, of course. And where does the Government get it? Why, from the taxpayers, the only source of money the Government has.

Consequently, those taxpayers, who happen also to be employers or employees, are making two contributions to social security. One is made directly in the form of a pay-roll deduction which is matched by the employer. The other is made indirectly in the form of a tax to pay the interest on the first contribution.

Thus the intended beneficiary of social security gets soaked twice to pay for it. But that isn't all.

What happens to the social-security money which is invested in Government bonds? Is it stacked up in neat piles in the Treasury, awaiting the day when the people who paid it are ready to retire and to start drawing it out in monthly benefits?

Don't be silly. There isn't any social-security money in the Treasury. The Government has already spent it.

Then where is the Social Security Administration going to get the money to meet the claims of the people who are 65 or over and who want to retire? That's easy. The administration will simply cash in some of the bonds it is holding. Since they are Government bonds, the Government will have to redeem them.

But where is the Government going to get the money with which to redeem the bonds, if it has already spent the money it borrowed on them? Why, from the taxpayers, of course. Where else can the Government get money? Of course, the Government might issue new bonds, and sell them to the banks, but eventually they would have to be paid off, too, and the money would have to come from the taxpayers.

Thus the taxpayers are going to be soaked a third time for social security.

Calling this system social security is probably one of the biggest frauds ever put over on the American people. What it amounts to is simply a device to compel everyone who has a job to contribute to the pensions of those who have retired.

Labor Conflicts

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Newark (N. J.) Sunday News for January 22, 1950:

LABOR CONFLICTS

Industrial relations experts are agreed that the most promising path to industrial peace is through wholehearted collective bargaining. Its contribution to economic stability was stated by the labor committee of the Twentieth Century Fund some years ago in these words:

"Collective bargaining can be, and should increasingly become, a technique to help insure a larger and more regular output of goods and services, to maintain high levels of purchasing power, to establish clear lines of communication between employer and employee, and to inspire and intensify their joint responsibility."

Early this month Cyrus Ching, chief of the Federal Mediation and Conciliation Service, exhibited an optimistic view of the progress in collective bargaining techniques. The contrast is furnished by David L. Cole of Paterson, a nationally known arbitrator who was a member of the President's inquiry board in the recent steel dispute and currently is serving as chairman of a fact-finding board appointed by Mayor O'Dwyer to study the demands of New York City's transportation workers.

Speaking in this city, Mr. Cole said it was a tragedy that the true possibilities of collective bargaining were being neglected. Although deriving part of his livelihood therefrom, he deprecated the need of having Government boards intervene in labor disputes instead of settling them by direct negotiation. Most of the blame he laid to the "philosophy of irreconcilable conflict" by management and union alike.

Labor conflict has its origin in many and varied causes. Perhaps the most prolific cause of disagreement, leading to intervention by constituted authority, is the innate tendency of management and union to regard collective bargaining as mainly a horse-trading proposition instead of a cooperative undertaking to be pursued in good faith. No simple and effective cure may be immediately available, but Mr. Cole indicates the danger of the present situation as he sees it in these words:

"If Government has to tell employees how long to work and for how much, and employers what conditions they should provide and what welfare funds, the next step will be toward complete totalitarianism."

Thus is presented a crucial issue in the American economy that concerns each of us, whether or not we own a business or whether or not we belong to a union.

Defense Secretary Johnson Says "Unification Means Dollars and Makes Sense—That While It Would Be Disastrous To Wreck Our Economy by Inordinate Military Expenses, It Would Be Equally Disastrous To Be Penny-Pinching—The Watchword Must Be Military Security First, and Economy Second"

EXTENSION OF REMARKS

OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. FISHER. Mr. Speaker, I have just come upon a copy of an address delivered by Secretary Johnson to the New York Bar Association. It is a talk such as you would expect from a great direct actionist like Louis Johnson—a talk which lays right on the line, the administration policies he has established in order to achieve the economy, efficiency, and national security which the Congress of these United States declared to be its policy when it passed the act to unify the defense establishments, inclusive of the armed services.

Louis Johnson is no stranger, either to the Members of this Congress or the problems of administering the Nation's defense.

His marvelous work as the Assistant Secretary of War in mobilizing the industrial forces of this country during President Roosevelt's administration was an achievement of which America will always be proud.

A lawyer himself, and a conciliator of no mean ability, he reminded his fellow barristers of the personal differences, the financial, administrative and other difficulties which arise when one endeavors to effect the merger of two or three great corporations.

Congressionally dictated, the decision to unify the three services under a single department of defense was neither the brain-child of a superefficiency expert nor a bureaucratic planner with an uncontrollable itch to bring the independent services within the confines of a flow chart. Unification was a practical decision, dictated by experience and imposed by this Congress to meet the need of security in an insecure world.

Mr. Speaker, it is because I deem Louis Johnson's address to the New York Bar Association a statement of deep and vital interest to every Member of this House that I ask unanimous consent to extend my remarks and include the same in the records of our proceedings. I do this with a recommendation to all my colleagues that they study every word that our great Defense Secretary has uttered.

The talk is as follows:

UNIFICATION MEANS DOLLARS AND MAKES SENSE

I want to talk to you tonight about unification of our armed forces and its vital contribution to the national security.

Let's begin by defining our terms. What is the national security? It is not just the strength of our arms. It is the sum of all our strength—our political, economic, moral and military strength—and the strength of all the other peaceful nations of the world. My job is concerned primarily with our military strength. Our policy to attain this aspect of national security is based on three principles—each dependent on the others.

The first principle is that peace can only be maintained through preparedness. In the light of recent history this needs little argument or justification. Our preparedness has been generally recognized as a major stabilizing factor in these unsettled times. But what kind of military strength do we need? Obviously, to build up our military power to the point where it overburdened our peacetime economy and hurts that prop of our national security, would be disastrous. Such folly would help the cold aims of potential aggressors, would play right into their hands, and would not be preparedness at all.

But, while it would be disastrous to wreck our economy by inordinate military expenses, it would be equally disastrous to be penny pinching. The watchword must be military security first; economy second. And if we are realistic, we must face the fact that our military requirements are not static, but flexible. They are bound to be affected by major shifts in the international situation and new developments in science and warfare.

The second principle on which our military policy is based is that military security must by its very nature be relative. Obviously it is impossible to be absolutely secure. The cost of such security and the risks of obsolescence in a fast moving scientific age tend to negate efforts to achieve absolute security. This means that our military organization must be adequate, efficient and readily adaptable to change; our planning must always look to the future as well as the present. We must have an up-to-date fighting force in being, rapidly enlargeable in wartime, capable, in concert with our natural allies, of defeating any potential enemy. The maintenance of that kind of a fighting force, backed up by a sound economy, and high public morale, will give us relative security.

The third principle underlying our military policy deals with unification of the armed forces—one of the means by which the Department of Defense is developing this up-to-date fighting force designed for relative security. And it is this third principle—that unification is absolutely necessary to the maintenance of our national security—with which I wish to deal tonight.

Your own association, the New York County Lawyers Association, and the other bar associations of this city, have been having some experience with unification recently. The project before you is one of unification of the courts of the State, as proposed by the presiding justice of the appellate division of the first department and by other thoughtful leaders of the bar. You have all seen how difficult it is to carry out in practice what seems so sound and unassailable in theory. Opposition comes quickly—and in great force. Questions of history and tradition, of vested rights and national inertia, arise to plague us wherever we try to merge or consolidate two or more historic agencies. Doubts are expressed about trying the unknown, when the known has proven adequate at least in the recent past. Conflicting claims come up about priorities and superiorities and about respective jurisdictions. I need not tell you lawyers about that. You come across it every time you try to merge two corporations. You have come across it in a public way in your efforts to consolidate courts.

So you, above all others, have some idea of what I am up against.

World War II taught us that unified planning, unified command, unified research, and unified procurement are essential to success in modern war. The day before Pearl Harbor, unification, as we understand it, had not even been conceived. The tragedy of December 7 compelled us to adopt unification as the only sane method of fighting the war. But it took months and years to get unification into effective operation in the overseas theaters. If war should ever come again, the armed services won't have the luxury of years then to get organized for war; we might not have even days or hours to get organized properly. The national security requires that the Military Establishment be unified properly—now.

The problem since the war, then, has not been to determine whether, but how closely, our land, naval, and air forces should be joined together. The seat of most of the difficulty in the past has been the reluctance of some elements in some services to accept the functions assigned to their service.

These functions are determined by the Joint Chiefs of Staff under the direction of the President and his assistant, the Secretary of Defense. The sum of the roles and missions of the various services adds up to the whole military problem of being prepared for—and, if necessary, waging and winning—a modern war.

Under unification, the Army, Navy, and Air Force are each responsible for carrying out specific roles and missions. Obviously, we must constantly evaluate the effectiveness of this assignment, and we must make necessary adjustments whenever performance does not measure up to plan or need.

This process of assessment and adjustment of our state of preparedness, made practicable by unification, is essential to the maintenance of relative security. It is constantly being conducted—in whole or in part—by the President, the National Security Council, the Secretary of Defense, the Armed Forces Policy Council, the Joint Chiefs of Staff, and the services themselves.

The criterion for deciding how closely the services should be joined together is simple: How much integration will most effectively carry out the services' roles and missions? All policies and procedures of the Armed Forces must be examined exhaustively to see that they fit into this pattern of integration for relative security.

Furthermore, because of developments in the international situation, in concepts of war, and in weapons, this yardstick of unification must constantly be applied and reapplied to every operation of the Military Establishment. Unification, therefore, is an evolutionary and never-ending process.

Unification is not to be considered an end in itself; it is the means by which we achieve relative security. Unification is not simply an administrative device for securing economies in military expenditure. Nor is it simply a streamlined system of double-entry bookkeeping.

Neither is it a scheme for reducing the three services, and the several branches of the three services, to a common, colorless, undifferentiated denominator. It is not an administrative device, which, in the interest of a supposed efficiency, would strip the individual services in their history, their traditions, their distinctions, which form so large a part of their morale.

UNIVERSITY OF MICHIGAN LIBRARIES

There are those crisp, starched experts who would have men enlist in the Department of Defense, and be assigned willy-nilly, regardless of their individual wishes, and solely according to the results of scientific intelligence and aptitude tests, to the Army, Navy, or Air Force. I am not one of those experts.

I do not favor a common uniform, which would take away the paratrooper's distinctive insigne, or deprive the Marines of the distinguishing devices that identify the units which have made history in the wars we have fought for freedom and the minds of men.

It is easy to make fun of "the wild blue yonder," "Anchors Aweigh," "the Shores of Tripoli," or "stand up and hook up." But the "wild blue yonder, "Anchors Aweigh," the Shores of Tripoli," and "stand up and hook up," in the world of the imagination—which, after all, is the world in which morale has its life and being—represent to the airman, sailor, marine, and paratrooper certain definite accomplishments of which they are proud and which they will always seek to emulate. They represent the Eighth Air Force over Schweinfurt, the fleet on the move in the Pacific, the landing on Tarawa, and Normandy on D minus 1. We ought not to dim those memories, or to tarnish the visible symbols of them.

If, then, unification is not merely the common procurement of T-shirts, nor the reduction of three services to an agglomerate mass, what is it?

Unification is a state of mind that grew out of the experience of the war—so right, so forceful, so undeniable that those who had experienced that state of mind during the war were convinced that it must control the thinking and planning of the Military Establishment in peace.

To get some notion of that state of mind, and how it arose, take your thoughts back to the invasion of Normandy, to the invasion of the Philippines. What were the essential conditions of combat, without which success in those invasions would have been impossible? They were the same as for every engagement in the war. For this was not simply a land war, not simply a war of aerial bombardment, not simply a war of naval engagement—but a war in which the three arms had to play, and were eager to play, their part in securing a grand objective.

If this unification, if this state of mind, was the prerequisite of victory in modern war, then, all responsible and disinterested military men finally agreed, it had to furnish the guide for the Military Establishment which was to secure the peace so hardly won.

The decision to unify the three services under a single department of defense was not, then, the brain child of a superefficiency expert, a bureaucratic planner with an uncontrollable itch to bring the independent services within the confines of a flow chart. Unification was a practical decision, dictated by experience and imposed by the need of security in an insecure world.

The decision to unify is one thing. The degree of unification, the act of unification—I need not tell you—is something else again. Honest men can, and do, differ as to the extent of unification which security required. It is relatively easy to get agreement on joint medical research, or even on joint research on weapons. These are matters on the periphery of the unification idea, and do not so closely engage the loyalties and jealousies of the three services.

It is far more difficult to get agreement on the roles and missions which are assigned to the services in the event of war. This is not surprising. The Army, Navy, and Air Force are not merely units on paper. They are institutions, living institutions, human institutions. And, like any human institution that has salt and savor in it, each of them has a proud history. It may be true that this history is at times an encumbrance to clear thinking in the present. It may be true that some officers are sometimes self-seeking like other men, and that their self-seeking narrows the range of their vision. Even conceding these things, still we must ask ourselves whether these very defects have not played some part in building up the efficiency of the services. It is true that narrow regard for the interest of the individual service may result in a disregard for the national interest. Yet, we must admit that in the past this narrow self-interest, this fierce independence, this rivalry, this competition have also acted to keep our services at the top of their forms; these elements were active ingredients in service morale; and they have, as a result, played a part in the victories which our arms have won.

Edmund Burke, criticizing the attempt of the French revolutionaries to wipe clean the slate of history, declared that while society was indeed a contract—as the French revolutionary philosophers maintained—it was not a contract in tea and calico and spices. It was, said Burke, a contract in every science, in every art, in every virtue; it was a contract between the living and the dead, between the living and those yet to be born. In the same way our three services are not paper organizations—no mere collection of bodies and weapons. They are proud institutions with every right to be proud. They have a contract with their past—and with their future as well. That contract must, and shall, be honored.

But they also have a contract with their country—as they have always had. And while the object of that contract remains what it has always been—the security and defense of the Nation—the terms of that contract have changed. The terms have changed because science has changed the nature of war, and the roles and missions of the three services. The safety of the Nation no longer reposes in the skill and valor of its individual arms, individually engaged, but in its combined arms jointly engaged. The decision to combine and unify, to subvert the individual role to the common end, is a decision that is taken rather easily when the Nation is fighting for its life. It is a decision that is much harder to take in peacetime—especially when the planning is for an indeterminate future. But that decision is necessary. It has already been made. The decision to unify has been made by the Congress, approved by the President, and endorsed by the American public. And that decision is going to be carried out.

In carrying it out we have found that decisions which affect the autonomy of the services—or what they have regarded as their autonomy—have resulted in prolonged resistance and, at times, acrimonious debate which culminated in public hearings on Capitol Hill. And while the debate has often been wearisome and feelings have been bruised, this process is to some extent a part of our democracy. I cannot help but add that the process might have been expedited by the use of some more imagination and common sense and less self-interest.

To my mind, however, the wonder is not that the first 2 years of unification have generated differences. The remarkable thing is that unification has progressed as far and as rapidly as it has. Far more progress has been made than is generally realized. The state of mind, which is unification, is becoming more widely accepted, and more widely diffused, both in the services and out. This is especially so since the recent public hearings before the House committee.

One thing which these hearings did bring out, and which I would like to emphasize, is the lack of substance behind the frequently reiterated statement that in the councils of the Joint Chiefs of Staff the Navy has been consistently outvoted 2 to 1.

Now the facts of the matter are these: The concept that decisions are made by a 2-to-1 vote in the Joint Chiefs of Staff is a fallacy, from start to finish. The Joint Chiefs of Staff do not vote; neither do they decide. Instead, the Joint Chiefs recommend; and the Secretary of Defense, as the representative of the Commander in Chief, and where appropriate the President himself, does the deciding—all within the provisions of the Constitution and the unification law enacted by the Congress. The ultimate decision of the Secretary of Defense or the President is not necessarily governed by the fact that two of the Chiefs may recommend substantially identical courses of action, while a third Chief recommends something quite different. All that any difference of opinion means is that the issue is one which must be decided by someone other than the Joint Chiefs of Staff.

This is somewhat comparable to a situation where you have a petition for a writ of certiorari from a circuit court of appeals to the Supreme Court of the United States. The fact that the expression of views in the circuit court of appeals was 2 to 1 for or against your client does not determine what the Supreme Court will do. Many of us here tonight as lawyers have had occasion to find that out from time to time. It is true, of course, that the client who has both a good case and a good lawyer when the issue reaches the Supreme Court can have greater confidence than the client who is less fortunate. I can assure you that in the forums which Congress has provided for the purpose—the Joint Chiefs of Staff and the Armed Forces Policy Council—all issues are being argued effectively and persuasively by excellent advocates of the Army, Navy, and Air Force.

In conclusion, may I venture to say that we have now reached a point where unification has about weathered the stormy seas of service controversy. It is now emerging into the comparatively calm waters of greater understanding and acceptance. It is sailing toward the safe harbor, where decisions, because they have been jointly arrived at, can command not only obedience but obedience freely and cheerfully given.

Your Dollars for a Delusion

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 26 (legislative day of Wednesday, January 4), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Your Dollars for a Delusion," by E. F. Tompkins, from the Chicago Sunday Herald-American for January 8, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YOUR DOLLARS FOR A DELUSION

(By E. F. Tompkins)

Tomorrow the Finance Committee of the United States Senate will start public hearings on a new social-security bill.

This is a bill which was passed by the House of Representatives at the last session of Congress by a vote of 333 to 14, to increase the payments of old-age pensions by the Federal Government.

The overwhelming favorable majority indicates that virtually everyone believes in security.

Even more, it indicates that politicians are somewhat afraid of the question as a political issue; they are willing to vote security when actually there is no assurance that the security will be provided.

And, because of the nature of the Federal social-security system, and the New Deal's fiscal practices, there is no such assurance.

The Federal social-security system is not a sound insurance system.

It is financed by taxing pay rolls, and the tax money is not saved up to meet the obligation.

Instead, the money goes into the general fund of the Treasury and is spent by the Treasury.

In lieu of the money, the social-security fund receives investment paper from the Treasury, which the Treasury must repurchase when the insurance fund needs the money.

And the Treasury can obtain the money only from taxpayers—including the workers and employers who already have been taxed once—or by borrowing against future taxes.

Until now, the pay-roll taxes have exceeded the annual payments, so that the fund has a mythical surplus.

But the time approaches when the annual payments will exceed the pay-roll taxes, and the Treasury will have to meet the deficiency by more taxes—whether on pay rolls or otherwise.

The only remedy for this defect—one which the Hearst newspapers have advocated—is to provide old-age pensions according to need, and to revise the whole tax system in order to provide for them.

Otherwise, both the Government's obligation and the pay-roll taxes will become excessive and damage or destroy the free-enterprise system.

Furthermore, an insurance system cannot be any better than the monetary system of the Nation.

A worker who pays for a retirement pension with one kind of dollars is entitled to receive the pension in dollars that are just as good.

At present, because of the New Deal's deficit financing and its substitution of fiat dollars for gold dollars, we have inflation, and inflation is the thief of security.

We no longer have a 100-cent dollar.

Our unredeemable paper dollar is worth only about 50 cents in comparative purchasing power.

If the administration continues its financial methods the dollar is likely to diminish to a dime in actual values of goods.

And a pension of $100 a month, promised now, may be equal merely to $10 when the retired worker gets it.

It is no investment to pay a dollar for a dime's worth of security.

One of the best appraisals of inflation and social security was made recently by Mr. Bernard M. Baruch, a long-time advocate of social legislation.

In a copyrighted interview with the Scripps-Howard Newspaper Alliance, he said:

"No plan for old-age security can work unless savings have a sound, stable value."

Taking notice of some of the fancy pension schemes that are being promoted now, Mr. Baruch observed:

"We mustn't let ourselves become victims of the delusion that all we have to do is to vote the older people money."

Calling attention to the fact that the cost of living has increased something like 65 percent since 1939, Mr. Baruch concluded:

"Each pension or old-age insurance or social-security check buys that much less than before the war.

"It means that workers who paid their taxes expecting pensions when they retired are now being shortchanged."

The Senate Finance Committee should have Mr. Baruch in as a witness when it opens its hearings in mid-January on the pending social-security legislation.

Governor Driscoll's Second Inaugural Address

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of January 18, 1950:

GOVERNOR DRISCOLL'S ADDRESS

The statement of principles with which Governor Driscoll begins his second term will be read with interest outside New Jersey for its strong affirmation of the desirability of self-reliance at the lower levels of government. This is in the nature of reiteration; the Governor made the same point last December in an address here, when he said, "We want to do more and more for ourselves and ask less and less from others." It is a theme that echoes with frequency of late. It was dominant in Governor Dewey's recent message opening the New York legislative session. It was emphasized, we are especially pleased to note, in the letter published yesterday of the State conference of mayors to Governor Dewey and the legislature.

Our cities and States might well take to heart one warning uttered by Governor Driscoll in his inaugural speech. "One sure way," he remarked, "to destroy our Federal system and home rule is for the States to fail to provide for the general welfare of their citizens." The same lesson applies to the relations between the State and its localities, a fact recognized when Mr. Driscoll urges strengthening of the capacity of cities to govern themselves and to "mold their form of government to fit the needs of their citizens."

Most of the problems of New Jersey are not unique, except in emphasis. Some of these, and the general philosophy for dealing with them, bear a marked similarity with the pattern of Governor Dewey's message. The fiscal situation is troublesome. The demands for services by our citizens far exceed available revenues. After reviewing the several fields in which he hopes to extend progress already made and others in which new ground needs to be broken, Governor Driscoll reminds us that "despite the pessimism of some, we live in a good world." He sees this as a world of opportunity for government, but his fundamental interest is in keeping government close to the people. We wish the Governor well in his second term as he seeks to continue in New Jersey the progress acknowledged by the voters in returning him to office.

Repeal of Wartime Excise Taxes

REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. PHILBIN. Mr. Speaker, like many other Members of the House, I was gratified to note that President Truman has recommended the repeal of certain wartime excise taxes.

It seems to me, as I have stated many times before, that the continuance of these wartime taxes is untenable on any principle of governmental finance or social policy. I see no possible justification for continuing to impose such heavy and detrimental levies upon so many articles and commodities of ordinary use. These taxes have been well termed a national nuisance. They strike at many classes of our American body politic and some of them are ridiculous.

Is it arguable that we should continue to tax baby oils, women's handbags, telegram and telephone messages, transportation, recreation of the rank and file of our people, cooking appliances and water heaters and other things so indispensable to the American home? The President will have widespread support of his proposal to eliminate many of these onerous levies.

I have again joined with many of our colleagues in urging the House Ways and Means Committee to formulate appropriate legislation to repeal these inequitable, illogical, and repressive wartimes taxes.

I am not unmindful of the fact that when these taxes are repealed the Congress will have to provide other sources of revenue to replenish the Treasury for the losses sustained. In the first instance lifting the taxes on many of these commodities will unquestionably result in larger profits to industries and businesses affected and hence additional income to the Treasury.

Whether this additional income will be sufficient to offset the loss of revenue due to repeal is debatable. There is expert opinion both ways. Measuring the various opinions, I am inclined to the view that the additional income will not equalize the losses.

Assuming this fact, the Congress has two choices. It can provide new taxes to make up the difference, or it can endeavor to effect further savings and economies in expenditures. If it is at all possible, without impairing essential services, I should be disposed to favor the latter course. Otherwise, it will be necessary, and I very reluctantly reach this conclusion, to impose new taxes to make up the difference. Congress should exercise utmost care not to impose further onerous taxes, if avoidable.

The other alternative is continued deficit spending and in my judgment that would be most undesirable and unhealthy for the national economic well-being. Whatever this Congress does regarding revenues and appropriations, we

UNIVERSITY OF MICHIGAN LIBRARIES

should work together in a wholehearted spirit to avoid an unbalanced budget and further deficit spending.

Industrially and economically the Nation is near the peak of prosperity. Over 60 millions of our citizens are gainfully employed. Business and industrial profits have been unprecedented. The national income has been greater than ever. Great and desirable social gains have been achieved. The Congress must hold and extend these gains by promoting sound financial and fiscal policies which alone can form the enduring, solid basis for full employment, high wages, prosperity, and security for the American people.

We are all aware that this Government creates and produces no wealth on its own account. Our matchless economic system animated by the incentive and energy of our people performs that function. The Government can encourage and direct and guide business by pursuing wise policies and rendering necessary counsel and assistance and by maintaining basic conditions under which finance, industry, business, and agriculture may flourish and prosper. But we must have it constantly in mind that our economic system upon which the Government and our people must depend can be seriously impaired in its efficiency and, in the end, broken and destroyed on the rock of high taxes and regimentation. We have many examples before us in Europe of this fact of which we should take stern cognizance because they clearly point to the dangers and catastrophy involved in over-spending, over-taxing, and over-regulating by the Government.

Such unsound policies will lead us as a nation down the road to totalitarian serfdom. I think and hope that this Congress can and will take effective steps to avoid the sad experiences of other nations which have departed from the fundamentals of the free way of life.

I hope we will not seek to serve special privilege, greed, avarice and over-reaching by any class or group. If we move to secure to the average American citizen the protection of his basic rights and opportunities, his fundamental right of life, liberty, and the pursuit of happiness, we can best serve our Nation to build even a stronger citadel for a well-ordered government, a flourishing economy and a progressive and humane democracy.

The Strange Career of Teddy Hayes

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, January 26 (legislative day of Wednesday, January 4), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a story entitled "The Strange Career of Teddy Hayes," as written by Joe Williams, sports columnist of the New York World-Telegram and the Sun.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STRANGE CAREER OF TEDDY HAYES
(By Joe Williams)

NEW YORK, January 20.—There was quite a to-do on the city side yesterday when it became known that one Theodore T. Hayes had been named assistant to Oscar (Ole Oss) Ewing who is head coach of the welfare State varsity, or, as it reads on the door of Washington office, the Federal Security Administrator.

Who was Hayes and how did he come to be an authority on such vital and controversial items as social security and health insurance? I go back a long way with Hayes—back to the days when he was using his square monicker, Teddy Weinstein, and, as a lightweight, was fighting ham and eggers for small change out of Chicago.

TOWEL WELL SWUNG

It is an illuminating commentary on his fighting genius he did not become nationally prominent until he joined up with the two Jacks—Dempsey and Kearns—and was assigned to corner work such as carrying the champion's bucket and swinging a towel between rounds.

I regret I am unable to contribute anything to the search for information as to his qualifications as a social worker except to point out he never was a dumb cluck when it came to looking out after his own security and health.

I do happen to recall Mr. Hayes was connected with a Mexican lottery several years ago as a barker or shill. This may have been when he experienced the first twinges of a social conscience. I used to read his letters with tear-dimmed eyes. All the money was to go to helping the poor, the sick, the illiterate. Mr. Hayes needed publicity. First prize was $100,000. Obviously, Mr. Hayes was hopeful Americans would switch from Irish sweeps to Mex.

A SENSITIVE SOUL

Mr. Hayes' admirable program to bring sunlight, happiness, tequilla and tortillas to the underprivileged, unfortunately, was not a smashing success. Very few of the American winners collected. Some of the more heartless went to court. Such unwholesome descriptives as racket and larceny were applied to the operation. Naturally, Mr. Hayes, a sensitive soul, was distressed. But it is to his credit that, undaunted, he continued to fight the good fight for the oppressed, and when the call came from Oscar (Ole Oss) Ewing to help sell the welfare state to Congress he responded without the slightest hesitation.

I first came across Mr. Hayes as a representative of the Government when he was serving as Ed Flynn's assistant at a world's fair we had around here. Later, I believe, he became the commissioner of the fair. And still later Flynn, ardent New Dealer, sent him on the road hustling up young Republicans for the Dems. Little Teddy Weinstein, who used to carry Dempsey's bucket, had come far.

FOR HIS BROTHERS

I don't know how Mr. Hayes happened to go for the Mex deal unless he feared, as so many other Truman loyalists did at the time, that the joy ride was over and Tom Dewey was going to take over. Still, it couldn't have been too difficult a choice, considering that Mr. Hayes was going where he could do so much good for his less fortunate brothers south of the border.

The last time I saw Mr. Hayes in a prize ring was the night before the 1930 derby—or the Gallant Fox derby, as the pros put it—and on this occasion he was helping Jack Kearns master-mind Mickey Walker, the middleweight champion, against a large slab of suet named Paul Swiderski. This one turned out to be a lulu.

The weather had been bad all day, seat sales worse, and Walker had been told, or was under the impression, the fight had been canceled, but around 7 o'clock the promoters decided to go through with it anyway. Which was fine except in the meantime Walker had gone out and got himself so full of food and beverages he was scarcely the picture of the perfect warrior.

BOTTLE RINGS

But since this was supposed to be one of those pleasantries in which the less impeccable members of the profession sometimes engage, there was nothing to fear. That's what Kearns, Walker, and Mr. Hayes thought. Swiderski, noting Walker's condition and seeing a chance to steal the title, came out swinging. Walker was down five or six times before the bell rang to end the first round.

The end, it developed, came prematurely. Kearns had slipped around the ring and banged the bell with a beer bottle. In an instant there was wild confusion in the ring. Mr. Hayes punched Harry Lenny, Swiderski's manager, right between the eyes. In came the cops. Presently everybody was in the cat. It must have been 15 minutes before the ring was cleared. By then Walker had recovered, which was the main idea, and from there he went on to win like the remarkable fighter he was.

Unlike Mr. Hayes, Lenny never had an official Washington tie-up, but as an expert masseur he treated the late President at Hyde Park several times and has letters to show his ministrations gave Mr. Roosevelt at least a few moments of relief from time to time.

The Coal Situation

REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. CHURCH. Mr. Speaker, which comes first—the national welfare or the selfish demands of a few arrogant labor union monopolists? Whose interests are paramount—those of the general public or those of a highly organized pressure group? Whom do we serve, the inarticulate mass of American people or a noisy dictatorial minority?

Those are questions which I should like to address particularly to the House Committee on Education and Labor. For weeks a number of us have been endeavoring to impress upon the President the great hardship and suffering being experienced by our people in the coal shortage. To this end a number of us have introduced a resolution calling upon the President to invoke the national emergency provisions of the Taft-Hartley Act.

I wrote the chairman of the House Committee on Education and Labor, the gentleman from Michigan [Mr. LESINSKI], urging him to grant us a hearing that we might present persuasive and conclusive evidence of this emergency.

I have in my hand his letter of January 24 in reply.

He refuses to schedule a hearing. He not only thereby refuses to recognize the existence of an emergency, he even refuses to permit us to prove by evidence the existence of one.

In refusing us a hearing he uses as an excuse that his committee has agreed to hold executive sessions on measures previously reported by the subcommittees. He says, and I quote his exact words, "There will be no hearings scheduled before this committee until all pending business is concluded."

In other words, the Chairman of our Committee on Education and Labor tells us that regardless of how cold it becomes, regardless of whether or not industries shut down, regardless of the hardship experienced by innocent people who find themselves without heat, light, and jobs, he does not intend to depart from the routine business of his committee. He will not even let us prove how grave this emergency is.

Incidentally, the committee did not meet today on any business. I asked for a hearing last week, and it could have been scheduled for today.

Am I to believe that the prejudice against the Taft-Hartley Act is so great and certain labor union leaders so politically powerful that we cannot even be allowed to prove a need for use of the act?

At long last, at least one person connected with this administration admits the existing crisis in the current coal shortage. As you have noted from the press accounts, Dr. James Boyd, of the Bureau of Mines, admitted in his testimony before the Senate Committee on Labor yesterday that a national emergency exists.

These are his exact words:

Accordingly, it is believed that unless there is an immediate resumption of substantial increased coal production the national economy, health, and welfare of the Nation is now or soon will be imperiled.

Mr. Speaker, I again call upon President Truman to act immediately. Does this Government belong to all the people, or is it being run solely for the benefit of a politically powerful few?

JANUARY 20, 1950.

Hon. JOHN LESINSKI,
Chairman, Committee on Education and Labor, House of Representatives, Washington, D. C.

DEAR JOHN: I respectfully call your attention to House Concurrent Resolution 157, which I introduced on January 12 last, and respectfully urge that your Committee on Education and Labor give immediate consideration of this resolution.

It is my understanding that around 24 like resolutions have been introduced and referred to your committee. This in itself indicates the serious situation existing in various sections of the country because of the current strike in the coal industry. We are prepared to present to your committee, at a hearing I hope you will grant, persuasive and compelling evidence that this strike imperils our national health and safety.

The purpose of this proposed resolution is to call the attention of the President to the acute coal shortage resulting from the strike and to urge him to invoke the national emergency provisions of the Labor Management Relations Act, 1947. As representatives of the people we are seeking by this resolution to express the views of the people we represent. I hope your committee will grant us such an opportunity by a public hearing and prompt consideration of these resolutions.

With kindest personal regards, I am
Sincerely yours,

RALPH E. CHURCH.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON EDUCATION AND LABOR,
Washington, D. C., January 24, 1950.

Hon. RALPH E. CHURCH,
House of Representatives,
Washington, D. C.

DEAR COLLEAGUE: This will acknowledge receipt of your letter of January 20, in which you ask for hearings on House Concurrent Resolution 157, a resolution favoring the invoking by the President of the United States of the national emergency provisions of the Labor Management Relations Act, 1947, in the pending coal strike.

Please be advised that on January 16, 1950, in executive session, the Committee on Education and Labor adopted a resolution to hold executive sessions daily on bills that have been previously reported to them by the subcommittees.

Therefore, there will be no new hearings scheduled before this committee until all pending business is concluded.

Very sincerely yours,

JOHN LESINSKI,
Chairman, Committee on Education and Labor.

Capturing Revenue From Income Labeled "Tips"

REMARKS
OF
HON. EDGAR A. JONAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. JONAS. Mr. Speaker, an innocent gesture, originally intended to demonstrate a superlative feeling of satisfaction and gratitude for some special favor rendered, has expanded into an institution which has reached the height of promiscuity and insolence. I am referring to the tipping habit, or perhaps I should say "racket."

The President in his budget report the other day announced that if we are to do away with luxury taxes, additional ways and means must be found to replace this loss in current revenue. I know of no better source from which additional revenue can be obtained than the income from tips.

Time and time again, investigations started by the Internal Revenue Department, seeking to uncover income obtained from tips have been both ineffective and unsatisfactory. Recently our appeals courts have laid down a definite rule as to what constitutes income, and they say tips must be considered as such.

A thorough investigation relating to the receipt of gratuities and tips, together with the resultant loss of revenue is a matter I believe Members of the House should seriously consider at this time.

The tax burden as it now prevails, should be distributed equitably, and that presumes that moneys received and classified as income are not to be omitted from taxation, except when specifically so earmarked by law.

I have filed a resolution asking that a more thorough investigation be made by the Bureau of Internal Revenue into incidental income from tips, which represents additional income for workers in a score or more of classifications.

From the meager reports available it is reasonable to assume that more than three-fourths of the income derived by means of tips are never reported, and the Government thereby loses an inestimable amount of money in revenue; plus an additional source of taxable income, which quite conceivably add enough money to the Treasury to allow for the reduction of taxes which have become a harassing burden to the American people.

The liberal interpretation of the tipping situation as presently applied, has reached a point where it can no longer be ignored. While the costs of all necessities of life have risen sharply during the 10 years—so has the scales of expected tips risen.

From 1939 to 1949 retail food prices have risen from 95.2 percent to 204.8. The cost of wearing apparel has risen from 100.5 percent in 1939 to 190.9 in 1949. Rents have increased from 100 percent to 120.5 in 1949. Railroad passenger rates have increased from 100 percent to 133.8 during the same period.

It has been conservatively estimated that the tipping practice has reached the point where several billions of dollars per annum are extracted from the pockets of wage earners in other fields—and on this, at the present time, the Government has no definite check.

As a point of illustration, I enumerate the number of gratuities which are usually given on an ordinary overnight trip from one city to another. Not less than 11 tips are regarded as necessary from hotel to hotel. These are:

First. Tip to bellboy to carry baggage from room.
Second. Tip to doorman for getting taxi.
Third. Tip to taxi driver.
Fourth. Tip to station redcap.
Fifth. Tip for dinner service on train.
Sixth. Tip for service in club car.
Seventh. Tip for service to pullman porter.
Eighth. Tip for breakfast service.
Ninth. Tip to station redcap.
Tenth. Tip to taxi driver.
Eleventh. Tip to bellboy to convey luggage to room.

The average traveler can hardly manage to escape from some of these voluntary returns for favors or services rendered; but he or she will find still other occasions for tipping, should they require any additional services at all.

As for the hotels themselves, there are no ceilings on rooms occupied by transients, with the result that hotel owners and innkeepers have upped their tariffs to as much as the traffic will bear without

UNIVERSITY OF MICHIGAN LIBRARIES

leaving them enough empty rooms to curtail the hotels' income, thus the patron shoulders this burden, and the increases in the amounts required for tipping as well.

Hotelkeepers indicate that they can justify the increases in rates, and the tipping practice. During the Senate hearings, when rent controls were being considered in 1949, Mr. Glenwood J. Sherrard, speaking for the American Hotel Association, stated that since decontrol of hotel rooms there had only been an increase of 29 percent. This amount, he stated was more than consumed by the increase of wages and maintenance.

However, this figure was much different from the increase reported by the Housing Expediter, Mr. Woods, who testified before the same committee that hotel rates had increased since decontrol more than 47 percent.

Other checks have ascertained that a hotel room costing approximately $10 per day, costs its temporary tenant no less than an average of 33⅓ percent additional. Thus, his or her room, because of incidentals reflected in tips, costs $13.34 cents per day, not including food.

All this is in the face of wage increases. For the 10-year period ending in 1949 the average hourly earnings had increased 110 percent. Average weekly wages had increased 115 percent. The average weekly average of all groups, including clerical, salaried, and so forth, had increased 103 percent. The all-over increase for every single group and type of worker has almost doubled—or has increased 99 percent to be exact. It is known that employers encourage and countenance the tipping system, and are parties to it, despite the fact they have increased the cost of their commodities time after time.

Increased wages, instead of decreasing this drain on the public, has given way to unwritten laws setting up a regular scale to be expected in tips, which, if ignored by customers and patrons, makes them the target of derision, sneers, and other embarrassing outward evidences of the servitors' disdain and displeasure. This scale, although flexible, frequently amounts to 33⅓ percent for personal services over and above the basic charge.

The investigation I request should probe all categories of employment where tips are allowed and a thorough examination be made of wage scales; increases in business incomes, including the increases in costs to the customer and consumer.

Judicial precedent has already been established in this matter: I cite the case of Roberts against Commissioner of Internal Revenue, No. 11999, which was heard in the United States Court of Appeals, Ninth Circuit, wherein the court said:

> Generally a payment cannot at the same time be a gift and taxable income, but a gift cannot be excluded from gross income unless it is a genuine gift, and the essential characteristics of a gift, including absence of consideration, must be present.
>
> Tipping lacks the essential element of a gift, which is the free bestowing of a gratuity without consideration.

The decision pointed out that tips received by people who render services to the public are an incident to the service, and constitute compensation for personal services so as to require their inclusion in taxable income.

In this decision Roberts was ordered to pay an additional 10 percent prorated on his basic salary.

When the recipient of tips is confronted with a complaint and asked for an accounting he usually resorts to a well-developed and carefully thought-out pattern in justification for his demeanor. He maintains that he, by no outward sign or suggestion, has asked for the tip, and that it is the giver's expression of exhibitionism or showoffishness, a mere manifestation of his personal vanity, and therefore is a gift.

But the court, in the Roberts against Commissioner of Internal Revenue case, did not concur with this line of thinking. It stated that tipping had become so commonly accepted an incidence of certain types of service that "he who fails to give it may incur the haughty stare of the servant when he leaves, or expect a haughtier stare if he appears again," and that "the giving of a tip is tied to the service, without which the occasion would not have arisen."

This decision leaves no doubt as to just how "voluntary" the act of tipping has become. While it is almost automatic, still the court was moved to comment that any patron who failed to tip found it impossible to escape the "grumbling and sour faces" superinduced by a tip considered insufficient or inadequate by the recipient, just as Sir Walter Scott found the situation more than a century ago.

General Hershey Makes Masterful Statement in Support of Continuance of Selective Service

---

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. JOHNSON. Mr. Speaker, pursuant to leave granted me I am including a statement made by Gen. Lewis B. Hershey as a part of these remarks. During the recent war General Hershey performed a remarkable job as head of our Selective Service System. During practically the whole time between the wars he was studying the selective-service principle. He, more than any other man, is responsible for the system as it was finally enacted into law and for its administration.

His performance in carrying out the mission of providing the manpower for our armed forces was superb. We are now in the postwar world that we all thought would be a peaceful one. But to our surprise and disappointment the world is still unsettled. On the horizon we see many menacing clouds of discord, misunderstanding, distrust, and conduct that menaces the peace of the world. We have seen over a dozen nations lose control of their domestic affairs through the relentless penetration of one large nation that apparently is trying to dominate the internal affairs of these countries. This relentless drive to take away from large populations the right to select and operate their own governments is going on in various parts of the world.

From day to day we do not know what incident might bring war upon a war-weary world. For this reason we should keep ourselves in a strong military posture to indicate to the world that we are prepared to take care of ourselves in any kind of a contest. General Hershey made a statement to the Armed Services Committee of the House of the benefits to us and the world by the continuance of Selective Service by the United States of America. I wish every Member of Congress could find time to read this statement. He points out that this step now is really good peace insurance at a low premium rate. His statement follows:

STATEMENT BY MAJ. GEN. LEWIS B. HERSHEY, DIRECTOR OF SELECTIVE SERVICE, BEFORE THE ARMED SERVICES COMMITTEE OF THE HOUSE OF REPRESENTATIVES ON EXTENSION OF SELECTIVE SERVICE

Mr. Chairman and the members of the committee, I recommend the extension of the selective service law. My reasons for this recommendation are: First, the presence of the law is a vital factor in the preservation of the present precarious peace; and second, should all efforts to maintain the peace fail the existence of this law will be a most favorable factor in the expeditious procurement of manpower for the winning of the war and the reestablishment of the lost peace.

I believe that the preservation of the selective-service law is the cheapest insurance the United States can buy for the prevention of war. This is true for three reasons: First, continuation of this law is a pledge of good faith to friendly nations. Those nations, like us, are interested in maintaining and extending democratic principles upon which this Government has been founded and under which it has lived. On the other hand, failure to extend this law cannot but raise questions as to the intentions of the United States to support to the limit of her manpower resources the course upon which the community of nations has embarked.

Second, extension of this act is a notice to all who may not view with friendliness the ideals and the policies of the United States. Extension is evidence of continuing intention of the United States to use all its manpower resources in support of its policies. Had such action been taken, and such an intent been crystal clear to the aggressors prior to World Wars I and II, it is most doubtful that it would have been necessary for the United States to have become involved in either of these wars.

Third, and last, the most important of all, the extension of selective service is not only a pledge to our friends and a notice to others, but it is a dedication of Americans themselves in a forthright manner to indicate an understanding on the part of the Congress and on the part of the people of the United States that the troubled world in

which we live cannot be safely lived in without the cooperative efforts of the whole people. The experiences of World War I and World War II indicate that if war comes all of our citizens will be under the necessity of giving their maximum efforts. There has never been a question of the intentions and willingness of the American people when once the gage is down. It is worth the effort, in an attempt to prevent World War III, for our people to indicate in advance—and to understand in advance—that requirements for service will be upon all who are able to bear it. If that is the inescapable consequence of war, how wise and how honest to understand and to be willing to give a very small portion of the unity and support that is a part of the preparation for service in order to prevent a war which requires so many more times the effort and so much more of the individual's time to win.

The presence of a Selective Service Act not only is one of the many factors which go to preserve the peace, but constitutes an insurance policy which contains many other benefits. In cost it is less than one-tenth of 1 percent of the Federal budget for survival. Like insurance, it must be bought before the time when its benefits become due. Once that day arrives the favorable insurability has been lost. It is only in peace that we may buy at minimum rates the protection which may well be the difference between peace and war.

The second reason for recommending the extension of selective service is based upon its value in increasing the potential of the United States should peace be lost. Our experience in the past indicates that should war come it is inevitable that manpower of this Nation would be furnished to the armed forces by some orderly, expeditious, fair, and just method of selection and induction. It is no small task to register and classify the 50,000,000 of our manpower as we did in World War II. It requires a machine which covers the entire United States. It requires organization; it requires training; it requires teamwork; it requires a morale which comes with a feeling of esprit de corps for an organization in which all of its members can take a well-deserved pride. Such an organization is not built overnight. The Selective Service Act of 1940, which was passed in September, did not produce men at the rate of 400,000 a month until October of 1942. Fortunately it was not called upon for this rate of production earlier.

It will remain controversial as to the date that this production level could have been achieved by the Selective Service System organized under the act of 1940. It is my considered judgment, based upon every inquiry that I can make of our historical experience, that when we have said that 4 to 6 months would be required to organize and train a system, imbue it with its objectives and its ideals, while at the same time registering several millions of people and running them through this recently organized system up to this point where it was capable of producing even 300,000 a month, this estimate I believe to be in error on the side of optimism, rather than the contrary. I fear that we should inevitably find ourselves consuming at least a year to reach the production level of 500,000. There is no experience that we have had in this Nation that could lead us to any other conclusion.

In that particular I should like to state I believe that we lead ourselves into error in our thinking and planning when we presume that a critical situation with the country in chaos will permit and force a more rapid organization which is efficient and orderly than under circumstances in which we have more time and less interference. I believe firmly that if we should be attacked it would be much more difficult to perfect this organization than it was in 1940 and again in 1948. The present system, torn into segments, will operate each in its own area much better than an organization which must be brought together under circumstances that are disintegrating in their nature. There is no question, and can be none, of the inevitableness of the use of some selective sort of a system for the procurement of men for the armed forces should we be forced into war. There is likewise no question that the existence of this organization with men registered and classified will save months of time, billions of dollars, and hundreds of thousands of lives.

I have tried to indicate that the extension of the Selective Service System, is a positive and powerful move for peace—by its encouragement to our friends, by its warning to others, and by reminding each and every one of us of the responsibilities that survival in this present world entails. I have tried to indicate what it would mean to have this law and the system which it organizes in being in the event every effort which we have put forth failed to hold the peace.

I should like to discuss just briefly the law as it has operated for the past 2 years. I shall make no defense of the law. I believe that history when written with the distance from its occurrence which insures objectivity will give it a place that is not recognized now. There are on this committee most of the individuals responsible for this legislation in the House of Representatives. Because it has not been used to the extent that it might, because it has functioned to provide men by indirect means, there has at times, certainly on the part of many, been a feeling that it was not necessary. I am sure that the verdict of objective history will be otherwise. Discount the fact if you will that we have not deteriorated toward war since the passage of this law. Precarious as it may be, we still have a peace of a sort. I shall not claim that this act saved this peace, but it helped. This law would have been used a great deal more if we had gone to war, but how much better it is that we can be satisfied its presence was a great factor in preventing its maximum use.

We are prone at times to forget what it did do, especially in its early days. It is often said that the Navy and the Air Force never inducted any men under it, and yet their recruiting in the months immediately subsequent to the passage of this act tripled over what it had been the months before. I am sure that 250,000 men entered into the services, including the National Guard, under the impetus of this law in addition to the rate which had been in existence for the 6 months preceding the passage of this act. It is true that the Army is now permitting men to go to swell our ever ebbing trained reserve after they have served 1 year. Let us not forget that there are undoubtedly over 200,000 men now serving in our armed forces who are there as a direct result of the wisdom of our Congress in the passage of the Selective Service Act.

It is one of the strange experiences of life that we pay the premium on our life insurance when we live, and certainly we would not be wise to criticize our insurance policy at the end of 2 years from its purchase date because we had spent our premiums then and still had not collected because we are still alive. Protection we pay for, and one of the commodities bought is the absence of war. It is the same with the fire department or the police department. Do we ask as we pay each week or each month the individual fireman whether or not he has attended a fire that particular pay period, and then abolish his job, close up the fire house because it has not been used?

We are content with the policemen when there is no crime. How ridiculous it would be to ask each policeman on stated occasions whether or not he had shot a citizen during that period, and if his answer was "No" ask him to turn in his badge and get his pay at the office, because obviously if he was killing no one, there was no need for his services.

Selective service, like the armed forces, performs its duty just as much when it succeeds without its use, as when it is forced to rescue a war that is already in existence, a war generated by circumstances before the selective service could influence those circumstances. I am sure the members of this committee need not apologize to their colleagues, or to the United States, for the fact that they did their full measure of duty in the passage of the Selective Service Act of 1948 and thereby made a major contribution in strengthening America's position, and, by strengthening that position, avoided the loss of peace. Had the Congress passed a Selective Service Act in 1936 as it did in 1948 we might have avoided World War II in 1941 as we avoided world war III in 1948 and 1949.

It is so much easier to see this pertinent need which existed for the selective service law in 1940 than it is to see the same need in 1948. Saving and winning a war are steps that are visible daily, hourly, to our citizens. Preventing war, as well as keeping peace, is a 24-hour-a-day, month-by-month, year-by-year job. It has no glamour, but it has no casualties.

The fireman on his chair in the engine house is not a glamorous figure. He looks like a load on the taxpayer's purse. The same fireman though, up on his ladder in the blaze, is understood; and yet when he by his presence and his timely arrival at the fire puts out with his hand extinguisher a blaze that might be a seven- or eight-alarm affair, he is most useful, if not most glamorous. Preventing war by strength, by declaration of intentions, and by continual dedication of our citizenry needs no apology.

To keep our strength, to be ready, and to keep the peace, I recommend the extension of the Selective Service Act.

Is Hiss Alone?

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 26 (legislative day of Wednesday, January 4), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Is Hiss Alone?" from the Indianapolis Star for January 22, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IS HISS ALONE?

The conviction of Alger Hiss climaxes the most dramatic and important criminal trial in recent history. The jury has unanimously decided that Hiss lied and that his accuser, Whittaker Chambers, told the truth. Hiss denied that he gave secret State Department documents to Chambers for transmittal to the Communist underground. The jury's decision that this denial was a lie brands him as a traitor to his country.

The astounding thing about this decision is the fact that a young, brilliant, and ambitious man who was engaged in a Communist conspiracy against his own country should rise so high in the service of the Government. The frightening thing is the proof here given that a servant of communism did become a

UNIVERSITY OF MICHIGAN LIBRARIES

very important member of the inner councils of Government, was given a position of great power and influence, and successfully hid the fact that all the time he was supposedly serving the people of the United States he was actually serving the ruthless tyrants of Moscow.

Alger Hiss held one of the top jobs in the State Department. He was an assistant to Francis B. Sayre, Assistant Secretary of State. He was Secretary General of the San Francisco Conference which wrote the United Nations Charter. The imperfections of that Charter are now being used by Soviet Russia to block all hopes of peace and national independence through colleqtive action.

But most significant of all, Alger Hiss was a member of that small group of advisers who went to Yalta and traded the freedom of half the world for the empty promises of Joseph Stalin. At Yalta the United States turned over half of Europe and all of China to the Communist regime. We abandoned the traditional policy of the United States in China. We violated the high principles to which this country subscribed in the Atlantic Charter. We produced the greatest debacle in foreign relations in the history of the American Republic, the conquest of China by communism.

During a period in which the American State Department was making decisions that might mean life or death to the people of this Nation, this man, this convicted liar who is now branded a traitor to his country, was helping to formulate those decisions. Alger Hiss has been accused and convicted as a plotter against the system of government which he was sworn on oath to protect and defend and preserve.

Of course, Hiss was only one of many people who created the policies that today find this Nation backed against the wall in a terrible struggle for the preservation of all the things America and our form of government mean to the people of this Nation. His influence may not have been decisive. But now we cannot help but ask, was Hiss alone? Were there others who were equally adept at hiding their servitude to Russian communism working in the same way for the dissolution of American power and principle. Are there still others like Hiss in important positions in this Government?

President Truman called the investigations that finally led to the conviction of Hiss "a red herring." He can no longer do so with any justification. The part Hiss played was a real part, not the figment of somebody's imagination. The safety of this Nation, the rightness of our future foreign and domestic policies depend on the Government's clear and proved answer to this question: Is Alger Hiss alone?

Resolution by the Atlanta Chapter of the Military Order of the World Wars Against Communism

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. DAVIS of Georgia. Mr. Speaker, although in some quarters in Washington there is a disposition to ignore it, the fact is that the people of the United States know that Communists and Communist sympathizers have infiltrated into our Government, and they are tired of it. The people are tired of Communist coddling.

I have on two occasions within the last few days expressed my sentiments regarding this question.

I am inserting herewith resolution regarding this subject, adopted on January 11, 1950, by the Atlanta Chapter, Military Order of the World Wars.

I am in hearty accord with the sentiments expressed in this resolution.

RESOLUTION BY THE ATLANTA CHAPTER OF THE MILITARY ORDER OF THE WORLD WARS AGAINST COMMUNISM

Whereas communism as a political ideology and as a way of life is a danger that threatens to subject the world, including the United States, to tyranny and cruel suffering wherever it can fasten itself upon a people; and

Whereas communism is an aggressive, greedy, proselyting form of political disease that feeds upon the apathy of governments and of people, spreading like a cancer where the body politic is not always awake to its terrors and growth; and

Whereas communism is spotted upon the United States in frequent enough incidence to be a dangerous threat to the freedom and existence of this Nation and its peaceful way of life; and

Whereas communism here is by its publicly avowed and confessed doctrine a part of the pattern of world communism, alien to us in every sense, inimical to our safety and happiness, and working to poison our institutions to our destruction: Now, therefore, be it

Resolved, That the Congress of the United States is urged to take measures to prevent the infiltration of Communists and of known Communist sympathizers into any position with the Government of this country, national, State, county, or city; and be it further

Resolved, That the Congress of the United States is urged to adopt such measures as may be necessary to guarantee that no quiet seizure of this Nation by such enemies shall go forward, whether through its press, its schools, its radio, its public forums of any kind, or through clandestine organizations which work unmolested to destroy us; and be it further

Resolved, That the Congress recognize the awful extent to which communism has grown in the United States, and take steps to establish effective security and counter-Communist agencies adequate to the mission of affirmatively stopping communism and Communists here.

Adopted by the Atlanta Chapter, Military Order of the World Wars, at Atlanta, Ga., January 11, 1950, with instructions to transmit a copy to each Member from Georgia in the Senate and House of Representatives of the United States.

Attest:

T. CLINT HUGULEY,
Commander, Atlanta Chapter, Military Order of the World Wars, Atlanta, Ga.

Britain's Hand in Uncle Sam's Pocket—Again

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. SABATH. Mr. Speaker, I read with a great deal of interest an editorial appearing in today's Times-Herald, headed "Britain's hand in Uncle Sam's pocket—Again."

Two years ago I pointed out how the Marshall plan was born, having been conceived by a group of Wall Street bankers and war profiteers and those connected with and interested in the I. G. Farben cartels of Germany.

This editorial throws additional light, not only upon some of these men, but it also makes clear Britain's influence and interest in these German cartels. I feel the American people should have this brought to their attention. Consequently, I ask permission to embody this editorial in my remarks in the RECORD for their enlightenment.

The editorial follows:

BRITAIN'S HAND IN UNCLE SAM'S POCKET—AGAIN

A move to give more billions to the British is gathering momentum, Representative WOLCOTT, of Michigan, one of the best-informed Members of Congress on financial matters and a delegate to the Bretton Woods conference in 1944 by appointment of President Roosevelt, said in a statement last week that an attempt soon would be made to have the United States assume the debt of Britain to India, Egypt, and other foreign countries.

NEW SCHEME REVEALED

WOLCOTT was the first to describe the details of the new scheme. He said that the United States would pay these British debts by accepting sterling now frozen in London in payment, first, for agricultural products accumulated by the Commodity Credit Corporation, and then for machinery and other items.

All this ties up with the proposal made in December by a study group of United States Council of the International Chamber of Commerce. The scheme released by that group was the first suggestion of using money obtained from the American taxpayers to pay old and stale debts of the British Government.

The study group limited the donation to 15 percent of the British debts. The idea now, according to Representative WOLCOTT, is to have the United States assume the entire debt.

The composition of the group in the International Chamber of Commerce which made the original proposal shows the motivating influence. The interests back of the new eight-billion-dollar donation to Britain are the same ones which put over the Marshall plan and then made huge profits out of it. They are also the same ones which backed every other donation of American funds to Britain.

MARSHALL PLAN BUSINESS

One of the 21 named as authors of the scheme is Lamar Fleming, Jr. Mr. Fleming is president of Anderson, Clayton & Co., the principal business of William L. Clayton, former Under Secretary of State.

Mr. Clayton was the principal architect of the Marshall plan, directed negotiations with foreign countries in working out the plan, and directed the drive for the passage of the first ECA act. Mr. Clayton's firm has supplied at least $100,000,000 worth of cotton paid for with ECA funds. ECA transactions with Anderson, Clayton & Co., tabulated by the Tribune, total $79,000,000, with no figures available since September nor between February 1, 1949 and April 30, 1949.

Another member of the International Chamber of Commerce group which suggested unloading British debts on the American taxpayer is S. Sloan Colt, president of the Bankers' Trust Co. of New York.

His bank has, from the first of ECA, had a large percentage of the letter of credit business. Through the end of the year, Mr. Colt's bank has had $281,000,000 worth of business from the Marshall plan. Two directors of the Bankers' Trust Co., Philip

Reed and Ward Melville, were members of the committee for the Marshall plan—the propaganda group which agitated for passage of the act originally. Reed also is president of the International Chamber of Commerce.

The National City Bank of New York, which has had $310,000,000 worth of ECA business, was represented on the committee to put over the Marshall plan by two of its directors, Sosthenes Behn and Gerard Swope. Now we find two officers of the bank, W. Randolph Burgess, chairman of its executive committee, and Leo N. Shaw, a vice president, on the roster of the study group which brought out the new British aid plan.

BANKS GET THEIR SHARE

Two Irving Trust Co. directors, Henry P. Bristol and David L. Luke, worked hard to get the Marshall plan through Congress. The bank has cashed in on their efforts thus far with $220,000,000 worth of letter-of-credit business. A vice president of the bank, August Maffry, took a leading part in preparing the International Chamber of Commerce report.

J. P. Morgan & Co. has had $238,000,000 worth of business out of the ECA. I. C. Raymond Atkin, a Morgan vice president, was one of the study group which brought out the suggestion for a new lot of British aid. The Bank of America also can see the point that foreign aid is good for the country or at least the financiers' end of it, as its share of the ECA banking business so far has been $197,000,000. Russell G. Smith, an executive vice president, is on the international chamber's committee.

Those who had the misfortune to invest in foreign bonds which are not being paid or serviced would like to see their debtors helped; so the membership of the chamber's committee of James Grafton Rogers, president of the Foreign Bondholders Protective Council, is understandable. For like reasons, so is that of William S. Robertson, president of the American & Foreign Power Co.

The new plea for British aid at the expense of the American taxpayer is not being promoted by patriotic people who have only the welfare of all the people of the country in mind. It has been launched by persons who have their own private interests in mind. The influence of these people, when combined with that of the eastern Anglophiles, proved sufficient to put over the $3,750,000,000 loan to Britain in 1946 and the Marshall plan.

Unloading upon the United States old and stale debts of the British Government does seem a little more outrageous than the other schemes, but it will all look sweet and reasonable when the internationalists' propaganda has had a chance to dress it up.

Shaky United States Economy Resulting in New Kind of Isolationism

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 26 (legislative day of Wednesday, January 4), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Shaky United States Economy Resulting in New Kind of Isolationism," written by Constantine Brown, and published in the Charlotte (N. C.) Observer for Sunday, January 15, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHAKY UNITED STATES ECONOMY RESULTING IN NEW KIND OF ISOLATIONISM

(By Constantine Brown)

A new kind of isolationism is developing rapidly among thinking political men, some voiceless military men, and others who, in the past, have been inveterate foreign interventionists.

One of the reasons for this reaction is the disappointment suffered by so many because of the failure of our leaders to secure a stable peace after we had won an overwhelming victory in World War II.

Another reason is deep concern over the possibility that our economy will become so shaky, as the result of extravagant expenditures abroad, that we shall be incapable of defending ourselves against the Soviet Frankenstein monster we helped to create.

And, finally, there is a growing feeling that the billions we are planning to spend in rearmament of western Europe may be thrown away because of the war-weariness of the peoples of the Atlantic Pact.

The American Government is committed to provide the equipment for about 25 divisions among the nations of the Atlantic Pact. But there is increasing fear, even among the advocates of that plan, that the war material may not be used if the Russians decide to strike at a time when we can scarcely spare the money to build up properly our own national defense against a Soviet attack from Siberia.

This neo-isolationism is different from that advocated before the last war by the America First organization. The America Firsters were opposed to any military preparedness. They maintained that a substantial increase in our Military Establishment would only lead to intervention in the war going on across the Atlantic.

The neo-isolationists believe in the strongest possible military preparedness at home. They believe in a substantial increase of our air arm, our ground forces, and to a lesser extent the naval forces. But looking at our budget—which is in the red—and at the commitments we have made across the seas, they do not think an increase in the cost of our national defense is feasible.

So far we have spent nearly $35,000,000,000 since VJ-day on all kinds of stop-communism-in-Europe schemes. We are the only country in the history of the world which is paying indemnity to the defeated nations. After having crushed Germany, Italy, and Japan we now are spending more than $3,000,000,000 a year to put them back on their feet. If we had not done that, it is argued, all those countries—with a population of nearly 170,000,000—might have gone over to the Communist side.

In Italy alone we spent nearly $2,000,000,000 in cash to defeat the Communist Party at the last election. In order to prevent the Communists from making real gains in a prostrate Germany we have to spend more than $1,000,000,000 a year in helping to put the German economy back on its feet.

It is difficult to guess when we will be able to stop our subsidies to western Germany. The Germans are working hard and would like to be on their own. But many difficulties lie in the way of their full economic recovery.

Neither France nor Britain, our closest allies, like the idea of meeting German economic competition. This explains their determination to dismantle the German factories. Officially we were told that if German industry is permitted to remain intact—even after a large portion has been dismantled—the risk of another German aggression would be great.

This argument, however, concealed the real reason, namely, the fear of the French and British Governments to compete once more with the hard-working Germans in a restricted world market.

Both the British and French can afford to adopt such a policy. It does not cost their taxpayers a nickel. But with us the situation is different. The American taxpayer must foot the bill not only for the armies of occupation in the Reich but also for many of the Bonn government's requirements. If we refuse, we are told, the whole structure of that democratic government will go to pieces and we will be faced with a Communist Germany in that area which is so close to the western union.

Over and above that, we are spending money on the Marshall plan to keep the Communist bear away from the western European countries and we are now to ship war materials of all kinds to the Atlantic Pact nations to permit them to organize their armies as a defensive force on the Rhine. But whether the European nations actually will use that war material if the Russians strike is another question.

Our Government has been assured by the governments of western Europe that they will fight if they have the means to do so. The European generals and admirals have assured their American opposite numbers of the same thing. But nobody has ever attempted to ascertain—even through some kind of poll—how the peoples of those countries, who would have to do the fighting, feel about it.

In private conversations our top military men admit that it is not humanly possible to give a clear-cut answer to such a question. They are compelled, however, to assume that what they are told by responsible officials across the Atlantic is correct. We must assume that by spending between $5,000,000,000 and $6,000,000,000 in the next 3 years we will provide the armies of our allies with sufficient equipment for them to put up actual resistance to possible aggression.

When these American military men are asked how they reconcile their optimism with the historical fact of the Nazi conquest of western Europe in 1940—when 81 French and British divisions melted away under the attack by a much smaller German force—they reply that the situation was different then. We had not committed ourselves to help the western democracies before the defeat occurred and the French felt themselves hopelessly alone.

Now that they know we are committed to fight any aggressor, they say, they will have a greater inducement to fight. Thus it is hoped that the western armies behind the Rhine will be able to fight off a numerically stronger Russian force with less than one-third of the forces they had in 1940.

The neoisolationists take this with a grain of salt. They ask quite frankly what would happen if the Russians, while holding the European front, decided to strike directly at us through Alaska, Greenland, or Iceland. None of these vital strategic points is prepared to withstand a Russian aggression.

At this time we have no ground forces in Alaska. The reason is that there is not enough money to meet all our domestic requirements and our international obligations and at the same time build houses for a minimum of one combat division in that Territory.

There are no military agreements between the United States and the government of Iceland, or with the Danish Government which controls Greenland, to provide for common defense of those strategic areas. All the American troops stationed in Iceland during the war were withdrawn—and properly so—soon after VJ-day. The military installations, to a great extent, have been destroyed.

The neo-isolationists say that in the event that Russia fools us and strikes at the strategic positions which would bring their air forces close to American territory, there

UNIVERSITY OF MICHIGAN LIBRARIES

is more than an even chance that our western European allies would protest, sympathize with us, and offer every conceivable moral support. But no western European government would remain in office for half an hour if it attempted to live up to the provisions of the Atlantic Pact and created a diversion by striking at the U. S. S. R. in Europe.

Hence, our neo-isolationists say, we must be prepared to face the music alone and rely only on our own efforts. The fear that Russia might attempt to strike directly at us is due to the fact that America, it now is obvious, is considered enemy No. 1 of the Soviet imperialism. If it had not been for our intervention, western Europe might already be behind the iron curtain. And if it had not been for our unbelievable policy in the Far East the U. S. S. R. would not now be the dominating power on the Asiatic mainland, free to do whatever she likes in that area.

A strong non-Communist China would have been a thorn in the side of the Russians and would have deferred any plans to use Siberia as a jumping-off place if the Kremlin decides to attack America and bypass its western allies.

The possibility that we will have to fight the Soviet forces alone is strong in the minds of many people, who now are called neo-isolationists. Because of that possibility they believe that we must start soon to pay far more attention to the defense of the United States on its own soil than to continue to throw our wealth, which is not inexhaustible, about in the world.

These views are likely to be heard soon when Congress starts to scrutinize the new budget, particularly those sections containing provision for the Marshall plan and military aid to Europe. Secretary of Defense Johnson and the senior officers of the Air Force will be asked pertinent questions as to whether they are able to assume the defense of the United States with the present 48 groups provided for in the budget. The Army will be asked whether it can assume full responsibility for defense of Alaska with the one combat division it intends to send there during the summer and whether the three divisions available in the United States are sufficient to guarantee the country's security in the event of Russian aggression.

The Joint Chiefs of Staff in all probability will be asked whether they are planning on physical help from our western European allies in the event of a surprise attack.

A substantial improvement in the actual defense of the United States is demanded by many who are afraid that we are dissipating our substance abroad and not providing for our own defense in case an aggressor bypasses western Europe. At this time, they say, we are planning to fight another war exactly as if the German strategy of World War II is to be adopted by the Russians. But what will happen if they decide to alter the strategy and leave the ripe European plum hanging loosely on the tree and turn their full power against America itself?

Oil and Gas Depletion Tax

REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. VURSELL. Mr. Speaker, to satisfy the ravenous appetite of this administration to secure more taxes rather than to practice economy and cut the cost of Government, the President in his tax message this week asked for a reduction of the oil and gas depletion tax which has worked successfully and to the benefit of the Nation for many years. This ill-advised recommendation of the President should and, in my judgment, will be soundly defeated by this Congress.

If this tax-depletion recommendation is approved it will drive all independent oil producers in the Nation out of business. The independent producers who risk their capital and open up new oil fields cannot and will not be able to operate without the benefit of this tax depletion.

This move on the part of the administration, if successful, would place them in a position where their only alternative would be to sell out to major companies who would be able to name their own terms. It is a gigantic move which will favor big monopoly.

In addition hundreds of small refineries would be put out of business. Hundreds of thousands of men operating throughout the oil fields would no longer be employed.

This move to destroy the thousands of independent oil producers must be defeated in the interest of national defense because without the independent producers to discover new fields our oil reserves would dwindle, oil production would slump and in the event of another war the Nation would find itself short of oil and gas to supply the motive power for our Air Force, Fleet, and the Army.

Independent producers throughout my district tell me that if the proposed attempt to tamper with the depletion allowance is successful they will have no choice but to get out of the business. In selling they will be at the mercy of a few buyers consisting of the major oil companies and large financial corporations. Such a move which will produce less oil would not only throw a half million out of work but would cause the price of oil to increase to the consuming public. I ask, Which is preferable, to soak the consumer of petroleum products, or to keep back enough from the clutches of a wasteful bureaucracy to carry on a work that is a safeguard to the national security and which provides necessary and useful employment to hundreds of thousands?

These are the exact conditions that will follow unless this Congress defeats the attempt of the tax authorities to grab this power.

This depletion tax allowance has played a major part in extending the search and discovery of new oil and gas reserves throughout the United States. Because of this incentive we have been well supplied with oil products in time of peace, and we had an additional producing capacity which carried us successfully through the recent world war beginning with the critical hour when the Japs struck in December 1941.

The efforts to hamstring the oil producing business have been tried before. Congress has each time refused to let it happen. The weight of the evidence should again bury those who would sacrifice this industry so that their insatiable appetite for new tax can be gratified.

The process of finding new fields is expensive and hazardous. A majority of the wells drilled at great expense are dry with a terrific loss to the producers. This depletion tax is fair and just. It is the same type of a depreciation tax provided for the aging of buildings or the wear and tear on machinery. When an oil well is discovered it may produce well, but within a few years the oil in the ground supporting this well is pumped out. The well becomes worthless—that is the reason the Congress has wisely provided for the 27½ percent income tax depletion on oil well production.

United States Superforts to Great Britain—What Military Assistance to Arabian Countries?

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. SABATH. Mr. Speaker, my attention was attracted to an Associated Press release from London appearing in the Chicago Sun-Times of January 25, calling attention to the fact that Great Britain is to get about 70 of our superfortresses.

Inasmuch as Great Britain is supplying various Arabian countries with weapons of war, I wonder whether these superforts will also be sold to those countries by Great Britain after having received them gratis from us?

In view of this situation I think our country should cease furnishing war material to Great Britain to further their purpose of supplying these countries in their war preparations. Surely they do not intend to war against one another. If there is any intent of war, it would naturally be against the new state of Israel, which is doing everything possible to bring about peace with the Arabs, has taken care of over 60,000 Arabs, and notifying them to return, which they have and are doing in large numbers. Though the new state of Israel has aided them in every conceivable way, there are some who, for political reasons, are creating discord with the assistance of British authorities.

The Associated Press report is as follows:

BRITAIN REPORTED DUE TO GET SUPERFORTS

LONDON, January 25.—The United States will give Britain about 70 Superfortresses and some sorely needed raw materials under an arms aid agreement now nearly complete.

Diplomatic officials who reported this last night said the agreement probably will be signed in Washington this week end.

The Anglo-American pact is one of eight being worked out under the American $1,000,000,000 military aid program for the nations of the North Atlantic alliance.

Britain recently objected to some of the conditions which the United States wanted in the accord. The informants said these difficulties have now been ironed out.

Flow of arms to Europe will begin about a month after the pacts have been signed and President Truman approves the strategic plans already drafted for defending the Atlantic area. The President's approval is expected this week.

A new meeting of the Atlantic Defense Council—made up of the defense ministers of the 12 partners—is due in the spring.

Socialism in Britain Hits Church and Home

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, January 26 (legislative day of Wednesday, January 4), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Socialism in Britain Hits Church and Home," written by Stephen C. Noland and published in the South Bend Tribune for January 19, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOCIALISM IN BRITAIN HITS CHURCH AND HOME

(This is the first of a series of articles prepared as a result of a recent personal visit to England and study of conditions under its Socialist Government. The writer, Stephen C. Noland, was for 15 years editor of the Indianapolis News. His recent visit to England was for the specific purpose of learning first hand of the conditions and attitude of the rank-and-file residents of England. Every person who reads the articles, and all should, will learn the truth about socialism in that country and should ask himself whether he desires such conditions in America.—Editor, Tribune.)

(By Stephen C. Noland)

LONDON, ENGLAND.—You may have heard the rumor that British farmer now can be permently "kicked off" his land for not farming it to suit a government committee.

Is that really true under today's British Socialist Government under the Labor Party, which is now in power? As a Midwestern American newspaperman, farm-born and farm-minded, I looked for the answer not in a book or magazine article or merely in a printed British Government regulation but rather on an actual visit to a farmer in Durham County, England.

And the answer is "Yes," British farmers now can be "kicked off" their land.

That's the way the information for this series of articles was dug out. All of it came from the everyday lives and experiences of common people in England, Wales, Scotland, and northern Ireland who are really living under socialism.

WISDOM TOOTH PERMIT

Can a dentist in Britain pull a wisdom tooth without a Government permit? No, he can't. And you'll get the details straight from a British dentist in one of these articles.

What about socialized medicine? These stories won't stem from books or propaganda broadcasts but from doctors' own waiting rooms and inner offices. One will be about my own attempt to get free medical service to which foreigners are entitled. Another will be an interview with a doctor driven to the verge of a break-down by people demanding his signature on "sick cards" so they could stay home on sick pay for 13 weeks.

LABOR STEPS ON LABOR

How are the steelworkers doing and why? How are the coal miners getting along and why? You'll read their own answer given to me at the pit heads and down in a mine 2½ miles under the North Sea and in their own cottages in talks with their wives and children.

What has happened in Britain to the right to strike, the right for which labor has struggled more than a century? To get right down to the point, What happened to that right when workers in an electric power plant near London walked out in protest against a phony wage boost which netted them no more take-home money? Their own leaders, now running the government, denounced them as unpatriotic and sent armed soldiers into the struck plant to run it. The way that was done, leaving labor union members helpless to use their hard-won right to strike and their leaders gagged and out on their feet, will be told in one of these stories direct from the strike scene.

BREAK UP THE CHURCH

How much headway is British socialism making in its admitted effort to break up the church and the home as the "two greatest obstacles" to its complete control of the people through government? How is the church being beaten down until today only 20 percent of the British people claim church membership as compared with 50 percent in the United States? Are mothers permitted to feed their children the milk, orange juice, and cod liver oil prescribed by the government?

What is the Socialist diet, 9 years of it now, doing to the physical strength of the British people? How do men hold up on one meat meal a week, a dab of butter now and then, only one egg a week? Can they keep going on potatoes, bread, and fish?

IT HOLDS NO HOPE

What happens to the normal ambition of men in a country which takes $4 out of every $10 they earn for taxes and holds out no hope for better days? Have these conditions in Socialist Britain been caused by some of the same policies which the United States is pursuing today?

You'll read answers to these any many of your other questions straight from British common people themselves in the articles in this series.

Stop the Chinese Reds Now—Or Else!

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from a recent edition of the magazine See. Why has the State Department insisted for 4 years on following the advice regarding China of those who have consistently miscalculated the nature and objectives of the Chinese Communists instead of the advice of men like General Wedemeyer, Admiral Cooke, and many other eminent authorities who have been as consistently correct in their analyses. None has been more profoundly accurate than General Chennault, whose article follows:

STOP THE CHINESE REDS NOW—THE FAMED LEADER OF THE FLYING TIGERS, A WORLD-KNOWN EXPERT ON THE FAR EASTERN MILITARY SITUATION, OFFERS A DYNAMIC PROGRAM TO BLOCK COMMUNIST TIDE IN ASIA—FORESEES DISASTROUS RESULTS IF UNITED STATES FAILS TO ACT DECISIVELY

(By Maj. Gen. Claire Lee Chennault, U. S. Army (retired))

In ancient Peiping today functions an iron-handed People's Government established last October by Communist forces who came down from Manchuria to conquer northern China. Russia formally recognized it a few hours after it was proclaimed. Since then, it has sought recognition from the world.

This fanfare has served to cloud the real and desperate issue which the United States must face in China. Careless thinkers, instead of championing non-Communist forces forlornly holding China's south and west, parrot false hopes that the Chinese will develop a Tito brand of communism or absorb the Communists and evolve a kind of socialism.

That kind of talk reminds me of a conversation I had with Generalissimo Chiang Kai-shek in 1939, in his Chungking office. Madame Chiang, as usual, interpreted for her husband. I mentioned Japanese gains.

"Don't worry about those," the generalissimo said, "we'll defeat the Japanese if it takes a hundred years."

I thought a moment. "Madame," I said, "will you tell the Generalissimo, with all due respect, that neither he nor I will be here for a 100 years?

It is quite possible that Chinese communism will be modified in a century or two, but western hope for a free Far East will disappear in the meantime. If we let all China go under Communist domination, it will be a downhill ride for the Reds over the rest of Asia.

The United States must protect its position in Asia now, or risk maturity of an enemy power so enormous that it may destroy, first, the American system of free enterprise and, finally, American freedom itself.

Imbalances of strategic power, even more than new weapons like the atomic bomb, bring on wars. If the increasing imbalance in the Far East continues, we ultimately will have no choice but to fight a third world war—from a disadvantageous position.

Power-greedy despots start the wheels turning. Once the monster gathers momentum, its creators cannot stop it. To save themselves, they must go on. In China, the Communists put their war machine into low gear 5 years ago, and began chugging slowly southward, gathering force. Today that machine is in second gear. If we let it move into high, it will be all the harder—and it may be impossible for us to stop it.

Once the Reds have mopped up China, they will turn loose a well-organized, tremendously powerful force against smaller targets to the South. Below China in Asia, they can choose and conquer victims, one at a time.

CHENNAULT SUGGESTS THREE STEPS

Last year, for 5 months in Washington, I listened to the tugging over United States policy in the Far East. Asked to express my convictions, I examined them carefully. They stem from sympathy for the Chinese people, including my Chinese wife. But, much more, they stem from a judgment I reached during many years in China: the United States must frame and aggressively execute a realistic anti-Communist policy toward the Orient, or jeopardize freedom in this world.

As I see it, there is a realistic solution to the problem. I believe we must take three steps:

1. Create a military and economic supreme authority for rehabilitation of the Far East, with American personnel in charge initially.

2. Have this authority execute a definite United States policy for close economic and military integration of all non-Communist areas in the Far East.

3. Extend financial and military-equipment aid to Chinese military leaders fighting the Reds.

I believe the head of the proposed supreme authority must be an American at the outset. Only an American would be trusted by everybody. And he must have military and economic knowledge of the Far East.

UNIVERSITY OF MICHIGAN LIBRARIES

I would like to see Gen. Douglas MacArthur in charge of this supreme authority. He has the respect and admiration, not only of non-Communist China, but of the entire Orient. He is decisive, objective in performance of work. Finally, the American people know him well enough to rely on him.

The supreme authority should be given adequate powers and a moderate sum of money, to be spent at the supreme's commander's discretion. His staff would consist of men from the Department of Defense for military work, and from the State Department for economic and diplomatic work.

Around the supreme authority all non-Communist elements in the Far East could rally. It would participate in military planning for Chinese and all other anti-Communist Asiatic military leaders. Its military experts would apply their talents to tactics, logistics, and strategy in opposing the Reds in China and Asia in general.

This authority would determine just which military leader, at what locale, needed weapons, ammunition, equipment; would supply the needed items, and would see that they were used.

No American troops would be involved. The authority would be a planning, supply, and advisory mechanism, with power and money to act. Unquestionably, the anti-Communist Chinese leaders—all of them, including those in China's constitutional government—would welcome it.

When a vigorous anti-Communist nationalism had been created throughout Asia, leaders of the Far East would themselves take control of the supreme authority.

In offering this plan, I will be accused of submitting too simple and too inexpensive solutions. I plead not guilty.

The American people have grown used to having financial problems discussed in enormous figures and complicated formulas. But in the Far East, it is still an axiom that the best way to do a job is the simplest. And, properly used, money goes a long way in money-poor Asia, where $1 will get as much done as $100 in Europe.

It is therefore unnecessary to write a philosophic analysis of the Orient into a plan for action in the Far East. Besides, we don't have time. The Far East is in critical economic and military condition—a condition on which communism thrives.

IT'S A JOB FOR EXPERTS ON ASIA

One of the most embarrassing questions I am asked in free China is this: "If you Americans won't help us because you don't like our Government, or don't like Chiang, why don't you tell us what or whom you want?"

I can hardly answer: "The truth is, we don't tell you because we don't know."

But if, in Europe-minded Washington, we cannot decide what we want in the completely different situation in Asia, then let's deputize the job to our most expert Asiatic experts.

Fundamentally, the long-pull task in the Far East is economic, because only a healthy economy and a happy people can contain the Communist virus permanently. At the present stage, however, the task is to stop the Communist war machine—and stop it in China. The least we can do in China is to buy time for the rest of non-Communist Asia to get organized for what is coming.

Despite Communist victories, there are 200,000,000 Chinese outside Red control. The great majority are violently opposed to communism and given any kind of encouragement and ammunition will fight. Their non-Communist territory is largely in the western and southern areas. It is rugged country, easy—and relatively inexpensive—to defend with small forces.

ANTI-RED CHINA CAN BE SUPPLIED

The mountainous character of the terrain precludes the use of expensive and complex military equipment. Financial support—silver—to pay troops, plus small arms and ammunition, some pack howitzers, 75-millimeter mountain guns, and a few mortars would do the job, in my opinion. I have seen these mountain military leaders. In their strongholds they are almost invincible. Supplies of all kinds could be flown in to them, or hauled in by human pack work through the mountain passes, or both. It has been done before.

Here in the high western and southwestern portions of China is the key to the conquest of the remainder of continental Asia. Here we must hold against the Reds, or be faced with the infinitely harder task of trying to restore freedom in Asia at some future time. From the high southwest Province of Yunnan, the downhill approaches to French Indochina, Siam, and Burma, and ultimately Malaya and India, are extremely vulnerable.

It is essential to United States security that Formosa and Hainan Islands, Formosa especially, be denied to unfriendly powers. Both have good harbors suitable for submarines, and many good airfields. Our American lines of communication and transport in the western Pacific—from Japan through Okinawa to the Philippines—and the British line—stretching from Ceylon to Singapore and Malaya and up to Hong Kong—can be dominated by enemy submarines and planes based on Formosa and Hainan.

A FRIENDLY FORMOSA IS VITAL

If we were absolutely forced to it, there would be no legal reason why the United States itself could not move in and occupy Formosa, just as we did in Japan. Formosa was not given to China after it was taken from the Japanese. Chinese Communists, conquering it, would succeed to no Chinese Nationalist title. The Chinese Nationalists have the same status in Formosa we have in Japan. They are conquerors, holding the island until a treaty of peace with Japan finally determines ownership.

Communist plans for Asia's future are plain, were blared boastfully over the radio as the Red soldiers moved south. They involve:

1. Conquest of China.
2. Immediate aid to Communist allies in Indochina, Siam, Malaya, Burma, and India.
3. Rapid extension of this pattern in Indonesia, the Philippines, and Japan.

TROUBLE IN ASIA IS WIDESPREAD

With accomplishment of these steps, free civilization would have lost a strategic asset perhaps more essential to American security than all of Europe. An over-all look at the Far East begins to tell the story:

In addition to a large-scale war in China, there is Communist trouble in French Indochina, Burma, Malaya. The Communist leader in Indochina, Ho Chi-minh, has been fighting the French more than 4 years. There is Communist disturbance in Siam. I have information that the Bengal Province of India is rotten with communism. The Philippines are troubled with Communist-inspired and Communist-armed guerrillas.

Against a Red force in control of China, Formosa, and Hainan, these southward areas, already infected with communism, could offer very little resistance.

The burden of opposing the Reds' southward march could not safely be based on Hindu military operations. India's potential of course is enormous, and Prime Minister Nehru is a brilliant man, but the road to Indian consolidation and cohesion will be long and hard.

WHAT AN ALL-RED ASIA WOULD MEAN

Hindu passive resistance is no weapon with which to fight communism. Wherever this type of opposition prevails, there lies the most vulnerable point for the Communist pattern of conquest—infiltration, indoctrination and, only then, arms.

An all-Communist Asia would be a disaster to the United States. All of Asia's great resources and wealth would be available to Communist Russia. A Russian Far East merchant marine would spring up like magic, bringing new strategic dangers to democracies and gobbling up the rich eastern trade.

With the past 5 years Communist Russia has built at least 20 industrial cities along the Trans-Siberian Railway. Their factories need Asia's rich resources—iron, tin, wolfram, antimony, aluminum, rubber (and slave labor)—to build guns, tanks, airplanes, railroads, ships.

Moreover, if Russia established her Communist pattern in Asia, her industry would be so decentralized that it would offer no critical target to hostile bombers. Her vast industrial set-up would extend, almost unattackable, from Vladivostock to Poland. And the only good airfields for massive operations against the Russian atomic plants, known to lie in Siberia's Lake Baikal area, are in China—airfields built by the United States Army for B–29 operations in the last war.

Another important point: with China consolidated into Russia, it would be impossible to keep Japan in the American orbit. Communists would be free to cross the Bering Straits directly into Alaska, meeting only United States frontal defense. Today the invader also would be exposed to attack from Japan, on the southern flank.

With all Asia conquered, more than half of the population of the world would go behind the iron curtain. All the results of Christianized education, built up in the Far East over more than a century, also would go down the Communist drain. Any Christian or any western-educated Chinese would be considered seeds of infection under a Communist form of government.

The United States, therefore, would lose a tremendous human asset. It consists of thousands, maybe hundreds of thousands, of Chinese educated in the United States or in American mission schools in China; converts of American missions; sons and daughters of earlier-generation Chinese who made their fortunes in the United States and returned to raise their children in western traditions. In no other Asiatic country—not in Japan, not in India, possibly not even in the Philippines—are there so many people of Asiatic blood with an American intellectual inheritance.

We must, therefore, find, and keep, some piece of China free; a place where our Chinese friends can find sanctuary to plan and carry out a program for freedom in the Far East.

NO HOPE IN A CHINESE UNDERGROUND

Talk of supplying underground Chinese opposition to communism makes no sense so long as there is fighting strength overground. Even overground armies are expensive. The leakage through a thousand crevices in an underground would be 10 times more wasteful.

Today millions of Chinese working people stand ready to fight with the west for freedom against Communist domination. When the Chinese are criticized as a people who cannot or will not fight, I sometimes think of the war conference at Cairo to which the late President Roosevelt invited, among many others, Generalissimo Chiang Kai-shek and myself.

Generalissimo Chiang and Madame Chiang had gone out to visit the pyramids. I came

along later. The Generalissimo was standing still, looking up at the Great Pyramid, solemn, obviously impressed.

"Madame," I said, "remind the Generalissimo for me that we put more rock in the big airplane runways at Chengtu than they've got here.

"My Chinese built four B–29 runways and three fighter fields, two taxi ramps and hardstands for 48 planes, simultaneously. Every ounce of the rock had to be hauled and crushed by hand, and pounded into the runway excavations. Those runways were 2,600 meters long, 60 centimeters deep. If you ground up two of those pyramids, you wouldn't have enough rock to make those runways."

The sightseeing Generalissimo suddenly looked less awestricken.

The mountain men of western China, who built our B–29 runways, will toil and fight to be free, as they always have been free. All they need besides arms is advice to match the modern advice Russia is giving to the other side.

It is not too late—nor would it be too costly—to stop the Reds in China now, before they launch a downhill rampage into southern Asia from the Chinese provinces on the southwest slopes. Unless we do, we will have more on our hands than a struggle back uphill. America and the free western world in general may find that they have become an embattled island, fighting desperately for life.

Franco Spain

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. SABATH. Mr. Speaker, during the last few days I have read with amazement various reports of the intention to bring about early recognition of Franco Spain.

In this connection I read an editorial appearing in the January 23 issue of the Chicago Sun-Times entitled "Inching Toward Franco," expressing, as I believe, the viewpoint of a vast majority of the American people. It is as follows:

INCHING TOWARD FRANCO

What to do about Spain is an emotionally charged issue in this country. It is worth while to try to decide what is important and what not important in our relations with that nation.

Whether this country is represented in Madrid by an Ambassador or by a Chargé d'Affaires is not of the highest importance. Recognition is not at issue. We recognized Spain in 1939 and have never reneged. During the war we had an ambassador there. After the war we went along with the UN General Assembly's recommendation that Ambassadors be withdrawn.

Now Secretary of State Acheson says this country will support an Assembly resolution permitting any member to restore its Embassy if it wishes.

There is no very strong reason why this should not be done—even though the reasons often given for doing it ring exceedingly hollow. Those who tell us what a fine fellow Franco is, and how badly we need him in our struggle with communism, overlook the one fact that distinguishes Franco from every other ruler in the world.

The fact is that Franco was our enemy during the war. He did what he could, as long as he thought it safe, to support Hitler's cause. He was a Fascist tyrant when he come into power, he rode the wave of fascism as long as he dared, and he remains a Fascist tyrant today.

Franco should have been knocked off at the end of the war, when it would have taken only a slight push to do so. But he wasn't. Today there seems little doubt that the mere withholding of ambassadors is not going to force him out of power. Nor will the mere dispatch of ambassadors to Madrid significantly alter his situation or Spain's.

What is important in our relations with Spain is that we should not act alone in defining them. We should take no steps that are not thoroughly discussed with and approved by our friends in western Europe.

The most ardent promoters of Franco's cause obviously hope that sending an ambassador to Madrid will be the prelude to bringing Spain into the Atlantic Pact and making her eligible for economic aid. These are the really important issues. Before we decide them, we ought to recognize that we cannot squeeze Franco into the Atlantic community without totally destroying the conception of a community based upon a common devotion to freedom and democracy.

Franco's promoters would do well to recognize something else—namely, that the dispatch of an ambassador to Madrid will shatter any ideological grounds for failure to recognize Red China. There may be other reasons for withholding recognition of China—for example, the need for assurance that our diplomats won't be pushed around—but once we have an ambassador in Madrid we can hardly decline to send one to Peking because we don't like Red China's ideology. If you can stand Franco you can stand anything.

Money, Inflation, and Socialism

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, January 26 (legislative day of Wednesday, January 4), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Money, Inflation, and Socialism," written by Burris Jenkins, Jr., and published in the Seattle Post Intelligencer for Tuesday, January 10, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MONEY, INFLATION, AND SOCIALISM

(By Burris Jenkins, Jr.)

Gold, in the long experience of the ages, is the best kind of money that can be contrived.

Every other kind of money has genuine value and validity only to the extent that it is related to gold.

In the modern era, the usefulness of gold as money was augmented by the auxiliary device of paper money which was redeemable in gold and was therefore the equivalent of gold.

Under this arrangement, a government issuing and guaranteeing the paper money for which the gold was security served as the custodian but not the actual owner of the gold.

The real owners were the holders of the gold-redeemable paper against which the gold had been pledged.

And the gold could lie in safe keeping while the paper passed around in circulation as currency.

Thus redeemable printed currency was like warehouse certificates denoting title to merchandise.

It was not necessary to move the goods—or the gold—in order to change the ownership.

At the same time, the issuance of certificates—or currency—was necessarily limited by the amount of gold available for redemptive purposes.

This prevented demoralizing monetary inflation.

Likewise, public expenditures and public debt were similarly restricted, which served as a brake on credit inflation in all banking operations.

And, since all transactions had to be liquidated eventually with money, and the money had to be either gold itself or else redeemable in gold, the system was accurately known as the gold standard.

Gold, with not very many variations, was the fixed common denominator of all values and of all currencies.

Now, among its other excellences, the gold standard tended to prevent frauds; and frauds can be perpetrated by governments as well as by individuals.

Frauds committed by individuals are punishable by statute.

Government, however, is not only the source of legal currency; it is also the fountain of statutory power.

Consequently, by illicit use of power, government could subvert the gold standard.

Government could substitute deficit financing for balanced budgets.

Government could replace fiat money for redeemable currency—even in the payment of its own obligations.

And the Government of the United States did these immoral things in 1933.

It confiscated all the monetary gold in the country, and devalued the dollar, thereby reducing the worth of pensions and insurance policies by nearly 50 percent.

It took over the Federal Reserve System—that is, the national banks—as a tool and agent of the Treasury.

Thereafter, the Government could borrow in multi-billion-dollar installments on the security of its own debt and monetize the debts—part of which emerges from the banks in the form of fiat currency but the bulk of which comprises the basis for credit inflation, making itself evident in low interest rates or cheap money, in excessive check-book money and in swollen bank reserves.

These manipulations liberated the Government from dependence on taxes.

They made inflation the Federal fiscal policy.

As a result, the "supply" of currency in circulation has increased from $8,000,000,000 to $20,000,000,000; the volume of bank credit—about $30,000,000,000 in 1933—now exceeds $100,000,000,000 and the national debt—less than $20,000,000,000 in 1933—had mounted to $40,000,000,000 before the war, and is now more than a quarter of a trillion dollars.

Of course, much of the pyramidal debt and pervading inflation have been due to the war.

And the effect of this has been to obscure the truth.

For the truth is that inflation became the New Deal's policy before the war and has remained the New Deal's policy since the war.

The methods pursued originated in European socialism and in the "new economics"

UNIVERSITY OF MICHIGAN LIBRARIES

sponsored by the late Lord Keynes, and were imported here to socialize America.

The theory is to be found in the Marxist gospel of Lenin, who taught that the surest way to socialize an industrial society is to debauch its currency.

Without inflation, the New Deal could not undertake the fantastic schemes of its Socialist "welfare state"—and without inflation it could find no excuse for undertaking them.

But inflation—either by means of managed currency or deficit financing—is an illusion for which the people must pay.

They must pay in labor and production without corresponding progress and prosperity, if not in industrial stagnation and degraded standards of living.

And with $24,000,000,000 worth of idle gold in the United States available for a return to the honest gold standard, there is a remedy at hand.

A Dental-Health Program

EXTENSION OF REMARKS

OF

HON. WALTER E. BREHM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. BREHM. Mr. Speaker, at the ninetieth annual session of the American Dental Association held in San Francisco last October, a dental-health program for the community, the State, and the Nation was unanimously approved by our house of delegates.

In order that the public may know the objectives of the 70,000 ethical dentists holding membership in the American Dental Association, I herewith submit our dental-health program:

A DENTAL-HEALTH PROGRAM

The dental profession in this country long has urged a constructive approach to the national dental-health problem. The dental profession's proposals represent a scientific, feasible, economical, and rational approach to the problems of dental diseases in direct contrast with the costly and unrealistic proposals bound up with a system of Federal compulsory-health insurance.

In the past decade or more, there has been increasing recognition by the public of the value of dentistry as an essential health service. New methods of prevention and control have been discovered and these promise to give the profession more effective weapons in its fight against dental diseases. This progress has been accompanied by a general reawakening to the fact that American life traditionally is based on community life, that needs can best be determined and met through individual and community effort.

In the light of these developments, the American Dental Association reiterates the basic principles which have guided the development of dental-health programs and offers additional suggestions and recommendations which experience has demonstrated will be useful in the development of better local community programs for dental health.

THE NATIONAL PROGRAM

The American Dental Association believes that the following elements are essential for the success of a national program for the promotion of dental health.

Federal department of health: A Federal department of health, with Cabinet status, should be established independently of welfare and educational agencies and should be administered by persons trained in the health sciences and qualified to coordinate all Federal health activities except those of the military services.

Dental research: Dental research should be promoted through the National Institute of Dental Research and through grants to public and private agencies and individuals qualified to carry on significant research. New resources for dental research should be sought continuously from private agencies.

Dental-health education: Dental-health education should be carried on through appropriate State and community agencies to provide authentic information on health practices, to motivate people to assume personal responsibility for health and to inform them of the facilities available for dental health care.

Dental care: Dental care should be available to all regardless of income or geographic location as rapidly as resources will permit. Private and community programs should provide for priority treatment, prevention and control of dental disease in children, and for the elimination of pain and infection in adults. The community in all cases shall determine its methods for providing services.

Program planning: In all major conferences that may lead to the formation of a national dental-health program, authorized representatives of the American Dental Association should participate. Similarly, in all major conferences that may lead to the formation of a community or State dental-health program, authorized representatives appointed by constituent or component dental societies should participate that public health and welfare may be best protected.

Councils on dental health: The establishment of councils on dental health at State and local levels should be completed as rapidly as possible in order to provide a mechanism through which the development of dental-health programs can be facilitated. Such councils should have lay and consumer consultants.

General health plans and programs: It should be the consistent policy of all dental groups to cooperate as fully as possible with other health groups in the development of programs designed to promote the total health of the patient.

Public-health dentistry: Each of the States should be urged to establish a division of dental health within the department of health and the administration of the dental program should be in the hands of a qualified dental officer who is directly responsible to the State health officer.

Veterans' dental care: The dental care of veterans should be maintained at a high standard and should be provided under a State program in which the veteran has free choice of practitioners in private practice.

Hospitals and health centers: The construction or addition of adequate dental facilities should be undertaken in all hospital and health centers. Such dental facilities should be operated and maintained in accord with standards established by the American Dental Association and administered by a qualified dentist.

Methods of payment: Voluntary prepayment and postpayment plans consistent with sound experience should be developed as rapidly as possible. A Federal compulsory health-insurance program should be opposed on the ground that it is not in the interest of the public or of the profession.

Dental education and personnel: Facilities for the training of dental personnel should be expanded. Such expansion should be consistent with local and regional needs. Improved support for dental education should be sought provided that such support does not entail a loss of independence on the part of the educational institutions.

Dentistry in military services: Dental programs in the military services should provide high-quality care for the military patient. All policies dealing with dentistry should be developed, administered, and controlled by the dental officer.

THE STATE PROGRAM

The State dental-health program should be developed within the broad framework of policies established by the dental profession through the State dental society and the American Dental Association. The right of determination on all points which vary from State to State should be reserved to the individual States.

General policies: The State dental-health program should be developed specifically after a consideration of the 13 points outlined in the national program of the American Dental Association.

Grants-in-aid: Grants-in-aid should be considered as an acceptable method of supporting State dental-health programs provided that the right of the State to adapt any program to meet its own needs is safeguarded.

Dental-health inventory: In order to formulate the objectives, principles, and policies for a State-wide program based primarily on community dental-health programs, provision should be made for the examination and analysis of dental-health needs, for an appraisal of resources available for meeting those needs and for determination of the methods and means for utilizing and supplementing those resources.

Dental-health conferences: Dental-health conferences, sponsored by the State dental society and the State health department, are tested and successful devices for making a dental-health inventory and for planning a State-wide program based on prevention of dental disease, dental health education and dental care especially for children.

Continuing education for dentists: At the State level, the dental and other professional schools should be encouraged to coordinate their undergraduate teaching programs with the general program of dental-health service in the State. Short postgraduate courses should be made available regularly to practicing dentists, and an extension teaching program may be organized to reach dentists in areas more remote from the dental school. Where there is no dental school, a State-wide program of annual seminars or refresher courses may be developed cooperatively by the dental society and the health department, and conducted in the various districts, drawing qualified teachers from outside the State if necessary. Library service also should be made available to dental practitioners, so far as is practicable.

Courses of study for teachers: Opportunities should be provided for teachers in training to learn dental health facts and methods for integrating dental-health subjects in routine classroom instruction in elementary and secondary grades. Every teachers' college should include in the curriculum a course of study devoted to dental health.

Experiments and demonstrations: Experiments and demonstrations designed to teach or disseminate new facts of value in providing dental-health care should be encouraged by the State provided that there is approval by the State dental society of the type and duration of the experiment or demonstration.

THE COMMUNITY PROGRAM

The community dental health program should be developed with the advice and assistance of the dental profession. In all major conferences that are held for the purpose of planning a community dental health program there should be participation by authorized representatives of the component or constituent dental society. These representatives are to be selected by the dental society either by presidential appointment or by other means. It is vitally essential that all community dental health programs be developed with special consideration for local needs, traditions, and practices.

General policies: The community dental health program should be developed after consideration of the 13 points outlined in the basic program of the American Dental Association and of the elements of the State program outlined by the American Dental Association and after consultation with authorized officials of the constituent and component dental societies involved and with officials of recognized health agencies.

Objectives of a community dental health program: The objectives of a community dental health program should be to:

1. Help every American appreciate the importance of a healthy mouth.
2. Help every American appreciate the relationship of dental health to general health and appearance.
3. Encourage the observance of dental-health practices, including personal care, professional care, proper diet, and oral habits.
4. Enlist the aid of all groups and agencies interested in the promotion of health.
5. Correlate dental health activities with generalized health programs.
6. Stimulate the development of resources for making dental care available to all children and youth.
7. Stimulate all dentists to perform adequate dental health services for children.

Organization of community dental health program: The following initial steps are recommended to communities in the development of dental health programs:

1. A conference of key persons in a community should be called to develop a plan of action.
2. A procedure should be developed for the appraisal of the community's dental health needs and resources.
3. The general public, and community leaders in particular, should be made aware of existing dental health needs through publicity and group meetings.
4. The local dental society should be consulted to obtain advice on technical and professional matters.
5. A plan based on the dental health education, prevention of dental disease, and dental care for children should be adopted after it has been related to the needs of the community.
6. The responsibility for administering the program should be delegated to the individuals and agencies best suited to this task.

Financing the program: Whenever possible, local funds should be utilized for the institution and maintenance of community programs. In communities where funds are inadequate for this purpose, State and, if necessary, Federal funds may be sought. The appropriation of local, State, and Federal funds should be in keeping with the magnitude of the dental health problem. Funds for health care from public and private sources are generally interpreted to be available for dental care. Public health, welfare, and voluntary organizations, therefore, should be asked to budget a portion of their funds to assist in meeting dental health needs.

Local, State, and Federal funds are available under specific conditions for dental health programs. Federal funds include those allocated by the Children's Bureau and by the Public Health Service. Federal funds allocated by these agencies are appropriated to State health departments. Some State governments provide funds for dental treatment programs for specific groups. Some county and local departments of health, local boards of education, and welfare departments provide funds or facilities for the treatment of children whose parents have low incomes. Voluntary groups, such as the Red Cross, parent-teacher associations, and others also are sources of funds for initiating experimental or permanent dental health programs.

Appraisal of community dental health problems: In order to provide a sound basis for planning and executing an effective community dental health program, an appraisal of the community's dental health needs and resources must be made. The appraisal may be sponsored by the local dental society, the local health department, voluntary health agencies, educational authorities, and other interested community groups. The appraisal should include: (1) an analysis of the community's dental service needs and specific dental health hazards; (2) a census of available dental personnel, including dentists, dental hygienists, dental assistants, and dental laboratory technicians; (3) delimitation of those oral health procedures essential for optimal oral health; (4) a list of accessible service facilities, including private dental offices, hospital dental clinics, and other public and private clinics; (5) an estimate of public and private funds expended for dental services in the community; (6) an estimate of the effective demand for dental care in the area; (7) a study of individual variations in income and in the ability to pay for dental care; (8) an estimate of the community's potential or unused resources in providing dental health services.

Dental-health education: The community program should make specific provision for the education of the public in matters relating to dental-health hazards and diseases and to desirable and undesirable health habits and practices. Instructions in dental health for school children should be an integral part of the school curriculum. Dental-health facts and proven methods for imparting them to children should be available to all school teachers. Speakers should be furnished for meetings of special groups which can be interested in dental health. Factual, simple, and attractive dental health pamphlets should be provided and the press, radio, posters, motion pictures, television, newspapers, and magazines should be employed in a continuing program of education for the general public. Whenever possible, dental health education activities should be directed or supervised by a person qualified in the field of health education.

Continuing professional education: Continuing education for the professional personnel involved should be an integral part of the community program. Opportunities should be provided for practicing dentists and dental hygienists to keep abreast of scientific knowledge in their fields, for public health workers to develop and maintain familiarity with basic dental-health principles and practices, and for physicians and nurses to understand and accept their responsibilities in the dental-health program.

As a part of the community program, dental societies should be encouraged and assisted in the development of well-planned discussions on community dental-health problems, as well as on scientific subjects, in connection with their regular meetings. Joint sessions with local physicians and public-health workers can be helpful in consolidating various phases of the community health program. In addition, study groups and clubs may be formed locally to encourage day-to-day individual study and periodic group discussion of special problems and fields of mutual interest.

Efforts should be made to relate the continuing education program for professional personnel in communities with the same program conducted at the State level.

Methods of payment: The need for finding a more satisfactory financing plan to meet dental health service costs, especially for the medium and low income groups, suggests the desirability of establishing experimental voluntary prepayment and postpayment plans. Although the successful application of the prepayment principle in meeting hospital and medical care costs has been well established, present knowledge of the subject is inadequate to determine whether a similar budgeting plan can be applied to dentistry.

Experimental prepayment plans for dental service should be inaugurated by dental societies. With proper management, it is believed that actuarial data can be obtained to analyze the now unknown factors of a prepayment system as they are related to dental care.

Efforts to develop satisfactory postpayment plans should be encouraged and the dental health education program should motivate the public to budget for dental care.

Eligibility for dental health care: The determination of those eligible to receive dental care at the expense of the public should be made under a plan acceptable to the concerned groups of the local community and should be related to ability to pay. Priority should be given to dental care for children and to the relief of pain and infection and the rehabilitation for employment in adults.

Facilities for dental health services: Every effort should be made to use to the maximum extent existing facilities for rendering dental health service. Such facilities should include the offices of private practitioners, hospital dental clinics, mobile dental units, and other private and public facilities.

Dental fees: Payments to dentists participating in the program may be made on a full-time, part-time, hourly or unit-of-service basis. The dental fee schedule should be determined by authorized representatives of the dentists who will render the dental services. In all cases payments should be consistent with the provision of a high grade dental service.

Preventive services: Certain preventive procedures which lend themselves to mass application on a public health basis may serve as effective agents of community dental health education. The community dental health plan should include such preventive measures for the control of dental disease as are approved by recognized dental authorities.

Treatment services: Although priorities in treatment service are usually listed separately for children and adults, certain services, such as the relief of pain and the treatment of acute infection, should be available to all regardless of age classification. The following priority classification of treatment services is recommended:

For children

1. Relief of pain and treatment of acute infections.
2. Elimination of pathosis and extraction of unsavable teeth.
3. Treatment of permanent teeth with exposed vital pulps.
4. Treatment of bone and soft tissue diseases and anomalies.
5. Repair of injured or carious permanent teeth.
6. Repair of injured or carious primary teeth.
7. Prosthodontic and orthodontic services.

For adults

1. Relief of pain and treatment of acute infections.
2. Elimination of pathosis and extraction of unsavable teeth.
3. Removal of irritating conditions which may lead to malignancies.
4. Treatment of bone and soft tissue diseases.
5. Repair of injured or carious teeth.
6. Replacement of lost teeth and restoration of function.

Program evaluation: All persons interested in health and community affairs will be interested in the accomplishments, soundness, and cost of the community dental health program. Data for evaluating the program may be obtained through follow-up services

UNIVERSITY OF MICHIGAN LIBRARIES

and the maintenance of simple records. Simplified dental health indexes should be applied periodically to provide comparative data for evaluating the effectiveness of the program and improvement in the dental health status of the community. Accountability for the expenditure of funds will require the maintenance of records of costs and of services.

Legislative Program, AMVETS

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a very splendid statement made before the Committee on Veterans' Affairs on last Tuesday, January 17, by Mr. Harold Russell, national commander of American Veterans of World War II, better known as AMVETS, covering his organization's legislative objectives.

Mr. Russell's statement follows:

STATEMENT OF HAROLD RUSSELL, NATIONAL COMMANDER, AMVETS, BEFORE HOUSE VETERANS' AFFAIRS COMMITTEE, JANUARY 17, 1950

AMVETS expresses its appreciation to the committee for this opportunity to appear before it and present its program.

We endorse the statements of our colleagues, Commander Craig, of the American Legion; Commander Lewis, of the Veterans of Foreign Wars; and Commander Brown, of the Disabled American Veterans, in censuring the Hoover Commission report as it pertains to the veteran and the Veterans' Administration. We believe that if this Hoover Commission report were implemented the result would be not economy and efficiency, but additional costs and drastic cuts in service to the veterans.

There is no question in our minds but that there is ample room for increasing efficiency and creating economies in the Veterans' Administration; to this end we have watched with pleasure the establishment by Congress of the Committee on Expenditures in the Executive Departments. But to take these services and place them in other Government agencies to be handled with nonbenefit legislation would be chaotic. We claim that the common denominator in the administration and effective utilization of the rights and benefits as enacted by Congress is the veteran himself and not the program, such as medical service; that for the most efficient operation of these programs it is necessary to maintain these services within the Veterans' Administration. Congress has enacted certain so-called benefit legislation in recognition of the fact that the veteran suffered certain handicaps and losses because of his service in time of war. Because of the special nature of this legislation, the Veterans' Administration was created. Now the Hoover Commission report would negate this basic concept and philosophy of veterans' benefits and say in effect that the veteran does not have any special problem, did not suffer certain special handicaps and losses in time of war. We refute this philosophy. If Congress is right in setting up the VA and passing this legislation, then the Hoover Commission is wrong.

Therefore we call upon this committee to guard against such attacks which we recognize as the mouthings of the same philosophy expressed by the economy league of 1933 and the effect of which you gentlemen will remember.

AMVETS urge the enactment of the so-called escalator bill in relation to compensation. Compensation, today, is still out of line with the cost of living in America. The Bureau of Labor Statistics indicates that the cost of living index rests at 168.7 as of November 15, 1949. It is inconceivable that this Nation should desire its disabled veterans to exist on present compensation levels. Recognizing the tremendous legislative work which must go into every change in the structure of compensation, AMVETS urge that this compensation be tied to the cost of living index of the Bureau of Labor Statistics and that for each 10 percent increase in the cost of living index, so shall compensation be increased, and likewise decreased so as to at all times honestly reflect the needs of these men in relationship to the purchasing power of their dollar.

Gentlemen, we bring to your attention the non-service-connected pensions for widows and orphans of World War II. We ask for equalization of these benefits with benefits allowed to widows and orphans of World War I. Hunger and want is common to all people. A generation's difference does not change the needs of those who have lost husbands and fathers.

AMVETS support H. R. 5574, a bill to liberalize the provisions of National Service Life Insurance. This is a particularly long and technical bill and AMVETS will appreciate the opportunity of appearing before this committee at a later date on it. This bill would serve to further equalize the insurance opportunities of World War I and World War II veterans.

At our last national convention, AMVETS voted in favor of adjusted service compensation payable in Government bonds maturing in 1960—10 years hence. Fifty-six percent of the delegates at this convention voted in favor of the bonus.

Thus, to put it bluntly, AMVETS favor a World War II soldiers' bonus computed at the rate of $3 per day for domestic service and $4 per day for foreign service to an individual maximum of $4,500.

We recognize that in some quarters this is an unpopular issue—that it has always aroused the wrath of the economy-minded in the press and even in the Congress. But by every standard of equity, the bonus is justifiable. It is inequitable to spend literally billions of dollars helping young, married, nondisabled veterans to make up their lost schooling, to spend other billions in European countries and to ignore completely the problems of older veterans with long-standing family obligations who were forced to give up their jobs, their businesses, and often their homes to go to war.

There are many thousand veterans, particularly in the older age brackets, who cannot collect a dime under the GI bill of rights and whose right to some form of financial reward for their wartime services has been utterly neglected. The bonus would adjust this inequity.

We support S. 2596, the Taft-Teague bill, which will redefine the rights of veterans to education under Public Law 346.

AMVETS also wishes to record a digest of all of our resolutions as enacted by our 1949 national convention, as a part of my remarks.

(The matter referred to follows:)

DIGEST OF AMVETS 1950 RESOLUTIONS

Resolution 1. That national headquarters and the national legislative director support legislation providing stenographic assistance for full-time paid representatives of certain congressionally chartered organizations that have been assigned office space in VA offices.

Resolution 2. That AMVETS urge congressional committees handling veterans' bills to make copies of reports on such bills from Government agencies and departments available to any congressionally chartered organization requesting them; and that if necessary, the rules of Congress be amended to make this possible.

Resolution 3. That AMVETS take steps to gain Federal and State recognition of service time in the WAAC for the purpose of veterans' privileges and benefits, when such service time was followed consecutively and uninterruptedly by service in the WAC.

Resolution 4. That in conjunction with the conscription of any citizens for the armed forces in the event of a future war, a proper and effectual mobilization of all resources, including industry and labor, be effected.

Resolution 5. That AMVETS favor enactment of legislation granting employees in the field service of the Post Office Department the same vacation and sick privileges accorded to other Federal Government employees.

Resolution 6. That AMVETS national legislative director support legislation whereby veterans who are discharged from the VA or other hospitals by reason of confinement or hospitalization for service-connected illnesses and who are not able to follow a substantially gainful occupation for a period of 6 months shall be given convalescent ratings entitling them to disability payments for that period of time; and that further such period of time be extended for periods not greater than 6 months where the physical exammation discloses the veteran to be physically unemployable.

Resolution 7. That AMVETS recommend that a request be made of the President in the name of AMVETS that the first vacancy occurring in the membership of the Civil Service Commission be filled by a qualified World War II veteran.

Resolution 8. That we urge the President and the Congress to enact legislation providing that amounts of compensation payable to disabled veterans and dependents of disabled veterans shall be immediately increased to take care of the increase in cost of living, and in the future be automatically increased by 10 percent for each 10-percent increase in the cost of living, as determined by the Secretary of Labor, provided that such payments shall be reduced in the same manner, but that such compensation shall not be reduced automatically below the basic rate in effect on the date of enactment of such legislation.

Resolution 9. That we urge Congress to enact legislation to give holders of national service life insurance the same rates, benefits, and privileges as are enjoyed by holders of insurance of World War I.

Resolution 10. That AMVETS will work for the passage of such laws and amendments as will give credit on social-security benefits for honorable service in the armed services between September 16, 1940, and April 30, 1947, at the rate of compensation of $250 per month.

Resolution 11. That the national legislative director is instructed to prepare and support legislation providing for special rating for veterans of World War II who have suffered loss or loss of use of a creative organ in line of duty.

Resolution 12. That AMVETS support the permanent extension of that portion of Public Law 663 of the Seventy-ninth Congress providing for the supplying of an automobile or other conveyance to veterans who have lost or lost the use of one or both legs above the ankle, cost to the Government on each not to exceed $1,600.

Resolution 13. That AMVETS strongly recommend to the Administrator of Veterans' Affairs, and if necessary to Congress, that the VA accept as evidence for rating purposes, examinations made at any hospital

approved by the American Hospital Association.

Resolution 14. That Congress is urgently requested to appropriate adequate funds to the State employment services and the USES to provide for sufficient personnel for effective job placement and employment counseling for veterans.

Resolution 15. That AMVETS recommend legislation to double the dependency allowance of veterans who receive service-connected disability compensation and that such allowance be granted on a prorated basis comparable to the veteran's degree of disability rating.

Resolution 16. That AMVETS recommend a women's ward be included in each VA hospital throughout the country.

Resolution 17. That AMVETS recommend that VA regulations be amended to permit eligible veterans a minimum of two prosthetic appliances per year in addition to those provided by the service hospitals upon discharge and that additional appliances need be furnished only after the veteran has proven need.

Resolution 18. That AMVETS support legislation permitting veterans eligible by reason of loss of one or both legs at or above the ankle as a result of service to purchase a car of their own choice; if the price be greater than $1,600, permit the veteran to pay the difference between purchase price and the $1,600 full liability of the VA as prescribed by law.

Resolution 19. That AMVETS support legislation providing for full benefits of veterans disabled in line of duty be given to WAAC personnel who suffered disabilities in line of duty prior to July 1, 1943, and who were unable to become members of the WAC because of these disabilities.

Resolution 20. That AMVETS support legislation raising income limitations to $1,800 per year for an unremarried widow without children and to $3,000 per year for an unremarried widow with children, and the limitation on permanently and totally disabled veterans without dependents entitled to non-service-connected pensions be raised to $2,000 and to $3,000 for such veterans with dependents.

Resolution 21. That AMVETS support the establishment of a national cemetery in each of the 48 States.

Resolution 22. That AMVETS urge amendments to existing laws providing an increase in burial allowance from $150 to $250.

Resolution 23. That AMVETS urge legislation exempting income from private or commercial insurance for the annual income limitations governing payment of death pensions.

Resolution 24. That AMVETS urge legislation placing widows and children of World War II veterans on a level with widows and children of World War I veterans with reference to non-service-connected death pensions.

Resolution 25. That AMVETS request adequate funds for the Civil Service Commission so that it may adjudicate veterans appeals, process examinations and AMVETS oppose any decentralization or reorganization of the Civil Service Commission.

Resolution 26. That AMVETS believe that veterans in Federal civil service should be separated only under section 12 of the act of 1944; also in the widening areas of competition; also that preference eligibles should be allowed to displace nonveterans if the veterans meet the minimum requirements of the new position.

Resolution 27. AMVETS request the Civil Service Commission and the several Federal agencies to amend leave regulations so that a veteran with service-connected disability who because of that disability needs hospitalization for longer than a year shall be granted such leave without pay so that he shall not lose seniority rights.

Resolution 28. AMVETS support H. R. 87 and S. 689 of the Eighty-first Congress (postal employees military credit bills).

Resolution 29. That AMVETS petition Congress for legislation extending the period of filing for gratuitous insurance to a period of 10 years from the veteran's death; further requests the parent be allowed to prove dependency within a period of 2 years from date of death of the insured.

Resolution 30. That AMVETS consider National Employ the Physically Handicapped Week as a continuing 52-week program.

Resolution 31. That AMVETS petition Congress to amend the national service life insurance laws to provide that the total and permanent disability rider now available on World War I insurance be made available on a like basis for veterans of World War II.

Resolution 32. That AMVETS request the VA to release to all newspapers and service organizations the method whereby the amount of refund on national service life insurance is computed.

Resolution 33. That AMVETS recommend the VA make available to all veterans with a service-connected disability an identification card.

Resolution 34. That AMVETS recommend a substantial raise in pay be given to VA hospital attendants, especially those in mental hospitals.

Resolution 35 That in regard to extension 2A of the 1945 rating schedule, AMVETS recommends to the VA if a veteran is released from a VA hospital in cast or other condition necessitating return to the hospital he be released on pass or furlough and not be discharged, so that his extension 2A benefits will be continuous.

Resolution 36. That national headquarters is mandated to do everything possible to have the Servicemen's Readjustment Act extended for 2 years.

Resolution 37. That AMVETS favor the extension of the Servicemen's Readjustment Act as specified in the Rankin bill with the following exceptions: (1) Closing date be extended from June 30, 1950 to July 25, 1951; (2) the proviso dealing with one or more years of training under the auspices of the VA be removed from the bill; (3) that the benefits of this bill be made retroactive to the date of expiration, July 25, 1949.

Resolution 38. That AMVETS recommend a contingent fund to enable the Veterans Employment Service to expand its facilities similar to the contingent fund now available for the Unemployment Compensation Facilities.

Resolution 39. That AMVETS recommend continuation of veterans' reemployment rights program on its present basis without any reduction in personnel.

Resolution 40. That AMVETS urge the statutory award for all World War II veterans with arrested tuberculosis similar to World War I benefits.

Resolution 41. That AMVETS favor the release of some part of the $33,000,000 now held in the Treasury contributed by the veterans of the National Soldiers' Home in Washington, D. C., to be used for the expansion of that facility.

Resolution 42. That AMVETS recommend the VA amend its regulations to permit eligible veterans a minimum of four pair of shoes per year at the veterans' request.

Resolution 43. That the national executive director and national legislative director publicly post at the next convention all resolutions adopted at this convention, together with notations of all action taken on such resolutions.

Resolution 44. That the position of our national legislative program be carried as a column of the National AMVET.

Resolution 45. That approval of posts effected by any State or national fund raising activities be secured prior to the start of such activities.

Resolution 46. That the national executive committee make a review of all items of expenditure at national headquarters.

Resolution 47. That national headquarters and the national executive committee are urged to take steps to establish a national joint veterans' council.

Resolution 48. That AMVETS strongly oppose section 3 of the Judd bill, concerning immigration of Chinese nationals as it applies to wives and children of ex-service personnel.

Resolution 49. That AMVETS believe the maximum efficiency in achieving agreement among labor and management will result when there is a minimum of outside interference; further this convention recommends that national legislation dealing with labor-management be limited in scope to definition of minimum working conditions, the right of organization and expression of workmen, protection of fundamental property rights and the proper staffing and operation of the United States Conciliation Service.

Resolution 50. That AMVETS exert all means to influence the ending of discrimination in the armed forces and commend Secretary Johnson on the initial action taken toward accomplishing that purpose; that AMVETS urge the American Bowling Congress to drop its racial barriers; and that AMVETS generally support such pieces of legislation in the Congress designed to afford full, free, and unrestricted life to all classes and groups of the population.

Resolution 51. That AMVETS urge prompt action on the admission of Alaska and Hawaii as States.

Resolution 52. That AMVETS urge the privilege of naturalization be accorded to parents of honorably discharged Japanese-American veterans of World War II.

Resolution 53. That AMVETS urge that American Indians be made citizens in the full sense of the word to give them all privileges and rights of American citizenship.

Resolution 54. That AMVETS urge that the citizens legally domiciled in the District of Columbia be allowed the right to vote.

Resolution 55. That AMVETS commend those national and State legislators who have given careful consideration to the great body of veterans' legislation proposed.

Resolution 56. That AMVETS commend post 8, of Wichita, Kans., for its action in giving 15 percent of its profits from its new clubrooms to the National Service Foundation.

Resolution 57. That AMVETS instruct its quartermaster department to establish an independent budget; distribute catalogs as widely as possible; arrange for furnishing women members with WAC-type hats; instruct its suppliers to use forest green piping on caps instead of Kelly green; reemphasize cap colors as green with gold lettering for posts, white with green lettering for State, and white with gold lettering for national; contract for, stock, or sell any pins not authorized by a national convention; remind AMVETS that a key has been established as an official reward to past post, State, and national commanders; to inform uniform manufacturers to comply with specifications laid down by a previous national convention; to provide suitable publicity in the National AMVET on quartermaster items; and to arrange for delivery of caps within 2 weeks.

Resolution 58. That AMVETS oppose compulsory health insurance by the Federal Government in any way, shape, or form.

Resolution 59. That AMVETS go on record favoring the Hoover Commission report in principle.

Resolution 60. That the national commander of AMVETS should instruct all State commanders to appoint State agricultural committees and to do all in their power to have post agricultural committees established.

UNIVERSITY OF MICHIGAN LIBRARIES

Resolution 61. That AMVETS do all possible to assure that the Government in its spending programs for maintaining the farmers' purchasing power provide funds for the addition of organic matter to the soils of the United States.

Resolution 62. That AMVETS urge close scrutiny of all bills as a result of the work of the Hoover Commission pertaining to the facilities and benefits for veterans.

Resolution 63. That AMVETS urge the following housing legislation: (1) Establishment of complete secondary market for GI home loans through an agency of the United States Government, retroactive to the time full secondary market lapsed, with a continuation of present 50-percent market for FHA loans; (2) abolition of the section 505 combination FHA-GI loans; (3) Government-guaranteed mortgages on individual homes be limited to the same rate of interest as provided by the GI bill so the GI loan will be as attractive as other loans; (4) extension of amortization period from 25 to 30 years, and income of Government guaranty from 50 percent to 60 percent, with a maximum limit of guaranty increased from $4,000 to $7,500; (5) establishment of a Government agency, when and if necessary, to aid and assist veteran home owners facing loss of homes through economic circumstances beyond control; (6) Congress and/or Department of Justice make a complete investigation as to the amount of favoritism, 5 percentism, malpractice, and other irregularities existing in branches of the Housing and Home Finance Agency and the Veterans' Administration; (7) adequate appropriations be provided for the VA to maintain and enlarge, if necessary, that division which has been so successful in preventing foreclosures on homes owned by veterans through successful counseling and advice to the veteran home owner; (8) secure similar financing arrangements for veteran cooperatives as now provided by the GI bill; (9) give priority to veterans of World War II in the purchase of Lanham Act property; (10) the VA and FHA use only competent and trained appraisers, with an appraisal panel available for final adjudication of appraisals held to be unfair; (11) AMVETS establish a continuous national housing committee; and (12) AMVETS oppose any legislation which eliminates or precludes any existing rights and privileges now held by the veteran under Servicemen's Readjustment Act of 1944, as amended.

Resolution 64. That AMVETS national executive committee create an AMVET National Youth Foundation.

Resolution 65. That AMVETS adopt peace and preparedness program as follows: (1) United States to support the UN and seek its development into a world federal government open to all nations; (2) eliminate the veto in matters pertaining to aggression and preparation for aggression within the UN Charter; (3) eliminate present armament race by international control and inspection and treat violating nations as aggressors against members of UN; (4) create an international court with jurisdiction over all matters pertaining to aggression within the UN and to establish and maintain a police force to carry out the court's decisions; (5) national headquarters to implement AMVETS bylaws by appointment of the directors of the AMVETS division of international affairs; (6) continue support of the Marshall plan, Atlantic Pact, and the armed implementation thereof; (7) encourage removal of trade barriers in our commerce with Marshall-plan countries; (8) continue the reciprocal-trade program, but prohibit shipment of all goods from the United States to Russia and her satellites; (9) urge the United States to promote an economic and political union of Europe leading toward a United States of Europe; (10) encourage development of regional pacts for collective self-defense, including a Pacific Pact; (11) reiterate our support of the good-neighbor policy in the Western Hemisphere, the Rio Pact, and support stronger economic and cultural ties among the nations of the Americas; (12) support requests of the armed services for full appropriation, and provide for their organic composition to insure the most effective armed force in the world; (13) continue selective service to keep America prepared and encourage appointment of World War II combat veterans to selective-service boards; (14) improve and unify the administration of justice in the armed services to permit qualified enlisted men to serve on courts martial, to authorize the appointment of a civilian inspector general, and to separate the functions of the inspector general and judge advocate general from the chain of command; (15) enact legislation requiring the registration of all Communists, Communist-front organizations, and all other people or groups advocating the overthrow of the United States by force or by subversion; (16) intensify the Nation's efforts in the fields of military intelligence, scientific research and development, and the world-wide dissemination of the truth about American democracy; (17) establish a program of economic mobilization to include industry and labor in case of war and eliminate excess profits; (18) support the St. Lawrence seaway and power project; (19) support moves for strengthening the four freedoms in all countries of the world; and (20) urge that Americans accept as a duty and responsibility the opportunities for service to our State Department when they are called upon to do so; we urge the Government to recruit more World War II veterans for State Department and foreign service.

Resolution 66. That AMVETS favor equal educational opportunities for all at the highest possible level and thus favor Federal aid to education.

Resolution 67. That AMVETS favor enactment of legislation providing for adjusted compensation with the following features: (1) Adjusted compensation be paid to veterans with honorable service in the armed forces of not less than 60 days unless sooner discharged by reasons of a service-incurred or service-connected disability during the period of time between December 7, 1941, and September 2, 1945; payment to be computed on the actual time in service from September 16, 1940, to and including December 31, 1946. (2) Totally disabled veterans and unremarried widows and children or dependent parents of veterans who died in service to receive the maximum amount; said adjusted compensation to be computed upon the amounts of $3 for each day of duty in the continental limits of the United States, including the Territory of Alaska, with a maximum of $4,500. (3) Said adjusted compensation shall be payable by issuance of United States Government bonds to mature in 1955, bearing an interest rate of 4 percent per annum; bonds to be nonnegotiable, nonattachable for debt, or for any other reason, and shall not be subject to pledge or security.

A Plan To Cut Your Income Tax

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Coronet magazine:

A NEW PLAN TO CUT YOUR INCOME TAX

(By Gwilym A. Price, president of the Westinghouse Electric Corp.)

HERE IS A PROGRAM DESIGNED TO HELP THE TAXPAYER AND BOLSTER OUR NATIONAL ECONOMY

At the heart of any conviction that America's future can be greater than her past lies the problem of taxation. Here, perhaps, is the most significant single factor in our national economy today.

More than 1 dollar in every four that we earn is taken directly from us by tax collectors for city, county, State, and Federal Governments, or is consumed by hundreds of hidden taxes on everything from cigarettes to limousines. Hence, how these taxes are levied is of supreme importance in determining what kind of an economy we are to have, and which way our country is to go. It can be either a dead hand or a force for progress.

A tax program which I believe can be a powerful force for progress is the incentive income tax plan, designed by my fellow-Pittsburghers, Frank Wilbur Main and M. C. Conick. Their plan is not designed as a cure-all for the problems of taxation, but it will go far, I feel, toward relieving the American people of the many inequities under our present income-tax laws.

Listed below are the main planks of the plan which I am convinced will benefit and encourage: (a) Labor; (b) business enterprise; (c) savings and investment; and (d) the intelligent spending that leads to better living:

1. All income should be taxed at the same rates, whether it is received by an individual or by a corporation.

2. Exemptions should be raised to $1,000 for a single person, and $2,000 for a married couple, and remain at $600 for each dependent.

3. The new graduated rates should begin at 15 percent on the first $2,500 of taxable income, and rise to a maximum of 50 percent at the $50,000 level and above.

4. Eliminate the double tax on corporation dividends by freeing the stockholder of tax liability.

To these recommendations, I would add this proposal:

5. Allow corporations to retain untaxed more of their earnings, insofar as they are used for modernization of plants and machinery.

Now, how could these tax revisions help our people to a better tomorrow? First, consider the small-income earner, like the average farmer and the person who lives on a modest salary or pension.

To start with, 20,000,000 individuals who now pay income taxes would be released from paying anything at all. This would be accomplished by raising the exemption from the present $600 per person to $2,000 for husband and wife.

Assuming the customary 10 percent in deductions for contributions, interest, local taxes, and the like, a family of four today pays tax on all wages above $51 a week. Under the incentive plan, the family would have to earn $68—or $17 more a week—before the tax collector got anything.

Now, let's see how the plan would work for a family of the same size which earns more. If the husband and father makes $3,500 a year, he now pays about $125 in income taxes. Under the incentive plan, he would pay nothing. The $5,000-a-year man who now pays about $350 would pay only $195. In the $7,000 bracket, where he now turns over about $650, even after taking advantage of the new joint-income provisions, his bill would be cut to $465. If he is at the

$10,000 level, his $1,167 tax would drop to $890.

For the big earners, the incentive tax would rise to a limit of 50 percent on incomes of $50,000 or more, putting into practice the popular belief that any man deserves a 50–50 break from the tax collector.

So much for the individual earner. What about the company for which he works?

Obviously, as head of a corporation, I do not find palatable an increase in the corporate maximum income rate from 38 to 50 percent. I could not possibly support such a provision, except as part of a total plan which I am convinced would be in the best interests of stockholders, employees, management, and customers, and therefore of the corporation itself.

Today, a business with more than $50,000 net earnings pays in income tax a top rate of 38 cents of every $1 it earns. Under the incentive plan, the corporation would pay in graduated amounts up to 34 percent of the first $50,000 earned, but would pay 50 percent on all earnings over $50,000. This would be an unbearable burden, unless it were offset by such benefits as:

1. Elimination of the double tax on dividends.

2. Greater freedom for corporations to retain more of their earnings for growth.

Elimination of dual taxes on dividends, along with the freeing of millions of small earners from income taxes, would be the most important boost our lawmakers could give to America's financial welfare. To appreciate the importance of this step, let us see how the dollars which buy stock—and provide the capital to make jobs—are now doubly penalized for taking that risk.

In the first place, the profits these dollars earn are taxed as corporation income—the tax that now goes up to 38 percent. Then, when the corporation pays part of what it has left to the stockholder in return for the use of his money, the investor in the top bracket is asked to pay as much as 82 percent on that.

For example, before Westinghouse pays a stockholder a dividend of $1.25 a share for using his money, it must first pay Federal and State taxes of about 85 cents a share. But that is only tax No. 1. The investor in turn must pay a second tax, running anywhere up to 82 percent or $1.03 of the $1.25 he gets.

Even if he is only a moderately wealthy man, he will pay enough tax to reduce the return on his investment to a mere 3 percent. Three percent. What incentive is there in such a return to persuade the investor to put his money into corporation stock, to turn over his savings to help make jobs for others, to help produce more and better products at lower prices?

The United States has become the world's greatest Nation only because its founding fathers and the pioneers who followed them were willing to take a chance. But who would have opened the West, built the railroads, prospected for oil, or labored to perfect the automobile if the rule had been: "If you succeed, the Government takes most of your profit. If you fail, the loss is all yours"? Removal of the double tax on dividends is at the very core of the argument that the best financial policy for a democracy is the one which leaves the greatest initiative in the hands of its people.

The incentive tax plan is not perfect. What are the principal drawbacks against it?

Frankly, it won't raise as much money for the Government as our present tax program does. On the basis of the 1948 national income, this new plan would have cut the Government's total take from $29,000,000,000 to an estimated $25,000,000,000.

Even in these days of big Federal spending, $4,000,000,000 is a lot of money. But it needn't be all lost. In the first place, it happens to be just about the amount the Hoover Commission says could be cut from the Government's expenses by reorganizing Federal agencies. Maybe if there were $4,000,000,000 less coming in, the President and Congress would have a little incentive of their own to bear down harder on spending.

There are other incentives, too. By removing 20,000,000 persons from the tax rolls and cutting the bills of others, there will be more money in their hands to buy the things they need. This, in turn, will bring increased business and higher tax yields. And more of the same would be accomplished by removing the double tax on dividends, prompting the creation of new enterprises and new jobs.

The second complaint against the incentive plan charges that freeing millions from paying taxes will make them less insistent that their Government operate economically and efficiently. But if you look at the record of recent years, you will find little support for this argument. With one-third of all Americans on the tax rolls, where is the proof that our Government has become economy-minded?

To me, it seems essential that tax relief be given to those in the lower income brackets so that they can keep their families' living standards as high as possible. Too much of these low incomes is currently going for taxes. Take just one example:

Think of the wage-earner's tax bill and his life-insurance bill. It is the exceptional worker who does not pay far more in taxes than he pays to protect his family's future.

One of the major advantages of the incentive plan is that it is easy for the taxpayer to comprehend and easy for the Government to operate. How different from our present complicated tax laws, which have been described as a code for penalizing success. The incentive plan is a forward-looking program, based on the belief that our greatest days as a Nation are still ahead.

To go forward confidently, our country needs nearly 700,000 new jobs a year. That figure represents the margin by which young men and women looking for jobs outnumber the oldsters who quit.

But today's worker does not depend on his hands alone. He uses the best and most efficient tools in the world, and they cost a lot of money—on the average, perhaps $3,000 per job. This means we have to pour about $5,500,000,000 of new money into business each year just to provide new jobs for all who want them. That money should come only from voluntary investment by individuals.

In recent months, we have seen the increasing tendency of pressure groups to turn to the Government for help in fighting a slow-down of our business machine. That is all part of the idea that government can provide security for all, that government can protect us from loss and guarantee us a profit.

But the idea is a fallacy. Government does not earn any money. It has for spending only what it takes from its citizens in the form of taxes. It cannot create jobs, income, or guaranties of any sort except by taking money from one group and giving it to another.

Far better, it seems to me, is a government that gives its citizens the incentive to make their own way—an incentive to work harder and risk more because both worker and investor will earn and keep their fair share of the wealth thus created. I am convinced that a tax structure based on such confidence in ourselves as a free people will yield increased prosperity and bring higher living standards to every family in the United States.

Tribute to Brig. Gen. Wladimir B. Krzyzanowski

REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. SADLAK. Mr. Speaker, at the time that freedom-loving people of the world mourned the death of Gen. Thaddeus Kosciusko, another great Pole, Gen. Wladimir B. Krzyzanowski, also a champion of liberty, was born on July 9, 1824, in Roznowo, a small town in an already enslaved Poland. Having lived his early years in an atmosphere of servitude, he grew up with the determination to seek freedom for himself and to help win it for others.

As a young man, Wladimir Krzyzanowski organized a strong student underground movement to rid his native land of German domination. Branded a conspirator and hunted by the German police, Wladimir fled to America in 1846. He came here as a humble immigrant. A young man, 22 years old, possessing a powerful physique and a burning desire to succeed, he faced the challenge of a new country—a land of liberty and opportunity.

Krzyzanowski's first undertaking was learning the English language. He spent several years pursuing an education, finally completing a course in engineering. With America's constantly expanding boundaries, he used his knowledge to chart railroad lines in America's westward move.

His career was interrupted by the outbreak of the Civil War. Two reasons prompted Krzyzanowski to join the Union Army at once. First was his strong love of freedom. Remembering his youthful years spent in servitude and oppression in a partitioned Poland, he pledged himself to save the freedom he came to know and embrace in America. Second was his knowledge of engineering which was invaluable to the Union Army. He was willing to forsake a promising career to volunteer his services in strengthening the Union forces.

Wladimir Krzyzanowski enlisted as a private on April 11, 1861, in Washington, D. C. At once he distinguished himself as an organizer. Just as in his early days in Poland, he inspired the student underground movement for throwing off the German yoke, so now in the United States he recruited a company of fighting men to help save the Union.

Because of his military skill and outstanding leadership, Krzyzanowski soon rose to the rank of brigadier general. His great achievement during the Civil War was recruiting a regiment of infantry, named the United States Rifles, which later merged with the Polish Legion to become the Fifty-eighth Regiment of New York. This regiment was composed of Danes, Frenchmen, Germans, Poles, and Russians, all of whom were eager to devote their services to the

UNIVERSITY OF MICHIGAN LIBRARIES

cause of justice. Under the leadership of Krzyzanowski, the Fifty-eighth Regiment fought gallantly in the battles of Cross Keys, Sulphur Springs, Waterloo Springs, Fox Ford, and Bull Run. On May 1, 1863, Krzyzanowski's men were the only ones to stop Gen. Stonewall Jackson at Chancellorsville. His regiment also saw heroic action in the Battle of Gettysburg. In each of these battles he contributed to the victory of the Union Army.

The outcome of the war saw the preservation of the Union. In Krzyzanowski's own words, "The ideals and freedom of America" were saved. Thus, through his contributions in the Civil War, Brigadier General Krzyzanowski has gone down in history as a great soldier. Though his deeds are not known as well as those of Kosciuszko and Pulaski, his name has always been inscribed brilliantly in the chapters of the Polish Legion of American Veterans.

After the Civil War, his job as a soldier done, he continued serving the United States Government in a civil capacity. His restless spirit took him on a mission first to Alaska where he started the first United States supervision of the Territory, then to Panama. Later he served as a special agent of the Treasury Department. Krzyzanowski died at the age of 62 on January 31, 1887. He was given a soldier's farewell and his body was laid to rest in the Greenwood Cemetery in Brooklyn, N. Y. Many years later, through the efforts of the Polish Legion of American Veterans, his body was moved to Arlington Cemetery to rest among the heroes, all of whom served the country so well.

This year, the Polish Legion of American Veterans will commemorate the sixty-third anniversary of Brigadier General Krzyzanowski's death by placing a wreath on his grave. It is in behalf of this organization that I am extending an invitation to all Members of Congress and their friends to participate in this memorializing ceremony which will be held at 10 a. m. next Tuesday, January 31, at the Arlington Cemetery.

Multiple Sclerosis

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. PHILBIN. Mr. Speaker, I understand that H. R. 3943, which is designed to fight the frightful, insidious condition known as multiple sclerosis, has been favorably reported by the House Committee on Interstate and Foreign Commerce.

It is not necessary to recite the merits of this legislation. Its title is self-explanatory and its objectives so commendable and praiseworthy that I believe there will be little, if any, opposition in this House to its enactment.

The statistics show that a surprising number of persons throughout the United States are suffering from this dread disease. Science has made comparatively little headway in counteracting its ravages. Government research and Government cooperation with scientific bodies already studying this condition will be of inestimable value. Perhaps new treatments can be developed. Perhaps new formulae and new drugs can be developed which will attack this fearful enemy of mankind. Perhaps so-called atomic medicine holds the secret to the solution of the treatment and cure of multiple sclerosis.

The recent advance of science has been phenomenal and in no field nearly so beneficial to the human race as in the field of medicine. Newly discovered drugs are rapidly obliterating physical ailments and diseases which formerly took a cruel toll of lives of the American people. The sulfa drugs and penicillin, and now cortisone and acth, have worked near miracles in combatting infections and diseases heretofore fatal or disabling or crippling to unfortunate individuals. The science of chemistry is advancing so fast in developing new drugs and the science of medicine is proceeding so rapidly with new methods of treatment and techniques that in truth a frontal attack against many dread diseases is steadily expanding average life expectancy and eliminating pain, misery, and disability.

It may well be that in the future, except for cases resulting from trauma, accidents, and other limited types of injury or physical ailments, chemistry will replace surgery as an effective means of fighting disease. The Government should not only encourage medical science and chemistry in striving to develop and perfect these modern drugs but it should assume a definite leadership and guidance in setting up and effecting programs designed to accelerate not only the paths of discovery but the development of these chemical substances which hold out so much hope for the alleviation of human suffering and the restoration to active useful lives of so many Americans.

I urge the House leadership to take early action concerning H. R. 3943 and related measures so that this House will be able to move toward speedy enactment of this vital legislation.

Our Crumbling World Power

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by my colleague from New York, Hon. RALPH W. GWINN:

OUR CRUMBLING WORLD POWER

My colleagues in Congress are deeply concerned about our policy in China, and with good reason. Our China policy touches the military security of our Pacific coast and the whole continental United States.

At the end of the war the United States was head and center of a military coalition whose power stretched round the world. Its pincers closed in on our enemies and destroyed their military power completely.

Only 5 years later the Communists' military power stretches in a huge semicircle from eastern Germany across Russia and Siberia, through China to the Pacific. It is marching on without resistance to Formosa, Okinawa, and Japan. Our power is crumbling. We are the country being encircled, not Russia.

In the last year of the war, there were 1,800,000,000 people in the countries making up the United Nations. Only one-ninth of this vast population, the old U. S. S. R. was under totalitarian rule, while 1,625,000,000 were antitotalitarian. Today the antitotalitarian group has shrunk to 540,000,000. The group under totalitarian control has grown to four times its former size, while our futile foreign policy has lost 700,000,000. Nations like India and Sweden have fallen away to a neutral group in the struggle between freedom and barbarian power.

This new danger is not like nazism, removed by thousands of miles of impassable ocear. Russia is only a few miles from our frontiers in Alaska. She is threatening our Pacific island defenses, which we are losing by stupidity and cowardice, if not treason.

We fought the last war from the island aircraft carrier of Great Britain, but if Japan falls and Okinawa is untenable, we shall fight the next one from California or Oregon, or perhaps behind the ramparts of the Rockies.

The people of the west coast are seriously alarmed. Husbands and fathers are thinking now of how they can protect their own families in a new Pearl Harbor. The east coast is not on the front line. We are not worried about invaders in our homes. But we certainly ought to understand what the danger is.

Who brought the proud American Nation to this dreadful pass? We let President Truman have $191,000,000,000 of our money in 3 years. The Reader's Digest made a table showing that he had spent more than all the other Presidents of the United States put together, including 12 years of Franklin Roosevelt.

Most of this money has been spent for military affairs or foreign aid. How could any President bring us to such a humiliating political and military defeat with over $200,000,000,000 to implement his foreign policy?

The answer is that the New Deal does not have a foreign policy. It has only one policy, the old familiar cheap political policy of tax and tax, spend and spend, elect and elect. Every dollar spent on its foreign aid is carefully designed—judging from results—to win votes among farmers, businessmen and the rest.

Meanwhile the Communists insult and imprison our consuls. We ask Siam and Czechoslovakia to intervene on our behalf. We haul down the American flag from Peiping and call our foreign representatives home. The Communists imprison two members of our armed forces and we say, "Please, oh please, won't you let them go?" In every test the Communists have set to trap us we have given way.

The working heads of our armed forces know that we are in danger, but they are silenced by the politicians as Denfeld was silenced. Just so they silenced our admirals before Pearl Harbor.

Husbands and wives, fathers and mothers of this country! Any public official who knowingly exposes our land to the danger of invasion by a foreign foe is a traitor! The brilliant young men like Alger Hiss, American-born and American-educated, who

gave away our secrets to a foreign power were traitors. But the petty politicians in high office who protected, promoted, and sheltered them for years, in order to get the collectivized vote, are just as much traitors as those who dealt directly with the agents of a foreign enemy.

How many other bright young Communists is Mr. Acheson sheltering in the State Department today as he sheltered Hiss? How many members of this Communist cell are still heading up our roving delegations in Asia, in the United Nations, in the Foreign Service, and in the Office of the Secretary?

When is President Truman going to be serious? When will he clean out the Communists who make our foreign policy? Can we sleep safely until we find and remove every one of the traitors?

In a moment of peril in the Continental Army, General Washington issued the order, "Put none but Americans on guard tonight." Our country is again in peril. Our first line of defense is to have in positions of honor and trust only those men who will put their country's welfare ahead of any personal or political gain.

Flood Control, Lower Mississippi River

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Civil Functions Subcommittee of the House Appropriations Committee, January 19, 1950:

Mr. Chairman and gentlemen of the committee, I am most grateful for the opportunity to appear before this committee in support of the budget item of $72,000,000 for the lower Mississippi and its tributaries.

I realize the very great importance of keeping Government costs down to a minimum and as a member of the House Appropriations Committee, I state without any reservation that I expect to be a party to keeping Government costs down wherever possible. I am fully aware of the fact that the House Appropriations Committee has a tremendous responsibility to discharge when considering appropriations for the fiscal year 1951, and may I further state that, in my opinion, with the high degree of prosperity that we are now enjoying, deficit financing is undesirable and unsound. Nevertheless, I am convinced that certain budget recommendations should not be reduced too drastically; specifically I refer to the recommendations for flood-control appropriations because there is proof that for every dollar invested in flood-control improvements, the value of America is enhanced $2.15. If these figures are accurate—and I believe they are—then funds invested in flood-control construction are a good investment.

In appearing before your committee, I am not necessarily asking for special consideration for any flood-control project in my district nor for the State of Louisiana. My interest is in the entire lower Mississippi Valley because Congress appropriates a lump sum for the lower Mississippi and its tributaries. Therefore, if the authorized projects in my district and State are to receive Federal funds, the over-all appropriation for the Mississippi River and its tributaries must be adequate; otherwise certain projects cannot be continued.

The Mississippi River and its tributaries is the oldest Federal authorized flood-control project in America and it is the No. 1 flood-control problem of the entire United States.

No doubt it has been directed to the attention of this committee that 42 percent of all the floodwaters of the United States must necessarily pass through the lower Mississippi Valley to reach the Gulf of Mexico. The $72,000,000 budget item for the lower Mississippi and its tributaries will be used against authorizations totaling $1,038,000,000. A study of the record will disclose that progress on the main stem of the Mississippi River and the off-river projects is progressing too slowly to be completed economically. I am sure this committee will be pleased to learn that out of the $72,000,000 requested, none of the funds will be used to start new projects. All of the funds will be used on projects already under construction.

I have been told, on good authority, that the Corps of Army Engineers asked the Bureau of the Budget to recommend $117,000,000 for the lower Mississippi and its tributaries for the fiscal year 1951. I might state further than the Mississippi Valley Flood Control Association, of which I am vice president, expressed a fear that if the Bureau of the Budget recommended less than $100,000,000 for the lower Mississippi and its tributaries for the fiscal year 1951, that many of the projects now under construction would have to be curtailed. That is history because the Bureau of the Budget saw fit to recommend only $72,000,000.

It is my hope that this committee in its wisdom can justify the amount recommended by the Bureau of the Budget which, in my opinion, is a very minimum by which the work on the main Mississippi River and off-river projects can progress economically. I am sure it has been directed to the attention of this committee that when funds are appropriated for the lower Mississippi and its tributaries, the lives and property of a great majority of the people living in the States of Kentucky, Missouri, Illinois, Tennessee, Arkansas, Mississippi, and Louisiana are protected. Available information will disclose that it requires a very minimum of $47,000,000 for maintenance and work on the main stem of the Mississippi River. Therefore, any reduction that you make will affect only the off-river projects.

There are projects in my district only 6 percent completed, others only 26 to 43 percent completed. This condition has been brought about by lack of funds and as businessmen I am sure you will agree that when work of this kind is prolonged over a period of many years, it makes the completed job much more expensive, which is nothing less than false economy.

I have appeared before this committee many times to testify in support of sufficient funds for the lower Mississippi and its tributaries and knowing that you have heard many other witnesses on the same project, I should not like to consume any more of the committee's time than is absolutely necessary, but I should like to point out to the committee that floods and soil erosion are costing the American people in excess of $1,000,000,000 annually. I am sure you will agree that if we permit this waste to continue, especially in face of an increasing population, this country may find itself in the same condition as many foreign countries; that is, without sufficient cultivatable land to produce the food to maintain our present standard of living.

I wish there were some way that expenditures in the field of flood control and reclamation could be considered on a capital-investment basis rather than as an expense, because on such a basis we could evaluate the benefits and check the return received on the investment.

Mr. Chairman, flood-control problems in the lower Mississippi Valley are great. I repeat, that we are working against a $1,038,000 authorization and I am thoroughly convinced that the $72,000,000 requested by the Bureau of the Budget is the very minimum by which the projects under construction in the lower Mississippi Valley can be continued economically. If the committee grants the $72,000,000, it will make possible the continuation of a minimum of work on the main stem of the Mississippi River and the off-river projects. I am sure that this committee has in its possession all the technical data and statistics dealing with the Mississippi River and its tributaries. Therefore, I shall not incur additional expense to the Government by filing additional statistics and technical data in the record. In conclusion, I should like to say that it is my sincere hope that this committee will grant the $72,000,000 recommended by the Bureau of the Budget and if you do, then the projects in my own district and the State of Louisiana will benefit along with the other 6 States in the lower Mississippi Valley.

Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. LECOMPTE. Mr. Speaker, the Iowa State Dental Society, in convention assembled, has adopted a set of resolutions on the subject of compulsory health insurance and has memorialized Congress of the opposition of this organization toward any legislation containing the principle of compulsory health insurance.

Under leave to extend my remarks, I desire to include these resolutions so that all Members of Congress may know the position of this great organization:

Whereas the American dental and medical professions have established the world's highest standard of dental and medical care, thereby helping the United States to become the healthiest major Nation in the world; and

Whereas the great advances which have been made in the profession of dentistry under the stimulus of private practice would be impeded by enactment of a Federal system of compulsory health insurance: Now, therefore, be it

Resolved, That the University District Dental Society does hereby memorialize the Congress of the United States not to enact any legislation containing the principle of compulsory health insurance,

That a copy of this resolution be forwarded to the President of the United States, to each Senator and Representative now in the Congress from this State, and to the Speaker of the House of Representatives and the President of the Senate of the Congress of the United States.

That a copy of this resolution be forwarded to the council on legislation, American Dental Association, 222 East Superior Street, Chicago, Ill.

P. M. HERRICK,
President.
FREDRICK B. LEHMAN,
Secretary.

CEDAR RAPIDS, IOWA, *January 17, 1950.*

UNIVERSITY OF MICHIGAN LIBRARIES

The Democratic Program for a Growing America

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Assistant Secretary of the Interior C. Girard Davidson at the Springfield Public Forum, Springfield, Mass., Wednesday, January 18, 1950:

THE DEMOCRATIC PROGRAM FOR A GROWING AMERICA

The Democratic Party has a vigorous, positive program for meeting our many and diverse problems. If I were to cover them all, I could do no more than list the points in that program in the time available to us tonight.

Instead I shall address myself to some of the basic objectives which underlie that program.

For the Democrats, the first objective of our democracy must be to guarantee opportunity, security, and liberty for all our people. This aim is as old as the Constitution itself, which was drawn up to establish justice, insure domestic tranquility, provide for the common defense. But that is not all. The Constitution lists this further purpose of our American Government—to promote the general welfare, and secure the blessings of liberty to ourselves and our posterity.

To Democrats it is obvious that our Government is directed to carry out this last-named purpose as well as the others. We have undertaken the action needed to promote the general welfare, and secure the blessings of liberty.

We believe that all Americans should share in the bounties which this rich land can provide. We believe too that all should share in the responsibility for developing and utilizing these riches. The workingman must have an opportunity to earn his living and to participate in setting the conditions for his employment. The businessmen must have access to materials and markets in a freely competitive economy. The farmer must be secure in the preservation of his land and is entitled to a fair return for his products.

Every one of us has a right to security in old age, to adequate schooling, to a decent home, to medical care, and to protection from discrimination. Thus secure in the essentials of life, a man has an opportunity to make his contribution to a fully-functioning democracy and to an ever-expanding economy. He can face the future unafraid.

Unable or unwilling to accept the implications of a democratic society, the Republicans have attempted to debase these noble objectives of our founding fathers. They have ducked the job ahead and turned instead to the invention of slogans. In tones sometimes fearful, sometimes sneering, they have attempted to breathe unwholesome connotations into the phrase "the welfare state." Frightened by the revelation of true democracy, they have labeled it a bogieman to frighten others.

We Democrats are not afraid of the welfare state. We are proud of it. The welfare state is meeting the needs of the people. That is our aim.

To achieve security, opportunity, and liberty, we must have a balanced expanding economy. Even the most old-fashioned of our economists have now admitted that this is possible, that catastrophic depressions are not inevitable. Last year we proved it. Well-conceived measures enacted earlier by the Government enabled us to slip out of a difficult inflationary period without serious economic upheaval.

Never has America been more in need of a stable economy that grows year after year. The entire free world depends for its prosperity, and for its continuing liberties, on a balanced economy in the United States. The masters of that portion of the globe which has lost its freedom lick their chops greedily in anticipation of our relapse into economic chaos.

A balanced economy calls for steadily expanding production to meet the needs of a growing population. Expanding production guarantees jobs for all. Expanding production guarantees goods for all in quantity to assure the American standard of living for everyone.

There must be a steady stream of investment to finance this new productive capacity. There must be a steady stream of wage and salary payments so consumers can purchase the goods turned out by this expanded industrial plant. This calls for a balance in the distribution of our national income: A proper share to create consumer purchasing power.

This is a delicate and dynamic balance, changing month to month and year to year. Industry, labor, and agriculture, freed from fear and firm in their faith in a growing America, could make the shifts to preserve the balance. But our Government must help by reading aloud the signposts as we move forward so we all know the road. And sometimes our Government must put a shoulder to one or another of the wheels which get caught in the mire, lest the balance be disrupted.

The concept of a balanced economy is not too big for the American people, who have foresworn depressions forevermore.

But the leaders of the Republican Party have not yet shown that they understand this fundamental objective of our society. They have whittled down this broad goal which promises a better life for all of us. Republicans prate about balancing the budget.

Twenty years ago, the Republicans balanced the budget. The year was 1930. They balanced it with bread lines.

Because the Republicans balanced the Federal budget, millions of family budgets became unbalanced. People found that the red ink in their books could not be eaten or worn or lived in. People stopped buying, and a lot of business budgets went out of balance. Next down the slide went the budgets of manufacturers, so more men were thrown out of work. Relief payments by localities and States mounted and—since the Federal budget insisted on its ivory-tower equilibrium—these States and local govment budgets went out of kilter.

Anybody could balance the Federal budget any time—if it were an important end in itself. The recipe is universally known. All you do is lop off some disbursements or levy some new taxes.

But it is not an end in itself. Balancing the Federal budget today must not be done at the expense of unbalancing other budgets elsewhere in the Nation, and very probably torpedoing entirely budgets overseas in some democratic countries dependent upon us.

Fifteen years ago, the orthodox economists viewed with alarm our unbalanced budget. This can't go on, they said. Government securities will become worthless, they warned. The Republicans echoed their gloomy predictions.

While the Republicans continued to prattle about budget balancing, the rest of us went to work on building the economy. We learned some basic economic facts. We found the Federal budget could be a useful tool. We discovered that what we did with an unbalanced budget was a large factor in promoting a balanced economy. To the Republican leadership, however, the Federal budget is still like the rubber ball to the trained seal, a toy to juggle.

President Truman reiterated these economic truths in his budget message and economic report earlier this month. He acknowledged that we could balance the budget today—but only by means of dangerous and crippling economies. Instead he chose a program which would raise our levels of production and income. This would bring us to the point where additional revenue coming from increased production and income would in time balance a budget providing for all the services necessary in this land of opportunity.

President Truman stated the proposition plainly: Either we can shrink or we can grow. Guided by the forward-looking spirit of the American people, he made his choice: "Let us grow," he said.

The President set out the goals of a hopeful people with faith in themselves and in the future. "Within 5 years," he stated, "we can achieve an annual output in excess of $300,000,000,000—a gain in national income equal to an average of nearly $1,000 for every family in the United States."

Such goals are not fanciful, but merely projections of our rate of progress over the past few years. But their achievement is not automatic. Government fiscal policy can help to assure them.

Public development of our rivers, our soils, our forests, and our minerals will give private industry and agriculture new fields for investment so that they can raise production. Public encouragement of housing and transportation will serve the same ends. Public expenditures for social security, health, education, and housing will maintain and expand consumer purchasing power to provide wider markets for expanded production.

The resultant increase in income will generate additional revenues to strengthen the fiscal position of the Government—and balance the budget.

How do the Republicans reply to this statement of goals for a growing America, for a higher standard of living. "It can't be done," they intone mournfully. They search for reasons why these goals cannot be achieved.

America was not wrested from the wilderness by men and women with an it-can't-be-done attitude. Today, too, our problems call for the same type of positive effort, for daring and bold imagination. Today the Democratic Party has reflected the frontier spirit in its bold proposals for the welfare state.

The people know the difference between construction and obstruction, between proposing and opposing. The people are not misled by Republican double talk about a balanced budget. The people say, let the Republicans leave their negative attitude behind. Let's all join in searching for a way to reach the goals of more jobs, more income, and more good things for all of us.

We forget that the Republicans once were crusaders for democracy. In its first year, the Republican Party freed the slaves, preserved the Federal Union, and set up free farmers on homesteads in the west. These acts were fully consistent with President Lincoln's pronouncement. "The legitimate object of Government," he said, "is to do for the people what needs to be done, but which they cannot by individual effort do at all or do so well for themselves."

Thus Lincoln perfectly defined the welfare state. The Democrats today are pleased to accept his leadership. We are striving for the creation of Lincoln's welfare state, even though he is now forsaken his own party.

The present-day critics of the welfare state aren't really opposed to welfare by government—if it's for them.

Businessmen aren't complaining about RFC loans, not even Mr. Guy Gabrielson, Chairman of the Republican Party, whose Carthage Hydrocol Corp. has received more than $13,000,000 in RFC loans. They aren't objecting to 90 percent FHA guaranties to builders. They don't oppose subsidies to air lines and steamships. The railroads never fussed over accepting a gift of the public lands equal to the size of France.

The question here is whose welfare?

Low-cost housing for the welfare of the workers? Oh, no, they caution us; that kills incentive. But let's have some more loans to industry.

Control monopolies to allow the small-business man a chance to compete? Definitely not, they say; that will destroy free enterprise. But let's slap some more injunctions on the unions.

Parity payments to assure the farmer a steady income? Beware, they warn us; that is the road to socialism. But can you get us a shipping subsidy?

We Democrats admit we are confused by this double talk. In our way of thinking, prosperity for one group does not require repression on another. All have to gain together or the laggard becomes a drag on the economy. The Government is dedicated to the welfare of all its citizens, and should assist any of them suffering from inequities or unable to play their part in the economy. That's why the Democrats are for the welfare state.

I always find that I can get a better understanding of a problem if I examine it in my own backyard, in terms of things close to home which are familiar to me. We might do the same thing with the goals of the Democratic Party. Let's take our objectives of opportunity, security, liberty, and a balanced economy and relate them to the problems of New England. Let's see how New England might use the principles of the welfare state.

You are all familiar with the region's economic picture. Production and income are falling off, unemployment is comparatively high. The fact is, New England in recent years is playing a progressively smaller role in the life of the Nation. Since 1929 manufacturing in New England, as measured by value added, has increased only 109 percent as compared to 133 for the whole country.

Now let's see what's happening to the natural resources which might provide a firm base for an expanding economy.

No one knows better than you residents of the Connecticut Valley what great damage floods have done to your communities. Pollution of the river and the destruction of fisheries is also a familiar story here. You have seen once rich cropland leached by erosion and taken out of cultivation. You have felt the lack of an adequate channel for river navigation.

Although New England has about 3,000,000 kilowatts of undeveloped hydroelectric generating capacity in its streams, its electric rates are the highest of any region in the Nation. For the same amount of electricity, the average householder pays twice as much here in Springfield as he does in Tacoma, Wash. Industry also suffers from the same differential, and many of the southbound plants have given high power rates as one of the main reasons for leaving New England.

Let's see what the welfare state has done about similar problems in other regions. This year, for instance, the Federal budget earmarks about $2,000,000,000 for development of natural resources. This will be spent for flood control, for irrigating new land, for protection of fisheries, for navigation, for soil conservation, for forest management, and for generating low-cost hydropower. A surprisingly small amount of this money will be spent in New England.

We have seen how this kind of Federal investment stimulates industry. TVA operations resulted in cutting retail power rates by two-thirds in the Tennessee Valley. Initiation of Federal power projects in the Southwest brought an immediate cut of one-half in wholesale power rates to preference customers. As a result of the full development of the river by TVA, the Tennessee Valley region is now growing economically much faster than the country as a whole. Federal resource developments in the Pacific Northwest have brought in hundreds of power-hungry new industries.

If conditions in this region warrant it, New England has a right to expect some Federal investment in development of its resources. Although the effect may not be as spectacular as in other regions, it may well help you to reestablish the stable economy New England used to know.

The time has come to get the facts. Your own Congressman, FOSTER FURCOLO, has introduced a bill to survey the prospects of the Merrimac and others providing for a Connecticut Valley Administration. And one of your distinguished New England Senators has already worked out a way to get the facts on the entire region. Senator GREEN has introduced a bill in Congress for setting up a New England River Basin Survey Commission. It would study the whole region, not just pieces of it. It would study all possible uses of rivers, not only water power. It would bring together the proposals of all parties into a unified program for regional growth.

This Commission would be seeking a firm base for a balanced economy in New England. It would try to point the ways to new opportunities for industry, for agriculture, for employment of labor. It would show what steps are necessary to realize these opportunities. These are true functions of a welfare state.

Here is a Democratic proposal for meeting some of the basic problems of New England. It is only one example of how the Democratic Party proposes to meet domestic problems. We intend to see that the Federal Government does its share of the job of expanding America's economy, of providing better security for its citizens, and of seeking a fair distribution of the fruits of the labors of our people.

We propose to do these things because we have unbounded faith in the people of America, in the strength and vitality of our democratic Government and of the dynamic upward drive of our free-enterprise economy. We are firmly convinced that the path America must take is not to the left, not to the right, not to the rear, but forward to a life of ever-increasing abundance and a peaceful world.

Jackie Robinson

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. ROONEY. Mr. Speaker, I know that most of the American public are highly pleased with the signing a day or so ago of that great ball player, Jackie Robinson, at an annual salary which is said to be the highest for a player in Dodger history. The Brooklyn Eagle claims that it took less than 5 minutes for Jackie and President Branch Rickey to agree. This fact is a tribute to both of them. The annual signing of Dodger ball players is not always so easy. My good friend in Brooklyn, Jim Ryan, the father and founder of the famous Anvil Chorus, points this out in the following limerick which he recently wrote:

"SIGN-US" TROUBLE

From Rickey we've wrung the admission
That headaches with him are tradition,
And they grow more severe
In the spring of the year
Which is due to a "sign-us" condition.

Man's Economic Background

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Chester D. Tripp, publisher of Economic Trend Line Studies. He points to the weaknesses of man which have led to the downfall of each of the five major economic systems man has devised, and will lead people to abandon ours unless they are corrected:

MAN'S ECONOMIC BACKGROUND

It might be said that no social economic system devised by man has ever been proved successful. One might come to this conclusion by a process of elimination: No system, as yet devised, has worked well enough to maintain itself over any great period of time.

There are many instances where the world has tried communism, and there are many places today, where it is still the common practice, but, without exception, no lasting high culture has ever been developed under its auspices. The same may be said for the economic systems involving barter, or exchange carried on through currency. These latter systems are as old as the hills; they still exist in large parts of the world, enjoying, if one may use that expression, shockingly low standards of living for the great majority of the practitioners.

As for capitalism, which should be considered exchange through the facilities of central banking, there is no long, uninterrupted records of its use. In Helenistic times, the Near East was more capitalistic than it is today, and, incidentally, at that time had a much higher standard of living. The late Imperial Roman period was partially capitalistic and partially currency-minded. The Far East, Indian and China have to all appearances been barter- and currency-minded since the beginning of history, and, although we think of the Chinese social structure as being one of the oldest in the world, a detailed study of it shows many upsets and fully as many changes in government as have been experienced in Europe itself.

No one of these economic systems has ever been tried in its pure form, so far as the record shows. In currency-minded parts of the world, the hinterland still leans heavily on barter. Communism, whether practiced in seventeenth-century America or among the natives in Mexico, was and still is heavily tinctured with currency trading and even with rudimentary forms of capitalism.

Capitalism itself did not develop on a grand scale until after the seventeenth century, but, even today, half the capitalism of

UNIVERSITY OF MICHIGAN LIBRARIES

the world, if one can judge by bank debits, is carried on by North America, a third by Europe, and the remaining percentage pretty much limits itself to coastal cities around the world and to capital arena where international trade takes place.

It is a fair question under such circumstances to ask, What is the reason for these 5,000 years of failure or only partial success of any one of these systems? They have all been tried either in relative purity or in combination, and all have clearly left something to be desired.

Currently, we have an articulate minority decrying the evils of capitalism. This is particularly true in western Europe, and, to some extent, in the United States. I have little doubt that in other parts of the world where other systems are used, there are other articulate minorities raising their voices against the standing order of things, strongly suggesting social and economic shifts in one direction or another on the theory that the suggestions they have in mind would cure the trouble and make abundance universal.

The sad part of the situation is that, historically, these shifts have been going on for centuries in both hemispheres. One economic technique after another has been overthrown, with conditions as likely as not going from bad to worse, the suggested panaceas having been proven time and again to have been inadequate. Why this long series of failures? Why is it that even today, right under our noses, the state-controlled economy hailed as liberalism is proving itself bankrupt.

On the face of it, and in pure theory, any one of the systems could work reasonably well if honestly practiced. Communism, under certain conditions, has developed a social atmosphere that is to say the least, tolerable; barter and currency certainly have much to recommend them; and capitalism, at least on paper, seems to solve a good many of the shortcomings of all of the systems, and seems to present the possibilities of a way of life much more abundant than anything that has been attained to date.

Very important literatures have been built up on the pros and cons of these systems. There are numberless books on why socialism, for instance, would solve our problems, and the political theories, based on the practice of socialism are without end. I wonder if we should not look elsewhere for the real cause of these failures. I would like to present the thesis that in none of these cases is it the fault of the system or of the theory of the system. I have a strong feeling that some systems could produce an abundance far greater than others, but I think it is safe to maintain that any one of them could work toward creating a social environment at least better than the days of the cave man. Criticisms of the different systems point out fundamental weaknesses within the systems themselves: Lack of incentive in socialism and in communism, the ponderance of actual money operations in currency trading; and the inability to easily tap distant markets in the case of barter. These disabilities are only important in degree and they in no way account for the widespread social unrest and dissatisfaction which have continuously driven humanity to further experimentation and to continual revision.

It is my opinion that the great fundamental weakness in all the systems is the inherent weakness of a substantial majority to operate under any system. If education were really widespread, if honest effort were more universal, and if personal unselfishness were more the rule than the exception, any of the systems could operate. It is, in my opinion, the weakness of us humans that gives the subject matter to the articulate minority for airing their dissatisfaction in the system and in so doing, trying to interest the masses in experimental changes. Endless examples can be brought up to support this theory.

Let us start with capitalism. The accomplishments in the name of capitalism have been exceedingly great. This economic system has done more to raise the standard of living than any system or combination of systems ever tried. Yet capitalism has its back to the wall today in defense of itself. It is my opinion that the dissatisfaction with the system is not based on the workings of the theory involved. As a matter of fact, I find the theory of capitalism rarely discussed, and I believe it is little understood. It is the individual impositions of a small number of ruthless and selfish people that continuously produce irritations which become socially significant.

What is happening today in the countries that are again experimenting with socialism? Why does not England produce more? Why is continental Europe torn with bickerings concerning the division of the tax load and the dominance of one party or another? Again, it is the question of the individual selfishness of a fair part of the population in not cooperating with the theoretical scheme of things.

The individual in Britain lacks incentive. He would like to get something for nothing. In spite of a splendid theory of individual cooperation, his very lack of incentive is causing the standard of living of that large section of the world to be lowered at a much faster pace than he realizes. I have no doubt that this same thing is true in Soviet Russia. Russia's swing in the last few years toward piecework and incentive production strongly indicates that the communism of brotherly love on paper has to be tempered to the facts of human nature, and supported by the prison camp and the iron fist if it is going to work at all.

It has often been said that what the world really needs is a spiritual revival. I probably read into this statement a deeper meaning than the proponents of this theory intend, but I cannot help feeling that there is something to this if by spiritual revival is meant a simple and earnest desire to pull one's own oar, to be fair and friendly with one's fellows, and to be deeply concerned with the welfare of one's community.

If the basic trouble with capitalism is the human factor, the problem of setting up the ultimate perfect social organization may be far in the future. Blueprints and theories will never solve the problem. What our society, or any other, must be concerned with is not the question of individual security, but of a widespread realization that any working system must be based on honesty, fairness and understanding. Every person in this great population wants to see a better day, wants to have more abundance, and to enjoy greater personal freedom from the risks of life, but, if there is ever going to be any fundamental change for the better, of more permannce than history has shown to date, that change will have to originate in the human heart and mind, and not in any temporarily espoused social order.

Let me summarize this great problem with its historical background in mind. To begin, mankind has been particularly unfruitful in originating economic procedures. Broadly speaking, the essential qualities of a workable system can be counted on the fingers of one hand. For clarity, they might be listed in order, the order mainly taking the position in which they appear in history. First, we have the economy of self-sufficiency: The original hunter and fisherman, who, in the course of centuries, supplemented his activities by adding primitive agriculture. The societies practicing this technique were wanderers who of necessity were continuously changing their locale. Obviously, their standard of living was exceedingly low. Often, too, the population was controlled through starvation, mostly due to this low standard of living.

Thousands of years later the self-sufficient nomad began to settle down. Stock raising became characteristic of his economy, agriculture became somewhat advanced and consumed a greater percentage of his activities. The new life involved the creation of settlements, and, as a result, there developed the primitive mechanical arts, such as potttery making and house building. It was at this stage of the development that barter, almost automatically, became the economy of the day, and with barter, labor began to specialize, and the standard of living was raised.

Communism is the next form clearly indicated. All primitive societies have gone through it. As late as medieval times, it was practiced even in advanced England, the English Commons being a survival of the technique. Sixteenth century America practiced communism to a marked degree, and the more advanced states of Central and South America even today carry on communistic activities, little knowing that certain parts of the world are trying to introduce the technique as a new discovery.

Beginning about 500 B. C., or possibly a little earlier, the Mediterranean economy became currency minded. With the minting of coins in the Greek colonies, the whole tempo of exchange suddenly changed: Trade expanded greatly, and with it, individual well-being improved. A very few hundred years later in the Near East, a capitalistic economy was practiced in a crude way, and then for 1,500 years, the known world floundered, using one of these forms or another, or combinations of all three. The high standards of living in the creative periods, however, are closely associated with either the use of sound currency or simple forms of capitalism.

In the seventeenth century, the English and the Dutch established central banking and a capitalistic economy followed on a broad basis. Almost immediately the scope of world trade was enlarged. The dispatch possible in bringing materials from the ends of the earth by self-liquidating credit instead of by barter or the use of hard money was most spectacular. As we would say in modern terms, the velocity of trade increased largely due to the elimination of obstacles. The new trade of the world greatly expanded the importance and position of the middle classes and it was at this time that European civilization began to develop what Gladstone called the social backbone of England, and what the modern Russian refers to as the degenerate bourgeois.

Since the seventeenth century, the institution of capitalism has increased spectacularly in the United States, but it has been much more slowly accepted in other parts of the world than the average American appreciates. At the best, it is a thin veneer that simply facilitates final accumulation of goods for shipment, probably originating in many places under the mechanism of barter or a currency economy. I think it would be safe to say that three-quarters of the population of the world have no idea that great quantities of goods can be handled on bills of exchange, without the use of money in any tangible form.

The record is fairly simple and as I have said, earnestly presents a question as to why history shows so much shifting and so much retrogression when it is so obvious that the capitalistic economy is the greatest trade-creating mechanism that society has ever used. To my mind, the answer lies in the endless series of impositions practiced by ruthless or selfish individuals that on the very face of it demands the greatest exercise of honor and fairness. If I am right in this, the solution does not lie in going back to first principles and primitive forms. What we need is an enlightened and efficient police power and an awakening on the part of

everybody through education and understanding that an economic method that is essentially based on honesty and fair dealing can be very easily sabotaged. Capitalism in its pure theoretical form has never been broadly tried nor has there ever been a demonstration, on the record to date, that any large group of humans has yet displayed the qualities in their personal dealings that might make this latest economic discovery a success. If and when that day ever comes, the well-being of the world can be increased beyond measure.

Minimum Wage

REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. LESINSKI. Mr. Speaker, yesterday the amendments to the Fair Labor Standards Act went into effect. A million and a half workers are getting higher pay because the law now says that everyone who is employed in commerce or in the production of goods for commerce must get not less than 75 cents an hour. No oppressive child labor can now be employed in commerce or the production of goods for commerce, and no children may be employed in agriculture during school hours.

For the 22,000,000 workers who are covered by the Fair Labor Standards Act the 75-cent minimum wage means that they once more have real protection for their own living standard even though they may be getting much more than 75 cents an hour. The business health of the whole country is strengthened, and the children of this country are given greater protection. The entire country benefits from this great advance in the improvement of the Federal law establishing minimum fair labor standards.

I think it is important for all of the citizens of this country to realize how great an achievement this Federal establishment of minimum fair labor standards has been. The Fair Labor Standards Act of 1938 was made the law of the land by the Democratic Party under President Roosevelt and has been expanded and modernized in line with our changed economic conditions by the Democratic Party under President Truman.

The earnest and untiring efforts of fair-minded and forward-looking people to outlaw substandard labor conditions have had a long history in this country. More than 100 years ago the Commonwealth of Massachusetts moved to limit the workday of children to 10 hours.

Today we are far beyond such meager and pitiful beginnings. But year after year and decade after decade the record was one of frustration and of painfully slow progress.

The great impetus given in 1933 to the idea that the Federal Government itself could protect the people as individuals has brought results that are now plain for all to see. The protection of the worker against hardships that befell him when the country experienced a downturn of economic activity required a basic floor under wages. The attempt to do this under the National Recovery Administration was declared unconstitutional. This was a grave set-back to those of us who wanted to establish decent minimum fair labor standards as the law of the land. But it was not accepted as defeat. Our efforts did not stop. Nor did the need for our efforts disappear. By 1938 much had been done to improve the economic health of the country and to relieve the suffering of its working men and women. But great numbers were still working extremely long hours at desperately low wages. These people bore the crushing burden of weary hours of toil while others looked in vain for jobs.

Too many people were working 60 hours a week or more for 10 or 15 cents an hour. In too many households was industrial work being done by children as well as their parents, with the entire family earning six or seven dollars a week with their combined efforts. These conditions had to be corrected.

A start had already been made in 1936 in establishing fair labor standards for the workers who produced goods bought by the Government in the Walsh-Healey Public Contracts Act. This law applied to the important but limited field of the Government contracting for goods and supplies.

In 1938 the first Federal statute of broad application was put into effect. It met tests on constitutional grounds because it lies squarely within the framework of our Constitution. It met the tests of actual operation in preventing substandard labor conditions in the channels of interstate commerce and in the production of goods for interstate commerce. It helped the individual worker in these employments to attain more nearly the minimum of material sufficiency that he needs for his self-maintenance as a worker and for his self-respect as a man and as a citizen of our country.

The Fair Labor Standards Act of 1938 provided for a minimum wage of 40 cents an hour. It required the payment of one and a half times the worker's regular rate of pay if he worked more than 40 hours in a week for each hour in excess of 40. It prohibited the shipment in interstate commerce of goods produced in an establishment in which oppressive child labor had been employed during the 30 days before such shipment.

The purpose of the minimum wage was to correct a condition under which a man might work a full week and still find himself unable to feed himself and his family. There was no reason why a man who contributed a full week of his efforts to the economy should have to go outside the economy to get relief payments for his sustenance. There was no reason why the enterprise that employed him should be permitted to meet part of its necessary pay roll with relief money. The floor under wages was established to correct this condition.

The overtime-pay requirement was set up to spread employment and the child-labor provision was an effort, although an indirect one, to prevent oppressive child labor.

The Fair Labor Standards Act of 1938 has proved itself an effective instrument for carrying out its humanitarian aims and its beneficial economic purposes. It has been a good law for the worker and a good law for the employer. It went far to correct substandard labor conditions. It went far toward removing from the great majority of employers of this country who are fair-minded and who want to maintain decent labor standards the fear and the pressure of unfair competition from those who would seek to win an order or gain a market at the expense of their own employees.

But conditions have changed greatly since 1938. We have moved to a $250,000,000,000 economy, and the 40-cent minimum wage had become out of date. It was time to reexamine the law. It was time to bring it in line with conditions of today, and to strengthen it. This the Congress has now done under the leadership of a Democratic administration.

The new minimum-wage rate of 75 cents an hour directly benefits a million and a half workers whose pay had lagged behind the times. Indirectly, it affords protection to the 22,000,000 workers who are covered by the law. And it is an additional protection of the Nation's economy.

Under the Fair Labor Standards Act as it stands today there is vastly greater protection for the children of our country. Oppressive child labor is now directly prohibited in the production of goods for commerce. For the first time oppressive child labor is now also prohibited in commerce which brings this protection to such activities as transportation and communication. The act now provides clearly and directly the authority needed to deal with the vicious aspects of industrial homework.

The Fair Labor Standards Act, modernized, strengthened, and improved, is a great achievement and another great step forward in our unceasing efforts of the past 17 years to promote the general welfare of all the people.

Modernization Work on Aircraft Carriers in Brooklyn Navy Yard

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial published in the Brooklyn Eagle of Saturday, January 21, 1950, which commends my friend and colleague, Representative LOUIS B. HELLER, for his efforts to secure the assignment of one of the two giant aircraft carriers for modernization work to the Brooklyn Navy Yard. The navy yard is

UNIVERSITY OF MICHIGAN LIBRARIES

situated in Representative HELLER's congressional district and he has won the admiration and respect of the employees of the yard for his consistent efforts to provide them with additional work and increased employment. In that connection, he has had the wholehearted cooperation and support of the other eight Representatives in Congress from Brooklyn.

The editorial follows:

NAVY SHOULD GIVE ONE OF CARRIER MODERNIZATION JOBS TO BOROUGH YARD

Representative LOUIS B. HELLER has made a timely appeal to the Navy high command to assign to the Brooklyn Navy Yard one of the two giant aircraft carriers slated for modernization work. As he points out, the Brooklyn yard has pioneered in the work of rebuilding carriers along the lines dictated by postwar scientific developments and atomic research. And, as he adds, the work would provide employment for hundreds of Brooklyn workers who face dismissal on completion of several current jobs.

It should be pointed out here that when the economy cut-back in navy yard personnel was ordered throughout the country last year, Brooklyn suffered heavily but demanded that it receive its fair share of the necessary, continuing work which must be done by the Navy's shipyards unless our fleet is to rust away or fall into complete obsolescence.

Now, just the situation that was foreseen at that time is upon us. Additional workers, beyond those contemplated by the economy slash, face dismissal at the Brooklyn yard. They face that dismissal unless a share of the work which is to be done is awarded to the yard in Brooklyn. In terms of individual workers and their families, this means tragedy. In terms of maintaining the usefulness of the borough navy yard and its trained personnel for possible emergency, it would be another type of tragedy.

Brooklyn does not demand that the work at its navy yard be increased beyond the economy standards set last fall. It does demand that it have its fair share of the work which must be done, that it not be victimized by increasing the work of navy yards elsewhere.

The Eagle is glad to add its voice to that of Congressman HELLER in demanding assignment of one of the two carrier modernization jobs to the Brooklyn Navy Yard.

Ambassador to Ireland

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. DELANEY. Mr. Speaker, this morning we received the announcement from the State Department of the elevation of our diplomatic mission to Ireland from the rank of legation to that of embassy. I should like at this time to extend my congratulations through the medium of this House and its RECORD, to the State Department for this acknowledgment of the importance of carrying on diplomatic relations with Ireland on the highest level.

When Ireland took its proper place among the free and independent nations of the world, the United States quickly accorded recognition to the Irish Government, and welcomed to this capital the first minister to come from Dublin.

The establishment of the Irish Legation in Washington and the concurrent arrival of our Minister in Dublin signalized a new and happier era in Ireland's long and troubled history. Today's announcement by our Department of State marks a new milestone in American and Irish history.

This week is indeed a joyful one for the people of both Nations. It was only last Friday that our Government announced the signing of a historic treaty which restates and renews the long friendship which has marked the relations of the American and Irish peoples.

Today we can point not only to a treaty of friendship, but, more, to a sealing of that compact with a still further earnest of friendship and high esteem—the elevation of our diplomatic missions to full rank.

What has happened today will, I am sure, lift up the hearts of millions of Americans of Irish descent. I sincerely hope that these two great strides in Ireland's glorious history will be harbingers of a third great advance—to the complete unity of all the provinces and counties of Ireland under the one free and independent Government in Ireland, the Government whose seat is in Dublin.

Hawaii Welcomes Inquiry of Un-American Activities Committee

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. FARRINGTON. Mr. Speaker, on Wednesday, January 18, 1950, the Honolulu Star-Bulletin published the following editorial:

THAT INVESTIGATION OF UN-AMERICANISM NEARS

A visit here by members of the National House Committee on Un-American Activities is expected within the next 60 days.

It's to study the scope and effect of alleged Communist influence here.

The Washington bureau of the Star-Bulletin clearly describes the plans being made now at the Capital.

First, one of the two special investigators sent here a few months ago by the House committee is coming back. He'll be here in a week or 10 days, to set the stage for the private inquiry and for the public hearings, if any.

He will be followed by the subcommittee, which will come at such a time as its members can get away from Washington.

The subcommittee will bring one or two of its own staff members. Other staff workers may be engaged here.

No limit has been set on the length of the committee's stay in Hawaii. That depends on the job they find to do, and the thoroughness with which they do it.

The proposed inquiry should be a salutary thing.

If carried out in a spirit of objective investigation, it can be, for Hawaii, a most helpful thing.

We are confident that any objective, completely unprejudiced inquiry will prove that the great majority, the overwhelming majority, of Hawaii's people are thoroughly loyal.

They are neither Communists and fellow-travelers nor under the influence and domination of such Communists and fellow-travelers as may be skulking in the dark and working in their sinister way to undermine an American community.

We note in some quarters a disposition to sniff at the proposed investigation—to dismiss the projected visit of the Congressmen as merely a junket for their personal pleasure.

One such sneer comes from Willard K. Bassett, the mayor's administrative assistant and often the mayor's mouthpiece.

Another sniff is from Ralph Vossbrink, president of the Oahu CIO council.

And a similar crack comes from Jack Hall, ILWU regional director. Says he: "It is nothing but a political smear committee."

Such an attitude does none of them credit. It is particularly ill-becoming in the assistant to the mayor. For it amounts to a jeer at the processes of democratic government, and he himself has been the long-time beneficiary, through appointment to public jobs, of that kind of government.

We should welcome any investigation which will produce facts on the Communist situation here, whatever it is.

Anyone who has facts or reliable leads on communism here should join heartily in making those facts and leads available.

And because this Territory has now for a long time been under fire from a few quarters as a nation rampant with communism, we should insist, as a matter of common justice, that the climax of the committee's work be the production of established facts.

Its findings, moreover, should clearly set the Hawaii situation in proper relation to the whole national picture.

For nothing is more certain, more clear, than that communism is alien to Hawaii. If it is here, it has been imported, or has entered by stealth, as secretly as the termite, the fruitfly, the leafhopper, the cane borer, or any other pest which has plagued the islands.

Rabbi Abraham Mayer Heller

EXTENSION OF REMARKS
OF
HON. JAMES J. HEFFERNAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Brooklyn Eagle of January 22, 1950, by Clarence Greenbaum, paying tribute to Rabbi Abraham Mayer Heller:

RABBI HELLER, OF FLATBUSH, A PREACHER AND TEACHER

(By Clarence Greenbaum)

Erudite Rabbi Abraham Mayer Heller's lifelong philosophy is that community educational activities are necessary adjuncts to the conduct of religious rites.

Dr. Heller, to whom many honors came last week as his congregation marked the twenty-fifth anniversary of his affiliation with the Flatbush Jewish Center, has applied this educational theme of preacher and teacher well. In practice, under his guidance, the center has thrived from the point 25 years ago when it attracted but 35 families to its present stage as a magnet for more than 700 families.

When one thinks of the center at 500 Church Avenue, one cannot help but think

of Dr. Heller, who was made life rabbi there 5 years ago. The 51-year-old spiritual leader, who springs from a long line of rabbis, is the only rabbi the center has ever had. It was organized in 1921, but services were conducted by visiting rabbis before Dr. Heller was engaged.

HIS SCHOOLING

By the same token, the center is the only religious institution which Dr. Heller has served. Born in Lithuania, he was brought here by his family when he was 11 years old. He was graduated from Towsend Harris Hall High School, and attended the College of Arts and Sciences of New York University before finishing his undergraduate work at the University of Minnesota. There he received a bachelor of arts degree.

Then he did graduate work at Columbia University, where he received a master of arts degree in social science. He was graduated from the Jewish Theological Seminary of America, Manhattan, in June 1924, with the degree of master of Hebrew literature, qualified, in his own words, to serve the community as a preacher and teacher.

In 1930, Dr. Heller received the degree of bachelor of laws from St. John's. He was admitted to the State bar in 1931, although he has never practiced law. It was his thirst for knowledge and his desire to have as much background as possible to serve the needs of his community that prompted him to study law.

WROTE TWO BOOKS

Dr. Heller is the author of two fairly popular books on Jewish religion. One titled "Jewish Survival," is a collection of his selected essays and sermons. It was published in 1939.

The other volume, The Vocabulary of Jewish Life, published in 1942, is a study of Hebrew customs and rituals. It is used extensively as a textbook for adult education classes in various schools. Additionally, he has contributed many articles to various publications.

Besides being one of the best-attended synagogues in the borough as far as services are concerned, the center's education department includes Brooklyn's largest daily afternoon religious school for children between the ages of 6 and 14. This school supplements the youngsters' secular education.

ADULT CLASSES

Under the guidance of Dr. Heller, the educational program also features departments for high-school students and adult classes. There is being erected a seven-story community house and educational institute on the Ocean Parkway side of the center which, when completed by this fall, will house an experimental Jewish progressive day school. All the curriculum requirements of the board of education will be conformed to, plus Hebrew teachings. For this purpose, the Bialik Hebrew Academy at 400 Stone Street, recently chartered by the board of regents, will be moved to the center. There will be an 8-year curriculum, plus a nursery school and kindergarten. The new edifice will also house a gymnasium, library, and other educational and recreational facilities.

HONORS NOT NEW

Dr. Heller is proud of the fact that the center serves as a beehive for community events. Many organizations and clubs, such as the Jewish War Veterans B'nai B'rith, meet there. During the war the center supplied a record number of blood donors for the Brooklyn Red Cross. Now the Flatbush division of the Red Cross is housed in the center for the annual appeal. The center also was among the four leading religious institutions in the sale of war bonds.

Honors, like those heaped upon Dr. Heller this past week, are not exactly new to him. Five years ago, to mark the twentieth anniversary of his affiliation with the center, a grove of 5,000 trees was planted in his honor near Jerusalem.

He is a founder and past president of the Brooklyn Board of Rabbis, and served two consecutive terms, in 1946 and 1947, as president of the New York Board of Rabbis. He has been prominently identified with Zionism and various philanthropic endeavors, and during the war he led movements for the escape of as many Jews as possible from Germany and other Hitler-controlled lands.

As chairman of the New York Board of Rabbis committee on chaplaincy, it is his duty to provide some 50 Jewish chaplains for city institutions like Bellevue Hospital, as well as for private institutions.

TO GET SABBATICAL

Dr. Heller's long and distinguished services to the community are in no small part due to his wife, the former Frances Lesser, of Boston, whom he married in March 1932. At that time, she was national president of Junior Hadassah. They live with their one son, Zachary, 11, at 188 Stratford Road.

So greatly esteemed is Dr. Heller by the members of his congregation that last night they surprised him by announcing that, when the new religious school is completed, he will have a 6-month sabbatical leave, with his family, to Israel with all expenses paid. Besides, they took out a special insurance policy for him, naming his family as beneficiaries, and presented it to Dr. Heller as a token of their warm affection for their "preacher and teacher."

Problems Before Congress

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. LECOMPTE. Mr. Speaker, on November 14, 1949, the members of the Farm Bureau of Davis County, Iowa, met in annual meeting at Bloomfield and adopted a set of comprehensive resolutions expressing the position of this great organization with respect to issues and problems that are before this country.

I desire to give to the Members of Congress the opportunity of knowing the position of the Farm Bureau of Davis County, Iowa, at this time, and I include these resolutions in my extension of remarks:

We, the resolutions committee, present the following declarations of principles and suggestions for consideration to the members of the Davis County Farm Bureau:

1. We feel it is imperative for the future success of any farm program to have that program developed through the combined approach of our two major political parties.

2. We believe that guaranties of 100 percent parity as compared with lower supports would result in more drastic governmental controls. It is important, therefore, to keep controls at a minimum and still get satisfactory and desired results.

3. We believe that if the cost of administering and carrying out a farm program becomes too high, in the minds of our consumer public, the agriculture segment of our society will stand in danger of losing its farm program.

4. We are in favor of flexible supports to average 90 percent of parity.

5. We favor flexible supports tied to the amount the commodity is in surplus with a minimum floor established by law and giving the Secretary of Agriculture the discretionary authority to set support prices from this minimum up.

6. We feel that, if production payments are made directly to a farmer, the prices paid by consumers for farm commodities will not drop enough to have a noticeable influence on the amount of farm commodities consumed. We believe that production payments would establish a cheap food philosophy in the minds of consumers. This philosophy might be dangerous to the long-time interests of farmers.

7. We believe that it is dangerous to have the income of farmers dependent to a large extent upon direct appropriations from Congress. We do, however, favor use of production payments in support of perishable nonstorable commodities. We go on record as being opposed to the destroying of any farm commodity that is in physical surplus as this destruction is both wasteful and sinful.

8. It is reported that half the families in the United States are not eating right. Part of this is due to insufficient family income and part to not knowing how to eat right even though the family income is sufficient. We favor promotion and extension of a school-lunch program that will give each and every school child in the United States an equal chance to have at least one square meal a day.

9. We favor the using of farm surpluses for school-lunch programs, blue stamp and relief programs.

10. We favor more research by Government farm agencies in expanding the farm market and finding new and alternate uses for farm commodities.

11. Use European relief, school lunch, aid to disabled, underprivileged, and aged groups (blue stamp) to increase consumption of farm products.

12. Satisfactory compliance with soil-conservation practices should be a requisite to eligibility for price supports.

13. We feel that when acreage allotments are used the base for computing them should depend upon fertility of land and good soil-conservation practices rather than past history of production in that area.

14. We would like to personally commend the Soil Conservation Service for the services they have rendered to farmers in Davis County during the past year. We strongly urge the farmers in Davis County to take advantage of the services available to them through our local soil-conservation unit. We would like to see the farmers make more use of the services of our soil technicians.

15. We strongly favor having the Soil Conservation Service set as their ultimate goal the charting of every farm in Davis County for that farm's capabilities.

16. We are not in favor of abandoning the parity concept for the income-support standard. We believe that parity should be modernized to reflect changes in technology and regions that have taken place in agriculture during the past 35 years.

17. We are in favor of the human approach of mediation in settling labor-management disputes since these disputes are somewhat social, ethical, and economic in nature.

18. We favor the organization of a Worker Extension Service, similiar to the Agricultural Extension Service, to work with labor groups for the purpose of helping them solve problems relative to family living.

19. We favor the changing of mail routes so that the principle of free mail delivery becomes an actuality to all rural families.

20. We are in favor of the establishment of a Federal agency, similar to the REA for the purpose of setting up telephone cooperatives.

21. We believe that road funds should be distributed on a need rather than an area basis.

22. We, in the Farm Bureau, recognize that there is duplication and overlapping of services among our governmental farm agencies. For this reason we favor the coordination of the farm agencies to the fullest extent possible in an effort to correct this situation.

UNIVERSITY OF MICHIGAN LIBRARIES

23. We favor a farm program set up on the following basis: Give the Secretary of Agriculture the power to set support prices, for those commodities in excess production, as low as 75 or 80 percent of parity. At the same time making provisions to set support prices of commodities in which an increase of production is desired high enough so that, if desired shifts of production are obtained, total support prices plus soil conservation payments equal at least 95 percent of parity.

24. The United States has become the greatest creditor nation the world has ever known. It is her responsibility, therefore, to promote good will in international trade and do away with artificial barriers to trade. This would be one method of raising the standard of living in other nations. This would also promote more trade thereby giving other countries a chance to pay their debts.

A. We go on record as favoring a gradual reduction of tariffs and the lifting of other free-trade barriers.

B. We favor the establishment of more reciprocal trade agreements between the United States and other nations.

25. We would like to take a few moments to mourn the loss by death of five of our oldest Farm Bureau members, George Good, William Wagler, Ed Blasi, V. G. Warner, and H. J. Craig. It was they who stood solidly in support of our farm organization from humble beginnings to its present place of power and prestige. We can only hope that community-minded young men will replace them by accepting the responsibility that was theirs.

26. In closing, we feel all of us should pledge ourselves to the procurement of membership in every way possible, so that we will have help in carrying the tremendous load our Farm Bureau organization has assumed for the benefit of all farmers.

The Study of Bigness

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement I made before the New York State Bar Association on January 25, 1950:

THE STUDY OF BIGNESS

There are many valid reasons which prompted me, as chairman of the House Committee on the Judiciary, to set up a Subcommittee on the Study of Monopoly Power.[1] One, frankly, was to shake the public lethargy, to prod the people into awareness that the middle nineteen hundreds was as different from the turn of the century as handicraft is from mass production. This commonplace thought is most readily agreed to, generally, but meets with fiercest resistance when an attempt is made to apply it to a realistic definition of monopoly.

There are two main reasons why I am concerned about concentration of economic power in the United States. One is that concentration of business unavoidably leads to some kind of socialism, which is not the desire of the American people. The other is that a concentrated system is inefficient compared with a system of free competition.

We have seen what happened to the other industrial countries of the Western World. They allowed a free growth of monopolies and cartels until these private concentrations grew so strong that either big business would own the government or the government would have to seize control of big business. The most extreme case was in Germany, where the big-business men thought they could take over the Government by using Adolf Hitler as their puppet. Hitler turned tables on them, so Germany passed from private monopoly to dictatorship and disaster.

In a report of experts sent to our Secretary of the Army we find this significant statement:

"Germany built up a great series of industrial monopolies in steel, rubber, coal, and other materials. The monopolies soon got control of Germany, brought Hitler to power, and forced virtually the whole world into war."

We must deplore the weaving in this country of the pattern that gave us in Nazi Germany the Krug, Thyssen, and I. G. Farben industrial empires.

There are clearest indications that unless checked our economy will become more and more controlled by a handful of giant corporations. The Federal Trade Commission just reported[2] that 46 percent of the total capital assets of all manufacturing corporations in the United States as of 1947 were concentrated in the 113 largest manufacturers, which in turn owned over sixteen billions of net capital assets. Three companies already control 100 percent of our aluminum output, three companies make over 95 percent of all tin cans and tinware, three make over 90 percent of all linoleum, three huge oligopolies control cigarettes, three control whisky, three control soap, three control autos. A Department of Commerce study corroborates this dangerous trend: A Big Four controlling at least 50 percent of production dominates 150 of 452 industries recently surveyed by the Department.[3] It is time we stopped, looked, and listened.

The Sherman Act is 90 years old. The Clayton Act, 36. They are horse-and-buggy statutes applied to an automotive and jet-propelled era.[4] These antitrust laws have not been kept current with today's facts of life.

All amendments to them have weakened, not strengthened, the antitrust laws.[5] The end sought, that of a free and open competitive society, has been steadily constricted by such acts as the Shipping Act of 1916,[6] the Civil Aeronautics Act,[7] the Reed-Bulwinkle,[8] the Webb-Pomerene,[9] and the Insurance Moratorium Acts.[10] All these amendments permit restrictive arrangements and agreements to lessen or soften competition. They chip away the underlying principle of the Sherman, Clayton Acts. They are economic crutches for certain groups—mainly pressure groups—at the expense of the general public.

The time has come to reexamine all these enactments that have weakened our antitrust fabric. The loopholes through which those seeking monopolistic advantages easily crawl must be plugged, whether the loopholes were hollowed out by amendments such as I named or by holes in the acts themselves.

Let me examine with you one such obvious hole in the antitrust laws. When the Clayton Act[11] was passed in 1914, Congress clearly intended to prevent prospective concentration achieved through the merger of competing concerns.[12] Section 7 of the act prohibited one corporation from acquiring the stock of another where the effect of such acquisition would be substantially to lessen competition, restrain commerce, or tend to create a monopoly. Absurdly enough, it is not violative of the act to acquire the assets of a corporation for possible monopolistic purposes.[13] I have proposed the cure in the Celler bill, H. R. 2734, which has passed the House and now awaits action in the Senate. Again, it is 1950 and the agents of resistance to change (no matter how logical and necessitous the change) and public apathy leave the issue still in doubt.

Yes, we hear the complaints that the law is not clear, that court decisions cannot be predicted,[14] and that the trend of interpretation is wrong. But you know, as good lawyers (and that you are) in most instances whether or not a particular activity violates the antitrust laws. There is, of course, a borderline area, but how narrow a strip that is. Even one as wise as Solomon could not envisage a law to cover all compounds in a conjuring cup which you able members of the bar can mix. As Mr. Herbert Bergson, of the Department of Justice, puts it, "* * * one who does not wish to run the risk of falling in should not persist in skating out as far as he possibly can on thinning ice; or for that matter skating on no ice at all."[15]

It is safe to say if there were not so many circuitous routes taken to skirt the intent of the antitrust laws—the maintenance of a competitive society—we'd hear less complaints about the obscurities and misinterpretations of our antitrust laws. The burglar wouldn't have to worry about the complexities of a Yale lock if he didn't intend to break through in the first place.

I want to make it clear I would vigorously oppose any antitrust laws that attempted to particularize violations, giving bills of particulars to replace general principles and the basic philosophy of free enterprise. The law must remain fluid allowing for a dynamic society. Otherwise, to put it bluntly, the process would become a rat race between the monopolist seizing upon omissions and the Congress trying to fill them into the law, always 18 steps behind. As I pointed out before, after 36 years Congress hasn't caught up yet to plugging section 7 of the Clayton Act.

True everybody is publicly against monopoly as he is publicly against sin. It reads well in publicity releases. A president of one of our billion-dollar companies, a very able

and estimable gentleman, in testifying, proclaimed his approval of the antitrust principles with no little emphasis,[16] yet his company has 16 antitrust suits filed against it by the Department of Justice and a number of similar complaints filed against it by the Federal Trade Commission. In the last two suits, two district judges within a year, one Judge Knox[17] and the other Judge Forman,[18] excoriated the baneful practices of the company. That kind of support for the antitrust laws as expressed by the president of that company is like the support the rope gives to the hanged.

And what about bigness as such—the power of size aside from what it may or may not do? That seems to me the question which has gone begging, and which only a very few have the courage to face up to. What inhibiting fear blocks even the asking of the question? Business giants are a fact in our economic life. Is then not an examination of their impact on our society a healthy and even a necessary one? Judging from the repercussions there are those in big business who do not think any question of their position is proper.

Recently a new judicial trend appeared, striking at bigness. Judge Learned Hand in the Aluminum case[19] made it abundantly clear that mere size could reach a point in which the power to restrain trade was so great as to make it illegal. The numerical measurement of size in this case was 90 percent of the industry under consideration.[20] Judge Hand's decision was cited with approval by the Supreme Court in the Tobacco case,[21] where the defendants, although conspiracy was charged, together controlled over two-thirds of the domestic field of cigarettes and 80 percent of the field of comparable cigarettes. But the Supreme Court apparently is unwilling to follow to the end of the line, leading to the principle that power is more significant than specific intent. The Court has yet to depart from its established principle that "the law does not make mere size an offense * * *"[22] Whether sound economic theory and industrial history have antiquated this principle is the question we must face.

The facts in the Columbia Steel case[23] revealed that the acquisition of the Geneva plant from the War Assets Administration gave the United States Steel Corp. ownership of over 51 percent of the rolled steel or ingot capacity of the Pacific coast area. With this background of size, the court nevertheless held that the acquisition of Consolidated Steel Corp., coupled with the 180 acquisitions of the United States Steel Corp. prior to 1920 and 8 acquisitions from 1924 to 1943, was not persuasive enough to compel the conclusion that there was present the necessary specific intent to monopolize

The majority of the court, in this case, failed to strike down the immunity which it has granted to bigness under the Sherman Act. At the present time, therefore, the problem of bigness as such is still far from judicial solution.

Many of our expert witnesses, and witnesses from small business, have stressed the idea that bigness is dangerous to free enterprise and to political freedom.[24] This view was contradicted by witnesses representing big business, who asserted that the antitrust laws and the pressure of competition can be counted upon to prevent abuse of the supposed powers of large size.

The viewpoint that power is dangerous has best been summed up by Justice Douglas in the Columbia Steel case where he stated in his dissenting opinion, "For all power tends to develop into a government in itself. * * * Industrial power should be decentralized. It should be scattered into many hands so that the fortunes of the people will not be dependent on the whim or caprice, the political prejudices, the emotional stability of a few self-appointed men."[25] Those in agreement with Justice Douglas believe that some concentration of power, both private and public, are unavoidable. Technology has to be accepted for the great benefits it offers, and some aspects of technology require large organizations for their efficient use. Many such applications as we all know, take the form of natural monopolies that fall under public regulation as public utilities, or in some cases become public services like the TVA, reclamation, and the Post Office. But all concentrations, public or private, are liable to abuse and require constant public vigilance to keep them devoted to the services of the public.

They believe, too, that private corporations may have to be large in order to do some kinds of work; other kinds of work can be efficiently carried on by small or middle-sized organizations. The relative size actually required for efficiency leave plenty of scope for free enterprise and competition, but only provided the big firms are prevented from using their power to take over the areas in which bigness has no technical justification.

Often we are told, and often it has been stated that not only has the process of concentration become accelerated, but that the units of concentration, the concentrates themselves, have grown to gargantuan size. The du Pont complex is often pointed to as an example of conglomerate concentration. It embraces not only the du Pont operations, vast as they are, but likewise has a significant relationship and control over General Motors, United States Rubber, Libbey-Owens-Ford Glass and numerous other huge entities. Each one of these outfits controlled by the du Pont dynasty is, in itself, an empire which has grown from without as well as from within, by natural growth or by merger, consolidation and the elimination of rivals. They have acquired the companies of their suppliers, distributing companies, mines and quarries as well as absorbing their customers and competitors.[26]

The Federal Communications Commission in its report of the investigation of the telephone industry in 1939 points to the relationship between the American Telephone & Telegraph Co., and its subsidiary, the Western Electric Co., which resulted in sales at noncompetitive prices and effected as well the rate structures for telephone services, since a large part of the total investment in the Bell System, as well as a part of its operating expenses, represents the purchase price of telephone apparatus, equipment, and material.

It has likewise been pointed out to the subcommittee that a tremendous amount of risk capital is in the hands of large companies in the form of profits that are not distributed to the stockholders.[27] These corporate savings, we are told, are usually available for expanding the plant of the big company or for acquisition of either a substantial or complete control of other companies. We have likewise been asked to note that many great companies, for example, have not offered any issue to the public for years. They don't need to.[28]

In 1938, Fortune magazine, a magazine nobody could remotely associate with the baiting of big business, ran a series of articles on bigness. I want to read two short paragraphs to you:

"In the progress of mankind there are times for everything. There was a time for the dark ages, another for a renaissance, another for an industrial revolution. There was a time for the building of America, for the creation of bigger markets and bigger pay rolls, and, inevitably, bigger industrial units. In our time men have been conditioned to the idea of bigness. They believe that to grow big is almost of necessity to progress. They believe that the expansion of American enterprise necessarily involves the corporate expansion of its units. And they are taught that the corporate expansion of the units should result in bigger profits, individually and to the economy as a whole.

"But it is possible to question this: Not that our time has been wrong, but that it may be time for something else. It may be time to weigh the notion that there is some necessary connection between economic expansion and corporate bigness. It may be time to wonder whether profits and the national income would not be bigger if the corporate units of industry were not so big."[29]

I have dwelt lengthily, I know, on the question of bigness and while the subcommittee is in the process of examining it, I believe it is necessary for a group like the members of this esteemed bar association to examine the premise as well, to give us the benefit of your approach, your understanding, and your studied criticism. You must ultimately concern yourselves with the question: Should Congress legislate on the problem of bigness?

An adequate answer to the questions presented by giantism and bigness is fraught with innumerable economic, legal, and political pitfalls. Brave, indeed, is he who would tread upon the hallowed grounds preempted by size. Yet several suggestions have been volunteered by those who have considered the broad implications of the problem with care. I do not consider any of these proposals a panacea; nor do I present them to you as possibilities other than tentative in nature. I do feel, however, that they offer fertile soil for stimulated thinking on the part of both members of the bar and the American public.

Prof. Howard J. Trienens, in his recent testimony before the Subcommittee on Study of Monopoly Power,[30] emphasized the strong analogy between the Public Utility Act of 1935[31] and dissolution procedure under the

UNIVERSITY OF MICHIGAN LIBRARIES

Sherman Act,[32] the former being closely patterned after the decree of the court in the Tobacco case of 1911.[33] On the theory that public utility holding companies should be legally treated in a manner no different from other holding companies engaged in interstate commerce, a bill was drafted by Dr. Walter Adams of Michigan State College applying the principles of the Holding Company Act of 1935 to all corporations of excessive size.[34] The bill goes little further than to embody in legal language the suggestions outlined in Fortune magazine as early as 1938[35] and merits attentive consideration.

Another line of attack was suggested by one of the prominent "experts" in the field of antitrust law. This solution would amend the Federal Trade Commission Act by adding a new section empowering the Commission to order the dissolution of a company whenever its size and power was so great as to substantially lessen competition or create a monopoly in any line of commerce.[36] It, too, is worthy of thorough study.

A third avenue of approach suggests an amendment to section 2 of the Sherman Act which would give a statutory definition to the concept of monopoly.[37] "Up to the present time the antitrust laws have not been successful in the monopolization field."[38] The legal definition of "monopoly" has failed to square with the economic realities of the current market place despite optimistic predictions to the contrary.[39] Any such action on the part of the Congress would have to be done with great care and studied preparation. But the idea that the hiatus in the antitrust laws which suffers the spawning of unwieldy mammoths to go unchecked may be closed by legislative language defining "monopoly" is certainly worth exploration.

We all seek the same goal, a free and competitive society. The primary question lies before all of us, gentlemen—How shall we maintain and expand it?

A British Warning To Preserve the American Watchmaking Industry

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. DONOHUE. Mr. Speaker, on repeated occasions, during the past 3 years, I have urged the Members of this House to concentrate their attention upon the gradually increasing disintegration of the American watchmaking industry, and the paramount need for corrective action to preserve it.

I have emphasized that, while I am not personally opposed to the cooperative economic theory at the basis of our trade-agreements program, it has been my understanding, which I am sure is shared by every other Member of the Congress, the negotiation of such a program was not intended or designed to eliminate our own domestic industries.

Especially so when such domestic industry involves the preservation of irreplaceable skilled craftsmanship and a vital contribution to our national security resources. I have already introduced in the RECORD the testimony of high Government officials that the continuation of watch-manufacturing operations is essential to the defense of the United States.

I have asked the State Department, again and again, to take cognizance of this vital fact in their trade-agreement negotiations with Switzerland, which country is subsidizing their own watchmaking industry with clear purpose of controlling the world watch market and eliminating American competition.

Although the State Department has no qualms about asking the American taxpayers, through their elected Representatives, to support almost every country on the globe, they are yet unconcerned about our national security and community employment problems with respect to the watchmaking industry.

It has been said that our State Department follows the lead of, and takes its instructions from, the British school of diplomacy. In this regard, I should like to call the attention of the State Department, and my colleagues, to a pertinent article entitled, "Watch and Clock Making Revives in the United Kingdom," written by Mr. A. H. Stuart, Consumers Merchandise Branch, Commodities Division, OIT, United States Department of Commerce, which appeared in the Foreign Commerce Weekly of January 16, 1950.

This article, without bias or prejudice, but with scholarly, factual detail, traces the history of domestic watchmaking in the British Empire. It decisively proves that the British have learned, from sad experience, that watchmaking is an essential industry, and they are being wise enough to admit past mistakes and take measure to rectify them.

It is my hope that the State Department high command will perhaps see fit to consult with Commerce Department experts to coordinate their primary joint purpose of administering the departments of this Government for the good of the people of the United States.

I earnestly ask each of you, my colleagues, to read this warning message, and join your efforts to prevent the American people and our Armed Forces from being deprived of sufficient precision instruments to conduct a possible atomic war, God forbid!

The article follows:

WATCH AND CLOCK MAKING REVIVES IN THE UNITED KINGDOM—BRITAIN'S BURGEONING CLOCK INDUSTRY SCORES FORTY-FIVE-FOLD GROWTH IN 9-YEAR PERIOD

(By A. H. Stuart, Consumers' Merchandise Branch, Commodities Division, OIT, U. S. Department of Commerce)

(EDITOR'S NOTE.—What is happening in timepiece production in the United Kingdom provides an interesting case study of the neglect and rehabilitation of a national asset. The very problems that are now of concern to watch manufacturers in the United States were encountered earlier and more severely by the British. It is well to note how the wartime shortage of watches and clocks has induced a remarkable change in improving British methods of production and in minimizing reliance on imports. If this program is carried forward vigorously, the British industry's output will—after satisfying accumulated demand at home—again be flowing into the channels of international commerce, earning exchange for Great Britain. The impact of this renewed competition is likely to be felt chiefly by the Swiss watch industry and the United States clock industry.)

Considered at one time to be the greatest of its kind in the world, the British watch and clock industry, after a long period of dormancy, was reestablished during the war. It is possible that it will again become a principal source of horological products, as the British Government has decided that a flourishing watch and clock industry must be maintained for security reasons (the Government's general policy of building up domestic manufacturing in order to provide employment and reduce imports was of secondary importance in arriving at this decision).

To encourage increased domestic production of watches and clocks, the Government is giving practical aid to the industry. The success of this program may be measured by the increase in production in 1948, when 580,000 watches and 2,700,000 clocks were manufactured, compared with 1939 output of only 18,000 watches and 60,000 clocks.

DEVELOPMENT AND DECLINE OF THE INDUSTRY

For hundreds of years English craftsmen specialized in making timepieces. The earliest clock worthy of our modern definition was made by Peter Lightfoot, an English monk, about 1335. By 1655 approximately 70,000 persons were employed in making and repairing timepieces, and British exports of horological products in that year were valued at more than £400,000. In 1675, the Greenwich Observatory was founded and was to become the basic reference point for measurement of time throughout the globe.

Englishmen have been responsible for many of the foremost inventions connected with horology. In 1661, Robert Hooke introduced the first balance spring (because he used a pig bristle, it became known as the hair spring). A few years later, Thomas Thompion, the father of English watchmaking, developed the cylinder escapement with horizontal wheels. Other master craftsmen were Thomas Mudge, inventor of the

gravity escapement, and George Graham, designer of balance wheels. In 1759, a self-educated Yorkshire carpenter named John Harrison crowned 50 years of self-denial, unremitting toil, and ceaseless concentration with the development of the first accurate portable timepiece—the marine chronometer. After a 10-week trial of one of his chronometers, it was in error by only 4½ seconds—less than one-tenth of a second in 24 hours. His instruments won for Harrison a prize of £20,000 offered by the British Government for development of a method to determine accurately longitude at sea. With Harrison's chronometer, longitude could be obtained from the difference in time measured from a standard meridian.

By 1800, Britain was the world's leading watch- and clock-making country, and its artisans were supreme masters of their craft. Tradition and individual craftsmanship, however, were insufficient to sustain the industry permanently. By 1850, the craftsmen's apathy toward the American system [1] of making timepieces from interchangeable parts manufactured by machinery was beginning to result in the progressive decline of the English industry, and some of the most skillful artisans were emigrating to other countries. By 1900, the industry could no longer meet domestic requirements and the United Kingdom was importing considerable numbers of watches and clocks from Switzerland, France, and Germany.

During World War I, the United Kingdom met essential requirements for timepieces by supplementing domestic production with Swiss imports. Following the war, the British industry continued to decline, and by 1935 the United Kingdom was importing approximately 5,000,000 clocks annually. At that time efforts were made to revive the industry. Several new clock factories were established by substantial concerns which believed that they had sufficient resources to withstand the foreign competition that was expected to be directed at them. However, the severity of this competition was much greater than anticipated. Prices of German clocks were reduced by more than 50 percent, and within 5 years some of the new firms were obliged to go out of business.

United Kingdom's imports and exports of watches, clocks, and parts, 1938 and 1947–48

[Quantity in thousands of units, value in thousands of U. S. dollars]

Item	Imports						Exports					
	1938 [1]		1947		1948		1938 [1]		1947		1948	
	Quantity	Value	Quantity	Value	Quantity	Value	Quantity	Value	Quantity	Value	Quantity	Value
Watches	7,548	6,517	1,333	4,672	1,519	5,072	214	284	(2)	(2)	(2)	(2)
Watch movements	554	1,181	295	1,361	352	1,712	19	66	(2)	(2)	(2)	(2)
Clocks	4,156	2,699	853	1,577	1,141	2,197	105	370	532	2,495	849	3,270
Clock movements	837	794	14	67	24	112	14	40	(2)	(2)	(2)	(2)
Watch and clock parts	(3)	867	(3)	1,437	(3)	2,257	(3)	370	(3)	2,765	(3)	2,623
Total value	-------	12,058	-------	9,114	-------	11,350	-------	1,230	-------	[4] 5,260	-------	[5] 5,893

[1] In 1938 reexports of imported watch and clock products amounted to $785,420 and consisted of 196,674 watches valued at $307,910; 18,838 watch movements valued at $63,570; 50,506 clocks valued at $84,590; 6,631 clock movements valued at $11,660; and watch and clock parts valued at $317,690.
[2] Included in watch and clock parts.
[3] Quantity not reported.
[4] Includes reexports of imported merchandise valued at $637,830.
[5] Includes reexports of imported merchandise valued at $550,280.
SOURCE: Accounts Relating to Trade and Navigation of the United Kingdom.

Germany appreciated the importance of a horological industry to the war potential of a nation, and undoubtedly the policy of undercutting pursued in the British market was motivated largely by military considerations.[2] During that period, German manufacturers received Government subsidies on exports to the United Kingdom ranging from 25 to 40 percent of production costs.

The fall of France in World War II and the subsequent cutting off of trade with Switzerland resulted in an acute shortage of precision timing instruments needed by the British military establishment. Some relief was obtained by imports from the United States, but after 1941 the United States own requirements sharply curtailed supplies from this source. The then existing British industry was too small for expansion on a mass-production scale. The United Kingdom was of necessity obliged to start from the primary stages of industrial tooling and labor training and produce as best it could the timing devices essential in modern military and civilian activities.

GOVERNMENT ASSISTANCE TO THE WATCH AND CLOCK INDUSTRY

At the close of the war, the British Government decided that the necessities of national defense made imperative the continued development of the domestic watch and clock industry. On October 16, 1945, Sir Stafford Cripps, then president of the board of trade, asked the House of Commons for a vote of credit for assistance to the industry. The vote was agreed to, and a government credit of £320,000 (approximately US$1,300,000 at the then existing exchange rate) was established. Provision was also made to increase this amount to £1,000,000, should additional funds be needed.

In commenting on this action, the Manchester Guardian on October 18, 1945, stated that "Britain has now as a result of the successful production of watches and instruments during the war a national capital asset of equipment, skill, and experience which would be wasted unless some encouragement is given to its use for commercial ventures. To maintain a body of trained instrument makers and a basis for research in this field is desired, both for reasons of future defense and for the sake of precision standards in British industry generally."

The Government at once made available £200,000 for the establishment of a National Horological College at London. This college was opened in 1947 and provides facilities for training essential technicians. The remaining £120,000 was used to encourage the establishment of watch and clock factories in distressed areas of Scotland and Wales.[3]

Under this phase of the government's aid program, fully equipped plants are leased to selected manufacturers for 5 years at an annual rental of 4 percent of their value—half the usual rate—with an option to purchase at the end of the period at prices then prevailing. As some equipment costs have risen by more than 300 percent over prewar levels, the offer of plants to users 5 years hence at current market prices eliminates the possibility of the industry being burdened with inflated capital charges, should equipment costs decline.

All firms taking advantage of these benefits are required to make full use of plant facilities, to undertake research development, and to take all possible steps to reduce costs in order that their products may become competitive as rapidly as possible. Several factories at Dundee, Glasgow, and Swansea are now operating under this system.

COLLABORATION WITH THE SWISS WATCH INDUSTRY

One of the most urgent problems facing the British was that of obtaining certain highly specialized watchmaking machines that were available only in Switzerland but which the Swiss refused to export, with the idea of protecting their own watch industry. However, when it became apparent that the British Government was determined to expand domestic production of watches, the Swiss realized that the British precision machine-tool industry could eventually supply the required machines. This would be possible because the decision was based on the necessities of national defense and initial capital costs were not, therefore, a controlling factor.

Under the circumstances, the Swiss felt that it would be to their best interest to collaborate with the British, and, as a result negotiations took place between representatives of the watch industries of both countries. An agreement was signed March 12, 1946, under which the Swiss agreed to make available, on a rental basis and under certain conditions, the special machines which the British needed. However, the decision as to whether a particular British manufacturer would receive such machines remained expressly with the Swiss, who also have the right to inspect the British factories to see that the machines are being operated according to Swiss methods. The Swiss also agreed to furnish to the British jewel bearings and certain watch parts. The British established acceptable import quotas for Swiss watches and movements at increased maximum prices.[4] Furthermore, the

[1] About 1800, the American inventor Eli Whitney, realizing the limitations of handicraft production, developed the idea of making mechanical devices from accurate interchangeable parts produced by machinery. In 1807, a New England clockmaker, Eli Terry, adopted this revolutionary principle and within a short time had reduced production costs by more than 75 percent. In the late 1840's, at Waltham, Mass., Aaron L. Dennison applied Whitney's idea to the manufacture of watches. British failure to accept the new method of manufacture at this vital transition stage is ironical, as an English clockmaker, Henry Hindley, is credited with making and using the first jig, a fundamental device in machine operations. Also, Eli Terry was an English clockmaker who had emigrated to Connecticut. The Swiss adopted the American system of watchmaking in the 1880's.

[2] Germany's watch and clock industry made important contributions to that country's war effort in World War II. One factory employing 2,800 workers produced more than 5,000,000 88-millimeter AA mechanical time fuzes and 15,000,000 20-millimeter point detonating self-destroying fuzes, in addition to supplying several types of timepieces required by the armed forces.

[3] Subsidies paid by the Exchequer to the watch and clock industry during the period July 1, 1946, through June 30, 1949, were as follows (expressed in United States currency): $310,000 in 1946–47; $730,000 in 1947–48; and $590,000 in 1948–49.

[4] Following devaluation of the pound, the British Board of Trade agreed to sanction the import of Swiss watches on a numerical basis instead of by value so that the same number of Swiss watches could be imported irrespective of their now-greater cost.

UNIVERSITY OF MICHIGAN LIBRARIES

British agreed that Swiss principles regarding control of output would be applied to the British use of Swiss machines.

The official Swiss announcement on the agreement stated that the Swiss Federal Council was convinced that the evolution of the British watch industry could not be prevented, and that it would be better for Switzerland to collaborate with the British industry than to permit it to develop independently.

DESCRIPTION OF THE PRESENT INDUSTRY

Approximately 70 firms are now producing watches and clocks in the United Kingdom, of which about 12 can be classed as large. The leading manufacturer employs more than 50 percent of the workers in the entire industry and accounts for nearly 60 percent of total output. To achieve efficient mass production, this company has integrated a number of specialist units into an organization which is as nearly self-contained as possible. The firm controls 13 large factories and several smaller units. Each factory specializes on either a single finished product or a related group of component parts.

This type of organization is designed to reduce costs to a minimum through mass production based on an intensive division of labor and on the use of a large number of specialized machines—a system that has been highly successful in Switzerland. It is understood that several other firms in the British watch and clock industry are being organized along similar lines.

Approximately 21,000 men and 14,000 women are employed in the industry, an increase of more than 31,000 workers over 1938, when total employment was less than 4,000. The average wage (as of August 1949) is 30 cents an hour for a 44-hour week, an increase of about 35 percent over the prewar average. A considerable number of youths are employed at a starting wage of 22 cents an hour. Most firms grant a 2-week vacation with pay each year. Unemployment has been slight and has been due primarily to temporary stoppages resulting from material shortages. The number of home workers in the industry is estimated to be extremely small.

PRODUCTION

Production of watches in 1948 was estimated at 580,000 units, of which 200,000 were entirely of British manufacture, while some imported components were used in the others. Production of clocks was 2,700,000 units, 2,000,000 of which were alarm clocks. All types of watches and clocks are being produced in a wide variety of styles. Clock cases are made of plastics and glass, as well as of wood and metal. One firm has developed a magnetic escapement for clocks which is said to make clocks silent, more accurate, and cheaper to produce.

It is expected that by 1950 annual production of clocks will exceed 7,000,000 units, and that this rate of output will be sufficient to meet domestic requirements and leave an exportable surplus of some 3,000,000 clocks. It is estimated that annnual clock production by types will be as follows: Alarm, 4,000,000; half-hour striking, 400,000; chiming, 150,000; 30-hour, 500,000; and electric, 2,000,000.

Because of labor-training problems and the difficulties entailed in obtaining certain machinery, a corresponding increase in watch production will require a longer time. However, the National Horological College should eventually provide the technical personnel needed to design watches, and the machines leased from the Swiss will assist materially in solving the machinery problem.

At present the shortage of certain raw materials and component parts is a problem. Some special types of brass and steel are allocated to manufacturers in ratio to the amount of their production which they export. Several firms have installed plants to manufacture jewel bearings, mainsprings, hairsprings, and small screws. Ample quantities of these items should soon be available.

PRICES AND DISTRIBUTION

Although prices in the domestic market are subject to strict Government control, the retail prices of timepieces in the United Kingdom are high and are subject to a purchase tax of 33⅓ percent of the wholesale value. Alarm clocks are priced from $6 to $15 and electric clocks from $10 to $50, depending on the type and quality of the case.

Traditional outlets for watches and clocks are some 7,000 retail jewelers. However, chain stores are now selling a considerable number of alarm clocks, and many electrical contractors are selling electric clocks. Most of the leading manufacturers arrange window displays in the stores handling their products. Although advertising is limited by the paper and newsprint shortages, the industry has expressed slight concern over this, as well as other marketing problems, because it can readily sell in the domestic market just about every timepiece that can be produced.

IMPORTS

Prior to World War II, annual imports were approximately 7,000,000 watches and watch movements and 5,000,000 clocks and clock movements. Switzerland was the principal supplier of watches and Germany and France supplied most of the clocks. In 1948, imports of watches and movements declined by 77 percent from 1938 and imports of clocks by 73 percent. Only 24,119 clock movements were imported in 1948, compared with 836,710 in 1938. Switzerland supplied most of the watches and movements and 50 percent of the watch parts. The United States supplied 40 percent of the watch parts. Switzerland and France were principal sources of imports of clocks and parts.

In view of the British Government's program for developing the domestic industry and of its general policy of limiting imports, it is probable that imports of timepieces will continue to decline. As a result of the quota provisions of the agreement of March 17, 1946, with Switzerland, that country will undoubtedly continue to supply most of Britain's imports of horological products.

Imports of alarm clocks valued at not more than 12 shillings[5] each are subject to an import duty of 25 percent ad valorem, or 4 shillings each, whichever is the greater. British Empire countries receive a preferential rate of 16⅔ percent or 2 shillings 8 pence[6] each, whichever is the greater. Imports of all other clocks, watches, and parts are subject to an import duty of 33⅓ percent ad valorem, except imports from Empire countries, which receive a preferential rate of 22⅔ percent ad valorem. Imported watches and clocks are also subject to the purchase tax of 33⅓ percent of the wholesale value.

United Kingdom imports and exports of watch and clock products in 1938 and 1947-48 are given in the table on page 4.

EXPORTS

In 1938 the United Kingdom exported domestically manufactured watch and clock products valued at $506,850; in 1948 such exports amounted to $5,346,840 and consisted of clocks valued at $3,270,300 and watch and clock parts valued at $2,076,540. Most of the 1948 exports were to countries in the sterling area.

The Government is placing great emphasis on increasing exports of timepieces as a means of obtaining foreign exchange. Each manufacturer is assigned an individual export quota and, as previously stated, is allocated scarce materials in ratio to his success in meeting his quotas. To meet foreign competition and achieve export goals, some manufacturers have reduced export prices below cost. With export quotas made and materials assured, it is then possible to make up the loss in the domestic market.

CONCLUSION

It will probably be several years before British domestic demand for watches and clocks is satisfied. During the war, few timepieces were available for civilian purchase and use, and a large replacement demand exists which cannot soon be filled under the current policy of reducing imports and increasing exports.

The continued success of the United Kingdom's export program is dependent primarily upon further increases in production. However, increased foreign competition or the imposition of prohibitive import tariffs and other restrictions by importing countries would tend to limit British exports of watches and clocks.

[6] One penny is equal to 1.17 cents United States currency.

Rural Electrification

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. MARSHALL. Mr. Speaker, I call to the attention of the Members of the House of Representatives an article by Wilfrid Parsons, S. J., which appeared in America, the weekly review, on December 3, 1949.

Like Father Parsons, many Members may not be aware of the very fine record that has been made by REA in bringing electricity to the American farm. It is a record that Mr. Claude Wickard and his associates in REA and in the Department of Agriculture can well be proud of.

WASHINGTON FRONT

After a recent visit from a former student of mine, now an employee of the Rural Electrification Administration, it occurred to me that we had there a very good example of the "welfare state" in action. Accordingly, I procured a kit of material which that agency has prepared for public information. Since few city people are even aware of the agency, still less of how it works, some of my urban readers may be interested.

When the Rural Electrification Act was passed in 1936, less than 11 percent of the country's farms had electricity wired into them. Farm work was muscle work, or at best gas-engine work; lighting was by oil lamp; housework was done by hand. In 1949, more than 78 percent of the farms have electricity, and I have before me a list of 22 farm-home and 37 field-and-barn appliances run by electricity, which are now most commonly used by "electrified" farmers. Formerly, the utility companies did not find it profitable to join the farms by wire, or, if they did, the price per kilowatt-hour was too exorbitant for all but a few of the most prosperous farm families. Cheaper distribution makes the difference.

Not by any means all the difference, however. Nearly 60 percent of all the farms electrified since 1936 get service from REA-

financed facilities. For REA does not build; it only finances. Generating plants and lines are built by the borrowers themselves, with money loaned by REA at low-interest rates and long terms of payment.

Now the interesting point about all this is that the vast majority of the borrowers and users are farm cooperatives, in most instances formed directly for this purpose. These co-ops follow the classical form; one vote for each member, and distribution of savings back to members each year. Borrowers own a million miles of line, serving 3,000,000 consumers. They either generate their own power, or buy it wholesale.

Since its foundation, REA has loaned an aggregate of $1,105,876,967; it has received $78,000,000 in interest, and $106,000,000 in repaid principal. Less than 1 percent of borrowers are in arrears. One interesting thing is that within 30 years or so, REA will go out of business, since by then the borrowers will have 100 percent equity, and REA will have all its money back—unless, of course, new forms of electrical power are invented meanwhile.

This is, of course, a tremendous economic revolution, which has profited the utilities, the appliance manufacturers and the farmers, not to speak of the United States Treasury, which will earn a handsome profit in interest. It is, also, still private corporate enterprise, of the cooperative type. But it is still more tremendous social revolution. Few city people can realize what a social change has been operated on the farms by that very electricity which they have always taken for granted. That would merit a separate essay by itself.

WILFRID PARSONS.

American Income, Its Sources and Distribution

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I include herewith the first article on American Income, Its Sources and Distribution, by Justus L. Johnson, of Aurora, Ill., former Republican State chairman of Illinois and one of the ablest political economists of our State:

I. AMERICAN INCOME, ITS SOURCES AND DISTRIBUTION

What the future has in store greatly concerns us. Not all people agree, neither do the experts produce the same conclusions.

Up in Wisconsin there is a manufacturing company whose chief line of production supplies the hospitals of the Nation. They have been greatly concerned because the hospital needs have been growing faster than the income of these institutions. They do not want to reduce the number of their workers because hospitals receive insufficient gifts to pay for goods needed.

This concern, the Hamilton Manufacturing Co., issues a bulletin of information designated "Hi-Lites." It is worthy of attention and analysis and is here presented with full credit to E. P. Hamilton, president of said corporation.

HOW IS INCOME DISTRIBUTED?

Preachers and teachers are among America's foremost opinion molders. Enjoying this place of influence, as they do, should carry a deep responsibility in presenting true facts. Unfortunately, some facts they present are inaccurate and is resulting today in a great deal of harm to our American way of life.

I don't think these groups are deliberately falsifying actual facts. Some no doubt are, because among preachers and teachers, we have some persons who want to twist facts around, just as this is being done by some persons in any group. Fortunately, the number is small and they account for only a very small part of the damage being done.

The real cause for the damage which results from wrong information is because of the lack of knowing what the true facts are. If preachers and teachers, who are among the best read people in our country, have incorrect facts, is it any wonder that the vast majority of our citizens are misinformed? Dr. Claude Robinson, president of the Opinion Research Corp., conducted a poll in American communities of over 2,500 population, among representatives of the clergy and teaching profession, on the subject of how American income was distributed. The clergymen were from all denominations and the teachers were social science teachers. Three questions were asked on this subject of income distribution—

(a) Wages and salaries.
(b) Dividends and interest.
(c) Rents.

In each case the persons interviewed were asked, "What portion of this form of income goes to persons whose total income is under $5,000 per year, and what portion goes to persons with incomes of over $5,000 per year?"

WAGES AND SALARIES

The average of the answers received showed that 66 percent of wages and salaries paid went to those with income under $5,000 and 34 percent to those with income over $5,000 per year.

This result was in great variance to the true facts. What are the true facts, and what is the source giving out these facts? The source of the facts I have taken from a pamphlet entitled, "The National Income and Its Distribution," published by Father Edward A. Keller, director of economic research of Notre Dame University. Father Keller's source was from figures published by the United States Department of Commerce and the United States Treasury Department. Here are the true facts.

Instead of those with incomes of under $5,000 per year receiving 66 percent of all wages and salaries paid (as Opinion Research showed preachers and teachers thought to be true), 89.8 percent was the correct figure. Likewise, instead of those with incomes over $5,000 per year receiving 34 percent of the national income, they received only 10.1 percent of the national income from these sources.

An interesting thing to note at this point is that those with incomes of over $5,000 per year who receive 10.1 percent of the national income, have only 5.5 percent left after paying taxes. This means that income taxes take nearly half of this total income. It should be obvious that if all the income in excess of $5,000 was confiscated from those receiving more than $5,000 per year, it could not even make a dent in the taxes paid by those receiving less than $5,000 per year.

DIVIDENDS AND INTEREST

Now, let's take a look at dividends paid by corporations and interest paid on bonds, bank deposits, insurance premiums, building and loan associations, and so forth. Dr. Robinson's preachers and teachers thought that those with incomes of under $5,000 per year received 29 percent of interest and dividend payments, and that those with incomes of over $5,000 per year received 71 percent.

Again, the true facts are far from what these preachers and teachers thought. Father Keller points out that those with incomes of under $5,000 per year actually receive 69.4 percent, not 29 percent and those with incomes of over $5,000 receive only 30.6 percent of all income received from these sources, not 71 percent. Also, of this 30.6 percent after taxes, those with incomes of over $5,000 per year have only 17.3 percent left.

Now, dividends and interest are the foundation of our capitalistic or free-enterprise system. They represent profit or a return on an investment that was made out of savings, savings that were the result of somebody spending less than they received, even possibly denying themselves some pleasure in order to create them. Is a profit disgraceful? Some, today, seem to think it is. Then let it also be understood that the overwhelming bulk of this disgrace, 69.4 percent of it, goes to those with incomes of less than $5,000 per year.

RENTS

Now let us consider that individual whom many consider an obnoxious character, namely, the landlord, who collects the rents.

Dr. Robinson's preachers and teachers think that people with incomes of over $5,000 per year receive 70 percent of all the rents collected in the country, and that those with incomes of under $5,000 per year receive 30 percent of these rentals.

What are the real facts? Again, Father Keller's survey indicates that all of the rentals collected in the country, 83.1 percent is collected by persons with incomes of under $5,000 per year, and only 16.9 percent is collected by those with incomes of over $5,000 per year. Again after taxes the 16.9 percent collected by those having incomes of over $5,000 per year have 9.6 percent remaining.

In most countries being a landlord is the habit of a few, but in these United States it is the habit of millions.

Next Sunday the balance of the article of Mr. Hamilton will appear. It presents an analysis of "What has happened" to the income groups in America.

Californian Wants TVA There

EXTENSION OF REMARKS
OF
HON. CECIL F. WHITE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. WHITE of California. Mr. Speaker, I quote below a letter which reveals the typical attitude of the people of California on Federal development and distribution of electric power. My people feel that since the flow of mountain streams belongs to all the people there is no reason why the electricity created by these streams should be turned over to the private power interests and sold back to the people at a profit.

The letter speaks for itself:

MORRO BAY, CALIF., *January 15, 1950.*
Congressman CECIL F. WHITE,
Washington, D. C.

DEAR MR. WHITE: I read the enclosed clipping in the Fresno Bee regarding your bill to have the Federal Government build dams on the Kings River to generate electricity, and I was wondering what, if anything an ordinary citizen can do to help along this project. I live in Morro Bay, Calif., and the Pacific Gas & Electric Co. have control of

UNIVERSITY OF MICHIGAN LIBRARIES

this district and the people are at their mercy. They raised the rates in November and they are getting beyond the limit of the person of moderate means.

A friend from Chattanooga, Tenn., has told me of the wonderful things that have been done there since the TVA went in, because of the low rates of electricity. Why can't we have the same advantages, as the taxpayers pay for the dams that create these projects?

Respectfully.

Egg and Grain Price Situation

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, many Members of the House have spoken of the low price of eggs and the high price of grain. They will be interested in the following letter to me from the Department of Agriculture dated January 25, 1950:

DEPARTMENT OF AGRICULTURE,
Washington, D. C., January 25, 1950.
Hon. EDITH NOURSE ROGERS,
House of Representatives.

DEAR MRS. ROGERS: This is in reply to your letter of December 27, 1949, and newspaper clipping from the Lowell Sun regarding the egg price situation.

In recent weeks farm sales of eggs throughout the Nation expanded tremendously as a result of a relatively large pullet flock and exceedingly favorable weather conditions. Market prices declined substantially due to this increased production of eggs. Moreover, the egg driers in the Midwest who were cooperating under the egg price-support program were offered more eggs than they could use in their plants, with the result that in many communities egg prices declined below the certified price of 35 cents which driers were required to pay. The Department seriously considered this problem and came to the conclusion that the only alternative would have been to inaugurate a comprehensive purchase program for both frozen and shell eggs in addition to dried-egg purchases. Since the support program for 1949 terminated on December 31, 1949, it did not appear advisable to broaden the program so late in the year and for such a relatively short period of time. As a result, the egg market during December sought lower levels based upon supply and demand conditions.

Under the provisions of the Agricultural Act of 1949, eggs and poultry products are in a large group of commodities for which price support is nonmandatory. The law requires that if any of these products are supported, the support price may not exceed 90 percent of parity. The law sets forth eight factors which are to be considered in determining whether price-support operations shall be undertaken and in determining the level of such support. After full consideration of these eight factors, it was decided to announce the support of egg prices in 1950 at a national annual average producer price of 37 cents per dozen. In order to help achieve this objective, the Department announced on December 30, 1949, that it would buy dried eggs from midwestern processing plants that would agree to pay farmers an average of 25 cents at the farm, or 27 cents at the drying plant. Copies of three press releases and a background statement which explains the price-support program in detail are enclosed.

Laying flocks have not yet reached their peak in production, and in many cases sales of eggs at this time of year probably do not completely offset feed costs. However, it is expected that producers who follow good poultry husbandry practices will begin to show some returns over feed costs as their flocks come into full production during the next month or so. As was indicated in the press release of December 21, poultrymen are urged to give careful consideration to their management practices and adopt those practices that lead to the greatest possible efficiency in production and marketing. Such practices will include careful culling and efficient use of feed.

Although corn and wheat are supported at 90 percent of parity, oats, sorghum, and barley are supported at 70 to 72 percent of parity. It should also be remembered that the market prices of some of these grains are not always at their respective support levels because all farmers do not make use of the price-support programs. During December the average percentage of parity received for the grains used in poultry feed was about 75 percent of parity. This is the same level, in terms of parity, as is the announced price-support level on eggs.

Sincerely yours,
K. T. HUTCHINSON,
Assistant Secretary.

If This Editor Went to Congress

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. JONES of Missouri. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am herewith including the following newspaper article from the St. Louis Globe-Democrat in which Charles L. Blanton, Jr., managing editor of one of the outstanding newspapers in southeast Missouri, gives his views on some of the problems which are confronting this Congress:

IF THIS EDITOR WENT TO CONGRESS

(C. L. Blanton, Jr., managing editor of the Sikeston (Mo.) Daily Standard, views the national scene and outlines what he would do in a legislative way to correct current errors and omissions. He frankly concludes that he would "serve only one term in any legislative body in which we attempted to enact our views into law.")

Today we feel as though we were going to Congress and will set down for our readers' perusal legislation we would enact if we were all-powerful in the halls of the lawmaking bodies.

If we were in Washington today the first thing to fight on our calendar would be any change in the Taft-Hartley labor law. Our discussion with individual laboring men has convinced us that in spite of the leaders' hue and cry, the individual feels that the Taft-Hartley law is his sole protection from labor goons.

We would see that Government costs were cut, with a major reduction in the number of Federal employees, a reduction of funds for aiding foreign countries, a reduction in funds for farm subsidies; in fact, we would be tempted to fight for across-the-board cuts in all Government departments.

We would reduce taxes immediately regardless of whether the budget was balanced or not. We would repeal the so-called luxury or excise tax imposed as a wartime measure. We would increase the taxes on liquors and cigarettes. If the income-tax law should be rewritten, we would continue the exemptions for contributions, medical expenses, dependents, etc., and apply a reduction to the middle income group first. We would expand the social-security program to include everyone.

We would approve an increase for benefits from social security if the recipient made a proportionate contribution.

We would not favor a compulsory health program applicable to individuals but would approve contributions to States to assist cities and counties.

We would not prohibit the advertising of alcoholic beverages so long as the statements contained in the advertisements were truthful.

We would not support the return of prohibition.

We would favor military training.

We would penalize the Department of Justice for every charge brought against big business or small business that it was unable to substantiate in courts.

We believe that a majority of Government authority and expense should be in the hands of the State of Missouri or the individual State.

We are sincerely afraid of the present trend and power and growth of non-tax-paying consumer cooperatives.

We would not support the proposed Civil Rights or Fair Employment Acts.

If we could transfer all power to the State legislature we would prohibit drunkards and seniles to the State mental hospitals. If it were not the obligation of the children to help the seniles, we would have a separate institution for them exclusively.

We would have a statute enacted covering the case of Dr. Hermann N. Sander, or like cases, on the merciful removal of suffering patients with incurable diseases provided the requests were made and substantiated by the patient and his or her husband, wife, and children.

We would provide for sterilization of all child sex offenders upon the first offense. We do not wait for two murders.

We would make it mandatory that all patrons of all theaters and picture shows receive the return of their price of admission if they were unable to find scenes in the moving picture or on the stage which are shown in the newspaper ads, billboards, and placards.

And, our final pet peeve—we would ask the legislature to reenact the good-roads-and-gas-tax-increase bill ex-Gov. Lloyd Stark and his committee originally submitted, giving to the highway department 2 cents to be spent as they are now spending, 1 cent to be spent on rural roads by the State Highway Department, and 1 cent to be spent on streets in cities, towns, and villages by the highway department.

We are confident we would serve only one term in any legislative body in which we attempted to enact our views into law.

Friendship, Trade, and Navigation Treaty

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. GORSKI. Mr. Speaker, much has been said in the past on the partition of Ireland and raising the status of the representation between the United States and Ireland.

Today I would like to congratulate the State Department on its wisdom and prudence in arranging the treaty of friendship between the United States and Ireland which was signed on January 21, 1950. This treaty registers, for the first time, in writing, the strong feeling of amity and, indeed, almost a devotion which exists between our two countries. I trust that from it will spring a great good and that our State Department will show further interest in Ireland by using its influence to end the unhappy state of partition which still exists in the country to which we are now pledged in friendship. This treaty deeply recognizes the close association between the people of the United States and Ireland.

The Coal Crisis

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. LOVRE. Mr. Speaker, on three different occasions I have written the President of the United States asking that he take action in connection with the critical coal shortage which is paralyzing the Nation. I have received telegrams and letters from people in Aberdeen, Sioux Falls, and Vermillion, S. Dak., explaining to me that the shortage of coal has reached emergency conditions.

In Aberdeen there was not enough coal last week to operate the schools, and there was a shortage in the hospitals. In Sioux Falls and Vermillion rail service had been seriously impaired.

In the last few days a serious blizzard has swept South Dakota sending the temperatures to lower than 20° below zero in many parts of the State. It is obvious that there is a critical need for coal at this time. There is already serious suffering and there will be more if this coal shortage continues for any length of time.

Perhaps the President, enjoying the June-in-January weather now prevailing in Washington, is unaware of the predicament out in the Middle West where people are cold and where schools are closing and trains are not running because of the failure of the miners to provide a sufficient supply of fuel for them.

Mr. Speaker, I tell you the situation has already passed the emergency stage in South Dakota. It is now in the critical stage. I ask you, Mr. Speaker, why should one man be allowed to tie up the transportation and economy and jeopardize the health and welfare of thousands of people. That is what is happening.

Mr. Speaker, I said one man is allowing this. I should say two men. One is the head of the miners and the other, upon whose shoulders there is an even more grave responsibility, is the President of the United States.

Mr. Speaker, the Bureau of Mines yesterday reported that the coal shortage had reached an emergency stage. The Bureau of Mines should be in a position to know the effects of the shortage on a Nation-wide basis.

The Taft-Hartley law clearly gives the President the authority to step in and correct this situation when strikes create a national emergency. I say that that national emergency is now at hand—and has been—for several days. The time has long passed for action.

This is no time for politics. If it is, then the President is playing politics with the health and welfare of a great Nation. The people stranded in chilly homes on the farms and in the towns of South Dakota are in no mood for a game of politics. They are demanding action. I believe they have a right to expect their Chief Executive to take this action.

The reason none has been forthcoming is simple. The President does not want to use this law because a Republican Congress wrote it. But I say the people do not care what kind of a Congress wrote the law. It is on the books—the administration refused to repeal it at the last session of the Congress—and the people want relief from their inconvenience and suffering.

Mr. Speaker, the President has the power to stop this foolish, stubborn obstruction. I suggest once again that he use it. There is no excuse. The President can look at the weather report from South Dakota if he wants a convincing answer to his question if the report from the Bureau of Mines is not enough to convince him to use the injunction provisions of the Taft-Hartley law.

Distribution of Relief in Poland

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. GORSKI. Mr. Speaker, the Communist Government of Poland has taken control of Caritas, the chief charitable organization of the Roman Catholic Church in this country, the Polish Press Agency has announced.

Caritas operates orphanages and other institutions in Poland.

The Communist government says that those in charge of Caritas will be jailed.

The Red determination to halt any display of faith has reached the point where even the abodes of homeless waifs are to be, not supervised, but controlled by the Moscow-trained Communists most of whom are not Polish by nationality but are recognized as the Government of Poland

We have seen the present alien rulers of Poland join hands with Soviet Russia in a vicious campaign of vilification of the United States, its Government, and its democratic institutions.

We have seen the faithful of all creeds kept from church and prevented from any demonstration of faith.

I ask that the Secretary of State protest to the present so-called leaders of Poland against this latest despicable show of authority in taking from its rightful supervisors the organization that has so ably directed the distribution of supplies received from the American relief to Poland and American Catholics and that the care and guidance of the orphanages be given back to those who are trained and faithful to the proper rearing of the youngsters who are parentless and homeless.

Cars for War Amputees

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, all of us in the routine of our congressional work receive sincere and sometimes very touching letters. I want to read one I received this morning because the writer, who is an amputee of World War II, so well represents the cheerful attitude and the fine outlook on life I have always found among those men who gave so much for you and me. He writes:

DEAR MRS. ROGERS: I am an arm amputee so I hope you will forgive my handwriting. I have three and a half fingers left on my left hand, so I know you will pardon me in my efforts to write legibly enough for you to read this letter.

I wrote to you once before, in 1947, in regard to automobiles for men who lost an arm in World War II. I received your most kind reply and I wish to thank you very much for your efforts to grant us wounded veterans a $1,600 car. You certainly don't give up. I believe anyone else would have given up long ago. I've written countless letters to other Congressmen and in their replies they were all for it. As you know, our honorable President vetoed said bill. Needless to say, we arm amputees were disappointed; I've hoped for the past 2 years we would receive the same as the boys who lost legs. One loss is as bad as the other.

I've a car now, 1940 vintage, which is always in need of repair. I keep it nice, because I take my wife and two small children riding every Sunday. I sure thought last October I'd have a new car. When the car bill was vetoed we were a sad lot indeed. However, I think I'm a lucky guy, don't you? I have a swell wife, two small kids, I live in a free country, and I have people like you looking after us ex-servicemen who were wounded.

I've heard your name mentioned so often in veterans' groups and am happy to say they are all for you. They, the veterans, know they aren't forgotten when people like yourself see to it that they aren't.

I received my DAV paper in today's mail, and I saw a bill, H. R. 6565, entered by Mrs. EDITH NOURSE ROGERS (Republican, Massachusetts). I smiled to myself, and thought, boy, MRS. ROGERS will never give up. How can we fail. I think you will win this time MRS. ROGERS, as you don't take defeat. I think the honorable President will pass it this time.

May I say again, Mrs. ROGERS, thank you and may God bless you and yours.

Sincerely yours,

——— ———.

UNIVERSITY OF MICHIGAN LIBRARIES

A Vote Against House Resolution 133 Not a Vote for FEPC

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. JONES of Missouri. Mr. Speaker, since many Members through their remarks made on the floor of the House have apparently sought to confuse the issue and have attempted to interpret the recent vote on House Resolution 133 as having placed some Members on record as being opposed to or favoring certain pending legislation, I would like to take this opportunity to state my position.

Herewith is the current release of a weekly newspaper article which I have prepared and which will appear this week in most of the newspapers published in the Tenth Congressional District in southeast Missouri:

REPORT FROM WASHINGTON

(By PAUL C. JONES, Representative in Congress, Tenth Missouri District)

Now that one of the most controversial nonlegislative issues is out of the way, perhaps the House can get down to work and begin dealing with some of the real legislative problems that face this Congress. On last Friday an overwhelming majority of the membership (236 to 173) reaffirmed the action taken by the House at the opening of the Eighty-first Congress a little more than a year ago when the powerful Rules Committee was relieved of some of its dictatorial powers.

Since 1931 and up until January 1949, the 12-man Rules Committee, with a membership including 8 members of the majority and 4 of the minority, not only served as a traffic director by determining the order in which bills would be considered on the floor, but in addition had the authority, not infrequently used, to exercise a veto power over the action of the regularly constituted legislative committees.

By the practical operation of the powers given to the Rules Committee, any seven members of that committee could block any bill even though it had the unanimous approval of the committee to which any bill or resolution had been referred and which had given detailed study to the legislation.

Last January this procedure was changed by the adoption of what was known as the "21-day rule" which provided that in the event the Committee on Rules failed to report within 21 calendar days any resolution providing for an order of business for the consideration of any bill or resolution favorably reported by a committee of the House, the chairman of the committee which originally recommended the bill or resolution could call up for consideration by the entire membership of the House the resolution which the Committee on Rules failed to report.

Naturally, there were times and occasions when the operation of the Committee on Rules under the old procedure suited the convenience of most of the Members. For instance, if a Member was opposed to some highly controversial bill, he might be relieved of the obligation and the necessity of taking a position on this bill if a majority of the Members of the Rules Committee, being of the same mind, would vote in committee to prevent this bill from reaching the floor.

Despite the fact that the leadership of both parties in the House attempted to make a political issue out of the proposed change, and despite the many different arguments which were advanced by individual Members participating in the debate, it seems to me that the question was based on the principle, "Does the end justify the means?" I can understand and appreciate the position of most of the southerners who in their unalterable opposition to any FEPC legislation, and who realizing that if the dictatorial powers could be restored to the Rules Committee that the FEPC bill would not come up for a vote in the House at this session, were willing to take this drastic action. There is no question in my mind but that an overwhelming majority of those who voted for this change were influenced entirely by the FEPC legislation. Voting on the bill did not follow party lines since 85 Democrats, practically all of them from the extreme South, joined 98 Republicans in their unsuccessful attempt to change the rules. Likewise, despite the urgent pleading of their leadership, some 64 Republicans joined with 171 Democrats in defeating this proposed change.

I think Speaker RAYBURN, who relinquished his chair to come down on the floor of the House to discuss this issue, stated the proposition very clearly when he said: "There is a lot of talk here about civil rights being involved in this matter. As far as I am concerned there is no element of the civil-rights program involved in the rules as they exist today and as, in my opinion, they should exist. The rules of a legislative body should be such at all times as to allow the majority of a legislative body to work its will. Under our present set-up, I am sorry to say, that is not the case in many instances.

"When a legislative committee of the House of Representatives has labored long and honestly, and by overwhelming majority brings in a bill and reports it to the House, and it asks for the privilege of being granted the right to try their case before the elected representatives of the people of the United States, there should be something in the rules of the House, regardless of one other committee which is not a legislative committee, allowing the House to work its will on that bill.

"That is the issue here, and I do trust that the membership of the House in their wisdom will leave the rules of the House as they are so that a majority of the House of Representatives on any and all occasions may have the opportunity to register its will."

While I did not join those who voted for the change in the rule, it has been my intention and I have announced that I do not expect to support the proposed FEPC legislation which will now come upon the floor of the House for a vote of the entire membership. In this same connection I think that, generally speaking, southern Members have placed too much emphasis upon the racial question involved in this legislation and have overlooked or minimized many of the other more important principles.

American Income, Its Sources and Distribution

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I herewith submit the second of a series of articles entitled "American Income, Its Sources and Distribution" by Justice L. Johnson, of Aurora, Ill., former Republican State chairman of Illinois:

II. AMERICAN INCOME, ITS SOURCES AND DISTRIBUTION

Last Sunday the article reprinted in the Now and Then column concerned itself with the sources of income, it covered wages and salaries, dividends and interest, and rents, and gave us some insight into its distribution.

Today, we present the balance of Mr. Hamilton's bulletin, which analyzes what is happening to the country and who must furnish additional taxes if national programs are extended. The article follows:

WHAT HAS HAPPENED

We constantly hear derogatory references to those in this country who have, or are considered to have, large incomes. Even our highest governmental offices refer to them as economic royalists, princes of privilege, the selfish few, etc. The Government has even published their incomes in the daily press. The figures quoted are, of course, always before taxes. Why don't these figures show the income of these people after income taxes? The reason is that it would not make a good story for those who want to stir up class prejudice in this country.

Father Keller points out that in 1917 persons with incomes of $25,000 or more had, after paying Federal income taxes, received 6.7 percent of the national income distributed to individuals. In 1932, under President Hoover, this same group received 3.4 percent of the national income distributed to individuals. Under President Roosevelt they continued to sink. In 1938 this group received 3 percent; in 1941 they received 2.5 percent; and in 1944 they received 1.3 percent of the national income distributed to individuals. Since 1944 the trend is still downward.

When the national income received by those with incomes of over $25,000 per year shrinks from 6.7 percent in 1917 to 1.3 percent in 1944, which is 80 percent, why do our starry-eyed crystal gazers still keep shouting about the "privileged few"? It apparently is popular to blame all our troubles on a few by making the people of this country think a few persons receive most of our national income. The facts cited above by Father Keller, who got his information from Government sources, makes it clear that the exact opposite is true.

GIFTS DIMINISH

The citizens of this country must realize that up to 10 years ago our colleges, hospitals, research foundations, etc., were built and supported by gifts from persons with incomes of over $25,000 per year. Gifts of this kind contributed in no small way to the advancement of the standard of living we enjoy in this country. Now that this group has been nearly wiped out, those who remain because of high taxes can no longer make these gifts.

The question is, Who is going to make money available in the future for colleges, hospitals, etc., if we are to continue our way of life in America? The answer is that the Government must supply the money.

The next question is, Where will the Government get the money? The answer is, From the people, because that is the Government's only source of revenue.

The next question is, From what group of people will the Government get the money? The answer is, From those people with incomes of less than $5,000 per year. Why is this so? Because persons with incomes of less than $5,000 per year now receive, as shown above, 89.8 percent of all the wages and salaries distributed. This group receives 69.4 percent of all dividends and interest distributed. This group receives 83.1 percent of all rents paid.

BIG BUSINESS

Another popular slogan our crystal gazers like to harp on is big business. Who actually owns big business? The magazine, Trusts and Estates, recently pointed out the result of a survey of 120 of our biggest United States manufacturing companies.

These 120 companies were owned by 6,126,716 stockholders. These same companies had 4,464,000 employees. These companies had 40 percent more stockholders than they had employees.

Sixty-two of these one hundred and twenty companies were able to supply a break-down of their stockholders, with this result:

(a) Twenty-four companies reported that no individual owned more than 1 percent of the stock.

(b) Five out of six holders owned 100 shares or less.

(c) About 9 percent of the stockholders, accounting for 41 percent of the stock, were institutions (schools, hospitals, cemeteries, and insurance companies). These institutions in turn represented millions of individuals.

Eighteen million people (one out of every seven United States citizens) own this country's corporations.

American Telephone & Telegraph Co., one of the largest, if not the largest, United States corporation, is owned by 764,000 persons. These people own an average of 30 shares each. The great majority are working people with small incomes. Are they the privileged few?

General Motors is owned by 433,000 people • • • 320,000 own 50 shares or less • • • 140,000 own 10 shares • • • about $600 in the business. Are these the privileged few?

General electric is owned by 249,000 people. United States Steel is owned by 227,000 people. Pennsylvania Railroad is owned by 207,000 people. Radio Corp. of America is owned by 206,000 people. Standard Oil Co. is owned by 200,000 people. Are these the privileged few?

LIFE INSURANCE

In 1948 there were 78,000,000 people who owned life insurance policies. This represents 60 percent of all families in the United States. If the assets of all insurance companies are divided by these 78,000,000 policy holders, we find that $690 is the average individual stake. Thirty-one percent of this $690 individual stake is invested in American business. Dividends and the payment of benefits to beneficiaries is dependent, of course, to a large extent on business profits. Can you picture what could happen if business failed to earn enough profits to show an adequate return on the investments that are made to guarantee life insurance?

Something must be done in this country to awaken the citizens as to what is taking place. This country has gone far along the road to socialism, more so than most persons realize. The greatest factor in this socialistic trend is government spending.

It is considered good politics to talk as if the privileged few will pay for all these securities that our Government officials are sponsoring. The privileged few is a phantom. They no longer exist. The people of this country must understand that from here on in the cost of government must be paid principally by the group with incomes of less than $5,000 per year. They must realize that the only way that their taxes can possibly be lowered is by the Government spending less money, hence collecting less money by taxation.

Those with incomes of under $5,000 per year are the persons who can and must stop the present trend of Government subsidies, Government securities of all kinds, and various other Government spending activities. On this group hinges the future course of America. Their understanding of what has made their standard of living the highest of all countries will determine whether they will continue to enjoy and improve their way of life, or whether they will enjoy the way of life now not enjoyed by the peoples of Europe.

Next Sunday article III will examine how the American worker is getting hurt by the adoption here of European patterns of control.

Odd Fellows Donate Occupational Therapy Building to Veterans' Home of California

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. JOHNSON. Mr. Speaker, when I was home during the recent recess of Congress Mrs. Hazel Hannan, of Stockton, told me of a most unusual project that the Odd Fellows, and its affiliated organizations, had carried to completion. This order had raised and donated $244,000 for the construction of an occupational therapy building at the Veterans' Home of California. This institution is located in my district in the beautiful Napa Valley. It provides a home for about 1,200 veterans of our various wars. The operation of this home takes a big financial load off the back of the United States. The National Government recognizes this and does make a contribution of $500 per veteran per year toward the operation of this home. The cost to care for these veterans has risen during the past few years and is now about $1,200 per veteran per year. This institution is administered by Nelson W. Holderman, who was one of the great heroes of the First World War, receiving the Congressional Medal of Honor for his heroic service as second in command of the famous Lost Battalion. Colonel Holderman has made a magnificent record in administering this great institution.

When Mrs. Hannan told me about the project of the Odd Fellows, I thought it was so unique and constructive that I asked her to write me about it so I might place it in the CONGRESSIONAL RECORD. When a group of people dig down in their pockets and raise a quarter of a million dollars to take care of veterans, which is the obligation of the National Government, that effort should be an example to others who might be similarly inclined. The purpose which the order had in mind when it raised this fund was also a uniquely constructive one. It was to furnish a facility which would help veterans rehabilitate themselves vocationally. What could be more constructive or humane than to provide a means whereby men who have been injured while in the defense of our country should be provided with an opportunity to overcome their disability and again become useful and self-supporting citizens? Just think of the personal happiness this facility will bring to these veterans, to say nothing of the economic benefits.

The following letter, which I make part of my remarks, explains the matter fully:

CALIFORNIA I. O. O. F. OCCUPATIONAL
THERAPY PROJECT FOR THE
STATE OF CALIFORNIA,
Stockton, Calif., January 16, 1950.

MR. LEROY JOHNSON,
Congressman, Third District of California, House Office Building, Washington, D. C.

HONORABLE SIR: At the request of Mrs. Hazel Hannan, of Stockton, Calif., I am writing to you the following information:

At the annual session of the Grand Lodge, I. O. O. F. of California, held in Sacramento, in May 1944, a resolution was adopted, wherein a committee was appointed for the purpose of raising a fund in the amount of $250,000, to be donated to the State Veterans' Home of California, to be used for the construction of an occupational therapy building for use in rehabilitating the veteran members of said home, and to be dedicated to the members of our order who gave their all in World War II.

As chairman of the committee appointed (67 members) we solicited our entire membership of Odd Fellows and Rebekahs throughout the State for free-will contributions. As is the case in all such projects, there was some opposition. But through untiring efforts and constant work of the committee by personal appearance in the lodges and thousands of letters, we finally succeeded in completing the raising of the funds in May of 1948, in the total sum of $244,000, said amount being delivered to the administration in the office of Gov. Earl Warren, on April 20, 1949, at 2:30 p. m., with appropriate ceremonies, pictures, etc. (Governor Warren is a member of the order).

Recently I have been informed that the contract for drawing of the plans and specifications has been awarded to a firm in San Francisco, and as soon as said plans have been completed and accepted, a date will be set for ground breaking, on which occasion many officers and members of both the Odd Fellows and Rebekahs will assemble at the veterans' home to participate in the breaking of ground for said building, then later another occasion will be laying of the cornerstone, and finally will come the great day of dedication. All of which our entire membership are looking forward to with great pleasure.

It will be my pleasure to advise you of the date of each of the above-mentioned occasions, and we shall be very happy to welcome you to be present at any one or all of them.

While it was a very large undertaking for our committee, and all of us worked very hard, we feel gratified that we accomplished our goal.

A large portion of credit for the work done, is due to the untiring and persistent efforts of our sisters, the Rebekahs, for they went into it wholeheartedly and never faltered for a moment. Sister Hazel Hannan, being one of them.

As you may know, our officers of both the Grand Lodge IOOF and the Rebekah Assembly are changed each year. Therefore, due credit goes to each and all of those fine ladies who took up the work, each in turn, and worked untiringly to the final accomplishment.

It will be my pleasure to be present at each of the occasions as stated above, and as chairman of the committee, will be one of the speakers.

If there be any further information you desire, kindly feel free to call upon me for the same.

Sister Hazel Hannan has stated that you desired this information so that you might put it into the CONGRESSIONAL RECORD.

UNIVERSITY OF MICHIGAN LIBRARIES

This will be greatly appreciated, and when so done, I will be very happy to receive a copy of same.

Thanking you for your interest, and looking forward to seeing you at the Veterans' Home, when we all gather there for the above-mentioned occasions, I wish to remain,

Sincerely yours,

WM. V. MCCOY,
General Chairman of the Committee.

The Polish Heritage

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a radio address recently given by Prof. Eric P. Kelly, of Dartmouth College, over Station WSPR, in Springfield, Mass., on the Justice for Poland program.

The address follows:

THE POLISH HERITAGE

The Polish heritage and its contribution to western civilization is one of the most valuable assets that we possess here in America. For more than a thousand years the Polish people have struggled amidst the most devastating conditions to preserve the rights of a free people, and not only their example but their actions have had a tremendous effect upon us all in preserving our own freedom.

By acting as a buffer state against eastern and despotic civilizations, Poland has in the past saved European civilization from destruction many times. The Polish state repelled more than a dozen Tartar invasions which would have devastated Europe. It turned back the Turks when it seemed at the time that the Ottoman Empire would extend clear to France. It opposed the spread of Nazi Germany by forcing Hitler to fight before he had completed the manufacture of his secret weapons, the atomic bomb among them, and undoubtedly saved England and America thereby from slaughter and destruction.

And yet, although the population of Poland dropped from 35,000,000 to 20,000,000 during the war, the spirit of resistance against despotism is still going on despite the fact that Poland is now ruled by a stooge set-up put in power by Stalin. There is a strong underground in Poland, ready to act at the proper moment—a psychological underground rather than a military underground, for people don't gather in old-fashioned cellars any more to make bombs in any romantic fashion. They are wisely playing the nonresistance game and waiting.

Along with Poland in central Europe are some 200,000,000 other peoples in Latvia, Lithuania, Estonia, eastern Germany, Czechoslovakia, Hungary, Austria, Rumania, and Yugoslavia simply waiting for a chance to attain their freedom. These peoples, whom the western nations allowed to slip to Stalin's control after Tehran, Yalta, and Potsdam, belong to the nations of western civilization. They will never be content to be stooge states under Communist dictatorship.

How will the break come, as it certainly will come? War? Who but Stalin dares prate of war in this atomic age? Who but Stalin uses the threat of war to spread fear throughout the world? Fear of war never prevented it. One must hate war and not fear it if war is to be prevented. No; I think the redeeming of these people from slavery and concentration camps will come about in some other way. Just what that way is is yet to be determined, but I am sure that we have enough brains in America, England, France, and the other western nations to devise some other method.

Poland is the key to peace in Europe. Mr. Raymond Leslie Buell pointed that out a few years ago. It has always been and will always be the keystone of Continental Europe. A partitioned Poland poisoned Europe for nearly 150 years, causing strife on all sides. Hitler signed his own death warrant when he invaded Poland and broke down the barrier against eastern tyranny.

Poland has been a center of democratic thinking since its earliest days. The freedom of the individual to speak, worship, and carry on his own work as he chooses has ever been a passion. If any fault is more noticeable in Poland than in other nations, it has been on the side of individualistic freedom and lack of cohesion in the whole state. Most of the propaganda hurled at Poland in recent years, stemming first from Hitler and then from Stalin, accusing Poland of landlordism and class society has been wholly false. Poland was one of the earliest states in Europe to elect its rulers by vote of its citizens, it has ever been liberal in its attitude toward religion, it has always possessed high ideals of education and justice, and has been a refuge place for many racial groups persecuted elsewhere.

The world will never be safe until Poland regains its liberty again. The great mistake of England and America in allowing Poland to be partitioned and in allowing Stalin to have control there is something that not only smacks of the greatest ingratitude for Poland's tremendous service in the war, but it endangers the life of every inhabitant of the world, since it sets up a heart of discontent and poison in the very center of Europe which may lead to one of the greatest tragedies of all time unless the wrong is righted.

United States Should Not Recognize Communist Regime in China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. JUDD. Mr. Speaker, recent developments in China and the proposals in some quarters that the United States grant recognition to the Communist regime imposed by internal aggression and forced on the Chinese people, make even more pertinent now than when they were given the remarks on this subject by our distinguished colleague the Honorable JOHN DAVIS LODGE, of Connecticut, before the Chamber of Commerce of the State of New York on December 1, 1949:

[Excerpts from the remarks of the Honorable JOHN DAVIS LODGE, Member of Congress, Fairfield County, Conn., in a speech to the Chamber of Commerce of the State of New York, in New York City on December 1, 1949.]

There is, at the moment, an attempt to prepare American public opinion for the recognition of Communist China. It has also been suggested that the Department of State may set up three legalistic criteria to decide whether or not to recognize the Communist government of China. Yet the Communists cannot even meet these criteria:

1. They are not yet and—pray God—will never be in full control of the territory of China.

2. They cannot be relied upon to discharge their international commitments. This is illustrated most dramatically in their incarceration of Angus Ward, the American Consul General at Mukden. Indeed, there is virtually no evidence that any Communist government feels bound by its word. Moreover, it is clear, beyond peradventure of doubt and by their own admission that Mao Tse Tung and his followers are not agrarian reformers, but are the disciplined agents of Stalin. And it is well known that the Soviet Union has been guilty of repeated breaches of treaties and agreements.

3. The Communist government in China does not represent the free choice of the Chinese people. It has been reliably reported that not more than 3 percent of the Chinese in the territory overrun by the Communist armies actively support the Chinese Communist government. The many millions of refugees from Communist-dominated China testify to the instinctive fear and revulsion which the Chinese people feel toward the Communist state.

But aside from these somewhat soulless tests there are certain unimpeachable State Department precedents.

For instance, we did not recognize the Hitler puppet government in Norway. Acting on the Stimson doctrine of nonrecognition of territories acquired by force, we refused recognition of Japan's puppet government in Manchuria. Woodrow Wilson declined to recognize the revoluntary government of Mexico which took over following the political murder of President Francisco Madero and his Vice President.

Accordingly, refusal by our Government to grant recognition to the Communist regime in China would be in accord with well-established practice.

Some hold the view that we can do business with the Chinese communists. At one time it was also contended that we could do business with Hitler. While there might be some temporary limited commercial gains, recognition would increase the threat to world peace and to American national security, thereby jeopardizing the entire American community on the preservation of which all Americans depend for their prosperity and for their freedom. Communism is by definition and by design opposed to private property and is dedicated to its destruction.

It is argued that the reestablishment of Japan's trade with China is important to us in our efforts to stabilize the economy of Japan, and that Japan's foreign policy should not conflict with our own. But it is also true that the hard-pressed Chinese Communists need the Japanese market. If we are not willing to help the anti-Communists in China with military aid, we should at least use the economic weapons available to us to help our friends in their struggle against those who seem to be determined to destroy us. After all, we are using the Marshall plan to create elsewhere on the Eurasian Continent, where there is a cold war, a political climate propitious for the preservation of freedom. We can do no less in China where the war is hot. If we cannot achieve victory in economic warfare, we can hardly expect to avoid another war.

Moreover, the recognition of Communist China would enable the Communists to obtain supplies which they badly need, while the American people are spending billions of dollars in their global struggle against this very same communism. These American supplies would help to subvert this gigantic

and costly American effort. The scrap iron and oil which was sent to Japan in the pre-Pearl Harbor days, not only destroyed life and property in China, our lifelong friend and ally, but also destroyed American life and property in the terrible war which followed. Let us not repeat this tragic and shameful mistake. Let us not allow short-term expediencies to overcome long-term principles. Let us realize that these American supplies may some day become blood-soaked and tear-drenched reminders of crass materialism and vacillation at a time when lofty leadership and high resolve were called for.

For it is an incontrovertible fact that the recognition of Communist China by the Government of the United States would give help to the self-styled enemies of America. Any action which assists Soviet imperialism or bolsters the economy of any of the Russian satellites may well capsize the tenuous balance of power in the east-west conflict.

Such recognition would open up every Chinese Embassy, legation, and consulate to espionage, fifth-column activities, and subversive attacks on free peoples. It would give the Soviet bloc an additional vote on the Security Council of the United Nations and would automatically range us on the side of the Soviets in their vicious attacks on the duly accredited Chinese delegation. Let us then abandon the policy of business as usual. Let us awaken to the hard fact that there is no sharp dividing line between war and peace. Let us realize that the cold war in Europe is irrevocably intertwined with the hot war in China, and that if we do not win the cold war we shall have war. Let us at long last make a start on a vigorous, far-sighted far-eastern policy by refusing to recognize the Chinese Communists and by recognizing with limited and directed aid those who are still fighting to prevent the subjugation of more than a billion human beings.

The recognition of Communist China by the United States Government would encourage Communist elements everywhere. It would discourage the valiant, freedom-loving people whom we are pledged to assist and who, although confronted by overwhelming odds and desperately weakened by war and invasion, are still fighting this godless tyranny.

It would compound the tragic results of our cynical, hesitant, and unworthy China policy at a time when our national interest as well as our solemn obligations demand that we look for inspired remedies rather than timid excuses. It would ratify in advance the brutal conquest of Pacific territories for the preservation of which 108,000 Americans gave their lives in freedom's cause.

It would, in the eyes of the world, constitute American approval of Soviet methods and objectives in China which are inseparable from their methods and objectives in Europe. It would consecrate Soviet imperialism. It would brand us as people of little faith in the freedom for which we fought two world wars and which we have publicly sworn to preserve. It would commit us to a course which, while it might be in accord with our postwar China policy, is not in keeping with our declared global policy to oppose rather than to appease the forces of Communist aggression. It would, in all probability, foreclose the possibility which still exists of aiding the anti-Communists in China, thereby at long last forsaking the dreadful doctrine that we can run with the hare in China while we hunt with the hounds in western Europe. It would strike a heavy blow at the security of our own Nation and the peace with freedom which is our sacred objective.

Repeal the Excise Tax on Jobs

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. KEATING. Mr. Speaker, as has frequently happened in the past, great news came out of Albany, N. Y., yesterday. The New York State Senate, by unanimous vote, and the New York State Assembly, with but a single dissenting vote, passed a resolution urging Congress to repeal immediately the Federal sales taxes, euphemistically referred to as excise taxes, imposed during the war and still retained as a burden on the American people.

It is significant that every member of the Democratic Party in the New York State Legislature voted for this resolution. I hope that the members of that party who serve in the Congress of the United States will share the view of their colleagues in New York. Since the Republican pressure has been strong for more than a year to repeal these wartime levies, all we need is to convince the Democrats down here, as has been so successfully done in Albany.

I understand that an opportunity may be presented to us today to state our position on the repeal of these taxes when the distinguished minority leader offers an amendment to House Joint Resolution 371. This amendment, while granting relief on the commodities singled out in the President's recent message, lacks the discriminatory feature which characterized the President's recommendations, since the amendment applies to all commodities subject to the wartime taxes and restores them to their prewar level.

This action of the minority leader, as contrasted with that of the President, will certainly be greeted with enthusiasm in the community which I represent. More people are employed there in the photographic industry than in all the rest of the country. Yet the President's recommendations were silent on the subject of reducing the discriminatory and outrageously high sales tax on photographic equipment and films. Indeed, he expressly limited his recommendations to retail taxes, which excludes any relief to the photographic industry.

The thousands employed in this business, now the victims of the highest Federal tax of any, forgotten by the President, will certainly welcome the fight which the minority leader is making to help them. On their behalf, I tender to him my grateful appreciation.

These are taxes on the right to work. It is estimated that they caused 5,000 people in my congressional district to lose their jobs last year and thousands of others to be forced to work part time. These levies were imposed during wartime to discourage civilian consumption. Yet they are still stubbornly retained, bearing in their wake loss of business, short workweeks, and unemployment with all of their attendant hardships and suffering.

Although the photographic industry is perhaps the most seriously affected by these taxes, there are, of course, many others where much the same situation exists. I hope the Members will solidly get behind our colleague from Massachusetts in the valiant fight he is putting up to convince the administration forces that action to relieve this situation is imperative.

Under leave to extend my remarks, I include an editorial from the Rochester Times-Union. The editorial follows:

REPEAL EXCISE TAX ON ROCHESTER JOBS

Months after jobs were lost in New York State by the thousands because of continuance of wartime excise taxes, the President has agreed to modify some of them, but he offers no relief for Rochester.

If Congress can raise enough revenue to replace them, the President will accept reductions in certain excises collected at retail—on handbags, luggage, furs, jewelry, and so forth. But he ignores entirely those collected from the manufacturer, including the 25 percent tax on cameras and 15 percent on films.

These taxes cost the jobs of 5,000 persons in Rochester last year and skip-week work schedules for thousands of others, because trade in these lines declined more than four times faster than general trade in the first quarter of last year.

At the same time the Government's receipts from the tax dwindled 41 percent below the year before. The camera tax is no longer an important source of revenue but of fundamental importance to Rochester.

Senator GEORGE recalls that Congress promised when these taxes were imposed to repeal them within 6 months after the end of the war. That promise has been ignored.

These taxes were designed to discourage consumer buying during the war so that manpower could be channeled away from civilian markets and into the war effort. That need disappeared 5 years ago. How far can an emergency be stretched?

Many of the other wartime excise taxes should be repealed outright, rather than reduced. They are hidden taxes on the cost of everything. A tax on freight, for example, defensible in wartime to discourage civilian shipping, is ridiculous in peacetime in a Nation so dependent upon transportation for most of the things we buy.

The same applies to taxes on communications. They are an added cost of doing any sort of business which the consumer pays.

The President's message makes clear again that so long as we have an administration that shuts its eyes to the spending side of the ledger, we shall have no tax relief.

Amending the Rules of the House

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1950

Mr. JUDD. Mr. Speaker, the national legislative body of a nation which was founded on the principles of democracy should proceed in such a manner that free discussion of issues is encouraged.

UNIVERSITY OF MICHIGAN LIBRARIES

At the same time, however, it is necessary that rules be in effect which make it possible to sift from the great volume of legislation introduced those measures which are of the greatest importance and urgency to the people as a whole. Without such rules legislative chaos would surely result.

Our problem, then, in considering a change in the rules of the House is how we can establish a rule which will best implement the two requirements stated above. The rule in effect since January 1949, allows a committee chairman to call up for debate a measure cleared by his committee after it has been in the Rules Committee 21 days. It permits consideration of bills which might otherwise be blocked. But this rule also makes it possible for committee chairmen who are understandably zealous about the importance of legislation from their own committees to call up bills recognized by the House leadership or by the rank and file of both parties as not being in the best interests of the country.

It was instructive to note the unchallenged statement by the gentleman from Georgia that "there has never been a time when the present Speaker of this body or his predecessor, the gentleman from Massachusetts [Mr. MARTIN], made request of the Rules Committee for a rule on any bill but what the request was honored." This is another evidence of the undeniable fact that it has always been possible to get up for debate any measure that a majority of the Members really approve and want.

The resolution before us today would eliminate the 21-day rule and return to complete control by the Rules Committee unless 218 signatures to a discharge petition can be obtained or Calendar Wednesday used. The latter device has proved impracticable because dilatory motions can be made to waste a whole afternoon without even getting to the bill involved. I oppose the Cox resolution to repeal the 21-day rule for the same reason I voted for the rule last year—it is the lesser evil of the only two alternatives we are being permitted to choose between.

What we need is something in between the extremes of "gag" rule by the Rules Committee, or a ship almost rudderless as the House is under the 21-day rule. A workable middle ground could be obtained in two ways. One method would be to amend the discharge petition rule so the number of signatures required would be reduced from 218 to 150 (as was the case prior to the Democratic Congress of 1931-33). The other method would be to amend the Calendar Wednesday procedure so that no dilatory motions or quorum calls could be permitted by the Speaker. Either of these methods of amending the rules would serve the purpose of limiting power in the hands of the Rules Committee and yet preventing confusion and waste of time in dilatory quorum calls or debate on bills which are not considered important or advisable by a substantial group of Representatives. Unfortunately we are not being permitted to offer debate and vote on such amendments.

Our Congress is one of the few legislative bodies left in the world which is actually responsible to the people and which has power to initiate, without executive sanction, measures it feels are in the best interest of the people. We must endeavor to keep it this way and to make it a model to be admired and emulated by other people in the world who hope for a truly democratic type of government. The present rule is not the best way to achieve these ends because it does not promote maximum efficiency in the use of our time. It allows a minority of either the ardent proponents or the bitter opponents of a measure to make a spectacle of this body and to weaken public confidence in the legislative process. The 21-day rule will be retained by today's vote, but it is not an adequate answer. We must continue to seek a better solution to the problem.

White House or Transport House

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Peter Barry which appeared in the English weekly magazine Truth:

WHITE HOUSE OR TRANSPORT HOUSE

(By Peter Barry)

Benedict Arnold was the great American traitor. He was one of George Washington's officers in the War of Independence, and he decided to betray his own side. He made a bargain with Major Andre, of the British Army. But the bargain went wrong. The Americans caught Andre and hanged him. Arnold escaped—and the Americans have execrated him ever since as the man who propitiated his enemies at the expense of his friends.

I dare say that Mr. Lewis Douglas, the American Ambassador in London, would be startled and outraged to hear himself compared, however remotely, to Benedict Arnold. So would Mr. Averell Harriman. So would Mr. Thomas K. Finletter, the United States Minister now administering Marshall aid in London. But let us see.

It is not suggested, of course, that any of these gentlemen is venal or in any other way personally disreputable. On the contrary. Their intentions are undoubtedly excellent. Unfortunately, it is not their intentions that matter.

Objectively (as the Communists say), Mr. Douglas and his two colleagues are—however unconsciously—betraying the American way of life. They are betraying the free enterprise system on which the United States is based. They are giving aid and comfort to the enemies of that system; and they are doing so not at all from any unworthy motive but because of credulity and ignorance. The difference between them and Benedict Arnold is that Arnold knew what he was doing and they do not know.

Mr. Douglas, Mr. Harriman, and Mr. Finletter have now become three of the principal assets of the British Socialist Pary. To judge from their public utterances they take their inspiration not from the United States but from the Socialist headquarters at Transport House. They are like a ventriloquist's dolls, Mr. Herbert Morrison's Charlie McCarthy's.

In the last 12 months these three innocent gentlemen have provided a whole series of unsolicited testimonials to British socialism. Almost every time they open their mouths they proclaim their belief in the ultimate success of the Socialist experiment. They swallow without a gulp the crudest propaganda balderdash put out by Mr. Morrison's machine. For capacity to be duped and humbugged and bamboozled Mr. Douglas, Mr. Harriman and Mr. Finletter bear away the palm.

Their utterances could not be more useful, from the Socialist point of view, if Mr. Morrison had written them himself. They are featured on the front pages and in the editorial columns of the Socialist press; they are circulated in thousands of leaflets and handbills; they are part of the equipment of every Socialist propagandist; they are quoted incessantly by canvassers and hecklers and saloon-bar oracles. Whenever a Socialist politician finds himself in a debating difficulty he falls back triumphantly on Mr. Douglas, Mr. Harriman, and Mr. Finletter. If there is any gratitude in politics, and the Socialists win the next election, Mr. Attlee should celebrate the victory by offering peerages to Mr. Douglas, Mr. Harriman, and Mr. Finletter. No man will have done more to earn them.

Let us look at the facts. At the present moment the Socialist experiment in Britain is drifting rapidly toward the rocks. It has been kept afloat from the beginning by American dollars and by nothing else. (Without those dollars, as Mr. Arthur Greenwood candidly confessed in a speech during the Hammersmith by-election, there would now be 5,000,000 unemployed in this country.)

But, in spite of the dollars, disaster is near; and the British voter is beginning to realize it. The Socialists have lost his confidence. He sees the muddle, the mismanagement, the jobbery, the incompetence all around him. With that slow-moving sagacity that is his distinguishing characteristic the British voter is coming gradually to the conclusion that socialism will not work.

It is being borne in upon him that the Tories are right; that we cannot keep a population of 50,000,000 alive on this island by passing resolutions; that Britain must choose, literally, between capitalism and starvation. We must produce more or we shall perish. In order to produce more we must go back to profit-making, to competition, to thrift, to investment, to exploitation and inequality and imperialism and all the other Socialist bogies.

A disagreeable conclusion; and it is not surprising that the British voter moves toward it slowly. He has been told so often that socialism can take the place of sweat. But move toward it he does.

This is the moment chosen by Messrs. Douglas and Harriman and Finletter to assure him, loudly and repeatedly, that the Socialists are right after all. Let us begin with Mr. Finletter. Mr. Finletter arrived in this country in June 1948. Within a few hours of his arrival he was holding a press conference at the American Embassy, at which he said: "The United Kingdom has made an extraordinary effort of recovery. Production has increased by 10 percent over the 1938 figure."

If Mr. Finletter calls this extraordinary, he must be, indeed, easy to astonish. He has, in fact, swallowed hook, line, and sinker, the crudest of all Socialist tricks, the trick of ignoring the increase in our population between 1938 and 1948. There are over 2,000,000 more people in this country now than there were then—a fact which makes nonsense of all the Socialist statistics. (Comparisons between our food supplies now

and prewar, for instance, are completely nullified by the 2,000,000 additional mouths to feed.)

But this elementary fact is concealed from Mr. Finletter. If he does not know it (and apparently he does not), and if there is nobody in Mr. Douglas' Embassy who knows it (as apparently there is not), he should ring up the Conservative Central Office, who will be glad to tell him about it. The telephone number is Whitehall 8181.

Having begun by talking nonsense, Mr. Finletter went on to talk more nonsense. On January 12 last he journeyed to Manchester to address the chamber of commerce there. He told his audience—who must have been puzzled to know whether they were listening to a spokesman of free-enterprise America or to a member of the Socialist government—that there had been highly satisfactory gains in British production, and that "austerity is a misnomer. It should be called the self-discipline program, because it is not as austere as all that." And so on, and so on.

The Socialists hailed this speech with jubilation. It was printed at length, in the first person, on the front page of the Socialist Daily Herald next day, with a jeering headline inviting Mr. Churchill to read it. Ever since, Mr. Morrison's orators have been using it systematically, on the widest possible scale, in order to persuade their dupes that socialism is doing fine. Here is a spokesman from capitalist America who says so; and here is the Socialist press using this capitalist spokesman as material for mud to throw at the Tory Churchill.

In addition to talking nonsense in London and Manchester, Mr. Finletter has found time to talk similar nonsense in Washington, too. Last February he had the assurance to tell the Foreign Relations Committee of the United States Senate that the proposed nationalization of the British steel industry would not affect general production here. He also handed to the committee a document praising the "responsible attitude of the British trade-union movement in facing the nation's economic difficulties."

Presumably he meant something by those words; it would be interesting to know what. At the present moment the miners' trade-union, led by its Communist secretary, will not permit its members to work as hard as they did before the war. At the present moment the transport union and the engineers' union are forbidding the use of labor-saving machinery by their members. At the present moment the postal workers' union are forbidding under threat of a strike, any restoration of prewar postal services. At the present moment the railwaymen's union is blackmailing the public (to whom the railways now belong) with demands for higher wages that are not being earned. And so on, and so on.

Yet Mr. Finletter talks about "the responsible attitude" of the trade-union movement.

At the same meeting of the Senate Foreign Relations Committee, Mr. Averell Harriman also saluted the Red flag. He said: "I have seen no change for the worse in Britain as the result of socialism. I have seen no indication that the Labor Party does not believe in the free process just as we do."

It may be that Mr. Harriman is compelled to talk like this—or believes he is—because of the requirements of American politics. Marshall aid is the responsibility of the Truman administration, and therefore it must be defended against the opponents of that administration.

Agreed—but is it necessary for Mr. Harriman, in striking at the opposition in America, to strike at the opposition in this country too? Is he really so naive as not to know that the words he utters in Washington will be used—as they have been and are being used—to plaster the cracks in British Socialist propaganda?

Senator WILEY, from Wisconsin, did his best to enlighten Mr. Harriman. "It is an historic fact," said Senator WILEY very properly, "that every attempt at European socialism has degenerated into totalitarianism. Do you see any steps in that direction in Britain?" To this Mr. Harriman replied: "None whatsoever."

If Mr. Harriman believes that, he is capable of believing anything. He will have no difficulty, none whatsoever, in believing that there are fairies at the bottom of his garden.

Next let us look at Mr. Lewis Douglas. To judge from his speeches Mr. Douglas should be accredited not to the Court of St. James's but to Transport House. He seems to have swallowed the Socialist policy at one gulp; he is the complete marionette.

He testified before the Senate Foreign Relations Committee last January; and he made a statement then about the nationalized British mining industry that might have been written for him by Mr. Morrison. Here are three sentences from it: "By 1951 Britain hopes to produce 249,000,000 tons of coal a year. If the problems of the industry are tackled with the vigor of the past three or four months, Britain will attain her target. This is all the more remarkable considering the mines' history of neglect and mismanagement."

An Ambassador who knows no more than this about the principal industry of the country to which he is accredited is a luxury that only the United States can afford. The mixture of ignorance and credulity in those sentences would hardly pass muster on a Socialist soapbox. Every statement in them is demonstrably untrue. It is nothing less than scandalous that the American Ambassador should soil his tongue with the Socialist lie of Tory misrule—the most contemptible lie in British political history.

Since the Americans are so willing to offer advice to this country they will not object, I am sure, if this paper offers some advice in return.

It is the business of the United States to uphold democracy and the American way of life. Democracy and free enterprise are two sides of the same coin. If free enterprise is destroyed then democracy dies with it.

Now a Socialist victory in 1950 will mean the end of free enterprise in Britain. It will put this country so far on the road to totalitarianism that there will be no turning back. Does the United States want that?

The answer, presumably, is "No." Let the United States therefore tell Messrs. Douglas, Harriman, and Finletter to stop acting as the chief unwitting propagandists for British socialism. If the Socialists win the 1950 election a very large part of the responsibility for that disaster will rest on the shoulders of three Americans.

NOTE.—This issue of Truth contains an article which will cause everybody who reads it concern, and may cause some resentment. It is no light thing to criticise the accredited Ambassador of a friendly power, but it is equally no light thing that an Ambassador should, however inadvertently, lay himself open to criticism.

The article White House or Transport House is written in no carping spirit but to demonstrate that three distinguished Americans, presumably devoted to the American way of life, which is founded on free enterprise, are by their utterances helping to destroy that way of life.

It need hardly be said that Truth will most gladly put its space at the disposal of any of these distinguished gentlemen should he feel that its contributor has been guilty of misconstruction or misrepresentation.

EDITOR.

Marine Battle Position 1950

EXTENSION OF REMARKS
OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting in the RECORD an article by Maj. William P. McCahill, USMCR, which appeared in the January 1950 edition of the Reserve Officer.

Major McCahill is the executive director of the Marine Corps Reserve Officers Association—MCROA—and is well qualified to speak on the subject he has discussed in his article.

There are many Members of Congress who are aware of the attempts being made to reduce the duties and functions of the Marine Corps. We have noted with regret the language and budget estimates as they affect the Corps in the 1951 budget, but we have also noted with some satisfaction the statement by Secretary of Defense Johnson at his press conference when he unequivocally said that the Marine Corps would maintain two divisions at reduced strength. This would indicate that more than the six marine battalion landing teams mentioned in the budget message will be considered.

Mr. Speaker, it is my hope that both the Armed Services Committee, under Chairman CARL VINSON, and the Armed Services Appropriation Subcommittee, under Chairman GEORGE MAHON, will keep in mind the real and practical needs of the Marine Corps and will do what they can to see that it is maintained as it should be and protected in its functions and duties.

MARINE BATTLE POSITION 1950

(By Maj. William P. McCahill, USMCR)

"In spite of sugary words and fair phrases from high places, the Regular marine and his civilian counterpart in the Reserve has a jaundiced eye cocked at recent developments in national defense."—So says a marine and here he tells why.

The marine reserve today finds himself in a peculiar role. He is on the defensive. After almost making a fetish of the offensive spirit since 1775 the marine of today is both baffled and belligerent over the role assigned him in the peace of 1950. The Pacific champ almost has to apologize for being around.

In spite of sugary words and fair phrases from high places, the regular marine and his civilian counterpart in the Reserve has a jaundiced eye cocked at recent developments in national defense. Some of the oratory we take at face value. The rest of it we consider strictly double talk for the record, a double talk we consider dangerous.

After having had a fair share of annoying moments from Guadalcanal through the occupation of Japan and North China the corps might expect that its professional and volunteer marines could take a breather. But such has not been the case and it was General Cates who as Commandant of the Corps described the Marine Corps as occupying "a battle position which must be defended in full force."

At a time when defense spokesmen are assuring the public we will strike back and

UNIVERSITY OF MICHIGAN LIBRARIES

retaliate in force in event of another "4 o'clock Sunday morning attack" the Department has recommended to the Congress through the Budget Bureau that the offensive strength of Marine aviation be pared 50 percent. It is also an established but as yet unpublished fact that Marine ground elements of the Fleet Marine Force, the Navy's instant landing force in readiness, will receive a substantial cut.

Such is the magic of the word "economy" today. You can't tell a marine about economy. We are used to it. We have been a shoestring service for so long that it is a known fact that for every fighting marine we put on the field it costs some $3,000 less than for his soldier counterpart.

Marine Reserve officers have much more to do than run down their sister services and their brother reservists. Yet, the professional publicists would have the Nation believe that we are essentially opposed to "unification," unable to give credit anywhere else but within our own corps, and violently antagonistic to the Army, the Air Force and even the Navy at times.

If a man strikes back after being pushed around, after being ignored, after being studiously insulted by inference if not in actuality, he isn't picking a fight. And yet, there are brother officers in the civilian reserve who resent the treatment the corps has been getting in postwar policies almost as much as marines themselves. Generally, they are people who either served with or alongside marines and are familiar with the way a marine can handle a dirty assignment nobody else wants.

If anyone still thinks we are looking under the bed, if the scoffers actually believe that we are poking lances at windmills or setting up men of straw they should read the record and balance words against deeds. It may be that the budget cuts planned for 1951 and the ones already instituted for 1950 are not disproportionate. We doubt it. It may be that the country doesn't need a strong Marine Corps capable of instant field operation and air support. We also doubt that. It may be that certain Pentagon planners love the Marine Corps. However, when the commandant breaks a long and studied silence, a silence predicated on trying desperately to do a job for the country without rocking the boat, we prefer to listen to him. When the commandants says that planned budget pruning deliberately strikes at the combat efficiency of the corps we have no alternative but to believe him and discount other sweet sentiment so liberally dished out.

Because they have had the courage to stand up and take their case to the Congress and the people, marines may yet win this greatest of their bloodless battles. And because the American people respect a battler the battle may be resolved in the next meeting of Congress if the issue can be sufficiently clarified in an age which worships at the shrine of economy.

ROA SUPPORT

It won't be easy. But the corps has many friends. The Reserve Officers Association, at its recent national convention, was the first national group to get behind a program aimed at an ultimate safeguard for the corps and the country, the present legislation establishing a minimum flooring on corps strength. Midway in the last session of the Congress some 55 Representatives and 4 Senators tossed bills into the hopper in support of Admiral "Bull" Halsey's suggestion that the corps should always be 6 percent of the total armed forces personnel strength. The bills also call for an Assistant Secretary of the Navy for Marine Corps.

ROA was willing to go along with and lend active support to the proposition that the average of the last 20 years, 6 percent, was a legitimate request. But the legislation is almost sure to have unanimous opposition from the Defense Establishment and perhaps all three of the Departments.

Col. Melvin J. Maas, a former national officer of ROA and long time national president of the Marine Corps Reserve Officers Association, has pounded away at the need for a corps that can get up and go anywhere, any time. He has pointed out that 87 percent of Marine aviators are graduates of the amphibious schools and know what the gyrene on the ground is thinking about planning to do and how he's probably going to react under a given situation. He has emphasized that because of their very training and background the Marine is at home on all elements.

Sometimes it's the little things that indicate a man's thinking In a speech December 7 titled "The Ramparts We Watch," Secretary Johnson made two references to the Marines but consistently referred to the three services. This slight constantly irks Marines. We feel that if the Congress says we are a service then the Secretary of Defense should recognize it and so should the Joint Chiefs of Staff. It is true that there are three Departments. But as long as Congress says there are four services we'll insist on at least that minimum recognition.

Recent developments in the Naval Establishment indicate that we may be well on the way toward winning our point. Admiral Forrest Sherman has ordered Col. John Smith, Congressional Medal of Honor Guadalcanal ace, to duty in the office of the Chief of Naval Operations. John Smith is to see to it that Admiral Sherman doesn't forget to let General Cates in on anything that he should know or on any pending plans which concern the corps.

The Civilian Components Policy Board which is carving our future Reserve policy carefully and professionally now refers to the four services and is perhaps better indoctrinated to the capabilities of the corps than either the Joint Chiefs or the Little Joint Chiefs. But it's an uphill battle.

Marines freely admit that they are biased when it comes to the corps. But so is America biased when it recalls Tarawa, Iwo, and Midway, as it too infrequently does today. It seems today that it was the Army that took Guadalcanal. There are a lot of guys who still get hot and cold with malaria that might give you an argument on that one.

However, in spite of our acknowledged bias, many of us are sincerely and seriously concerned about our military security as a nation. If a set line of thinking can set the stage for practical disintegration of the corps as a combat unit, the same thing could happen tomorrow or a year from tomorrow to another arm of our defense team. We are the first to concede the reasonableness of a balanced team for our national security. But, as David Lawrence so ably pointed out, we are puzzled when the Defense Secretary jumbles the context of the amendments of the National Defense Act passed in 1949 and comes up with a quarterback in the garb of the chairman of the Joint Chiefs of Staff.

The next speaker within my earshot who piously proclaims that he has no intention of abolishing the Marine Corps is not only going to have to define his term "abolish" but answer a few pointed questions, at least better than did the eminent chairman of the Senate Armed Services Committee last summer.

CONGRESSIONAL DISCUSSION

In recent Senate debate Senators KNOWLAND and TYDINGS scoffed at any danger to the corps. However, when Marine Lt. Col. PAUL DOUGLAS, junior Senator from Illinois, asked Senator TYDINGS a direct question, he received an evasive answer. Senator DOUGLAS asked, "Does the Senator from Maryland know of any persons anywhere in the National Military Establishment who would wish to abolish the Marine Corps?"

Senator TYDINGS failed to answer the pointed question simply because there are men in high places who have this intention. Senator TYDINGS, speaking as chairman of the powerful Armed Services Committee, said: 'The Senator from Maryland, so long as he is in the Congress, will resist any attempt to abolish the Marine Corps, because it has been of tremendously valuable assistance to the United States and is worth millions or billions of dollars to our country."

In the language of economy-minded legislators and officers we probably will again hear the specious argument that we do not need "two armies and two air forces" which is another way of saying that marines should be confined to interior guard duty and thrilling the folks at home with snappy parades. During 1947 debates on the so-called Unification Act, both the Army and the Air Force wanted the marines cut down to size. Their statements are available for all who read the CONGRESSIONAL RECORD (p. 9306, July 12, 1949) and provide much light on today's controversy where it appears that some people neither mean what they say nor say what they mean with regard to the corps.

General Eisenhower, as Army Chief of Staff, recommended:

1. The Marine Corps is maintained as an adjunct to the fleet and participates only in minor shore combat operations in which the Navy alone is interested.

2. That it be recognized that the land aspect of major amphibious operations in the future will be undertaken by the Army and consequently the marine forces will not be appreciably expanded in time of war.

3. That it be agreed that the Navy will not develop a land army or a so-called amphibious army, marine units to be limited in size to the equivalent of the regiment, and the total size of the Marine Corps, therefore, limited to some 50,000 or 60,000 men.

General Spaatz, as Air Force Chief of Staff, said:

"I recommend therefore that the size of the Marine Corps be limited to small, readily available and lightly armed units, no larger than a regiment, to protect United States interests ashore in foreign countries and to provide interior guard of naval ships and naval shore establishments."

There is no question here of good faith. It is merely a matter of opinion. Marines and others feel that in an atomic age there is still great need for shock troops ready to pack up and go at a moment's notice. There are some other matters which require consideration, such as the evident fact that the Marines serve as a measuring stick against which to measure the effectiveness and economy of other American military units. Maybe some commanders would prefer not to have such a handy measuring stick around. Maybe some people in high places would find it difficult to explain the number of generals per men in the Army as against the Marine ratio. Maybe the Army would be embarrassed if tomorrow we were to be mobilized and the corps could put two streamlined divisions with air support in the field in a few hours or days while the giant Army was able to provide only about an equal number of troops in the same time.

Last year in summer maneuvers the Marine Reserve air arm actually transported 28,000 Reserve ground troops either to or from training at Camp Lejeune or Camp Pendleton. Marine fighter, bomber, and transport planes converged in 24-hour periods under Reserve control at the coastal bases at Cherry Point, N. C., and El Toro, Calif. This past year countless companies and battalions of the Organized Reserve and thousands of volunteer reservists took part in amphibious training designed to keep them ready if the call should come. The Marine Corps Reserve is almost 130,000 strong and represents an elite corps of trained specialists ready to more

than double present Marine strength in case of war or serious emergency. Yet, if present budget plans are carried out—and they have not been officially denied—Marines will find themselves with insufficient planes available for reserve training and probably with none in the world.

Never before in its history has the corps needed friends so badly as it needs them today. Senator SALTONSTALL, of Massachusetts, recently said very frankly to a marine audience that no Congressman or Senator would dare risk political suicide by advocating abolishment of the corps. Most of his colleagues probably would echo his remarks. But this is not the danger. The abolition of the corps is not the immediate goal but rather the stripping of its ability to ever spearhead another war as it did in the Pacific.

So when a person scoffs at any real or presumed danger to the corps, it is well to check not only his motives but also his interpretation of danger. A corps of the size proposed by Pentagon planners would certainly be incapable of carrying out its assigned missions and functions as laid down at the Key West conference and subsequent agreements.

Whether on guard in the Near East or the Pacific, whether aboard capital ships of our shrinking Navy or at domestic and foreign land and air bases, the Marine Corps today stands ready, as in the past. Its future readiness is in the hands of the Congress and the American people. May they be as faithful to the marines as the corps has been to them.

Between the Lines

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am extending my remarks at this time to include a poem by Mr. Tex Reynolds, of the Racine Journal Times, Racine, Wis., which seems to point out a moral which the American people should be thinking about quite seriously:

WITH ABJECT APOLOGIES TO ROBERT W. SERVICE, WHO AUTHORED THE SHOOTING OF DAN MCGREW

A bunch of the boys were whooping it up,
In the new White House saloon,
And Harry that hammers the music box
Was playing a party tune.

When out of the night, which was gosh awful cold,
And into the political air,
There staggered a mailman, fresh from the truck,
Bowlegged with all he could bear.

He looked like a man who needed a shot,
With scarce the strength of a louse,
But while Harry hit a gay musical bit
He called for a drink on the house.

There are men who somehow grip your eyes
And hold them hard like a spell,
Such was he, and he looked to me,
Like a man who was madder than hops.

But he had the poise and amid all the noise,
He raised his hand with a sway—
"If you will just please quit pounding those keys,
"There is something I want to say."

Then Harry stopped with a kind of a laugh,
And his manner was cute and droll,
"I suppose," he said, with a wag of his head,
"Some more cities are out of coal."

"Oh, smile if you wish," the mail carrier cried,
"But let me my story unfold.
"These missives right here, from far and from near,
"Mean that a lot of good people are cold.

"For weeks and for weeks these letters have come,
"To tell of the cost and the toll,
"That you could soon end if you'd only unbend
"And put a stop to the strike in coal."

But Harry replied with a grin that was wide,
And his voice it was calm and cool,
"I'm playing it smart with my head, not my heart—
"I'm nobody's political fool."

"So the coal piles are shrinking and citizens freeze?
"Well, tell 'em to put on their wings,
"I know of a clime where it's warm all the time—
"Why don't they go to Palm Spring?"

Then he whirled right around and started to pound,
And the number was lilting and light,
And the music it rang while his Margaret sang,
"Hot Time in the Old Town Tonight."

So those are the simple facts of the case,
And I guess I ought to know,
They say the mailman was dumb like a goose,
And I'm not denying it's so.

If he had been wise like the "fixer" guys,
Just between us two,
He'd slyly have gone to General Vaughan—
The White House "Lady Lou."

Why Can't We Unmask Old King Coal?

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. O'SULLIVAN. Mr. Speaker, there is no real coal shortage emergency at this time, according to the best informed sources, among them being the Christian Science Monitor. The real shortage is one of facts to substantiate the coal operator's false and futile claim. The principal shortage is a shortage of truth in this matter and an abundance of make-believe. The alleged coal shortage has been self-created by the unholy coal barons and their ilk which is indirectly putting the coal squeeze, at this time upon many unsuspecting small communities, coal users and small-business institutions, who in turn, as was expected, are pleading with certain of their unsuspecting Congressmen to compel President Truman to declare that an emergency exists, when it does not exist in fact, and invoke the provisions of the Taft-Hartley Act, which its first-named author admits has 27 things wrong with it.

No sensible person blames our great President, even in a proper case, for being hesitant about making use of such an un-American, grotesque legislative monster.

If the supposed authors of this act, had 27 things wrong with their handkerchiefs, socks, shoes, underwear, shirt, tie, pants, vests, coat, overcoat, gloves, or hat, would they want to use them further or throw them on the scrap heap. If they did want to make use of them further everyone would be justified in believing that there were 27 things also wrong with their heads.

There is in this Nation, right now, a large supply of coal piled above ground, on railroad sidings, joyriding in transit from place to place, and stock piled in the coal yards of favorite manufacturers and dealers. Some of the railroads are helping to put the squeeze on those who are now in want of coal by laying off trains and squalling loudly but falsely that they, too, are also hard hit because of a coal shortage. Something should be done immediately to stop this latest reactionary rascality.

No, my dear readers, I am forced to come to the conclusion that the whole thing about a national coal crisis is a flatulent conspiracy of extreme right-winged, bad, big business, spearheaded by reactionaries and the innocent uninformed, and is without basis in fact and dreamed up to crush out the United Mine Workers and John L. Lewis, whom I believe to be in most instances, a fearless and great man truly working in the interests of the United Mine Workers of the Nation, their families, and their communities.

With due apologies to the author of a hopeful present day song hit, I dedicate the following humble filched words to today's reactionary jewels of misrepresentation and deceit, the coal clique.

Oh our ears are full of tears,
Lying on our backs in our beds,
Crying over you.

Adventurous Aroostook Farmers Have Seen Both Prosperity and Adversity

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. HALE. Mr. Speaker, so much publicity has been accorded to subsidy payments made to the potato growers of Aroostook County, Maine, that I should like to call attention to an article in the Boston Globe of January 1, 1950, which gives a little perspective on Aroostook County history. Aroostook County does not happen to be in my district but I know the county well and I know that the Aroostook farmer does not want to raise unwanted potatoes or to be paid beyond his deserts. He has fully complied with acreage allocations, and current surpluses arise almost wholly from importations from Canada.

The article in question is as follows:

ADVENTUROUS AROOSTOOK FARMERS HAVE SEEN BOTH PROSPERITY AND ADVERSITY

(By Herbert W. Moore, executive secretary, the Potato Industry Council of Maine, Inc.)

You have been reading much about the Maine potato industry in recent months. It has been the favorite subject for various political writers, who with little regard for the

UNIVERSITY OF MICHIGAN LIBRARIES

truth, have sought to create an exceedingly distorted and false picture of its way of life.

All of these writings have centered about the wartime price support program which ceased to exist a year ago, and have given absolutely no recognition to the picturesque and romantic development of an industry which within the past century has transformed a bleak impenetrable forest land into the most concentrated, and most heavily mechanized agricultural area in New England.

Aroostook, a county the size of the Commonwealth of Massachusetts and Rhode Island combined but with only 10 percent of its area cleared of timber, and its gigantic potato industry which each year harvests 15 percent of the total national potato production, is by reason of its unique development perhaps far more removed psychologically than it is geographically from the rest of New England agriculture.

As with the progress and development of our great Nation and its historic expansion from the Atlantic to the Pacific, the progress and development of the Aroostook potato industry has also centered around the railroad. In our case, however, the direction has been northward rather than westward and for the most part has taken place in the first half of the twentieth century.

AROOSTOOK'S WESTERN ATMOSPHERE

Since the Civil War, Aroostook has been actively engaged in the production of potatoes, but without adequate transportation facilities its potato production was converted in its entirety to the manufacture of starch for use in the New England textile industry.

With the coming of the railroads in the later part of the nineteenth century, however, the development of the Maine potato as a national delicacy began and it was only a matter of a few years before it assumed a commanding role in the life and diet of the entire population of the eastern seaboard.

Perhaps because of the nature of our growth, more analogous to the development of the West than of New England, a westerner would feel right at home in Aroostook. Instead of grain elevators beside the tracks, however, he would see potato houses. Since the direction of our growth has been northward he probably would find weather conditions more severe, but he would recognize the general atmosphere and feeling which permeates the area as distinctly that of the cattle country, the wheat country, or the irrigated country.

By reason of the nature of this industry which involves such tremendous financial risks as to stagger the imagination, there has developed a people who by virtue of their past experiences are hardy, adventurous, keen, and tenacious.

In fact, their willingness to take risks has resulted in the development of a production know-how that is without peer. Nor have they stopped there. With the same energy and aggressiveness, by means of self-imposed taxes, they are financing continual projects aimed at the betterment of storing and merchandising their great crop to insure the consuming public of superior quality at minimum cost.

LOSSES MIXED WITH PROFITS

Let's take a moment and review the financial history of Aroostook, where until now the potato has been king and where diversification has been very limited in scope. Here are the figures for the profit or loss that the average farmer received per barrel, charging all the costs and all the returns. These figures are exceptionally dependable as cost figures go. They were assembled by an impartial expert. They are based on hundreds of farms. Starting with 1926 the figures run like this: 1926, profit 78 cents a barrel; 1927, loss 9 cents; 1928, loss $1.40; 1929, profit $1.50; 1930, loss 44 cents; 1931, loss $1.06; 1932, loss 65 cents; 1933, profit 54 cents; 1934, loss 65 cents; 1935, profit 29 cents; 1936, profit 89 cents; 1937, loss 55 cents; 1938, loss 16 cents; 1939, profit 14 cents; 1940, loss 67 cents.

No wonder bankruptcy was general, that mortgage companies were desperately trying to get out. No wonder the potato country is inhabited by men more adventurous than the typical New England farmer, men who can take it. They have had to.

Since 1940 there have been the war and price support. The area has had a period of stability and relative prosperity heretofore unknown. The prosperity however has been much more modest than the most lurid stories that have gone out have led the general public to believe. Here are the profit figures for these years every one a profit, but a modest one: 1941, 43 cents; 1942, 70 cents; 1943, 31 cents; 1944, 34 cents; 1945, 95 cents; 1946, 53 cents; 1947, 53 cents. This, remember, is per barrel. A barrel is 3 bushels. To get the profit per bushel divide by 3.

Unfortunately, figures from this authoritative source are not available since 1947.

Nineteen hundred and forty-eight was a year of profits, the last year of operation under wartime legislation and the subject for so much publicity in recent months. The estimate for that year is 90 cents per barrel of merchantable potatoes (less than for the year 1936). In consumer's terms, one-half cent a pound. And that profit includes the Government payments that have been so widely advertised.

MOST OF FARMS SMALL

These 8 years constitute the only period for which there is authentic history of stable prosperity in the potato country.

To get an even more realistic picture of the degree of the prosperity of our area let us look for a moment at a typical farm.

It distinctly is not a big operation that has been pictured so widely. In Aroostook County, where 90 percent of Maine's potato acreage exists, there were 4,338 potato farmers in 1949. Of these only 21 had over 200 acres of potatoes; 90 more had between 100 and 200 acres, 4,227, or 97 percent, had less than 100 acres. Most of them less than 50. Nearly one-half of all the farms were limited to less than 20 acres. These farms are farmer-owned and operated with 95 percent of the growers actually living on the farms. True the ordinary farmer has lived a little better than usual these last few years. More of the houses are painted. The machinery on most of the farms is fairly modern and fairly adequate and much of it is paid for. Mortgages are smaller and in better shape. But the farmer still has to borrow money to buy his fertilizer and seed and pay the potato pickers. He hasn't gotten far enough ahead to finance his next year's operations by himself and there are seasons of the year when the financial shoe pinches pretty tight.

Even in the face of this, however, these farmers of their own initiative sought the abandonment of high level wartime price supports.

They did not want profits to be guaranteed by the Government. This is not the way the industry had been developed up here. Only through Yankee ingenuity and thrift had it survived the economic rigors of the past and it had no desire to radically change this position in the future.

It did recognize, however, that because of its very nature—an industry consisting of thousands of small growers—it did not of itself possess the machinery by which it could effect even a reasonable stability. Therefore, it decided to experiment with a new idea—that of letting Government provide the machinery whereby its economy could be brought more nearly into line with that of industry, labor, and other segments of agriculture in the area.

"FIRE INSURANCE" SUPPORT

They have thus come up with a "fire insurance" price support, the level of which will not even cover the farmer's costs. This experimental plan has just begun to operate in 1949, but it is too early to determine what all the effects will be. We do know this much, however: The 1949 crop will bring in less than two-thirds what the 1948 crop brought in, despite a record yield. In 1949 the average farmer will go behind. He won't go down and out—not yet.

The ordinary farmer will dig into savings, if he has any. He will go further into debt if his credit will stand it. He will stop repairs and replacements and live partly on the depreciation of his buildings and equipment.

In 1950 the potato country faces a further cut in acreage—nearly 15 percent more. The 30-acre farmer therefore will become a 25-acre farmer. And price support will be lower still. It will not and cannot underwrite the stabilized moderate prosperity that Aroostook enjoyed for the first time in its life from 1941 to 1948.

That is the true picture of Aroostook.

EIGHTEEN POUNDS IN 1909, FORTY-ONE NOW

Where will we go from here? The next few years will tell us that. If our present experiments indicate still more controls and continued restrictions in acreage we will not be able to put up with it for long. At least not for what we are getting out of it now.

Then we shall try again.

We hear much talk about the Brannan plan, the features of which have been under study in this area for years, but its practical operation has created many doubts in the mind of the farmer.

In any event, in the firm belief that a reasonably stabilized and a reasonably prosperous agriculture is a primary requisite for a healthy national economy, and with bitter memories of the depressions in the past half century, all of which started on the farm, the residents of Aroostook are earnestly seeking some means of maintaining some of the stability they have enjoyed for the past 8 years.

Many accusations have been made that price supports have caused high potato prices. True, potatoes cost somewhat more than they did several years ago, but so does everything else. It is interesting to note however that in the period 1909 to 1914 1 hour of labor in industry would purchase 18.2 pounds of potatoes at the farm, whereas in 1948, 1 hour of labor in industry would buy 41 pounds. And still we hear that potatoes are high priced.

We continue to hear also that the farmer is responsible for higher potato costs. This is not true. In years gone by, when potatoes were sold in bulk the housewife loaded herself down with potatoes when she went to market. Now storekeepers do not want to sell potatoes that way. They want them in small packages so that the housewife will have room to carry out other merchandise. The housewife also wants them that way for her own convenience in handling. Fancy packaging in small lots costs money. That is why even if we gave the potatoes away here at the farm the housewife would still pay anywhere from 1½ to 4½ cents per pound for them at her local store as a result of the costs of packaging, distribution and merchandising.

RAISING OF BEEF CATTLE

As far as 1950 is concerned, and with or without support, the only hope of fair returns is that by some miracle the national average yield per acre which has been mounting year by year should suddenly turn downward resulting in a relative shortage of potatoes and prices well above support levels. There is a chance of that—a bigger chance than in recent years—but not big enough on which to pin very substantial hopes.

There is one other ground for hope in the potato country on the long-time basis. It doesn't promise much for the immediate future. It can't be done that fast. That is the farmer will be able to expand the pro-

duction of other farm products to supplement his potato sales.

He won't give up potato raising unless he has to. But potato acreages are down and down permanently. The great increase in yields per acre—nearly doubled nationally—and the spectacular drop in potato consumption make old acreages entirely out of the picture. The Aroostook farmer now has more acres not needed for potatoes. With the lower returns from the potatoes he does grow he must put these idle acres to work if he is to survive.

At the present time the biggest development appears to be the expansion of dairying, although the raising of beef cattle is also assuming considerable proportions.

We are not going to go out of the potato business, but rather will add other farm products to what potato business we have left. The combination seems a very sound one, and brings about a diversification never before experienced in the area.

That is our history and that is our story—certainly unique in modern New England history and certainly less remunerative than others would have you believe.

This past 50 years has seen our complete development and growth. Our troubles have been many, our heartaches great, but they have been overcome.

Our progress will continue to be governed by the adventurous, hard-headed, and progressive thinking of our people and regardless of the obstacles we shall continue to maintain our place in the economic life of New England and the Nation.

Admiral Yarnell Warns United States of Greater Loss in Orient

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Journal-American of January 15, 1950.

In it Admiral Harry E. Yarnell, noted author and student of Far Eastern affairs and former Commander in Chief of the Asiatic Fleet, warns that our failure to live up to our commitments to our ally, the Government in China, not only will cost us our prestige and influence in the Orient, but will lead to certain loss of Formosa, which he terms a vital link in America's Pacific defense perimeter. He declares that America must abandon her do-nothing policy in the Far East and adopt a dynamic course of positive action against the spread of communism in Asia. It was Admiral Yarnell who foresaw better than any other high official the menace of Japan and the attack on Pearl Harbor. He was ignored then. Are his warnings to be ignored now?

YARNELL WARNS UNITED STATES OF GREATER LOSS IN ORIENT—CALL FOR ACTION ON FORMOSA

(By Admiral H. E. Yarnell, U. S. Navy, retired)

There have been few periods in the diplomatic records of the United States that can compare in ineptitude with that displayed in our relations with China during the past 13 years; this has been especially true since the occupation in recent months of most of that unfortunate country by Communist armies.

We have openly adopted a "wait and see" attitude inspired by lack of any plan for assistance to the Nationalist Government in its resistance to an enemy, whose advance in Europe is being halted by the billions of dollars we are pouring out to that end.

In fact, there are those both in the Government and out who feel that the time has come to recognize the Communists as the de facto government of China. They argue that by such action our trade and the Americans remaining in China will be safeguarded.

WEAK ARGUMENT

Judging by the treatment of our nationals in other Communist countries, there is scant support for such an argument. Worst of all, results of such recognition would be the effect on Indochina, the Philippines, and Indonesia.

It would mean our abandonment of the Nationalist Government, and would encourage and strengthen the Communist elements in their plans for control of the remainder of eastern Asia.

Furthermore, it would mean the eventual surrender of Formosa to a Communist regime, and a break in our island defense barrier in the western Pacific.

NEED FIRM POLICY

While the State Department has announced a policy that it proposes to follow in regard to Formosa, there are certain factors in the situation that should receive consideration.

There must be, sooner or later, and the sooner the better, a definite policy concerning our attitude toward communism in the Far East.

It seems strange to have one policy entirely opposing communism in Europe, and an entirely passive one in regard to communism in the Far East. For that reason, a policy similar to that proposed in this article should be given urgent attention.

The recognition of a de facto Communist regime would be a betrayal of the Government that fought Japan for more than 4 years before Pearl Harbor and suffered losses of life and property beyond computation.

Many hundreds of thousands of American lives were saved by the 8 years of Chinese resistance to the common enemy. Surely the debt we owe the Chinese leaders and people merits more than a passive attitude and the criticism that is being directed against the Nationalist Government today.

HATRED FOR UNITED STATES

We need have no illusions as to the treatment the United States, its nationals and its trade, will receive at the hands of a Communist regime. Their leaders have openly avowed their allegiance to Moscow and their hatred of the imperialist America.

Furthermore, it does not make sense to contribute billions of dollars from our depleted purse to resist the advance of communism in Europe while leaving the back door open to its spread over the other half of the world.

The time has come for a clearly stated, dynamic course of action against the Chinese Communist regime and a discontinuance of the passive, do-nothing, "wait and see," procedure that prevails at present.

The consequences of a do-nothing policy are obvious. Communism will sweep the entire Far East. Formosa will be lost and our island barrier against Moscow in the western Pacific will be shattered. American prestige and influence in the Far East will disappear. A third world war becomes more probable.

WOULD SNUB SATELLITES

Only a positive stand on our part will influence the Communists who respect nothing but strength. To that end we should aid by political, economic, and military means those people who are resisting its advance in the Far East.

Moral support alone will be of great value, and to that end a statement should be issued that the United States will not recognize any regime in the Far East which is dominated by Moscow and the ideals of communism.

On the other hand, support will be given to democratic national governments, which guarantee the rights and freedom of the people and are willing to work with other nations to establish peace throughout the world.

Since we have established the precedent in Europe we should support a "Pacific pact" of the far-eastern nations opposed to communism.

NEED MILITARY AID

We should also declare that the United States will have no economic dealing with Moscow-dominated Communist regimes, but will make every consistent effort to improve its economic relations with democratic governments in the Far East.

Military aid must be given also, but this need not be on the grand scale of that now being given western Europe.

The Nationalist Government of China has established itself on Formosa, and from that stronghold its navy and air force, with our help, can exert a powerful influence in the eventual defeat of communism. An efficient military force can be built up in Formosa at moderate cost on our part for arms and equipment.

Propaganda and guerrilla warfare can be utilized to great advantage and at small cost on the Chinese mainland. In many ways these are the most useful methods of combating communism. It is the use of weapons which they themselves have found most effective.

CITES EUROPE AID

An early settlement of the Japanese problem with a just treaty of peace, which must provide, however, that she cannot go on the warpath again, will add a note of stability to the far-eastern situation.

A staff of diplomatic, economic, and military personnel under the direction of an outstanding authority on far-eastern affairs would be valuable in coordinating the campaign and the part to be played by the several agencies.

Nothing has been recommended in the foregoing suggestions that has not already been done in Europe on a much grander scale. Whether the Asiatic area is more or less important than the European area is a moot question.

One fact is plain, however, and that is that failure to contain Russia and communism in their drive for control of the Far East will eventually result in the United States being driven back to our Pacific coast with Hawaii as our outpost.

The situation demands positive action—not passivity. The first method may, or may not, succeed. The latter will certainly fail.

WOULD LEAD WAY

The announcement of such courses of action and their execution will inform the Far East and the world that the United States is determined to resist the spread of communism in Asia as well as in Europe. It will strengthen greatly the hands of those elements which are opposed to Moscow and its philosophy.

We are a world power, so let us act as one, not only in Europe but in Asia. Such action as proposed, if taken at once, and directed strongly and wisely to a common end may do more for our national security than many billions for armament. The friendship of the people of Asia is a necessary rampart of our defenses. Let it not be lost by indecision and procrastination.

UNIVERSITY OF MICHIGAN LIBRARIES

General MacArthur at 70

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a splendid story on that great general, MacArthur. He will be 70 years old tomorrow and has given 50 years of his life to the service of his country:

MACARTHUR AT 70, DRESSED IN FRAYED KHAKI, WORKS 12 HOURS EVERY DAY

(By Walter Simmons)

TOKYO, JAPAN.—It is somehow symbolic of Douglas MacArthur that America's standard military uniform has insufficient space for the 47 decorations and 10 campaign ribbons he has won in more than 50 years as a soldier.

On his seventieth birthday next Thursday the great soldier-statesman can look back on the most fantastically successful military career of any American since Washington.

In his own lifetime General MacArthur has become a legend. His likeness has appeared on stamps and coins. No American has ever worn his country's uniform for so long. His public career has spanned three generations of the Nation's life, from service as President Theodore Roosevelt's military aide to the colossal responsibility he now bears in Japan.

At an age when most men have retired his reputation is so high that whenever a global problem arises somebody in Washington is certain to suggest hopefully, "Let's turn it over to MacArthur."

Not in 150 years has any American so combined the skills of the soldier and statesman. Two foreign ministers, who had remained unmoved by the most skillful Washington diplomacy, changed their international policies after talking with General MacArthur in Tokyo.

RUSSIANS OUTGUESSED

His extraordinary success has extended even to dealings with the Russians. After pocketing the big diplomatic winnings of Yalta and Potsdam the Soviets have made no headway in Japan or Korea. Relations between General MacArthur and the Russians in Tokyo were courteous but firm from the beginning.

Trying to outguess him has led them into some ludicrous mistakes—they passed up, for instance, an opportunity to send an occupation force to Japan's northerly island of Hokkaido, where opportunities for mischief would have been tremendous.

Once, after listening to a long discourse from Lt. Gen. Kuzma Derevyanko, Moscow's top emissary in Japan, General MacArthur reportedly snorted, "Baloney!" That closed the discussion.

Soviet efforts to propagandize in Japan by insisting American sponsored reforms were answered with such shattering vigor that the Reds have kept quiet since early last summer.

Japanese Communists, too, have failed to make much progress despite the rich opportunities offered by the nation's low living standard and the apparently hopeless prospect of ever bettering it much. Since summer the Communists have suffered one defeat after another.

A carefully timed campaign of civil violence, synchronized with the return of thousands of Communist-indoctrinated war prisoners from Russian areas, backfired with stunning force. Millions of Japanese unionists rebelled against Communist leadership within a few months.

All this vindicated General MacArthur's judgment that the Japanese were capable of taking care of communism themselves without resort to the repressive sort of police action used before the war.

HIS UNIFORMS FADED

Those who knew General MacArthur as the Beau Brummell of the Army during his years as Chief of Staff are surprised at the simplicity of his life in Tokyo.

His summer khakis—some of them dating back to days on Corregidor—are faded and frayed. His winter olive drabs are strictly GI and fit none too well. He wears no insignia or ornaments aside from the five-star token of his rank as general of the Army.

General MacArthur has probably done the hardest work of his life in Tokyo. His schedule is 12 hours a day, 7 days a week. In 4½ years he has missed only a few days at his desk, due to colds.

Working tropical hours—a trick learned during his tours of duty in the Philippines—helps conserve energy and also ties in better with the 14-hour time differential between Tokyo and Washington.

The general rises at 7 and over a leisurely breakfast, enjoys a visit with his son, Arthur, 12. By 8:30 breakfast is over and he goes to his study to read Washington cables that have arrived during the night.

Between 10:30 and 11 he sets out for the office in a big car bearing five-star plates front and rear. Formerly he was followed by jeeploads of honor guard men, but now a few Japanese policemen spaced along the 5-minute route between his American embassy home and GHQ are his only protection.

HIS KNOWLEDGE PROFOUND

The simplicity of his office often astonishes visitors. It contains little besides a telephoneless desk, a leather davenport, several chairs, and an undistinguished marble bust.

Hundreds of prominent Americans have visited him here since the war. They have run the gamut from Ike Eisenhower (MacArthur's one-time aide) to ex-President Hoover, the late Father Flanagan, of Boys' Town fame, and Showman Billy Rose.

General MacArthur has been around so long, seen and experienced so much, read so widely, and known so many different kinds of people that he is quickly on terms of easy intimacy with any visitor.

Congressmen are astonished at his broad grasp of politics. (He was one of the few who foresaw Truman's victory over Dewey.) Labor leaders find him a great deal more liberal than they had supposed.

Educators are confounded by his knowledge of their field, until they recall he had to wrestle with the problem of a university president when he was superintendent of West Point back in the twenties.

But it is when he starts discussing far-eastern matters that he leaves his visitors with their mouths hanging open. His personal knowledge goes back 45 years to the time he observed the Russo-Japanese War with his father, Lt. Gen. Arthur MacArthur.

Those who have heard him discuss the Orient agree that his grasp of it—military, political, economic, and historical—is more profound than that of any other American.

OPPOSED HUMILIATION

Something of the sort is to be expected, of course, since he has been in the Far East since 1935 without a trip home. After his unprecedented 5 years (1930–35) as Army Chief of Staff, he went to Manila as military adviser to the Philippine Commonwealth government.

Since the war, which resulted in his storied journey to Australia, New Guinea, and back to the Philippines, he has officiated at the birth of two new Governments—the Philippine Republic (July 4, 1946) and the South Korea Republic (August 15, 1948).

The general's industrious study of things Japanese before and during the war equipped him with unique qualifications for the job of supreme commander for the allied powers in Tokyo.

It was not necessary for him to unlearn such favorite American wartime oddments as "the favorite diet of the Japanese is fish heads" or "the average Japanese can live for weeks on a tobacco sackful of rice." (Actually fish heads are used for fertilizer, and the average Japanese is miserable unless he eats approximately a wastebasket full of cooked rice every day.)

The wise decision to keep Emperor Hirohito on the job was made in Washington, of course, but it was General MacArthur's sure handling of a difficult protocol problem that helped make the occupation such a success.

Most Americans in 1945 and 1946 wanted to see the Emperor publicly humiliated. The general would not permit it. He did not even summon the Emperor to his headquarters, as many expected.

After a while the Emperor called on General MacArthur. These courtesy calls have recurred at 6-month intervals ever since. What is discussed is never divulged, but it is probably nothing of major importance.

ARMY A FRIENDLY GARRISON

The supreme commander himself has never claimed Japan is completely democratized, or will be by any such foreseeable date. He made this plain on St. Patrick's Day, 1947, when he gave Tokyo correspondents his only interview of the occupation.

The interview became one of history's landmarks, for at that early date General MacArthur urged an immediate peace treaty, a settlement of the reparations problem and an end to the economic blockade that still stifles Japan.

He also warned that a long occupation would defeat its own purpose. When it became plain last year that the occupation was going into its fifth year without a peace treaty he moved swiftly to sever connections between American troops and Japanese life.

Today the occupation is over to all intents and purposes and the Army has been turned into a friendly, protective garrison force.

Military government is a thing of the past.

INFLATION STOPPED

Increased production of necessities has made it possible to brush aside the vast web of controls that had tangled business for more than 10 years.

This action, which Commander MacArthur earlier had promised as soon as practicable, virtually eliminated the black market. Prices of many commodities dropped and quality has greatly improved.

Other far-reaching changes have taken place within the year. Inflation was stopped by balancing the national budget for the first time in 15 years. Occupation costs to the Japanese were slashed to the bone. Subsidies were drastically pared. Coal production now exceeds demand for the first time.

Industrial output has been shoved close to the 1930–34 level by prodigious effort, but living standards are only about 70 percent of that level because of a 17,000,000 increase in population.

American unilateral action finally broke the reparations impasse, but Japan's foreign-trade picture remains clouded because of the determination of several nations, notably Britain, to keep their war-won markets. General MacArthur has gone ahead, nevertheless, by returning nearly all trade to private hands.

As the complexity of his task has increased General MacArthur, far from attempting to run a one-man show, has not hesitated to ask the services of numerous technical experts from the United States.

The modern techniques they have imported have increased efficiency in government, industry, agriculture, and many other fields. For instance, Blaine Hoover of Chicago, a civil-service expert, threw the feudalistic bureaucratic system out of the window and replaced it with modern personnel methods.

NO MEMOIRS YET

The Japanese Government's recent accomplishments in budget balancing, tax reduction, elimination of controls and subsidies and the firing of 170,000 surplus government workers are food for thought for Americans here who reflect that General MacArthur was passed over as a Presidential possibility in 1948.

Actually he refused to cooperate with those who sought to get him the nomination. He refused to give interviews or pose for pictures.

This was admittedly his last chance at the Presidency. Perhaps it is just as well, many of his friends agree, that Americans no longer view him through the red haze of political passion.

As his long and lonely job draws to a brilliant close General MacArthur gives no indication of what he might do after leaving Japan. Friends point out that he is the only great war figure who has not written his memoirs. Asked about this long ago, he smiled and said:

"Well, I've got 20-foot lockers full of papers up at the house."

A Story of Bravery and High Courage

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. FENTON. Mr. Speaker, under leave to extend my remarks, I ask unanimous consent to include in the RECORD an editorial from the Record-American, Mahanoy City, Pa., under date of January 19, 1950, relative to the mine tragedy that attracted Nation-wide attention.

By the heroism of the anthracite mine workers, who daily risk their lives in the bowels of the earth, and by the wholehearted cooperation of all who aided in the rescue, the life of one World War II veteran was saved, but that of his brother, who also served his country with honor, was lost.

Our heartfelt sympathy goes out to Mr. and Mrs. Michael Burda, of Morea Colliery, Pa., in the loss of their son Edward, who after returning home from the horrors of war, met such an untimely and tragic death in the region where he had hoped to find peace and contentment. Such is the lot of hundreds of coal miners who in their daily duties to earn a living risk their lives to recover a precious natural resource to keep the wheels of industry moving, the home fires burning, and contribute to the national security.

A STORY OF BRAVERY AND HIGH COURAGE

The Burda brothers have been brought up from the bottom of their independent mine slope at New Boston—Joseph, alive, and Edward, dead. The saga of their rescue from the depths of the earth adds another brilliant chapter to many other such rescue projects that are part of the history of the anthracite region.

Certainly the spirit of unselfish courage that motivates men to brave all dangers and work like galley slaves when called upon to come to the rescue of those in distress was splendidly exemplified by all those directly connected with the operations near New Boston that began when word was flashed around Friday afternoon that two men were trapped inside a bootleg mine. Only those who were privileged to view the work at first hand are in position to appreciate the unselfish devotion those scores of men exhibited once they heard the call of distress.

Outside newspapermen on the scene were indelibly impressed with the nonchalance the force of mine workers displayed as they arrived on the scene volunteering their labors in the great effort that was to be made to free the entombed men. There was no question of pay—you can't offer money for a task which men take up knowing that it may cost them their lives. They were only interested in reaching the mine prisoners and getting them to the surface, dead or alive. They gathered at the mine mouth, smoked, chatted in low tones and when one or more emerged from the opening there were others there to silently take their places without even a question. Thus it went until the limp body of Edward was brought to the surface near noon on Wednesday.

And there were others. The call went out for equipment needed on clearing the way for rescuers to enter the blocked slope. Owners of power shovels, bulldozers, and the crews that manned them heeded all requests made for help and willingly sent valuable machines to the scene all the time knowing it was a humanitarian job with no recompense promised or expected.

And there was the splendid gesture of the coal companies whose managements responded generously to the call for materials, timber, and so forth, so vitally needed in the job ahead. The P. & R. C. & I. Co. magnanimously sent in a force of expert mine workers headed by leaders trained in mine-rescue work and continued them on the job until their task was accomplished. It was a work that surely must have struck a chord of high appreciation in the hearts of men whose fate it possibly may be to face a similar fate as long as they are engaged in a hazardous occupation.

All honor and credit to the State mine inspectors who took charge of the work and who relayed each other until their job was finished and when they could take pride in accomplishment well and faithfully done.

And there were those others who, while not necessarily engaged in the direct work of going into the earth, nevertheless did their part in attending to the wants of those who did. The devoted members of the Salvation Army crew who supplied food and drink to the workers; the Red Cross who were on hand with offers of financial or other assistance; the truck owners who provided transportation of men and materials when needed. The good people of Morea and New Boston, generally, who stood by at all times ready to do anything in their power to advance the work that lay ahead.

There were leaders from among the mine workers who provided needed guidance to those who volunteered; who brought the plight of the entombed to the attention of those who might help in a big way; to owners of equipment; to mine managers for timber and other supplies. As with all the others they threw themselves wholeheartedly into the job before them and played an important role in the project completed successfully.

Shortage of Doctors Becoming a National Problem

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. MULTER. Mr. Speaker, as the years go by the shortage of doctors in this country is growing proportionately larger and is becoming a real national problem. According to reports the number of doctors in relation to population is less now than it was 40 years ago. Unless we take steps to solve this ever-increasing problem in time, we may some day have to pay a terrible price in the event of some unforeseen national emergency.

Various plans are now before Congress aiming to aid medical students and medical schools so that we may attain a larger supply of doctors and a better national health program. I can think of no better investment in the future of our people than in safeguarding its health. The sooner we do it, the more economical it will prove to be in the long run.

I am placing in the RECORD an article, Not Enough Doctors—Subsidy Planned, which appeared in United States News and World Report, January 27, 1950:

NOT ENOUGH DOCTORS—SUBSIDY PLANNED—GOVERNMENT WANTS 20,000 MORE IN 10 YEARS

(Forced growth of the doctor supply is coming closer. It's a $312,000,000 project, as it stands in Congress. Federal aid for medical students is one phase. So is cash help for medical schools. Bigger enrollments—more doctors in training—is the first goal. Idea is to spread the supply of doctors more evenly over the Nation, get enough to man a national-health program.)

A new subsidy is not far from approval by Congress. This subsidy is one of $312,000,000. If it clears final hurdles, it will be used over a 5-year period to finance the training of more physicians, dentists, nurses, osteopaths, public-health officers, and maybe optometrists.

The doctor supply has reached the stage of a national problem. The Senate already has voted to do something about it. A House committee has recommended action. Barring last-minute hitches, Congress will approve a subsidy for medical schools and for students, designed to step up training of physicians and others in the health field.

Physicians in relation to population are fewer at this time than 40 years ago. The supply is not uniform. In some parts of the country there is one physician for every 1,640 persons; in others, one for 555 persons. That situation is leading to political pressures, reflected in Congress, for more physicians in shortage areas.

Congress shows interest too, in the fact that many youths who want to enter the medical profession are unable to get a chance at training. In the 1949 autumn term, about 25,000 sought admittance to medical schools, with 6,986 accepted.

A subsidy plan is offered as a partial solution to the problem.

A subsidy is urged by many medical schools, and a committee of doctors helped to write the present plan. The White House favors it, because a larger doctor supply is essential for a national health-insurance program. The American Medical Association opposes the idea, on the ground that each

UNIVERSITY OF MICHIGAN LIBRARIES

doctor can care for more patients now, so that there is no need for a great expansion in numbers of doctors.

Schools are to get several subsidies under the plan as it passed the Senate. One subsidy is to be a United States fee of $500 a year per student, to schools of medicine and osteopathy. If a school enrolls more students than in the past, it will get $1,000 a year for each added student.

Similar payments, on a lower scale, will be offered to other types of schools, such as those teaching dentistry and nursing.

Another subsidy is to come from a fund of $5,000,000 a year, for buildings and equipment. The United States Surgeon General will allocate the money where it is needed most. Some of this money may be used to start new schools. States such as Florida and South Dakota, with no medical schools, are keenly interested in this possibility.

These grants are to help the schools meet their present financial losses. Medical schools figure they lose about $1,600 per year on every student. They say that is one reason why enrollments are held to a low level in many institutions.

A few medical schools are reported to be on the verge of closing down, unless they get more income. For their financial relief, and the aid of other schools in the field of health, the Senate plan calls for a total Federal subsidy of $230,000,000 in the 5 years starting next July 1. Another $25,000,000 is set aside for vocational training of practical nurses.

Students are to get some Federal aid also. Scholarships costing an average of $11,000,000 a year are promised to students in dentistry, nursing, and public-health courses. It is assumed that 1 out of every 10 will get a scholarship to study dentistry, starting in 1951. The sum to be allowed is $2,000 a year per student for tuition, fees, living expenses.

Dental hygienists and nurses are to get scholarships of $1,800 a year. About 30 percent of the nurses are expected to win scholarships. Students preparing for public-health careers will be allowed $4,500 a year. No scholarships are provided for medical students under present plans. This limitation may be removed in future years.

What this plan produces, in the way of additional medical workers, will depend on many factors. Without the plan medical schools will graduate about 57,000 new physicians between now and 1960. With the plan officials estimate that an additional 15,000 physicians may be trained during the next 10 years. They figure that the plan also will produce 5,000 more dentists than would be trained otherwise.

In other fields these results are hoped for: An 8-percent increase in the number of osteopaths trained each year; a rise in the enrollment of nursing schools, from 43,000 at present to 50,000 by 1951; a 9-percent increase in the number of dental hygienists turned out each year; a 25-percent increase in graduates of public-health training; a 60-percent increase in the number of sanitary engineers.

Actually, the increases might fall below these estimates. There is no assurance that medical schools can find enough physicians to teach many more students, in the next few years at least. The money promised for construction, $25,000,000, in all, is called a drop in the bucket compared with needs by the schools. Medical schools alone count up a need for about $200,000,000 to bring facilities up to date.

Any serious delays in the expansion program will be reported to Congress by the National Council on Education for Health Professions. This new group is to advise the Surgeon General on administration of the training subsidies.

The council also is directed, in the proposed legislation, to draw up a permanent Federal program to encourage medical education. This long-range plan is to be ready by 1952. The subsidy system now being considered is only the emergency first step of aid.

Lack of doctors in rural areas goes a long way to explain why Congress suddenly is getting excited about medical training. The chart above shows one aspect of the doctor-supply situation. It shows that there are 137 physicians per 100,000 people now, where there were 149 in 1909. In other words, there is one physician for 730 persons now, where there used to be one physician for 671 people.

Nobody can prove whether or not this is enough physicians. The American Medical Association says that it is, and cites an estimated one-third increase in each physician's productivity since 1940, due to new drugs, better equipment. The Federal Security Agency has adopted as its goal a supply of not less than one for every 585 persons.

What interests Congress, in any case, is that the proportion of physicians is far below the national average in many rural areas.

There has been a steady increase in the number of physicians in relation to population since 1929 for the country as a whole. But the new ones have flocked into cities, away from rural places. Low pay and professional isolation, in rural communities, are the usual reasons.

Many rural areas point to a record like that of Kansas. That State had 2,732 physicians for 1,545,000 people in 1906. Now there are 1,900 for 1,900,000 people.

The East has gained notably in the number of physicians, while other areas have lagged. In Massachusetts there is one pediatrician for every 5,000 children; in Mississippi, one for every 35,000 children.

The regions line up this way, as to supply of physicians:

New England States, plus New York, Pennsylvania, and New Jersey, have 1 physician for every 575 people now, far more physicians than there were 27 years ago.

South Atlantic States have 1 physician for every 800 people. These States have also gained sharply.

All other regions in the country have fewer physicians now than they had in 1923, in proportion to population. That is true of the Midwestern States as a group, the South, the Mountain and Pacific regions.

These facts and figures, as outlined here on the basis of official surveys, form the background for the plan to expand medical training. This plan has been taking shape, largely unnoticed, in the shadow of political battles over national health insurance. It appears to have widespread support in Congress.

But, even if the plan is approved, an economy-minded Congress may cut down on the subsidy when the time comes to appropriate the cash.

Charity Begins at Home

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1950

Mr. SADOWSKI. Mr. Speaker, early this month, at the joint session of Congress, President Truman delivered his annual message on the state of the Union. This was not a message of defeatism and dejection. It was a fearless and constructive message. It was a timely message outlining the hopes and ambitions of the American people, not only for the next year, but for the next half century.

The message had depth, breadth, and vibrated with hope for peace and progress for all the people of the world. Truly this was the finest message that President Truman has ever given to the Congress of the United States.

This splendid document tells the whole world that the President intends to carry out the Democratic platform of 1948, and calls upon the Congress to back him up.

This bold and fearless message, which foretold of the fulfillment of our democratic pledges at home and our support for the people of the world in their struggle for freedom and liberty, struck fear into the hearts of the reactionaries. The wheels of sabotage were set in motion. How to stop Truman was the $64 question.

Last week the coalition of reactionary Republicans and reactionary southern Democrats showed their hand. They brought out a resolution to give back to the 12-man Rules Committee autocratic veto power over House legislation. The vote was taken last Friday, and without doubt, it was the most important, the most far-reaching, the most crucial battle of this Congress. Fortunately the Truman forces, with the help of a few progressive Republicans, won this fight. If the opposition had won, it meant that the Democratic platform and all of the Truman Fair Deal program was killed for this session.

In the past, pledges and party platforms were absolutely meaningless, a huge joke and a hoax upon the people. They were meaningless because of the veto mechanisms that were set up in the House and Senate, by which a small minority could block the will of the majority and defy the pledges of political parties made in open conventions and approved by the majority of the voters in the Nation.

In the Senate the mechanism for minority veto is the filibuster. The power of the filibuster was increased when the reactionary Republicans and the reactionary southern Democratic coalition got together and emasculated the cloture rule.

Previously cloture could be applied to choke off debate by a majority of those present, which might be 33. The anti-administration coalition raised the number required to 64, thus virtually throwing cloture out of the window.

In the House the 12-man Rules Committee had exercised veto power over legislation since 1884. The Rules Committee was originally designed to control the order of business. This authority was soon perverted and the committee became autocratic and domineering. They took upon themselves the right to pass judgment on the merits of all legislation.

Of course, membership on the powerful Rules Committee was much sought after. It was a great privilege to be 1 of 12 men in the House who could say "yes" or "no" on vital bills. Of these 12 members 8 are Democrats and 4 are Republicans. Of the eight Democrats, four are from the South and on most issues they see eye to eye with the four Republican Members. They like to call themselves "strongly conservative." So,

whether we call them conservative or reactionary, the fact is that this anti-Truman, anti-Fair Deal coalition, has 8 of the 12 votes on this powerful committee. They do not all have to be present at a meeting because six votes is sufficient to block any positive action. So, Government by majority becomes a farce. American democracy cannot meet the challenge of the times. Legislative machinery could not be speeded up. The will of the majority is made ineffective.

The Rules Committee, originally organized as a traffic light for House legislation, had become a road block for everything that it opposed and could smother any bill that it desired to.

When a bill is introduced in the House it is referred to a standing legislative committee, usually made up of 25 members. Many weeks are spent in hearings and deliberations; after much study and hard work the legislative committee would report out a bill only to have it languish in a pigeon-hole in the Rules Committee. So, last year the House took this power away from the Rules Committee. The new system provided that after a 21-day wait a committee chairman can call to the floor any bill on which the Rules Committee has not acted.

On Friday the Truman opposition tried to abolish the liberalized rule adopted last year. They were beaten by a vote of 236 to 183. It was a great victory for the people. No longer can 6 or 7 men on the Rules Committee thwart the will of 435 elected Representatives of 150,000,000 people.

It is too soon to say that the battle is over, however. This powerful coalition will try again when the proper opportunity presents itself. The second and fourth Mondays of the month are reserved for chairmen of legislative committees to call up bills under the 21-day rule.

Last Monday, by forcing six or seven unnecessary roll calls, thereby stalling the legislative machinery and preventing chairmen of legislative committees from calling up the bills pigeonholed in the Rules Committee, this hard and unrelenting coalition showed that it is still unwilling to accept the verdict of the people in the 1948 elections, and in defiance of the wishes of the American people, this group, with the Republican leadership in the vanguard, has shown that it will resort to every dilatory tactic to bottle up important legislation included in the program submitted to Congress by the President of the United States.

Yes, the people have rejected the Republican Party in five consecutive presidential elections, but still by political chicanery, with the aid of some reactionary southern Democrats, they may yet gain control of the legislative machinery.

In recent months we have heard much moaning and groaning about the welfare state, statism, socialism, and just generally, that Truman and the Democrats are driving the country to the dogs. This propaganda was played up strongly in the last 3 or 4 months of 1949.

But since the annual reports have been published showing corporate and business earnings for last year, those political and professional wailers have slowed down to a mere sniffle here and there.

Here, I hold a Detroit newspaper dated January 17, with the headline "Profit sets record for all firms," and that General Motors Corp. earned more profits last year—over $600,000,000—than any other company ever made in a similar period, Alfred P. Sloan, Jr., chairman of the board, revealed today.

Addressing 500 leaders in industry, finance, and civic affairs at a Forward From Fifty luncheon, preliminary to the company's annual auto show—the Midcentury Motorama—opening Thursday, Sloan termed 1949 a satisfactory year for the industry and for General Motors. Last year's profits, he said, "are likely to move up to over $600,000,000. Such a figure is well over $13 a share on outstanding common stock, on which 1949 dividends totaled $8 a share.

EXCEEDS 1948 FIGURE

In 1948, net income amounted to $440,447,724, or $9.72 a common share, while common dividends that year aggregated $4.50 a share.

When I presented this to some of our Republican groaners and moaners in Congress, the answer was "Well dog-gone it anyhow. You Democrats are not supposed to read the financial pages."

But in a couple of weeks when they feel sure that the people have forgotten all about these earnings and huge profits, out will come the big red bandana handkerchiefs and the tears will be profuse and voluminous, the wailing, the moaning, and the groaning will increase in tempo every week—yes, sir, right up to November, because there is an election this year.

One of the problems that I am most deeply interested in is that of old-age pensions, and adequate social security. For years this problem has been bantered about. Finally, last year, the Ways and Means Committee reported out H. R. 6000 which passed the House with only 14 votes against it. This bill is now before the Senate for consideration. I hope that the Senate will liberalize the provisions of this bill because it was brought up under the so-called gag rule in the House and there was no opportunity to amend it on the floor.

Now, since the House passed H. R. 6000 the whole pension issue has broken wide open as a result of labor-management conflicts. The auto workers, steelworkers, and coal miners have fought a strong and determined battle for a $100 monthly pension. The Townsend-plan workers are more active than ever. Big business, headed by Herman Steinkraus, president of the Chamber of Commerce, fearful of the effect on private business of the private pension-plan agreements won by the unions, is now supporting a broader Federal-aid program. Private industry therefore will support bigger Federal benefits in order to shift some of the burden of private pensions.

So, the lesson learned is that when you hit the company pocketbook, they too will join in the parade for adequate Federal aid for the aged.

Under the bill passed by the House, the vast majority of needy aged would not receive pension insurance as their right, but would still have to rely on charity from the assistance programs. I believe that these old people should remain as a group of active consumers. That is the position that the Townsend plan people take. I also believe that annuities should begin at the age of 60 years.

The one thing that this Nation can afford and must provide is a real measure of security for its old people and its disabled citizens.

To keep our internal economy sound and to guard against any sudden emergency, I believe that the Federal-State unemployment insurance system should be strengthened by establishing a minimum standard of $30 a week benefits—with additional amounts for dependents—for all parts of the country and extending coverage up to 26 weeks.

All of those big business and big banking interests who have been so loud and insistent in their support of the Marshall plan and China-aid programs are always quick to point out that a certain portion of these free Treasury dollars will be spent for United States goods and services. That the expenditure of this money means markets for farm products, automobiles, and tools.

Well, how about a little domestic Marshall plan for our own people—those who are sick, aged, unemployed—for those communities that need hospitals, schools, teachers, and nurses?

Is not every one of these dollars going to be spent right in our own country for farm products and manufactured goods?

Why is it that the same people, the same big and powerful interests who are so anxious to raid the United States Treasury to spend money in Europe and Asia are always leading the parade in opposition to domestic programs in the best interest and welfare of our own people? The only obvious answer is that there is money and profits in the European and Asiatic deals, and they cannot snip anything off on the domestic programs. Therefore, our program is called the welfare state and socialism.

I think that it is a simple truth that full employment in our country depends on the ability of consumer purchasing power to keep pace with the steady increase in production of goods and services. To guarantee steady and expanding markets there must be an increased flow of real income to the American people. This also calls for an economic uplifting of our substandard families. I feel that our domestic welfare programs have been slashed too deeply already, and that we are endangering our paramount objective which is permanent full employment. I believe that substantial cuts can be made in appropriations for the Marshall plan and the military. More than one-half of our tax dollar is going to those two sources.

President Roosevelt laid down a postwar program for peace and prosperity. The foundation for this is the United Nations and two of the cornerstones are the International Trade Organization and the World Bank. Roosevelt had told the Congress and the whole world, including Mr. Churchill, right after the second UNRRA appropriation, that there would be no more free dollars available, that the American economy could no longer stand the strain. Mr. Roosevelt had proposed the International Trade

UNIVERSITY OF MICHIGAN LIBRARIES

Organization and the World Bank as a means of financing world trade for the postwar period. The ITO was to provide multilateral agreements so as to give to all the nations an equal opportunity to trade in all the markets of the world for raw materials, supplies, and machinery. The bank was to finance this world trade. We have 38 percent of the stock in this bank; the bank was to issue bonds paying 2½ percent interest, and the bank was to charge 4½ percent interest for the loans that it made. This was sound business policy. We were assured of the return of our money; yes, not only the return of it, but 2½ percent interest upon the bonds that we bought. Now, would any Member of Congress oppose the purchase of ten or fifteen billion dollars worth of these interest-bearing bonds? I do not think so. Was this not a better program than the Marshall plan? Yes; but the recovery of the world would have been assured, and there would be no necessity for bilateral trade agreements which are aimed at destroying the trade of the United States of America and putting us out of the world markets. Yes, by doing business through the World Bank we were assured the return of our money or the defaulting nations would lose faith and credit in the whole family of nations.

Well, now of course, this program did not suit Mr. Churchill, who was looking for more free hand-outs for England. This proposal did not suit those Americans who had a $1,000,000,000 prewar investment in Germany and were seeking free United States Treasury dollars to triple or quadruple this kitty. Of course, this program did not suit the international cartelists, monopolists, and the big international banking houses, who worked hand in hand with the international cartelists—but then Franklin D. Roosevelt died. So Mr. Churchill came to Fulton, Mo., made his famous speech that left America shaking and quivering with fear. The hysteria grew and mounted, and the free American dollars started to roll out again. Mr. Churchill won, England got her money, the German barons and the Japanese zaibatsu will be handed back their war plants and industries, nicely restored with the latest American equipment and machinery, and the latest American production methods. It is time to stop, look, and listen. Charity begins at home.

You'd Smile, Too

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. GROSS. Mr. Speaker, as one who last year opposed the tax exempt $50,000 expense allowance increase for President Truman, it is with pleasure that I insert in the RECORD the following editorial from the Bremer County Independent, a newspaper published at Waverly, Iowa:

Ever see a picture of President Truman when he wasn't smiling? Well, if we had $54,000 left out of our salary after paying Federal taxes, got an extra $40,000 expense allowance, plus an additional $50,000 expense money in January, all tax-exempt, we wouldn't just smile—we'd laugh out loud!

Haym Salomon, a Hero of the American Revolution

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. MULTER. Mr. Speaker, one of the heroes of the American Revolution was that great patriot Haym Salomon. We remember this month the one hundred sixty-fifth anniversary of the death of this man who carved for himself a place of honor and dignity in the annals of American history by his selfless support of the cause of American democracy.

Haym Salomon, who is described by American historians as "the financier of the American Revolution," was a Jewish immigrant from Poland. He was born at Lissa, Poland, in 1740 and arrived in New York in 1772. He settled in New York and opened a brokerage office on Broad Street. He was among the early supporters of a little group of American patriots who advocated independence for the American Colonies. Because of his ardent activities in this patriotic organization, known as Sons of Liberty, he was arrested by the British on September 26, 1776, and confined at the famous Citadel.

About a year later he was released, continued his activities with the American patriots, and early in 1778 was again arrested by the British, court-martialed for spying for the patriots and sentenced to be hanged. With the aid of the Sons of Liberty, he succeeded in escaping and fled to Philadelphia. There he reestablished his business connections which enabled him to make contributions of vast sums for the patriotic cause during this crucial period in American history.

I am privileged to call your attention to the following article by Harry H. Schlacht, which appeared in the New York Journal-American and other papers throughout the country on January 13, 1950:

HAYM SALOMON: THE FORGOTTEN MAN OF HISTORY

(By Harry H. Schlacht)

We open the golden book of memory. We thank God for our heroes of yesteryear who have by their vision and their faith, who have by their courage and their lives, bequeathed to us our priceless heritage.

We remember with gratitude the one hundred and sixty-fifth anniversary of the death of Haym Salomon. He was the great Jewish revolutionary patriot whose qualities of mind and heart endeared him to our founding fathers.

Let America remember and acclaim this great benefactor and patriot. Here was a man of great character, of noble self-sacrifice, of wholehearted patriotism, of martyr-like devotion to high ideals.

If our Nation is great, it is because such men have made it great.

Haym Salomon came here seeking liberty. He came here to help build a nation which gives to bigotry no sanction, no persecution no assistance. He was a man of humility. He was a man of self-denial. He was a simple man, the badge of a great soul.

The American Revolution was a time that tried men's souls. It was a time that also tried men's purses. When Gen. George Washington called upon him for aid, Haym Salomon placed at his service his wealth and fortitude, his enthusiasm and energy in freedom's holy cause. He was an institution in himself. He became part of our glorious inheritance. It was he who helped raise the money to equip the Continental Army. It was he who contributed his entire personal fortune of $640,000. It was he who gave his all, and all he could borrow to enable General Washington to keep his tattered forces on the march until victory was won.

Haym Salomon died penniless.

From the very birth of our Nation to the present day, the descendants of Haym Salomon have been the dauntless defenders of American liberty. They have written their names in flaming letters upon the treasured pages of American history. They have played a noble role in the Government of our country. They were identified with our colonial growth. They have fought with glory in all the wars of the Republic. They have won the highest commendation from every President of our Nation. They have helped write liberty in the skies all over the world.

Haym Salomon belongs to America. He is part of the very heart of our Nation. He is ours by more than patriotic self-devotion. He is ours by the unshakable gratitude for his services in the crisis of our fate. He belongs to America by that tie of love which is stronger than death, which links his name for the endless ages with the names of Washington and Jefferson, Morris and Madison, and the other great immortals of our glorious history.

Let America remember Haym Salomon. Let Congress set aside a Haym Salomon Day. Let the President sign this resolution. Let his name be revered as long as America shall live. Let his example be a beacon light to all Americans. Let us be strong in the faith of Haym Salomon, whose memory we honor.

Mr. Speaker, as suggested by Mr. Schlacht in his very fine editorial, I have today introduced a joint resolution making January 6 of each year Haym Salomon Day. I hope that it will soon be adopted by the Congress.

An Honorable Career

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks I am including an editorial from the Lock Haven Express, of Lock Haven, Pa. This editorial speaks for itself and expresses exactly my own sentiment and what I believe to be the sentiment of almost every Member of Congress:

AN HONORABLE CAREER

Congress won't be the same without BOB RICH.

His decision not to be a candidate for reelection in this year's campaign is received with sincere regret by his host of friends and admirers, including many who may have opposed him politically but could not fail to recognize his sincere purpose and sturdy convictions on matters of principle.

During his 18 years in Congress, and even including the 2-year term when he surrendered his seat to stay on the sidelines, Mr. RICH has been a consistent and sturdy spokesman for the fundamental principles to which he has been committed throughout his 20 years in public life on the national scale—solvency in government. He has been one Congressman whose record has been steadily consistent in two predictable areas—Federal economy and service to his constituents.

There is a sort of poetic compensation in the fact that, after years of what Williamsport Grit yesterday described as "crying in the wilderness," Mr. RICH now retires from Congress in an atmosphere of an increasing Nation-wide concern for governmental economy.

He may have been a prophet without honor among some of his congressional colleagues during the past 20 years, as he insistently demanded to know where the money was to be found to finance expanding governmental operations, but even the skeptics now can see the day of reckoning approaching. He will leave Congress at a time when the old-fashioned virtue of economy, which he championed through the season of scoffings and scornings, is winning respect and even popularity as Congress and the country see the national deficit growing by billions each year.

The Fifteenth District owes Mr. RICH a real tribute of gratitude for his congressional service, for he has turned in an amazing performance of conscientious and careful service on behalf of his district.

Regardless of party, residents of the Fifteenth District could be sure that any request or query they might make to Mr. RICH'S office would be attended to as swiftly and satisfactorily as possible. The Congressman and his efficient office assistants have given this district outstandingly efficient day-to-day service on the multitude of matters in which a Congressman must act as the Washington spokesman for the people of his district.

It is no exaggeration that Mr. RICH has set an extremely high standard of service in this respect—a standard any successor will have a hard time to match, certainly during the fir[illegible] years of his career as a new Congressman.

Tree Farming Increases

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Commercial Appeal of January 20, 1950:

TREE FARMING INCREASES

Reports from American Forest Products, Inc., say that tree-farm acreage passed the 20,000,000 mark in this country last year. At year's end the Nation had 20,000,102 acres of privately owned timberlands dedicated to the perpetual production of wood for commercial use. This acreage represents 2,242 different ownerships in a total of 27 States.

Of special interest is the fact that the reports show the South led the Nation, and for the fifth consecutive year, in increasing its tree-farming acreage. During 1949 the South added 1,151,759 acres to the total number set aside to do nothing but grow wood. Alabama leads the South in the number of tree farms, with 325, but Arkansas, with 251 farms, is ahead in acreage with 3,009,843. Mississippi has 226 tree farms amounting to 738,792 acres and Tennessee has 231 farms totaling 290,193 acres.

It is to be hoped that the South continues to advance rapidly along these lines. That they have profitable possibilities was vividly illustrated just recently when a new $32,000,000 paper plant began operations near Childersburg, Ala., to offer landowners in the area a steady income from tree farming.

Legislative Objectives, Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a digest of the legislative objectives of the Veterans of Foreign Wars.

The matter referred to follows:

LEGISLATIVE OBJECTIVES OF THE VETERANS OF FOREIGN WARS OF THE UNITED STATES, SUBJECT TO THE JURISDICTION OF THE HOUSE COMMITTEE ON VETERANS' AFFAIRS

JANUARY 17, 1950.

The following legislative objectives of the Veterans of Foreign Wars of the United States are subject to the jurisdiction of the House Committee on Veterans' Affairs, and are based on resolutions adopted by the 1949 national convention of the Veterans of Foreign Wars of the United States:

1. To increase disability compensation and pensions for World War I and World War II veterans and widows and orphans (Resolution 337). H. R. 909 by Mr. RANKIN.

2. To urge the enactment of the veterans pension bill H. R. 4617, now pending before the Senate Finance Committee (Resolution 211). H. R. 4617 by Mr. RANKIN.

3. To increase the income limitations governing eligibility for widows' and veterans' non-service-connected death pension to $2,000 for those with no children, and $3,000 for those with children (Resolution 343). H. R. 921 by Mrs. ROGERS of Massachusetts.

4. To enact legislation which would provide an equitable adjusted service compensation for veterans of World War II of $3 per day for home service (maximum $3,500), $4 per day for overseas service (maximum $4,500), plus an additional $500 for a wound or wounds received in combat; and that all tangible monetary benefits received by any veteran pursuant to the Servicemen's Readjustment Act of 1944, as amended, be deducted from such adjusted service pay (Resolution 335). H. R. 914 by Mr. RANKIN.

5. To urge the President of the United States, (a) to rescind his order for the cutback of the 16,000 beds announced on January 10, 1949, and (b) to issue orders for the prompt construction of these and such other beds as may be required for adequate care of America's disabled veterans (Resolution 432). H. R. 5965 by Mr. RANKIN.

6. To provide a statutory seniority equal to the time spent in the armed forces during World War II for those veterans employed in an industry governed by the seniority system (Resolution 357). H. R. 5509 by Mr. RANKIN.

7. To amend Public Law 16, Seventy-eighth Congress, so that any rehabilitated physically handicapped veteran would be allowed to complete a further training course on part-time or night-school basis, provided that such additional training will not exceed the maximum of 4 years, as authorized under existing law (Resolution 226).

8. To provide statutory award for arrested tuberculosis, service-connected, for World War II veterans on same basis as World War I veterans (Resolution 284).

9. To enact legislation providing that all honorably discharged veterans who have served in any and all past armed expeditions on foreign soil and in which the United States took part, be entitled to receive the same medical aid and hospitalization as is extended to veterans of war service (Resolution 57). H. R. 3575 by Mr. KEARNEY.

10. To liberalize existing law relating to the granting of automobiles to disabled veterans so that the Government contribution will be $2,000 instead of $1,600, or in the alternative to support the passage of S. 2115, Eighty-first Congress (Resolution 393). S. 2115 by Mr. PEPPER.

11. To enact legislation providing for chiropractic service in the medical facilities of the Veterans' Administration (Resolution 436). H. R. 1512 by Mr. HUBER; and S. 2025 by Mr. PEPPER.

12. To urge that all cost of training programs for Veterans' Administration medical and other professional personnel shall be charged to an appropriation separate from the Veterans' Administration appropriation and that any such trainees shall be required to serve for 2 years with the Veterans' Administration upon completing such training (Resolution 450).

13. To amend Public Law 483, Seventy-eighth Congress, to provide death-pension benefits where the serviceman incurred a permanent disability but his death while in the service was not considered in line of duty, although not under dishonorable conditions (Resolution 401). H. R. 5619 by Mr. EVINS.

14. Endorsing H. R. 1776, which denies apportionment of compensation or pension to the wife of a veteran unless there was continuous cohabitation from the date of marriage or where separation was due to the veteran's misconduct without the fault of the wife (Resolution 451). H. R. 1776 by Mr. RANKIN.

15. To amend part III, Veterans Regulation No. 1 (a), as amended, to provide that constitutional and developmental abnormalities producing unemployability shall be treated as disability for this purpose (Resolution 395). Covered by H. R. 599 by Mr. RANKIN.

16. To amend Public Law 483, Seventy-eighth Congress, so that widows of World War II veterans would be eligible for pensions on the same basis as now provided widows of World War I veterans (Resolution 234). H. R. 6188 by Mrs. ROGERS.

17. To provide pensions for veterans of the Confederate Army on the same basis as pensions now provided veterans of the Union Army (Resolution 325). H. R. 5821 by Mr. HARE.

18. To enact legislation to exclude commercial insurance payments from consideration as income in determining eligibility for non-service-connected death pensions (Resolution 294). H. R. 3821 by Mr. RANKIN.

19. To enact legislation providing that the interval between technical release from active duty and arrival home within a reasonable period shall be considered active duty for compensation purposes, provided, that disability or death during such period is not attributable to the veteran's own willful misconduct (Resolution 394).

20. To oppose any legislation that would reduce the hospital benefits now available to

UNIVERSITY OF MICHIGAN LIBRARIES

veterans suffering from non-service-connected disabilities (Resolution 18).

21. To enact legislation increasing compensation by 20 percent for those having combat-incurred disabilities and diseases (Resolution 251). , H. R. 903 by Mr. RANKIN.

22. To urge the enactment of H. R. 4074, which would presume as service-connected the disabilities of veterans of the Spanish-American War for the purposes of obtaining out-patient treatment and hospitalization in facilities of the Veterans' Administration (Resolution 19). H. R. 4074 by Mr. RANKIN.

23. To enact legislation excluding pensions derived from contributory systems in determining income for pension eligibility (Resolution 272).

24. To increase monetary veterans' benefits by 25 percent in the cases of veterans residing in Alaska in order to meet the higher cost of living in that territory (Resolution 1).

25. To amend Veterans Regulation 2676 (B) (4) so as to permit the acceptance of lay testimony in determining service connection for malaria (Resolution 34).

26. To provide a uniform pension program for war veterans, based on attained age or non-service-connected disability as follows (Resolution 360)—H. R. 2512 by Mr. RANKIN:

Upon being rated 60-percent disability, $60.

Upon being rated permanent and total disability, $90.

Upon reaching the age of 65 years, $90.

Where an aide or attendant is required, $120.

27. To amend Public Law 182, Seventy-eighth Congress, providing for payment of a statutory award for enucleation or loss of use of an eye and loss of use or amputation of an arm, or enucleation or loss of use of one eye and loss of use or amputation of a leg (Resolution 207). H. R. 1220 by Mr. HINSHAW.

28. To extend the time for administrative presumption of service connection for World War II veterans to August 1, 1953, and limit presumption to the diseases now provided for in World War I presumptions (Resolution 208). H. R. 2311 by Mr. MILLS.

29. To enact legislation making permanent the present Federal-aid allotment of $500 per annum per veteran domiciled in State and Territorial veterans' homes (Resolution 20).

30. To enact legislation providing out-patient treatment and medication for those veterans who have been hospitalized and are in need of further treatment; or, if hospitalization has been requested, treatment may be authorized when beds are not available, for those suffering from non-service-connected disabilities and who are in receipt of part III benefits (Resolution 202).

31. To extend for 2 years the period during which World War II veterans may receive readjustment allowances under the Servicemen's Readjustment Act (Resolution 15). H. R. 1374 by Mr. HUBER.

32. To endorse the bill, H. R. 5479, which provides for reimbursement by the Veterans' Administration of medical expenses incurred by a veteran under certain emergency conditions (Resolution 391). H. R. 5479 by Mr. RANKIN.

33. To enact legislation providing World War I veterans status to those persons serving with the army of occupation between November 12, 1918, and July 2, 1921 (Resolution 86).

34. To enact legislation abolishing or reducing the 5-percent compound interest on insurance liens under World War I insurance (Resolution 47). H. R. 38 by Mr. DAVIS.

35. To enact legislation to enable veterans rated totally disabled service-connected to reinstate Government insurance (Resolution 114). H. R. 4234 by Mr. RANKIN.

36. To endorse H. R. 5574, providing for certain liberal changes in the NSLI Act of 1940 (Resolutions 407–417). H. R. 5574 by Mr. RANKIN.

37. To oppose the proposal of the Hoover Commission to operate the insurance activity of the Veterans' Administration in a different manner than the other major services of that organization, and to assure that the Administrator of Veterans' Affairs retain his present full control over all phases of the Veterans' Administration activities, and operate the Veterans' Administration as one administrative entity (Resolution 430).

38. To endorse the bill H. R. 5331, Eighty-first Congress, which authorizes an equitable adjustment of certain NSLI policies by applying contemplated dividends to unpaid premiums so as to revise lapsed policies (Resolution 433). H. R. 5331 by Mr. RANKIN.

39. To oppose any effort to transfer from the Veterans' Administration its Loan Guaranty Division or any other divisions, departments, or functions (Resolution 255).

40. To oppose any plan which would take from the immediate control and jurisdiction of the Administrator of Veterans' Affairs, any of the functions of Government which have to do with the care and treatment of veterans (Resolution 431).

Without Issues Voters Fail

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. ALLEN of Illinois. Mr. Speaker, under unanimous consent to extend my remarks, I include the expressions and beliefs of an outstanding American, Justus L. Johnson, clerk of the Appellate Court for the Second District of Illinois since 1920.

His statement is sound and logical. It should be given sincere thought by every taxpayer.

His statement follows:

WITHOUT ISSUES VOTERS FAIL—INCOME, OWNERSHIP AND OPERATION AFFECTED BY REVENUE SYSTEM

Too many people of small incomes have been led to believe that the rich and corporations are carrying the heavy Government expenditures. Many feel the Government actually grants them advantages.

The true facts show that 69.8 of salaries and wages, 69.4 percent of dividends and interest, 69.1 percent of rents go to persons with incomes of less than $5,000 per year. This is the compilation of Father Edward A. Keller, director of economic research of Notre Dame University, in his pamphlet "The National Income and Its Distribution." The figures are from the United States Department of Commerce and the United States Treasury Department.

From whom can more national revenue be obtained? The country's corporations are owned by 18,000,000 stockholders. There are only a very few large corporations having individual stockholders possessing over 1 percent of that company's stock. The exceptions are institutions, schools, hospitals, cemeteries, insurance companies, etc., who account for 41 percent of the ownership of these corporation stocks. But these associations represent millions of people.

The Government already imposes a heavy corporation tax and also taxes the individual stockholder's dividends, which makes a double tax. To increase the corporation taxes will reduce individual stockholder income. The great pool of national income already is in the hands of those receiving $5,000 or less per year. From here on the pinch is more tightly on small incomes if the Government cannot reduce its operating costs.

Every new regulation or tax imposition adds to the cost of production. The business operation or corporation must add the overhead on its output, if it is to continue. There is only one place from which it can get a return—the user and consumer. He is at the end of the line and pays the added cost. He has been made the goat for all added costs. Every time the Government socks the producer or corporation up goes the cost of his article. The hurt is passed on to the ultimate purchaser, who is the fellow with the income less than $5,000 a year. He constitutes more than 90 percent of the purchasing needs.

The producer and the consumer constitutes the neglected groups in the United States. The heavier the added cost of production the higher the price structure. This increases buyer resistance and lessens the volume of production and reduces employment. The fellow who uses the article or goods, pays for everything that has been added to the price. He does not escape because corporation taxes have been upped or the rich have been soaked. These clear by attaching the added costs. As a matter of fact, the consumers, who have nothing to pass on, have been made suckers to supply the income for Government programs he does not understand.

In addition to the millions of employees who work for the Government for pay, other millions are strait-jacketed to become tax collectors, without pay, to build up revenues for Federal spending. Every salesman, every business operator, every assembler and producer, every worker under social security, anyone that sells goods, pays or collects from others to build up accumulations for Federal spending. Services and time that could be used by people, for people, are absorbed in satisfying Government inquiries and reports and overcoming buyer resistance on heavily tax-loaded prices. This is also an overhead on production and distribution and the expense becomes part of the price that the customer must pay. No one speaks up for him in terms he understands. He is the beast of burden who provides for the absorption and carrying of all these weights. Is there not a leader or party who is able enough to become his champion?

We wonder how politicians have so successfully hoodwinked the two largest classes of citizens—the producers and the consumers.

It is time to have new issues in campaigns—freedom—the Constitution—liberty—trade and commerce—your brother's keeper—suffering Europe and starving people—as issues have been worked to death while the producer and consumer in America pays the bil. Strange how this has been camouflaged—how the people receiving less than $5,000 per year are kept from understanding that they are 90 percent of the consuming class and to them is "passed the buck" to provide the payment for making the world "safe for democracy."

Is it not time that someone should arise and speak? Point out the groups that continue to make the little fellow the beast of burden for grandiose schemes and world-wide give-aways?

TAKES ONE-FOURTH OF INCOME

The tax bill in the Nation is above $50,000,000,000 annually, 25 percent of the

whole national income. Forty billion dollars is taken by the Federal Government. Some escape income tax because of exemptions and low earnings. Do they escape paying? Everything carries that indirect burden—that package added to production. In many cases it far exceeds any direct tax load that might have been imposed on the individual. Certainly it is time for the consumers of the Nation, especially those with families to support, to get off the "sucker list" put together by these "Princes of Power and Politics."

Let us get our bearings and understand that the two important groups of people in our country are the producers and the consumers. If a healthy atmosphere exists for these two groups, the remainder fare all right. When materials and goods are produced there is trade and commerce. Without production there will be disaster and it will fall first on business institutions. The American public has been distracted too long. Let's get on the beam—understand our problems. Give adherence to leaders who lead—voices that get their guidance from production centers and from the consumers. Ghost writers and propaganda-inspired solutions do not present basic answers. Change the viewpoint and the American public will take on a crusader spirit. Give the voters something to fight for and there won't be over 43,000,000 voters failing to go to the polls.

FACE THE FACTS

Let's face the facts and give the voter something to support or oppose. Ninety-three million voters were qualified to cast a ballot in 1948. More than 43,000,000 did not vote. Did these nonvoters have positive convictions? People busy with their own affairs want consideration of problems that affect their existence. Meet them on issues in an understanding way and no one will need to drag them to the polls.

Old empires grew to power on control of sea routes and the sea ports controlled the pattern of life. It was trade and commerce. To the Atlantic seaboard in the United States it was normal to think in these same terms. But America is not like Britain, France, Italy, Spain, Rome, Greece, Egypt, etc. More than three-fourths of America is not on the seaboard and from the very beginning of our development it was devoted to production. Attitudes on life, law, politics, what is important, varies where well-being depends on giving something for what you get—it is the code for production. Let the production areas make the slogan for so-called leaders. Let the consumers who pay the bills, say to the politician, "Earn it, not burn it."

The country's problems affect us all. As a practical matter about two-thirds of our voters the country over are traditionally members of the two major parties. They vote the candidates and the party platforms. The party in power has slightly over half of these traditional party men in its ranks. Another one-third of the voters are fence sitters and vote only when aroused to action. For them there must be issues that burn for solution; that calls for judgment and creates a willingness to do something.

In the last national election many Democrats, many Republicans, and very many independents failed to vote. In fact, about 47 percent of the qualified voters did not go to the polls. Now do you think people are not serious? They will follow the candidate with answers. Let the answer come from those who understand the production problem and are a part of it. Let the consumer understand what part of his dollar goes to the producer and what part goes to far away places and programs. We will then get what we are willing to pay for and the "Voice of America" will come from the heart of the people on whom our country's prosperity depends.

No Arab Ghettoes in Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. MULTER. Mr. Speaker, I believe many Members of this House will be interested to know how Israel treats its minorities. Israel's population now numbers about 1,200,000, of whom 175,000 are non-Jewish. Most of this non-Jewish population are Moslem and Christian Arabs.

Here, then, is a state where for the first time in 2,000 years Jews constitute a majority of the inhabitants. What have Jews learned during their long exile when they were always and everywhere a minority, often suffering indescribable persecution and oppression? How are they applying this lesson in their own state today?

The article on this subject, which I am inserting in the RECORD, answers these questions. I trust all Members will take the few moments necessary to read this article and judge for themselves. It was published in the issue of June 10, 1949, of Israel Speaks.

The article follows:

NO GHETTOES FOR ARABS IN MINORITY-MINDED ISRAEL

(By Zvi Shiffrin)

TEL AVIV.—How Israel treats its minorities—especially the Arabs—is a matter of interest for the whole world. Almost every country has had a Jewish minority within its borders for some period during the past 2,000 years, and many people are curious to know just how the Jews have reacted now that the tables have at last been turned.

Right now it's too early for a detailed analysis. Security reasons prevented the complete normalization of the relationship between the Jewish state and her Arab minority. Even its harshest critics, however, have found little to criticize in Israel's treatment of the 70,000 Arabs who elected to remain within its borders.

CULTURAL RIGHTS

Probably the chief reason for Israel's success in this field is that so many of her leaders really understand the Palestine Arabs and their culture. Their policy toward the Arabs rejects the two extremes that hurt the Jews so much in the Diaspora; ghettoization on the one hand, and assimilation on the other. What they want to ensure for the Arab population is equal democratic rights for the individual, and community cultural rights for the Arabs as a group. To carry out a policy like this requires more than tolerance. It demands real understanding.

A minor but highly significant illustration of this occurred at the opening of the Knesset (Israeli Parliament) in Jerusalem. One of the Arab delegates rose to say a few words, in his native tongue, of course. When he was through, an official translator repeated his remarks in Hebrew. Then to the amusement of all, Foreign Minister Moshe Sharett, one of Israel's leading Arabic scholars, asked for the floor and pointed out that the translator had made a slight mistake. Sharett then proceeded to give the correct version while the Arab delegates beamed with satisfaction.

Thus far the Israel Government has undertaken rehabilitation measures for the Arabs extending into every sphere of life—religion, employment, education, health, even marriage and divorce. Whenever possible, Arabs themselves are entrusted with the administration of these activities. Each ministry has a special department to look after the Arabs. Thus the Department of Labor takes care of Arab employment, while the Department of Health is responsible for Arab health. It is felt that the problems are so complicated that this method works better than setting aside one ministry to cope with all Arab needs.

FILL MARRIAGE VACUUM

A good example of the work done by the Government is the record of the Ministry of Religion. The mass Arab exodus last summer left Israel's Moslems without religious leadership. (Most leaders of Christian Arab communities remained, however.) From the Mufti down, Moslem priests (imams) and judges (kadis) left their people to wait until the Arab forces would march triumphantly into Tel Aviv. While they waited, the Israel Government proceeded to fill the vacuum. They had to do something, because without the proper Moslem officials, there could be no Arab marriages. And how could a minority be happy without any marriages?

The Israeli authorities charged with dealing with this intricate subject had to start from scratch. With the assistance of special liaison officers appointed by the Army the Government authorities immediately took charge of the deserted mosques and religious courts. The mosques were repaired and, in many cases, again put into use. The destroyed archives of the religious courts were reassembled and the Ministry of Religions appointed a special committee to deal with Moslem holy places. This committee was headed by Prof. L. A. Meir, of the Hebrew University and its function was to advise the ministry on the conservation of Moslem religious sites.

A search was made and a few suitable candidates for the job of kadi were found. Their pay was raised substantially above what it was under mandatory rule and their courts are now operating in Jaffa, Haifa, Majdal, Tiberias, Nazareth, Acre, and other places. They have full authority to perform marriages and divorces. It is hoped that the second stage of Moslem jurisprudence—the appellate division—will soon be reestablished.

MOSLEM PROPERTY

How to hold religious services for the Moslems presented another difficult problem. So far, more than 35 religious dignitaries of various grades have been reinstated, but the number is woefully inadequate. What the Government plans to do is to reopen the Achmadi Seminary in Acre in order to provide enough functionaries to conduct Moslem rites.

The possessions of the Waqf—Moslem religious authority—are very extensive, and taking care of them has proved to be a complicated affair. Previously they were under the control of the now nonexistent Supreme Moslem Council. A detailed plan on how to manage and dispose of these lucrative holdings still has to be worked out by the Government. In the meantime, the limited income derived from the Waqf property is being spent on the maintenance of Moslem religious services and various welfare activities.

Eventually the Government wants to give the Moslem religious community complete responsibility for the direction of its own affairs, with only a liberal and discreet control from Tel Aviv.

LOCAL SELF-GOVERNMENT

The Jews hope to cement permanent friendship with the Arabs—not by buying

UNIVERSITY OF MICHIGAN LIBRARIES

individual notables—but by fostering local self-government in every village and by giving them a share in the democratic rule of of the state. As one official puts it, "We're not satisfied merely to make the condition of Israel's Arabs better than that of the Arabs in Moslem countries. And, of course, we would never force the Arabs to live the way Jews in Arab countries do. What we do contemplate is raising the Arab standard of living to that enjoyed by the Jews in Israel."

There will be no second-class citizens in Israel.

Foes Seen as Aiding Fair Deal

EXTENSION OF REMARKS
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. AUGUST H. ANDRESEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Paul Pioneer Press of January 8, 1950:

FOES SEEN AS AIDING FAIR DEAL

(By Gustaf A. Nordin)

WASHINGTON.—The conservatives of the American political scene may today be devising the very method for the Fair Dealers to extend the welfare-state program which they so bitterly attack as socialistic.

It may sound impossible that a conservative Republican President—Herbert Hoover—may have built the vehicle in which a Democratic President—Harry S. Truman—will ride to victory. But there is reason to believe it not only might happen—but that it already has.

Herbert Hoover was appointed by President Truman to head a commission which would find means of reducing Government expenditures, some way of getting more for every tax dollar spent.

The conservative Mr. Hoover accepted the task and named a flock of task forces to dig into every governmental closet. President Truman gave his full support. The doors of the agencies opened, the books were laid bare. No one dared object to such a bipartisan effort to save the taxpayers from a top-heavy Government.

Experts in the field of finance, accounting, and research gladly agreed to help a bipartisan legislative body do the job proposed.

They did their work so well and thoroughly over a 2-year period that detailed accounts on how the Government was wasting money quickly were provided. The President again gave his blessings and Congress, eager to appear economy-minded, set in motion the legislative machinery to carry out the Hoover Commission recommendations.

Billions of dollars are to be saved through the recommendations.

All factions of all parties agreed with the philosophy of thrift. But did they really? Did they all want economies for the same reason? It doesn't really appear to be the case.

Mr. Hoover soon will discover that he has been talking all the time about saving taxpayers' dollars. He thought he was recommending a way of cutting down on Government spending. He figured the outlay of dollars would be less if his plan was promptly carried out.

The Fair Dealers, who are supporting President Truman's welfare proposals, don't see it quite that way. Their program is condemned by Mr. Hoover and the Republicans generally, but it is to help finance the welfare program of the Fair Deal which prompts them to suspect wholeheartedly the work of the conservative Mr. Hoover.

The Fair Dealers want to make the Government efficient so that more money can be made available for extending the Fair Deal.

They are not talking about reducing spending, as Mr. Hoover and his followers. They are talking about economy through efficiency, so that the multi-billion-dollar Federal budget need not be increased and yet leave several buildings for the new programs.

If Herbert Hoover's plan could save $5,000,000,000 annually, for instance, this money could be used for the compulsory health insurance plan, extension of social security, Federal aid to education, and any other program which might cost money not now available.

* * * * *

So spending could go up if the people insisted upon the rest of the Fair Deal program.

A few days ago, Dewey Anderson, head of the Public Affairs Institute, a privately financed research group, quit the Hoover citizens' committee. His reason: The former President tried to commit us to a set of principles that is anathema to every New Dealer and Fair Dealer. He objected to a Hoover speech which Anderson said would establish a limited Government, a ceiling on public expenditures.

Perhaps before long the Republican conservatives and anti-Fair Dealers will discover they have helped provide the means by which the welfare state can be more easily financed.

McGregor Opposes Me-Too-ism and Gag Rule

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I would like to discuss House Resolution 133 which was recently defeated by action of the House of Representatives. This resolution, if passed, would have given a majority of the Rules Committee, comprised of 12 members, veto power over every legislative committee in this Congress, and the Rules Committee would dictate to the Congress just what bills would be presented to us for our consideration. It should be remembered that before a bill reaches the Rules Committee it has already been considered by the appropriate legislative committee, after possibly many weeks of hearing, and has already been recommended by the majority of that standing legislative committee for House consideration.

Mr. Speaker, I am opposed to dictatorship in any form, which certainly includes this legislative body. I do not believe in gag rule of any kind that prevents the membership of the House from expressing by their speeches and votes what they believe to be right. I have been sent to Congress by the people of the Seventeenth Ohio District to express their views, both by voice and vote, and they do not expect me to relinquish my powers or responsibilities to any small group of individuals. I am of the firm conviction that we have some in Congress who are fearful of taking sides or taking a definite stand on some of the issues confronting us. I recognize, had the resolution been passed, that a great many controversial issues would not be presented to us for our consideration. In other words, as stated on the floor of the House, by passing the resolution we would be "taken off the hot seat." But, Mr. Speaker, it is time for the membership of this body to be willing to go on record so that the people that elect us will know how we stand on various issues. Then, after we are recorded either by "yes" or "no" vote, the people will have the opportunity to determine whether or not we express their views, and they will so tell us at the next election. The argument has been put up that only by passing this resolution and giving the power to these 12 men will we be able to stop our enormous expenditures. This statement is in error because of this reason: Legislation covering our expenditures is considered by the Appropriations Committee and they report bills covering appropriations directly to the floor of Congress for our consideration and completely bypass the Rules Committee, in accordance with long-established legislative procedure. We, by our vote on the floor of this Congress, determine whether or not we are in accord with the expenditures, and, I reiterate, the people should know how we stand. We should be honest enough to come out in the open and put ourselves on record in voting on legislation before us for our consideration. It is time for all of us to be willing to stand up and be counted so that the people can decide by our record whether or not they want us to represent them in this legislative body.

Voters Ought To Begin Pinning Down Noncommittal Element in Congress

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Mobile Press Register of January 23, 1950:

VOTERS OUGHT TO BEGIN PINNING DOWN NONCOMMITTAL ELEMENT IN CONGRESS

Representative J. HARRY MCGREGOR, of Ohio, is another Member of Congress who has served notice on the Truman administration that he cannot be counted on to support deficit spending, tax-raiding, and the concentration of more and more power in a bloated Federal bureaucracy.

He says:

"I definitely oppose the President's program of taking power from the people back home and placing it in the hands of Federal bureaus in Washington.

"I am not in accord with the President's socialized-medicine program and I will con-

tinue to strenuously oppose unnecessary Federal expenditures and the philosophy of spend and spend, tax and tax.

"I am not in accord with his demand for increased taxes nor do I believe in deficit spending.

"The time has arrived to cut down expenditures, reduce taxes, and apply a reasonable amount to our national debt."

Every Member of the House and Senate who does not voluntarily make known his position, should be pinned down by his constituents for an explicit statement of position on the raw-deal program devised by the Truman administration.

The people of the United States deserve to know who on Capitol Hill in Washington is and who is not a congressional puppet of the Truman administration where its raw-deal program is concerned.

It's time for the voters to begin calling the roll of those Members of Congress who have been vague or noncommittal as to where they stand.

H. R. 6769, To Amend the Bankhead-Jones Farm Tenant Act, as Amended

EXTENSION OF REMARKS
OF
HON. THURMAN C. CROOK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. CROOK. Mr. Speaker, having been born and reared on a farm, and continuously keeping in close contact with the pulse of agriculture, I sincerely want my rural friends to know that I have always considered agriculture to be one of the very basic enterprises of our country. In fact, the prosperity and economy of our Nation, the success of our various industries, and the welfare, health, and happiness of our people are highly dependent upon the tillers of the soil and the products from the farms.

Let us be reminded that approximately all the wealth of our Nation comes from soil and toil, and those that toil in and on the soil are entitled to a fair share of the wealth they help to produce.

In recent years, through legislative enactments, we have been quite successful in providing the farmers of our Nation with conditions conducive to giving them a fair opportunity to dedicate their efforts in a constructive manner, exalt the dignity of their calling, and receive a reasonably fair share of the wealth to which they are entitled. Others just starting in the agriculture arena, and some with years of tenant farming experience, but sadly handicapped for want of capital to adequately equip a farm or rebuild impoverished soil, have now found a vehicle that makes it possible for them to become successful farm operators or owners of a family-size farm.

Since 1935 special aid has been given to low-income farmers by the Resettlement Administration, which was reorganized as the Farm Security Administration in 1937. The Bankhead Farm Tenant Act of 1937 authorized loans for tenant purchase and loans and emergency grants for rural rehabilitation. The Farm Security Administration was replaced in 1946 by the Farmers Home Administration, which gave permanent status to the production and subsistence loan program formerly carried on by FSA.

So we may rightfully say that the FHA program was given inception to assist worthy tenant farmers, potential farmers and GI's that were unable to obtain enough insured loans from banks to adequately establish themselves so they could become operators or subsequent owners of farms.

The FHA program has been a very meritorious one. It has met with success and pays incalculable dividends. In fact, it has been a godsend to those worthy and energetic farmers who avail themselves of the provisions incorporated therein. Checking many of the FHA farms in my congressional district, I was happy to find that the operators or purchasers of said farms had gained a new lease on life, were doing an excellent job of farming and were much in advance of required payments on interest and principal. Many of the farmers will clear their indebtedness within a span of 10 years.

Up to the present time the ownership loan under FHA, in most cases, has been limited to $12,000. Considering the present high cost of land, farm equipment, building materials, fencing, fertilizer, modern utilities, and so forth, so essential for successful and profitable farming, I am thoroughly convinced that the FHA farmer could well use a larger farm-ownership loan to a decided advantage.

So I have introduced H. R. 6769 in this second session of the Eighty-first Congress to amend the farm-ownership loan provisions of the Bankhead-Jones Farm Tenant Act to increase the amount which may be loaned with respect to certain farms.

Said resolution provides that the second sentence of section 3 (a) of the Bankhead-Jones Farm Tenant Act, as amended, is hereby amended to read as follows:

Loans may not be made for the acquisition or enlargement of farms which have a value, as acquired, enlarged, or improved, in excess of whichever of the following is higher: (1) $15,000, or (2) the average value of efficient family-type farm-management units, as determined by the Secretary, in the county, parish, or locality where the farm is located.

In conclusion, I wish to say a loan of $15,000 on a farm cannot be considered exorbitant, considering the price one pays for a reasonably good house and lot in the average city.

If Jackson Only Knew

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. MEYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Oklahoman of January 23, 1950:

IF JACKSON ONLY KNEW

All of these $25-a-plate banquets to be served by the Fair Dealers will be called a celebration of Jefferson and Jackson Day. And we suspect that it is a mighty good thing for the promoters that Old Hickory knows nothing at all about it. If he did, he might erupt from his grave with the pistols he once used so effectively against just anybody who had stirred his Hibernian wrath.

For Andrew Jackson was the sworn foe of the national debt. He was pledged to pay off that debt in the days of his Presidential candidacy. And when he became President he paid the national debt. For the first and only time in our history the National Treasury was debt free in the closing years of the Jackson tenure.

Now the party that has created the largest national debt in human history is on the eve of staging a series of political feasts, and the promoters of those feasts are pleased to call the day of the festivals Jackson Day. Men who have built up the largest national debt known on earth since time began and who are driving desperately to add billions to the sum of the indebtedness have the audacity to name the day of their banqueting after the only President in American history who paid the national debt and left the National Treasury debt-free.

It is a good thing that the shade of Andrew Jackson doesn't know what is going on. A good thing that is for the puny politicians who have swamped the Nation in debt and then boasted that they are Jacksonian Democrats.

Cooperative Banks Favor Tax Cuts

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include the following resolution recently adopted by the executive committee of the Massachusetts Cooperative Bank League:

MASSACHUSETTS COOPERATIVE
BANK LEAGUE,
Boston, Mass., January 24, 1950.

The Honorable ANGIER L. GOODWIN,
The House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE GOODWIN: At a recent meeting of the executive committee of this league, the following resolution was unanimously adopted, and I was instructed to so inform you:

"Whereas the cost of government, Federal, State, and local, has continued to increase until today more than 25 percent of the national income is taken in the form of taxes for the operation of government; and

"Whereas the Massachusetts Cooperative Bank League, like similar organizations throughout the United States, represents, through its members, thousands of substantial citizens who are either buying their homes on monthly payments or who by self-denial are endeavoring to accumulate by savings a down payment on a home which they hope someday to own, and yet another group who by small monthly savings are endeavoring to build a modest competence for their old age; and

"Whereas every dollar expended by the government, whether Federal, State, or local,

UNIVERSITY OF MICHIGAN LIBRARIES

is a dollar taken from these thrifty citizens and handicaps them in their efforts toward personal security—a situation existing not only in Massachusetts, but in every State in the Union: Therefore be it

"*Resolved*, That the executive committee of the Massachusetts Cooperative Bank League, on this its December meeting, calls upon our representatives and Federal, State, and local government officials to give heed to the excessive cost of government and bend every effort to reduce expenditures and particularly to eliminate unnecessary services."

Respectfully,

W. M. ALLEN, *Executive Secretary.*

The King Cannot Err

EXTENSION OF REMARKS

OF

HON. HERBERT A. MEYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. MEYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Oklahoman of January 23, 1950:

THE KING CANNOT ERR

In the ultrapartisan debate in the House of Representatives Friday, Speaker RAYBURN beat back the opposition right handsomely with his rhetorical question, "Who won the election in 1948, anyway?"

Of course, the answer was obvious. No Congressman could doubt and none would dare deny that Mr. Truman won that election. And no one could quarrel wtih the Speaker for asking such a question.

But the implication of that question is a different matter. In effect it was a categorical assertion by the Speaker that since Mr. Truman was returned the victor in the 1948 plebiscite, all opposition to the President and his policies should cease on every line. Whatever the President asks for should be granted meekly, even if the Congress is convinced that its acquiescence would be ruinous.

The question further implies that since the President won on a certain program in 1948, he has the absolute right to present an entirely different program in 1950 and that it is the duty of Congress to accept the change. Since the people declared that the 1948 program was right, nobody has any right to say that the 1950 program is wrong. In other words, when a President has carried one election, he has the full right forever thereafter to say how Congress shall vote, what the people shall think, and when his opponents shall cease to do any thinking at all.

It happens that the question before the House Friday was a proposed change in the House rules. Of course the House has the right to choose its own rules and to change them at will and no one else has any right to interfere. Certainly it is not the function of the President to write the rules of Congress. Nevertheless, the Speaker chose to imply that since the country went Democratic in 1948 the House is bound to adjust its rules to Mr. Truman's wishes.

The spirit that underlay the Rayburn interrogatory was at one time dominant in Great Britain. At that time the spirit was expressed in the formula, "the king can do no wrong." And for centuries the people of Great Britain agreed that the king could do no wrong. But finally they began to question it. And the more determinedly they questioned the principle of royal infallibility the faster their bill of liberties grew. Finally the American colonials reached a point where they seriously doubted if the king could do anything right.

Now by implication the Speaker of the House revives in a small way the old discredited formula that the king can do no wrong. The President was elected in 1948, wasn't he? Therefore no man born has any right to oppose him on any issue whatever. When he commands Congress to do something, Congress is guilty of a mild form of treason if it fails to do it. He was elected President, wasn't he?

This policy of blind recognition of executive infallibility may be good politics. It may help a partisan President to have his partisan way. But it is extremely questionable Americanism.

Terminal-Leave Pay

EXTENSION OF REMARKS

OF

HON. WILLIAM L. PFEIFFER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1950

Mr. WILLIAM L. PFEIFFER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to state that on January 12, 1950, I appeared before the subcommittee of the Committee on Armed Services urging favorable action on legislation which would extend the date for veterans to file application for terminal-leave credits at which time I filed the following statement with the afore-mentioned committee:

On February 3, 1949, I introduced legislation H. R. 2335, which would extend the date for veterans filing application for terminal-leave credits to June 30, 1950. No action was taken by the Armed Services Committee on this legislation in the first session of the Eighty-first Congress.

I am happy to know that your subcommittee is now considering H. R. 3205, introduced by the gentleman from Massachusetts [Mr. PHILBIN], which in effect is the same as my bill except for the date.

It is my understanding that the committee is being asked to extend the deadline to June or July of 1951. This meets with my complete approval.

It makes little difference to me whose name appears on the bill, since I believe we are concerned only that equity be done here by granting the veterans who have this money due them the right to apply for these credits, if by inadvertence they failed to meet the previous dead line of September 1, 1948.

I have no way of knowing how many veterans have been denied their justly-earned terminal-leave credits, but I would presume that several thousand are involved. I firmly believe that such veterans should be given an opportunity to file for their terminal-leave credits, and, therefore, respectfully urge that the subcommittee favorably act upon this legislation.

Address of Leonard W. Trester

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 27, 1950

Mr. O'HARA of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Leonard W. Trester, chairman of the committee on advertising, Chamber of Commerce of the United States, and director of public policy, General Outdoor Advertising Co., Inc., Washington, D. C., delivered before the Lions Club, Madison, Va., on December 13, 1949:

Things seem to change so gradually about us that we are all inclined to forget that we are living in a different world from the one we were born into.

In the lifetime of many of us in this room we have seen the airplane, the radio, the telephone, the automobile, and refrigerator, to mention only a few items, come into existence and be sold into mass consumption.

The accomplishments, the progress, in the period of our lifetimes, has been amazing. If you are 43 years old, you have lived one-fourth of our national history. Yes; think of it, the Declaration of Independence was signed only 173 years ago. How our progress has accelerated from the isolated agrarian economy of that day to the present time, particularly in the period of our own lifetime. The physical changes we have seen stagger the imagination.

But it is more of the subtler changes in our way of life that I want to speak. Sixty years ago 80 percent of our people lived on farms or in rural areas. Today, 90 percent of our people live on 1 percent of the land in the United States. Less than one person in five lives on a farm and this ratio is decreasing every year. One-third of our farms produce four-fifths of all of our agricultural production—all we will need after the world-feeding problem is solved by a few good European harvests.

In the past those living on farms were largely self-contained. Most owned their own property. They ate the fruits of their labors and they spun their own cloth and made their own raiment. The basic necessities of life, however meager, were assured by that kind of existence. In the trading areas business was largely local. Drugs and soap, two generations ago, were brought in from regional manufacturers to some extent. But most of what was sold locally was made in town.

Looking back across the years, consider also the problem of health. In those days we did not live so long. But that was before the day of the specialist. The poor were cared for by private agencies, supported by that out-moded individual whom the income tax has killed, the philanthropist, or by local governments. But the people of modest means had a family doctor who charged on the basis of ability to pay. Expensive specialists, hospital and diagnostic services were unknown. A bad disease was more likely to mean death in those days but not so likely to spell years of working off debt.

Wave upon wave of immigrants were only too glad to take the jobs at the bottom of the ladder, which represented such an improvement over their lot abroad. The immigrant saved and worked for the day when he or his sons might climb the ladder and open a small shop and, as the sociologists like to say, become assimilated to America.

The opportunities of yesterday have not disappeared by any means. The Congress of Industry of the National Association of Manufacturers saw only last week a skit of a displaced person who, coming to these shores 2 years ago, had borrowed $2,000 and set up a business which has already grossed $400,000.

But the fact that freedom of opportunity abounds here as it does nowhere else on earth—the fact that even the poor of our day enjoy luxuries unknown even to our grandfather and envied by the other peoples of the earth—all of this, I say, should not blind us to the climate in which we live.

We live in a time when half of the people of this country do not even own their own homes and one in five do not own their own furniture, even. Thanks to union restrictions, the interdependence of the economy, Government regulations, and all the rest, most are thrown out of work only when it is equally impossible for them to get jobs in the same line somwhere else. In two out of five homes mother goes to work along with dad and brings home at least 25 percent of the family income. In these very homes servants are out of the question because of the cost of human labor, so the children are left to roam the streets. Serious illness can throw the budget out of whack for years to come.

Well over one-third of the people who now populate this country cannot remember the period before the depression of 1929. They remember the long decade when it was not unusual for one out of every four breadwinners to be tramping the streets. They remember the period when NYA or CCC actually represented an opportunity for the youth trying to get a foothold. They have known the insecurity of the war that followed. They, like all the rest of us, know the insecurity of another threat of war, which may well be beyond our control to do anything about, and the fact that we may all be blown to smithereens at any moment, but they are too young to have developed a philosophical attitude toward these contingencies.

Another fact that we must face is that the day in which we live is not necessarily one in which enterprise, initiative, incentive, and perseverance are the royal road to success. Without capital, even the most outstanding, personable, and hard-working folks cannot hope to succeed, except over a very long pull. The hand lathe cannot compete with the electric one. Keeping accounts by hand cannot be done so quickly as with the adding machine. Longhand cannot keep up with a typewriter. Sometimes I wonder whether we do not have too much, rather than too little, rugged individualism in our great country, when I consider that one of every three businesses that opens in a normal year is bankrupt within the next two.

Less than 25 percent of all retail stores in this country have more than two employees. There is one retail store for every 25 families. Three out of five retail stores gross less than $33 a day. Forty percent of all stores are run by proprietors alone or with the unpaid help of their families.

Let us face the facts. There are insecurities in our day unknown in the times of our fathers. Acts of God could cause us in a simpler and earlier day to have to tighten our belts and work harder. But the individual was not at the mercy of man-made systems, union restrictions, and all the rest, over which he as one individual has little control and which can deny him not only a livelihood but also his birthright as a man—pride of accomplishment and the right to spend himself in his work.

If the best our generation can offer is to say that those who long for security can find it in prison, then perhaps it is we who belong there. It is for us, out of our years of business background, to provide some guidance, some constructive and positive leadership—if our philosophy is as sound as we proclaim it to be.

In spite of the longing for security, it should encourage us to know that a Nationwide survey of college graduating classes found these youngsters rate opportunity for advancement as the first prerequisite of a good job, although high-school kids listed it third. But surveys also show that most of those going to work for the first time are not so much interested in risking a connection which gives them a chance of cleaning up financially, early in the game, as they are in a steady job with gradual advancement. This is what they mean by opportunity to advance in business or the profession, not taking a roller-coaster ride.

Is security so bad, when it has raised the home-ownership figures from 35 percent 2 years ago to nearly 50 percent today? And most of the owners earn less than $300 a month and are under 35. Maybe security is to our sons pretty much what our fathers meant when they talked about thrift.

Is security so bad when it impels people to study for self-advancement? One out of every five adults is taking some sort of educational course—extension, night school, and the like. One-third of all loans made by personal finance companies under $500 are for training for self-improvement. That is what most of us have preached to our youngsters and younger employees, but we talk about it under the name of opportunity.

You and I, my friends, must find the answer to this great interest, longing, desire, or what have you, for stability, unless business is to lose not only its profits but its power and prerogatives for leadership.

Our youth are looking to the Government for solutions, because whatever else may be said of its panaceas, the Government's obsession with this problem, for political reasons, I grant you, has been apparent and it cannot be said that their proposed solutions, however much they lacked in practicality, have been short in imagination.

In our youth—yours or mine—nobody expected business, Government, or anyone else to look after people. As I have pointed out, conditions were different—there was no need for it on a widespread scale. The businessman philanthropist plus local governments could more than cope with the problems.

In those days it was the accepted function of business to make a profit. Nobody but crackpots questioned that. And the better profit the company made, provided it came by it ethically, the more respected and successful it was.

Today, however, business has no choice but to assume the responsibilities for increasing all the human satisfaction of the group with which it is associated, as Dean Donald David, of Harvard, puts it.

The reason is that business management as a group is just as much in competition for the loyalties of the public as the individual businessman is in competition with those in his same line.

We live in a day of big labor unions, big Government and big business—all competing for public favor. The Federal Government and the national labor unions are today primarily public relations agencies. In its national health programs, in its housing projects, its electric power developments, they are saying in effect that it can distribute human satisfactions more adequately to more people at less cost than private business. It is advertising its merits through every channel of communications. The national labor organizations recognize the magic of being in favor of the good ends of life and stress their ability to provide, with the aid of a friendly Government, more of the good things of life—a larger share of them—to their members. Labor and agricultural groups, depending on the individual dues of millions of members, have long realized the public relations secret of interpreting themselves, their motives and their objectives in terms of basic human aspirations. Business, on the other hand, has been the only factor so busy in producing the good things of life that it has not had time to win the battles of public opinion and so is gradually losing its right to distribute what it produces. As Government gains ever more control over the distribution of what it does not produce—housing, health benefits, food, electric power—business faces the prospect of becoming the contractor for a Government which will decide what shall be produced, by whom and in what quantities, for what price and how it shall be distributed.

As one industry or profession is taken over after another, the tax burden on the remainder—the shrinking free segment of our economy—becomes ever greater, not only because it is numerically reduced but also because it must pay the subsidies which allow Government to sustain the illusion of greater efficiency, increased distribution and lower costs in the nationalized industries.

We are far down the road to socialism already, so far along that some of my friends who have studied the problem doubt whether the tide can ever be completely turned. I am not that pessimistic, but it is going to take not only herculean efforts but sustained work on the part of us in business to reverse the trend, that I do recognize.

Today 14,000,000 persons, 1 family head in 6 receives Government checks regularly. One out of four aged people in this country are on the public-assistance rolls. The amount spent for Government relief, in payments to individuals in this country last year, was 250 percent of the aggregate amount of dividends paid by all United States corporations. The Government paid out $65,000,000 in Aroostok County, Maine, alone last year to hold up potato prices, as a result pickers' earnings averaged between $20 and $25 a day. Six out of every one hundred breadwinners in the United States work directly for the Federal Government. The Government will operate in the red next year to the tune of $7,500,000,000 assuming the most prosperous sort of conditions.

The Federal Government now costs $100,000,000 a day.

Here is the sort of thing it is doing with that money:

The Government owns 3½ typewriters for each stenographer or typist on its pay rolls.

If you apply to certain Federal agencies for a job, your application is processed through more than 100 different stages.

In Washington alone, the United States Government employs 1,485 press agents, 2,650 botanists, and 5,725 lawyers and legal assistants.

The United States Government has 45 separate Federal offices dealing with housing.

More than 530 Federal offices are located in Chicago alone.

Today the average person must put in 61 working days to pay his taxes. If the administration program carries, he will have to devote the earnings of 81 days' work to this purpose. The bill for taxes will absorb between 75 and 85 percent of all the savings of the people.

Our Federal debt is $250,000,000,000 or more than all the capital assets in the country, and equivalent to $6,297 per family.

The Federal budget itself is a document of 1,670 pages from which it is a practical impossibility to determine the real cost of any activities of Government. These pages are in fine type, almost impossible to read, let alone interpret. For instance, one item in the Veterans' Administration is a single line—salaries and expenses, $843,897,000. On another page in the same budget is a similar short item for carfare and bicycle allowance, $42.

The cost of the application of the so-called Brannan plan to milk alone is estimated at $2,000,000,000 by the American Farm Bureau Federation.

In addition to the 17,000,000 persons receiving payments direct from the Federal Treasury, there are millions benefiting indirectly from approximately $25,000,000,000 flowing annually from the Federal Government to business through subsidies, purchases, construction contracts and other expenditures.

Since the war there have been 23 programs for siphoning off American money, materiel,

UNIVERSITY OF MICHIGAN LIBRARIES

and credit overseas and by last July the total value of our foreign assistance was already $35,000,000,000. To this figure should be added another $7,000,000,000 or $8,000,000,000 in usable military equipment left behind in Europe.

Eighteen cents out of every tax dollar you pay goes to foreign aid programs—35 cents for defense and 15 cents for interest on the debt.

Interest alone is now more than the total cost of the Federal Government in 1933.

Hiring of Government employees is increasing daily. One hundred and fifty thousand will be taken on for the census. Roughly 50,000 full-time permanent new employees were authorized by the last Congress.

Let's take a closer look at this subject of taxes. In 1914, when the income-tax bill was passed with a maximum rate of 1 percent, some cautious Nellies wanted to put a ceiling of 5 percent on by constitutional amendment. They were assured, however, that this was asinine since it was said no one in his right mind could even contemplate the tax rising that high.

Today one-third of the cost of the average item the consumer buys goes to taxes. More than 60 percent of the cost of cigarettes goes to taxes. Corporation taxes have increased 1,000 percent since 1932. Well over 100,000 units—Government-owned corporations, cooperatives and unions—included are escaping much more than $1,000,000,000 in tax liability, 522 hidden taxes take one-third of the cost of a $10,000 home, for which so many of our people are saving and scrimping. There are 116 tax items added to the average store-bought suit of clothing. But we can all take comfort in the thought that there is no Federal tax on coffins, unless the Government leaves us enough to buy one costing more than $100.

Seriously, the hour is late, the situation is alarming. But I, for one, do not expect it to be solved by merely reciting the facts and figures or by a long harangue on taxes. Our people want stability; our youth cannot, for the most part, because of their inexperience, see clearly the road down which we are traveling. Even though they can grasp perhaps the tangible, financial cost, but not the spiritual cost in terms of lost liberties, I believe, from my own observations, backed up by many researches, that there are great numbers of people in this country who would prefer to pay staggering taxes in exchange for a relatively stable existence without too many ups and downs over which they individually have no control. Who, indeed, would not rather bring his children up on a modest salary than in luxury one year and perhaps extreme poverty the next? Nineteen hundred and twenty-nine, when ruined fortunes, suicides, breadlines, and foreclosed mortgages went hand in hand, is an experience deeply etched into the consciousness of even the youngest.

The paradox of our situation is that even under a great tax load, business has demonstrated, with little help from many administration prophets of gloom and catastrophe, that it is the great economic stabilizing factor in our economy.

But business has failed to do a public relations job like its competitors in the arena of public opinion. Business has failed to sell itself. At the very time it has sold its tangible products and wares it has allowed its competition to steal a long march in the ultimate control of distribution of these good things of life.

The problem, oddly enough, is not one of business ability to produce the most human benefits or to produce them most efficiently nor even to stabilize the economy, although sorely harassed by Government and organized labor. That has already been accomplished.

Therefore, it is obviously not enough that we in business do an efficient job of reducing costs, providing jobs, improving quality, or expanding distribution.

Unless these benefits of business are interpreted and understood, it is clear that the public will favor those programs which the politicians promise, even though they as taxpayers must share the burden of paying for them.

National advertising can do a lot to educate the public about the economic benefits of business, just as it has made those benefits possible. But business management, unlike labor, agriculture and a Government administration, suffers from the handicap that it cannot speak with a united voice because the very system which it seeks to preserve is competitive. Nor would it help matters much if business could speak with one voice because people would still judge business in general by the actions and words of the individual businesses which they know. The problem, as we have seen, is not primarily a rational one which can be answered by rational arguments and demonstrated proof, or the problem would not continue to exist. The problem is emotional or psychological.

There just are not enough people in this country either who are enough interested in the viewpoint of business management per se to give it fair hearing or to support that viewpoint, merely because it would preserve power, prerogatives, or profits of business. Therefore, it becomes obvious that business can only win public support by identifying itself with the interest of people in general.

How to do this? The answer is that a lot of little things go to make a good sale. Public relations is looking after the details. The place to make the sale—the people we can influence most—are our employees whom we see every day.

In selling the principle of free enterprise, we should realize that in the past too many of us have been too autocratic and authoritarian in our management of people. We must more and more realize the importance of dealing with people as individuals rather than treating them as a mass. This means giving people an opportunity for advancement, a chance to ask questions about how the company's plans will affect their jobs, and giving them specific information about their work.

Specifically, we should not get into too much detail in trying to run our stores or businesses. We should give each employee broad latitude to use his own common sense and imagination in trying to develop the best techniques of selling, taking inventory, or whatever. Maybe he can teach us something if we don't sap his initiative.

All employees should have a chance to discuss policy with us individually and in a group meeting from time to time. We can then tell them why things are done as they are; and get the benefits of their observations as to how they might be done more efficiently and economically.

We should not go in for general pay raises where they can be avoided. People enjoy knowing they have earned a raise, rather than that it is something forced upon the employer or at any rate, automatically. Periodically, we should review with employees why they are or are not getting raises. And we should be specific about it.

We should try to treat all workers as equals not in proficiency at the job (that would be silly) but in basic privileges, such as vacations, sick leave, and so on.

Consider trying to keep rules down to a minimum. Instead of posting signs such as "Do not run up the stairs—J. C. Scrooge," why not get a cartoon drawn, with a comic figure saying "Don't be a dope, you may slip and fall."

Instead of prohibiting smoking on working hours altogether and having your people constantly slipping out the back door, why not suggest they come up with some practical rules as to how smoking can be handled without offending customers or slowing up the work. You'll probably find you have less smoking in the end that way and the rules will be stricter than your past enforcement of an outright ban.

Have chats with new employees frequently. Not only will this get them to pull on the team and feel the job is worth while but a fresh eye can see a lot of things about any of our businesses which we don't recognize.

Before you start telling your customers or suppliers about some new development in the business, be sure to cover your employees. They can help spread the word, and they will in a negative sort of way if they are confronted with such information by the wife who has heard it somewhere before they are "in the know."

Take them into your confidence, so far as possible, about earnings, the cost of your investment, and how much is needed to maintain your place of business in proper condition. If you don't do this, chances are they think you're taking a lot more out than you really get and that if you weren't such a skinflint you would give them a better Christmas bonus and substantial raise.

These are just a few hints on how to run a business on democratic principles. The reason for doing it is that it is the most satisfactory, ultimately the most profitable, and always the most human way of managing men.

As we learn this, we will be doing the most important job that business must learn to survive. Simple as it seems, difficult as it is, day by day, this is the great challenge facing all of us if we are to pull our oar in the race for understanding ahead. As H. G. Wells once said, "The situation in America is a race between understanding and catastrophe." May you and I do our part to advance understanding. Then and only then, can business move forward with a strong and active faith and devote its entire energies to realizing that higher standard of living for everyone which is nearly within our grasp.

Is the Coal Shortage Critical?

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Friday, January 27, 1950

Mr. HILL. Mr. Speaker, is the coal shortage critical?

Does the threatened closure of schools and institutions because of the lack of fuel, the suffering which faces families without coal, the curtailing of work in shops and on railroads because of exhausted fuel supplies, constitute an emergency? Or are all of these things daily occurences?

Do these conditions warrant firm steps to get our coal mines in production? Or must we wait until there is a complete collapse, with its hardships, before we take action? I believe the situation is critical. There is a serious coal shortage. I believe that any informed person knows it.

The only reason the Nation has not been seriously hurt by the current coal shortage is because of the blessing of a mild winter. It has alleviated suffering

and made an intolerable situation bearable. That is obvious. Only the kindness and consideration of the weatherman has prevented a disaster.

But the President sees things differently. He seems to be as mired down in his prejudice against using the legislative tools to get coal mined, as the "Mighty Mo'" is stuck in the mud of Chesapeake Bay. He stubbornly refuses to act, regardless of what happens to the country.

If a hard blizzard should strike Colorado and the Nation, I fear the consequences.

I have received telegrams from three schools in my district, plainly pointing out the seriousness of the coal shortage. Their supplies are gone. The officials state they may have to close the schools. They are appealing for immediate relief. Action is necessary. We must get coal on its way. Further delay invites catastrophe.

Under unanimous consent, I include these three telegrams with my remarks:

STERLING, COLO., *January 23, 1950.*
Representative WILLIAM S. HILL,
House of Representatives,
Washington, D. C.:

Have little over a ton of coal to run junior college. It will only last a few days at most. It will be necessary to have coal at once. Hope you will be able to get action to keep our schools running.

JUNIOR COLLEGE COMMITTEE.
Dr. J. H. JACKSON.

STERLING, COLO., *January 23, 1950.*
Representative WILLIAM S. HILL,
House of Representatives,
Washington, D. C.:

Only a few days of coal supply left. If the weather gets bad that will be very few days. It is urgent that we have coal. We'll have to close all our schools unless we receive supply of coal at once.

STERLING PUBLIC SCHOOLS.
HAROLD R. WYMAN.

STERLING, COLO., *January 23, 1950.*
Representative WILLIAM S. HILL,
House of Representatives,
Washington, D. C.:

Here is a shortage of coal. It will be necessary to close our high school unless we can receive some coal within the next few days. Because of State aid we must keep our schools open 172 days. If the schools have to close it would cost the district thousands of dollars. We urge immediate action on your part to get coal for Logan County.

LOGAN COUNTY HIGH SCHOOL COMMITTEE.
A. E. BEEDE, *Chairman.*

The Hiss Conviction

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 27, 1950

Mr. MEYER. Mr. Speaker, much is being said and written in condemnation of the treasonable machinations of Communists and fellow-travelers within our borders which were revealed in connection with the conviction of the traitorous Alger Hiss.

Mr. Frank C. Sands, editor of the Daily Reporter, of Independence, Kans., my home town, in a recent editorial discussing this nauseous Hiss case, concluded by stating:

It is indeed a sad case, far sadder than the deflation of Alger Hiss. The really sad part is what happened to the United States and what probably is continuing to happen through the efforts of persons of similar rathood who remain in positions where they can do great harm.

Because no more important verdict than the Hiss conviction has been reached in our day, and because Mr. Sands in his editorial drives home in telling fashion several factors underlying this case, I am, Mr. Speaker, under permission granted me to extend my remarks in the RECORD, quoting his editorial in full herewith:

HAS MORALITY CHANGED?

The name of Benedict Arnold still is the blackest one on the pages of history in the minds of average Americans. The Teapot Dome scandal brought to light during the Harding administration created an immense sensation among the American public and the name of Albert Fall, a Cabinet member, was blackened as a result of it.

The conviction of Alger Hiss on a perjury charge, based on the accusation that he lied when he said he had not given American secrets to the Russian Communists, brands Hiss as bad as Arnold and worse than Fall, who only stole money, but the public seems less excited than it was by Arnold or Fall.

Is this because there has been so much Communist treason in recent years that the moral sense of the people is blunted?

A formal charge of treason against Hiss was prevented by the statute of limitations, but he is morally guilty of that crime unless the jury was mistaken in its verdict of perjury.

How probable was it that the jury was wrong?

The former high standing of the accused in governmental circles gave him a presumption of innocence from the start. Compared with his accuser, Whittaker Chambers, he had infinitely greater prestige.

Two justices of the United States Supreme Court volunteered to appear as character witnesses in his first trial. The present Secretary of State, Dean Acheson, said, "Alger Hiss is my friend, and I do not give my friendship lightly."

Hiss was an adviser to President Roosevelt at Yalta and he was secretary general of the San Francisco conference in 1945 which drafted the United Nations Charter. Hiss held top ranking in the State Department under three Secretaries.

When he could be convicted in the face of all that, the evidence must surely have been compelling.

It becomes plain that talk of Communist influence in high places was not a "red herring" as it was described by President Truman in his last campaign.

According to Chambers there were a lot more "red herrings" in the school of fish with which Hiss swam.

Future activities of the administration will show whether the Truman government is more interested in seeing traitors cleaned out or in protecting the reputation of the FDR administration and his own.

A vigorous move to put only Americans on guard cannot be very confidently expected until there is a change in the high command in Washington.

Mrs. Eleanor Roosevelt, who made the muddled comment that "I feel he [Hiss] may have perjured himself, but I don't feel he ever sold any secret papers," added "It's a very sad case."

It is indeed a sad case, far sadder than the deflation of Alger Hiss. The really sad part is what happened to the United States and what probably is continuing to happen through the efforts of persons of similar rathood who remain in positions where they can do great harm.

Voting on Appropriations

REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks, I would like to discuss a resolution I introduced which provides as follows:

Resolved, That rule XXI of the Rules of the House of Representatives is hereby amended by adding at the end thereof the following new paragraph:

"5. No bill or joint resolution of a public character making an appropriation shall be finally passed, and no amendment of the Senate to, or report of a committee of conference on, such a bill or resolution shall be agreed to, unless the vote of the House is determined by yeas and nays."

I do this, Mr. Speaker, for the purpose of letting us become appropriation-conscious. I have seen in this House not millions but billions of dollars of the taxpayers' money appropriated without even having a majority of the Members of the House present. I think we owe it to the taxpayers of this Nation, our constituents, to let them know how we stand on the appropriation of their money. I hope you will give consideration to this resolution.

Well, a Little More Time

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 27, 1950

Mr. SABATH. Mr. Speaker, it has been a very long time since I last had the pleasure of reading a worth while short story. My attention was directed to a short story published in Collier's for December 24, 1949, and written by Bob Considine, long-time columnist for International News Service. The article is entitled, "Well, a Little More Time."

With the tumult and confusion that is constantly present in our everyday lives, I enjoyed this article all the more, for in it I found a perfect veiled presentation, in a figurative story, of a meaning metaphorically implied but not expressly stated. This allegory should be read by

UNIVERSITY OF MICHIGAN LIBRARIES

everyone, and I can assure you that you will enjoy it. Oftentimes, allegories are true to life.

The article follows:

WELL, A LITTLE MORE TIME

(By Bob Considine)

He had grown a bit older through the nearly 2,000 years. And He had been working too hard. The phones had been going night and day, for centuries, and there were millions of newcomers He hadn't been able to meet as yet.

His mother, of course, was the first to notice the few gray hairs around His temples. Quietly, but firmly, she suggested that He get away for a spell, and just before His birthday He decided it might be a pretty good suggestion, at that. He went to the window of His study one clear night and looked things over, trying to pick a vacation spot.

There were more than 30,000,000,000 worlds to tempt Him. All these, of the countless billions more, had passed through the trying years of war and want and had settled down to a point where peace had become an estate much more exciting to their peoples than war. He mulled over which of them He would visit, for He had not been to any of them for a time. But then a distant memory stirred itself and, searching the enormous oval of the littered sky, He found a tiny, luminous cinder amid an obscure constellation. And after a bit He remembered its name: Earth.

When He announced that He had chosen that forgotten place for His vacation, His mother was a bit vexed.

"The hotel situation is bad there," she reminded Him. "Don't You remember we had some trouble getting reservations?"

He laughed a little, in His kindly way, and assured her that nearly 2,000 years can make a lot of changes in man's hostility to man. She walked away, wondering, and pretty soon Michael, an enormous archangel, with a handsome face and the wingspread of a B–29, came up to Him and sat down.

"I heard You're going on a trip," Michael, the archangel, said. "I'll drive You down. And get you back in a jiffy."

"No, thanks, Michael," He said. "I'll get down all right. And besides, I've been wanting to try some of the transportation down there. Primitive, isn't it?"

And so, on the morning before Christmas, He arrived in New York City, bought some new clothes, took a look around the town, then caught an air liner. He got off at a fashionable winter resort and applied for a room at a nice hotel.

The man behind the desk looked Him over carefully and shook his head. "All booked," the man said. At the next hotel, the desk clerk said the same thing, and at the next and the next. But the doorman of the last place seemed to take a little pity on Him and suggested that He inquire at a place where a lot of young men, bachelors, mainly, seemed to stay.

They were nice to Him there, especially the lady in charge. She said that the town's hostesses and hosts had just about emptied her place looking for extra men to fill in at the numerous holiday parties being held. And would He please tidy up in a hurry? He did, and was happy when the lady in charge said He too had been invited to a party. It would give Him a chance, He felt, to get to know the descendants of those for whom He had undergone certain hardships.

It was a grand party, and He found it stimulating. Nobody caught His name, but He passed that off as one of the idiosyncrasies of this odd little planet. The talk was fine: certain political events had bestirred the men; certain fashion events, the women.

He joined in and found it rather easy to hold His own, for people had talked much like that when He was around the last time. Everybody at the party loved His fairness and easy wit.

Everything would have gone nicely, He supposed later, if the talk had not turned to, "Where are you from?"

They were from an interesting variety of places, He found; places that had sprung up during the split second of the last two or three centuries. He was charmed by the pride they held in their home towns, their schools, their clubs, and the like. Then just before the party was to move on to the exclusive Wampum Club for dinner, He realized that somebody was asking Him the question.

"I was born in Bethlehem," He said. "It's a small place."

"Bethlehem?" His host repeated. "Been there many times, when I was in steel. Fine town!"

"Then we moved on to a town named Nazareth, and finally to Jerusalem."

He didn't notice, for a moment, that a heavy silence had fallen on the room.

The host was the first to recover, boomed for another round of drinks for the other guests, and then took the Stranger by the arm and escorted Him to a quiet corner of the living room.

"Don't mean to be personal, old man," he said, "but You say You were born in Bethlehem * * * moved to Nazareth * * * then Jerusalem?"

"Yes," He said wonderingly.

"What's your profession?"

He thought a bit, then smiled. "I was a carpenter for a time. Then I sort of went on the road, as you say."

"Salesman?"

He thought that over for a time. "Yes, in a way."

"We thought You were a writer, from the beard * * *"

He shook His head. "No, I never got around to that. But I used to talk now and then."

The host thought things over for a long time. "Well," he said, finally, "I hope you won't be offended by this, but we've got to face facts here. Are you Jewish?"

"Yes." He smiled.

The host wheezed again. "Facts," he said, "have to be faced. We were counting on You being an extra man at the dinner at the Wampum. But, I'm sorry, it can't be done. There's a rule, see? Don't blame, me, I didn't make it. It's just a rule. If I bring You, and they find it out, I'll be asked to resign from the club. It's the oldest and best club around here, and we've got to live here, see? I hope You understand."

"Understand? Why, yes; I guess I do. You've already been quite kind to Me."

"Not at all. Not at all. You're interesting. I like your manner. But this is one of those things I can't buck."

The host's wife hovered behind them. "We're late, Horace," she reminded him. "You know how they are about holding tables, especially on Christmas eve."

The guests crowded out on the curb in happy confusion and piled into their convertibles and the chauffeur-driven cars. The sweet sound of racing motors filled the soft night. The host stayed behind, momentarily, and put his arm around the Visitor's shoulders.

"No hard feelings?" the man asked.

"No hard feelings," He answered warmly.

"Well, I got to get along. Nice of you to drop in." The host stepped into his own convertible and roared off.

The Stranger stood for a moment on the curb of the now darkened street. The air was tender in the palms, and it reminded Him vaguely of the palms He had known as a Child, and the palms He had known for one brief Sunday as a Man. He thought for a long time, reflectively. Well, a little more time. Then He chuckled a bit—or was it a laugh?—and clapped on His new hat.

Then He looked up at the star-studded night and cupped His hands around His sensitive mouth.

"Michael!" he shouted at the top of His lungs. "Oh, Michael!"

Will Congress Sell Out?

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 27, 1950

Mr. O'HARA of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Mr. Jerry Keohen, one of the publishers of the Montgomery Messenger, of Montgomery, Minn., which appeared in that newspaper on January 13, 1950:

WILL CONGRESS SELL OUT?

The new session of Congress may do much to decide whether we are to continue down the road that ends in statism and dictatorial government, or whether we are to reaffirm the principles and the ideals that made us a great, free, and prosperous people.

A determined effort is being made to fasten the welfare state idea upon the country. Congress will be asked to appropriate billions for cradle-to-the-grave security measures—all of which, of course, would be compulsory. The only logical reasoning behind proposals of this character is that the American people are no longer capable of taking care of themselves, that independence, thrift, self-reliance, and pride are obsolete virtues, and that we must follow the sorry example of near-bankrupt England and dictator-ridden Russia.

An equally determined effort will be made to extend Government ownership and domination of industry and enterprise. This naturally goes hand in hand with the welfare state—the cloth is cut from the same bolt.

It is also possible that an effort will be made to increase the tax rates—despite the fact that they are excessively heavy now, cut deep into the purchasing power of every individual, and make it difficult and in some cases impossible for enterprises to obtain the investment capital they need. That is particularly true of new and smaller companies.

The basic issue was well put by General Eisenhower when he said, "Government ownership or control of property is not to be decried principally because of the historic inefficiency of governmental management * * *. Its real threat rests in the fact that, if carried to the logical extreme, the final concentration of ownership in the hands of government gives to it, in all practical effects, absolute power over our lives." That fine statement should be on every Congressman's desk. We have come nearer than we realize to giving government such power.

Federal Control of Education

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 27, 1950

Mr. HARRISON. Mr. Speaker, under leave granted to extend my remarks in

the RECORD, I include herein the following address which I delivered before the Rotary Club of Leesburg, Va., on January 26, 1950:

There is no doubt that the paramount difference of opinion today—the one that means most to the future of the United States and the lives of its people—is the controversy swirling around the welfare state idea.

The welfare state means many things. In general, though, it means that the Federal Government takes care of everything—health, education, conditions of employment, income. It's an all-encompassing system that has reached pathetically ludicrous proportions in England with such things as filling out a Government form to get a wig or a set of false teeth.

We have read in recent months of the curtailments the British have been forced to make in this brave scheme. The country has reached the brink of bankruptcy, and the Government, busy taking care of everybody, has been forced to pause and try to figure out how to take care of itself.

But these snags in the great experiment in Britain haven't dampened the enthusiasm of the "welfare staters" in the United States. The technique here is to offer a series of proposals which, from their surface aspect, can be expected to generate substantial public support.

Medical care for all the people, better education, increased interest in elections, adequate opportunity for employment—these, for example, form a group of objectives all of us can endorse. The "welfare staters" assure us they can be achieved painlessly and quickly through Federal legislation. The flaws are not discussed in the sales talk. We have to find them by looking closely at the merchandise now—before we buy it. It's not being sold with a money-back guaranty.

But let us see the effect of these proposals when you add them up and put them all together. The anti-poll-tax bill is a deceiving prelude to Federal control of all now free elections. The FEPC would place control of employment relationship in Washington; repeal of Taft-Hartley would subject the industrial production of the Nation and its workingmen to the caprice of a dozen labor bosses; compulsory public-health insurance would give control of public health to Washington bureaus; passage of the Brannan farm plan, devised by Henry A. Wallace and pledged in the 1948 platform of Wallace's Progressive Party and later adopted by Mr. Brannan without credit to its true author, would vest control of the Nation's food and raw materials in the hands of a Washington bureaucracy; Federal aid to education would place the training of American youth in the hands of an untrustworthy group; housing measures passed and proposed will destroy private business in a large field; continued deficit financing and high taxes will crush the middle classes and small business to extinction. What sort of an America does this add up to in your mind?

Many who are opposed to all other features of this program may protest the inclusion of Federal aid to education in this group.

Although always suspicious of the proposal, I confess that, at first, I was not convinced, as I am now, that the sort of Federal aid to education program pending in the Congress is the worst of all of these plans.

Because so many fine citizens—unfortunately including a number of experienced and respected legislators—have not looked under the veneer of this proposal to discover the stark structure of centralized socialistic control, I should like to tell you why I have come to regard the measure with such disapproval and concern.

The one argument that is advanced in its behalf is that some of the States are too poor to support an adequate public-school system. Did you ever stop to think that there is no State in the Union with a financial structure so unsound and demoralized as that of the Federal Government?

In Virginia, for example, we have relatively low taxes, whereas the tax structure of the Federal Government is inequitable and extremely high. Virginia has a surplus. Uncle Sam will wind up this fiscal year with a $5,000,000,000 deficit. Virginia owes no money, but the Federal Government owes $265,000,000,000.

Let us grant the need for additional money for schools. If that additional amount is to be raised by taxation, Virginia is in a better position than is the Federal Government with respect to increasing taxes. If it is to be financed by borrowing, the credit of Virginia is better than that of Uncle Sam. If more money is to come from surplus, Virginia has the surplus, whereas the United States Government is in real danger of bankruptcy as a result of heedless deficit spending.

Admit, for the sake of argument, that a few States, such as Mississippi, are so poor that they cannot finance adequate schools without outside help. Why should we include the great majority of States, such as Virginia, in such a program, which would take away more from Virginia citizens and give back less to its schools?

I challenge you to suggest a single reason other than a desire to force decisions on State and local school boards as a condition to receiving Federal grants.

Now, the sponsors of the Federal education subsidy program protest that there is no thought of Federal control over the Nation's public school systems. Those who believe that are misinformed. Those who are informed don't believe it.

Without entering into the delicate discussion of racial relations this quotation from a recent open letter to the Washington Post signed by a prominent group of educators, including John Dewey, is cited merely to show that leaders of education intend to exercise control:

"The existence of racially segregated schools is itself a blot upon the American public school system which must in time be eliminated. Any measure which forward-looking forces can support must provide effective means to prevent discriminatory application of Federal funds."

In addition, there is no form of Federal grant in aid that is not accompanied by conditions to be met before the money is paid. This has been true of Federal aid to roads; of aid to hospitals under the Hill-Burton Act; and of all similar proposals.

The power to withhold huge funds until conditions are met, of necessity, carries with it the power to impose the controls. Let the States accept the Federal aid for a few years, become accustomed to it—adjust their State financing to depend on the Federal contribution for school-program maintenance. Then, the educational planners will be ready for the next move—more controls, an approach to standardization of curricula—in short, a Federal system of public education, worked out in Washington and supervised by a corps of bureaucrats headquartered there.

What sort of educational system do they seek to impose upon us?

We can judge that when we have examined the efforts of leaders of the progressive education system and of bureaucrats up to now. Let us also consider the progress they have made up to now under State and local control which forces them to permeate the education departments of 48 States and thousands of localities.

It is my opinion that their intentions are very bad and their success very great.

Most of us have been puzzled, if not seriously concerned, at one time or another by evidence that our children aren't being taught the fundamentals that were drummed into our own heads years ago—an appreciation of the history of this country, for example, and a respect for its institutions of individual initiative and free enterprise.

We have noticed, too, that children who, either as a result of inadequate effort or insufficient ability, fail to master their subjects are nevertheless given a passing grade, but have we considered that when such a system is continued until a youth approaches maturity its effect must be to instill in him the thought that somehow he will get along in life regardless of ability or effort. We have noticed that the precocious or hard-working child is not permitted to enter the schools earlier or advance faster than the dull or indolent child, but have we considered that when such a system is continued until a youth approaches maturity its effect must be to instill in him the thought that there is no competition in life or reward for individual effort. We have noticed that public school curricula rarely includes the 3 R's, that rarely do children have courses in history, or spelling, or geography, but have we noticed that the high school graduate is untrained and uneducated? A survey made a few years ago by the New York Times showed shocking ignorance among the Nation's high school graduates, most of whom could not identify the Declaration of Independence or locate the Mississippi River.

Are we off the track in our thinking? Is this just our imagination? Or has there been a scrapping of the old teaching methods in favor of a new educational mysticism? I think it is the latter. I think, in fact, that we have permitted to grow within our system of public instruction a dangerous cancer. If we permit control of public education to become vested in one Washington bureaucracy that cancer may not be cured by our surgery.

John Dewey, a philosopher and educator, probably has been responsible to a larger extent than has any other individual for the new course set by this ivory-tower coterie in the teaching field. I say "ivory tower" because it is clear the thoughts of the average American parent as to the upbringing of his child is beneath the dignity of their notice. They believe they must educate the young in spite of, instead of in cooperation with, the parent.

Those who have deified Dewey want only to be left alone to teach in the manner in which they interpret the tenets of this new mysticism. And most of all, they resent any effort to insure that the teachers in our schools and colleges believe in our democratic system.

These shadowy schoolhouse rings have moved in our schools, under the noses of conscientious governors and other officials.

They are preaching dissension and outright subversion in subtle paragraphs sprinkled through dozens of textbooks which have been approved by State educational authorities for use in elementary and high schools.

In some of these texts, widely used in the United States, the founding fathers are dismissed as self-serving men; the Constitution is branded an outdated document; so-called social gains of the Soviet Union are discussed at length; there is overemphasis on poverty and distress in the United States. The claims of socialism usually are described in proximity to the description of the seamier side of American life; the idea of a class struggle is harped on, and it is suggested repeatedly that the capitalistic system serves only the moneyed, industrialist class, at the expense of the worker.

Let us look at a few illustrative statements contained in textbooks used in public school systems:

In Elementary Sociology, by Ross L. Finney, it is said:

"We often hear the old slogan that local self-government is the vital organ of democracy. But this slogan was coined before the invention of railroads and automobiles, telephones, telegrams, and radios; and no

UNIVERSITY OF MICHIGAN LIBRARIES

longer applies to present conditions, except in part."

And here is another one from a book coauthored by the noted—or notorious—Dr. Rexford Guy Tugwell, who in saying that capitalism is a failure continues:

"Just as it was impossible for our Union to exist half slave and half free, so it may become impossible for the world to exist half socialistic and half capitalistic. And there are many who believe that capitalism in its nineteenth century present form would prove a weaker system than the system being developed by the Soviet Union."

Sneering reference is made to what is termed "the unreasoning,' almost hysterical, attachment of certain Americans to the Constitution."

In another textbook used in American schools, Man's Worldly Goods, by Leo Huberman, is this choice gem:

"The break-down that came in 1929 is often referred to as a world crisis. * * * The crisis swept like a tidal wave over all countries but one; * * * the Russians were secure behind their dyke of a socialist planned economy."

Teachers' College at Columbia University in New York City is considered in the profession to be one of the outstanding institutions for the development of educators.

Many teachers who have studied there have been exposed to the influence of a Dr. George S. Counts. In addition to teaching at Columbia for a number of years as a professor of education, this Dr. Counts has been a leader in the American Federation of Teachers, a labor union for teachers.

He set forth his teaching philosophy very frankly back in the 1930's, when he wrote a number of papers on the general theme, "Does the School Dare Build a New Social Order?" These papers were delivered before audiences of educators.

Among many things, he said:

"That the teachers should deliberately reach for power and make the most of their conquest is my firm conviction. To the extent that they are permitted to fashion the curriculum and the procedures of the school, they will definitely and positively influence the social attitudes, ideals, and behavior of the coming generation."

Among the ideas that Dr. Counts offered teachers was this one, straight from Karl Marx:

"If property rights are to be diffused in industrial society, natural resources and all forms of capital will have to be collectively owned."

In preaching the class conflict, Dr. Counts said something must be done to overturn American capitalism in its existing form. "And according to the historical record," he commented ominously, "this process has commonly been attended by a bitter struggle and even bloodshed."

Such men, highly placed in the profession of education, are preaching conflict to our young teachers. And they are making substantial headway in many large cities in unionizing the teachers and promoting teacher strikes.

Dr. Harold O. Rugg is another educator who wants the teachers to emphasize struggle between classes in their teaching—to give the pupils to understand that a bitter fight must go on continually between classes.

In one of his Teachers' Guides, intended to tell teachers how to use a textbook series he prepared, Dr. Rugg points out how they should develop one central idea, the beginnings of the march toward democracy as a struggle between the so-called common people and the so-called upper classes.

"Thus we present political history as a conflict between groups desiring to control the Government," Dr. Rugg states. And he comments:

"For 300 years, this struggle has been revealed in America."

He goes on:

"This material raises the question of the distribution of the social incomes, the enormous inequality in the wealth of our people, and the share of each class in the national income."

In other words, the idea of class warfare is to be impressed on our children.

Similar advice to the teacher is found in a 1946 report by the National Council for Social Studies, an affiliate of the National Education Association, wherein the teacher is urged to point out, and I quote, "that Russia's suspicion of the world parallels the attitude of the young and insecure American Nation of the nineteenth century."

Admirers of Soviet Russia are legion among the educators. In 1935, a number of them went to Russia to attend a summer school at the University of Moscow. John Dewey was among the sponsors of the session. And, in 1937, the United States Office of Education, the Federal agency which will administer Federal controlled education, saw fit to issue a bulletin for public schools describing a series of public affairs pamphlets which included a number dealing with conditions in Russia. One of them was written by the Communist, Earl Browder. This was financed by taxes paid by you.

In a study of textbook trends made by the Sons of the American Revolution, a prime exhibit is a series of publications known as Building America, inaugurated in the 1930's with the financial assistance of the Rockefeller Foundation and widely used in public school systems. An analysis of this series revealed that more than 100 Communist front organizations were represented in the affiliations of persons whose writings were cited in the series as reference material.

Extensive support of socialistic housing and medical schemes, as well as inflammatory civil-rights agitation, could be found throughout the Building America material.

To what extent has this disturbing tide touched Virginia?

Until this year, the approved list of textbooks for our schools carried a book entitled, "The Story of Civilization." One of the authors of this book has permitted his name to be associated publicly with organizations officially adjudged subversive and Communist-controlled. This book referred to Karl Marx and Lenin in glowing terms; upheld the Spanish loyalists for their heroism; defended socialism and vilified capitalism.

It taught that Stalin had abandoned the principle of world revolution and was seeking only to win the good will of other nations and maintain friendly relations with them. This book stated:

"Many ministers and priests felt that the capitalistic system was un-Christian, since it imposed poverty on the masses of workers while the rich employers and capitalists lived in palaces."

Although the State board of education let this book slip by, it is to be commended for striking it from the approved list. But what would be the situation if books of this character were bought for use in our Virginia schools—not as the result of a slip, but through the deliberate policy of Federal bureaucrats exercising authority which local school authorities were powerless to oppose?

In his inaugural address last week, the Governor expressed his dissatisfaction with the lack of emphasis on fundamentals to be found in Virginia schools. Although the situation in this respect is much less serious here than in many other States, as a citizen of Virginia, I am in full agreement with the Governor's position.

So long as we retain control in the people of Virginia, you and I can back our Governor in his announced purpose to bring our Virginia schools to the forefront in training our youth to become informed and patriotic citizens. But once we surrender the management of our schools to the Federal bureaucracy and the parlor pinks of the progressive movement in education, neither you nor I, nor State and local school boards, nor even the Governor and the legislature will have any power over who teaches or what is taught to our children.

Instead of Federal control of education, what we need most at this time, it seems to me, is a firm resolve that the people shall recapture our schools from schoolhouse rings—to take back into the people's hands a careful supervision of the education of our children.

The school is the public institution closest to the family. It belongs to the people. It was contrived to serve the desires of the people as to the education of the young.

School authorities must be made to understand that it is the people's wishes which are paramount.

We may be stupid and uncouth in the eyes of the disciples of Dewey, who insist on their way of education and demand to be insulated from parents. But the children belong to the people and so does the money that pays the school bills.

If we want our youngsters trained as God-fearing, patriotic, industrious citizens rather than as soulless instruments of class struggle and social upheaval, that is our business.

And it looks as if we had better start doing a better job of minding our business.

More About the Katyn Massacre

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, January 27, 1950

Mr. DONDERO. Mr. Speaker, for some time I have been interested in unearthing the ghastly details of one of the greatest crimes of the century—one that should take its place in the halls of shame together with the Nazi gas chambers and concentration camps. I refer to the cold-blooded murder of 10,000 Polish officers at Katyn.

Charges have been made by responsible authorities that this horrible deed was perpetrated by the Soviet Red Army. Recently a committee of inquiry has been formed to find the true facts and this body is headed by the distinguished Arthur Bliss Lane, former United States Ambassador to Poland. To aid this inquiry I have several times sought to gain access to information in the hands of the Office of National Defense on the basis of investigations made by American Army officers. Each time my request has been refused on the ground that the information is classified. I am taking the liberty of appending herewith the full correspondence on this matter for the information of the American people.

It seems to me the American people should know why information as to this heinous crime against humanity is kept secret. What justification is there for classifying this information and smothering it in the files? I should like to know who is primarily responsible for the decision to withhold this information from the world and what is the motive behind it. At a time when the Soviet Government is conducting a ceaseless barrage of slander against the United

States, why should we not tell the truth about the Katyn affair, more than 4 years after the end of the war?

Is it possible that the fact that Donald Hiss, brother of Alger Hiss and a member of the law firm of Acheson, Burling, Rublee, and Shurb, who has been representing the government of the Soviet satellite state of Poland, for some time, has something to do with the suppression of this information? Is this one more example of Soviet appeasement?

The correspondence follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., October 6, 1949.

The DIRECTOR, MILITARY INTELLIGENCE,
Washington, D. C.

GENTLEMEN: Some time ago I inserted an article in the CONGRESSIONAL RECORD regarding the murder of several thousand Polish officers, probably by the Russians.

It has recently come to my attention that certain British and American officers were taken to the scene of the execution of these men while such officers were prisoners of the Germans.

It has been rumored that at least two of the American officers were Lt. Col. John Van Vliet, Jr., now stationed at Fort Lewis, Wash., and a Captain Stewart, otherwise unidentified.

It is quite possible that a committee will be formed to investigate this matter officially, and the purpose of this letter is to inquire whether or not the above-named officers have made a report on this matter and, if so, whether such report is available. If so, I would be very much pleased to receive a copy of the same.

Thanking you in advance, I am,

Very sincerely yours,

GEORGE A. DONDERO,
Member of Congress.

DEPARTMENT OF THE ARMY,
GENERAL STAFF,
UNITED STATES ARMY,
Washington, D. C., October 19, 1949.

Hon. GEORGE A. DONDERO,
House of Representatives,
Washington, D. C.

DEAR MR. DONDERO: Reference is made to your letter of October 6, 1949, in which you request information on a report of the Katyn massacre. The Intelligence Division has recently acquired a report on this subject, which was partially based on Lieutenant Colonel Van Vliet's observations of the German exhumation of the Polish graves at Katyn in 1943. The report is classified, and therefore cannot be released at this time.

In the event this report is declassified, it will be a pleasure to furnish you a copy.

Sincerely yours,

S. LEROY IRWIN,
Major General, GSC, Director of Intelligence.

ROYAL OAK, MICH., *October 31, 1949.*

Maj. Gen. S. LEROY IRWIN,
Director of Intelligence, Department of the Army, Washington, D. C.

DEAR GENERAL IRWIN: For the life of me I cannot conceive why Lieutenant Colonel Van Vliet's report on the Katyn affair should be classified.

Would you please explain what reasons impelled the Department to classify this document and why such classification is maintained at the present time, 6 years after the event?

Was the action taken as a result of instruction from the State Department? If so, I should like to know what the instructions were and who issued them.

Very sincerely yours,

GEORGE A. DONDERO,
Member of Congress.

DEPARTMENT OF THE ARMY,
GENERAL STAFF, UNITED STATES ARMY,
Washington, D. C., November 8, 1949.

Hon. GEORGE A. DONDERO,
House of Representatives.

DEAR MR. DONDERO: Your letter of October 31, 1949, concerning release of the Van Vliet report has been received and your interest in this matter is appreciated.

I should point out, however, that since the perpetrators of this crime have not been determined with finality and, since the report contains certain highly sensitive information the premature disclosure of which would be extremely unwise in view of the current international situation, the Department of the Army believes it inadvisable to release the report.

Sincerely yours,

S. LEROY IRWIN,
Major General, General Staff Corps,
Director of Intelligence.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 9, 1950.

Hon. LOUIS JOHNSON,
The Secretary of Defense,
Washington, D. C.

DEAR MR. SECRETARY: For some time I have been interested in securing reports of the Katyn massacre.

I write to inquire if the report of Lieutenant Colonel Van Vliet is now available and whether a copy may be provided for my study.

I am also advised that Mr. Stanislaw Mikolajczyk stated in his book, The Rape of Poland, that the official Russian records of the Katyn prisoners (together, I believe, with German translations) were carried into Germany when the German Army retreated from the Smolensk area, and that these documents were captured by American forces and brought to this country. The importance of such documents can hardly be exaggerated, and I should appreciate your advice as to their availability.

Very sincerely yours,

GEORGE A. DONDERO,
Member of Congress.

THE SECRETARY OF DEFENSE,
Washington, January 18, 1950.

Hon. GEORGE A. DONDERO,
House of Representatives,
Washington, D. C.

MY DEAR MR. DONDERO: I have received your letter of January 9 in which you express interest in obtaining documents concerning the Katyn massacre.

Of the two documents you mention, the only one which we have in the Department of Defense, is a report prepared in the Army General Staff. This report is an accumulation of information from various sources and, although its preparation has been commonly attributed to Lieutenant Colonel Van Vliet, he collaborated in its preparation only to the extent of reviewing its contents.

It is my understanding that you have previously requested the Army to release this report to you and you were informed that, since it contained highly sensitive information, its release by the Army was considered unwise. However, shortly before I received your letter, Secretary of the Army Gray raised with me the question of its release. No decision has been reached as yet concerning this matter but I hope to be able to give a definite answer to your request at an early date.

* * * * *

With kindest personal regards,

Sincerely yours,

LOUIS JOHNSON.

Communists on the Federal Pay Roll

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, January 27, 1950

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial appearing in the Mount Vernon (Ohio) News. In my opinion, this editorial calls to the attention of all of us the lack of protection we have in our various departments of Government against Communists. I join with the writer of this editorial and insist we clean house of the Communists on our Federal pay roll and make a sincere endeavor to better protect our people in the future.

Elections will soon be here and the left-wingers and those who are friendly toward communism will support many candidates. The people should carefully analyze and scrutinize the various candidates to make certain they have not pledged themselves to those who would attempt to destroy our form of government.

During the last campaign, Mr. Speaker, the President as well as some candidates for Congress attempted to tell the people that communism was but a "red herring." Events since that time certainly prove that communism is still a menace to our freedoms and should be considered as such. Let us remember those who attempted to belittle this threat.

The editorial follows:

MAKING IT OFFICIAL

For years there have been rumors that the State Department—as well as some other Government departments—was pretty well sprinkled with Communists and Communist sympathizers.

And there have been rumors that these Communists and fellow-travelers have been active in feeding American secrets to agents for the Russian Government.

Just how much truth there is to these rumors has never been proven.

But it is now known that there is some basis for them.

This proof was contained in the verdict of the jury which convicted Alger Hiss on a charge of perjury for denying to a Senate committee that he had supplied State Department secrets to a Communist spy ring.

The outcome of this second Hiss trial—the jury in the first was unable to reach a verdict—makes one wonder about the present and the future.

Have all the Communists and sympathizers been cleared out of the departments and agencies in our Federal Government?

Or are there still some left in positions that enable them to inform Moscow on what is going on in the innermost circles of our Government?

And will the proper steps be taken to eliminate any Communist influence that still may remain in our Government?

For Alger Hiss was a trusted official. He was one of the brightest of the bright young men of the New Deal era. He held several important posts in the State Department. He was one of the late President Roosevelt's top advisers at the Yalta conference. He was secretary-general of the conference which drafted the outline for the United Nations Charter.

UNIVERSITY OF MICHIGAN LIBRARIES

He had the utmost confidence of numerous persons high in public life during the time he was helping shape the policies of Government.

President Truman branded the Communist spy ring investigation by a Senate committee a "red herring."

Mrs. Eleanor Roosevelt expressed the opinion, in her newspaper column, while the first Hiss trial was in progress, that Hiss was innocent.

And Supreme Court Justices Frankfurter and Reed were character witnesses for Hiss at his first trial.

Doesn't the Hiss case show the importance of exerting the utmost care in the selection of men and women to safeguard our national secrets and in taking every precaution to assure that those who now have access to secrets are to be trusted?

It is evident such precautions were not taken in the past. The American people should have the assurance of better protection in the future.

American Income, Its Sources, Distribution, and Continuation

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 27, 1950

Mr. VURSELL. Mr. Speaker, under unanimous consent to extend my remarks, I include an article by Justus Johnson, of Aurora, Ill., a political economist of distinction:

III. AMERICAN INCOME, ITS SOURCES, DISTRIBUTION, AND CONTINUATION

Sources of income and their distribution as reported by Dr. Claude Robinson, president of the Opinion Research Corp., and Father Edward A. Keller, director of economic research of Notre Dame University, have been presented the two previous Sundays.

These facts were pointed out neither to amuse nor to create prejudice. They helped understand what makes the wheels go around to produce a better living for all.

Let us give it further consideration. Why do we live better in America? Because there has been provided out of savings enough capital to better equip every worker. In Mongolia, lumber is sawed by hand. Here we have circular saws and electric or steam power. On the farms there are tractors—in the shops there are machines—everywhere the individual's effort is multiplied by implements and power energy. Back of each worker there is more than 100 horsepower of energy and over $6,000 of production equipment. Countries that do not make savings provide no capital. The production there is low and living is at a subsistence level.

European and Asiatic countries are much older than America. Many centuries of living together in groups provided answers ahead of us. The older civilization should have developed efficiency and know-how greater than ours. Their land area and undeveloped raw materials exceed ours.

DEVICES TO ENRICH

About the only things in which they surpass Americans is in devices that are now being promoted here on the patterns that made poverty there. Europeans especially have attained great experience in passing the buck and getting the other fellow to provide. These designs have been acquired in the extension of trading corporations and empire building. Their purpose is to get the fruits of the other fellow's toil. People long experienced in using their energy and ingenuity in this kind of effort, fail in providing better and more production among themselves. This type of operation has come down from the higher levels and now reaches into the worker groups. It is shouted from radio and press in America by the nonproducer class—those interested in making profits from handling the other fellow's goods. The eastern seaboard cities and the National Capital make 90 percent of the noise. Their faces are eastward across the ocean—not westward to production centers that supply 90 percent of the articles that give them an opportunity. The pattern of "get the money" stands out like a sore thumb.

America owes little of its success to this kind of leadership. The two most important groups in America are the consumers and the producers. A successful national policy must answer to their problems. A proper solution will get plenty of response at elections.

ADDED COSTS

Adding costs on the producer reduces the volume that could be utilized and lessens the amount of employment.

Production is absorbed by consumers and users. All added costs fall on these classes. The producer must add his overhead to the article and the consumer must pay the additional cost. Some may escape direct income taxes, but they will pay the load of added cost on everything purchased—food, clothes, housing, fuel, amusement, luxuries—everything carries the added production costs. One example which illustrates how it works: Politicians say "tax the corporations," so General Motors, which makes automobiles, is "socked." You buy their product. Their salesman without receiving Government pay collects from you, the buyer, $400 in taxes on every $1,500 of car price.

The consumer in America pays the bill. Strange how this has been camouflaged, how the people receiving less than $5,000 per year are kept from understanding that they are 90 percent of the consuming class and to them is passed the buck to provide the payment for making the world safe for democracy, according to the pattern of these good folks "who toil not, neither do they spin."

Is it not time that someone should arise and speak? Point out the groups that continue to make the little fellow the beast of burden for grandiose schemes and world-wide give-aways? These princes of power and politics stake the average man into camp and make him the goat to pay the freight. It is done by resorting to prejudicial name-calling as princes of privilege, selfish few, and similar cognomens.

LOCAL AND FEDERAL COSTS

Let's give thought to what we get from our Government revenues. From our local taxes we get the city service, police and fire protection, garbage collection, street cleaning and maintenance, public nursing, city health department, city hospital services, sanitary district, park system, township road and bridge expenditures, district organization, city, county, and circuit courts, county government, and State government. State government covers penal institutions, normal schools and State universities, State police department, many regulatory bodies, State aid, road systems, and many other services. Most of these can be visualized.

Now, recite what personal benefits you can visualize that comes because of the expenditures of the Federal Government. You name them and compare. Yes, sir; the Federal Government's take from the Nation's earnings is many times the cost paid for all these services enumerated as local.

America spends more per capita on education than any other country. Nearly every family can have provided for their children 8 years of grade school, 4 years of high school, some State university training, and special schools for those suffering from infirmities, and all this is provided at a fractional cost of what the Federal Government takes from the consumers.

TAKES ONE-FOURTH OF INCOME

The tax bill in the Nation is above $50,000,000,000 annually, 25 percent of the whole national income, $40,000,000,000 is taken by the Federal Government. Some escape income tax because of exemptions and low earnings. Do they escape paying? Everything carries that indirect burden—that package added to production. In many cases it far exceeds any direct tax load that might have been imposed on the individual. Certainly it is time for the consumers of the Nation, especially those with families to support, to get off the sucker list put together by these princes of power and politics.

Let us get our bearings and understand that the two important groups of people in our country are the producers and the consumers. If a healthy atmosphere exists for these two groups the remainder fare all right. When materials and goods are produced there is trade and commerce. Without production there will be disaster and it will fall first on business institutions. The American public has been distracted too long. Let's get on the beam—understand our problems. Give adherence to leaders who lead—voices that get their guidance from production centers and from the consumers. Ghost writers and propaganda-inspired solutions do not present basic answers. Change the viewpoint and the American public will take on a crusader spirit. Give the voters something to fight for and there won't be over 43,000,000 voters failing to go to the polls. In the Nation and in the State many granted leadership have surrounded themselves with "yes men." This has weakened our political virility. When the chief falls his captains do not have a capacity to make decisions because blind adherence over the years has eaten away any initiative.

FACE THE FACTS

Let's face the facts and give the voter something to support or oppose. Ninety-three million voters were qualified to cast a ballot in 1948. More than 43,000,000 did not vote. Did these nonvoters have positive convictions?

Ireland's Last Demand

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 27, 1950

Mr. MILLER of California. Mr. Speaker, the present week has proven an outstanding week in the field of international affairs. Only yesterday a new government took office in India and that country became an independent republic, after early 200 years of British dominance and control. The new Republic of India, with a population of 330,000,000 people, becomes the third largest in the world. Only the United States and the Russian Socialist Federal Soviet Republic exceed India in size.

Earlier in the week the United States signed the first treaty to be negotiated between this country and the Republic of Ireland. This treaty of amity, commerce, and navigation will prove an additional bond of union between ourselves and the Irish, who have always proven

their friendship through the centuries. On numerous instances the Irish have shown themselves to be our strongest supporters, especially in recent European matters where the Irish Minister for External Affairs, Mr. Sean MacBride, has repeatedly supported our position and taken the lead in urging European cooperation.

In addition to these events, President Truman has this week announced that the status of our representation in Ireland will be raised to that of an embassy. This change in diplomatic status is heralded both here and in Ireland as an appropriate recognition of the close ties that bind these two countries. Both the President and the State Department are to be congratulated on taking this step in advancing the international position of Ireland, by placing our mutual diplomatic representation on a par with that of other nations throughout the world.

Today but one step remains to bring about the complete realization of Ireland's hopes and dreams for freedom and independence. For 700 years the Irish have rebelled against British conquest and domination of their country. Today only a small portion of Ireland remains subject to that ancient imperialism. Only 6 counties in the north have not been granted the full independence, which has at last been achieved by the other 26 counties. It is inevitable that all Ireland must one day be free and united, and that no amount of foreign intrigue can long continue to hold sovereignty over this corner of the world.

Since our Government has now determined to give to Ireland the diplomatic recognition that is her due, why can we not also take the necessary steps to aid Ireland in abolishing the border in the north and reuniting the country into the natural unit, which it should be? One word from our Department of State or from the President to the Government of Britain could become the means of terminating this unjust aggression which continues in Ireland. To speak that word at this time would provide Britain the means of gracefully withdrawing from Ireland and would forever eliminate the possibility of riot and rebellion on the part of the Irish to regain their six lost counties.

While we hail the accomplishments of the present week in the international field, we yet realize that there is much more which can still be accomplished, and which must yet be undertaken. While the unification of all Ireland may appear to be a minor problem confronting the world, yet a peaceful solution of this matter is imperative, and only prompt action can assure that bloodshed will not occur in the effort to satisfy Ireland's last demand, namely, that all of Ireland be free and independent, that the border be eliminated and the nation united.

We have negotiated a treaty of friendship with Ireland and have raised the status of our diplomatic representation to that of ambassador. Now let us likewise assist in bringing about the satisfaction of this last wrong that afflicts Ireland, namely, the elimination of the border. Our influence can well be the deciding factor and should be made felt now. No more worthy achievement could be accomplished by our State Department than to bring about the end of partition in Ireland, thus ending the friction with Britain and satisfying Ireland's last demand.

Hoover Report

EXTENSION OF REMARKS

OF

HON. CHASE GOING WOODHOUSE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, January 27, 1950

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herewith a résumé of the status of legislation based on recommendations of the Hoover Commission as of January 1, 1950. This was compiled by the Citizens Committee for the Hoover Report:

The Reorganization Record—Status of legislation based on recommendations of the Commission on Organization of the Executive Branch of the Government as of Jan. 1, 1950

Subject	House bill No., committee, and date received	Senate bill No., committee, and date received	Notes	Enacted into law
1. (a) Reorganization Act of 1949	Empowers President to submit plans for realinement of agencies. Either House can veto in 60 days.		6 of 7 plans effective; Aug. 20	Public Law 109, 81st Cong., June 20.
(b) General management	H. R. 2613, Expenditures, Feb. 10	S. 942, Expenditures, Feb. 14	Basically important to over-all program.	
	H. R. 5526, passed Aug. 12	H. R. 5526, Expenditures, Aug. 15		
	Reorganization Plan No. 4, transfer, to the Executive Office of the President the National Security Council and National Security Resources Board.			Effective Aug. 20.
2. Personnel management	H. R. 5181, Post Office and Civil Service, June 15.	S. 2111, Post Office and Civil Service, June 20.	No further hearings scheduled	
	H. R. 5931, passed Aug. 28	H. R. 5931, passed Sept. 30	To conference, Oct. 3	Public Law 429, Oct. 28.
	H. R. 1689, passed July 8	H. R. 1689, passed Sept. 29	do	Public Law 359, Oct. 15.
	Reorganization Plan No. 5, deals with office of "Chairman, U. S. Civil Service Commission," provides Deputy Director and outlines functions of Civil Service Commission.			Effective Aug. 20.
3. General services	Combines purchasing functions, records, building management, disposal of surplus property.		Can save $250,000,000 a year	Public Law 152, 81st Cong., June 30.
4. Post Office	H. R. 5177, Post Office and Civil Service, June 15.	S. 2062, Post Office and Civil Service, June 13.	No further hearings scheduled	
	H. R. 5643, Post Office and Civil Service, July 14.	S. 2212, Post Office and Civil Service, July 7.		
	H. R. 5775, Post Office and Civil Service, July 26.	S. 2213, Post Office and Civil Service, July 7.		
		S. 1103, Post Office and Civil Service, out of committee September 30.		
	Reorganization Plan No. 3 transfers functions of subordinates to Postmaster General, subject to delegation, creates post of Deputy Postmaster General, abolishes Bureau of Accounts, creates Advisory Board on Post Office Matters.			Effective Aug. 20.
5. Foreign affairs	Strengthens staff of Secretary of State, paves way for amalgamation of Foreign Service and Washington Staff.		Partial realization of Commission Plan.	Public Law 73, 81st Cong. May 26.
6. Agriculture	H. R. 5179, Agriculture, June 15	S. 2055, Agriculture, June 13	No hearings scheduled	
7. Budgeting-accounting	H. R. 5823, Expenditures, August 1.	S. 2054, Expenditures, June 13. Amendment, expenditures, August 1.	No hearings scheduled	
8. National security: (a) Under Secretary of Defense.	Created much needed Deputy for Secretary of Defense		First step in better organization of armed services.	Public Law 36, 81st Cong. April 2.
(b) Tydings bill	Unifies armed services, centralizes operating controls, improves budgeting and accounting, creates Chairman of Joint Chiefs of Staff.		Savings of $500,000,000 annually announced.	Public Law 216, 81st Cong. Aug. 10.
9. Veterans' affairs	H. R. 5171, Veterans' Affairs, June 15.	S. 2019, Finance, June 8		
	H. R. 5288, Veterans' Affairs, June 22.			
10. Commerce	H. R. 5180, Commerce, June 15	S. 2056, Commerce, June 13		
	Reorganization Plan No. 7 transfers the Public Roads Administration from the General Services Administration to Department of Commerce.			Effective Aug. 20.
11. Treasury	H. R. 5174, Ways and Means, June 15.	S. 2058, Finance, June 13		
12. Regulatory commissions	H. R. 5173, Expenditures, June 15	S. 2059, Expenditures, June 13		
		S. 2073, Expenditures, June 14.		
		S. 2330, Interstate and Foreign Commerce, July 26.		
		S. 2340, Banking and Currency, July 27.		
	Reorganization Plan No. 6 makes the Chairman of the U. S. Maritime Commission the Chief Executive and Administrative Officer of the Commission.			Effective Aug. 20.

UNIVERSITY OF MICHIGAN LIBRARIES

The Reorganization Record—Status of legislation based on recommendations of the Commission on Organization of the Executive Branch of the Government as of Jan. 1, 1950—Continued

Subject	House bill No., committee, and date received	Senate bill No., committee, and date received	Notes	Enacted into law
13. Labor Department	Reorganization Plan No. 2 transfers into the Labor Department the Bureau of Employment Security and the Federal Advisory Council, and to the Secretary of Labor the functions of the Veteran's Placement Service Board.			Effective Aug. 20.
14. Interior	H. R. 5176, Public Lands, June 15. H. R. 5469, Expenditures, June 30.	S. 2057, Interior, June 13		
15. Social security, education, Indian affairs.	H. R. 5175, Expenditures, June 15.	S. 2060, Expenditures, June 13	Senate Expenditures Committee plans to hold hearings.	
16. Medical services	H. R. 5182, Expenditures, June 15.	S. 2008, Labor and Welfare, June 7.	No hearings scheduled	
17. Business enterprises	No bill prepared yet			
18. Overseas administration	H. R. 5172, Expenditures, June 15. S. 2072, Expenditures, Sept. 2 H. R. 6170, Foreign Affairs, Sept. 13.	S. 2072, passed Aug. 27 S. 2061, Expenditures, June 13	Provides for Overseas Study Commission.	
Federal-State relations	H. R. 4507, Expenditures, May 3	S. 1946, Expenditures, out of committee June 13.	No hearings scheduled	
Research	H. R. 4846, Commerce, out of committee June 13.	S. 247, passed Senate Mar. 18	Provide for Science Foundation	

Education in Democracy

EXTENSION OF REMARKS
OF
HON. JESSE P. WOLCOTT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, January 27, 1950

Mr. WOLCOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by John A. Hannah, president of the Michigan State College of Agriculture and Applied Science, which he delivered on January 26, 1950, at the annual banquet of the Michigan State Society of Washington:

The invitation to address the Michigan State Society of Washington was accepted with some diffidence. Only a foolhardy man would attempt to come into Washington and offer any comments on either domestic or international affairs. This is an unusual audience. Most of you have been called here from Michigan to serve your country because of special qualifications which set you somewhat apart from your fellow Michiganders.

It is a great comfort for one living in faraway Michigan to know that our State is represented here by such able people, and that problems of public importance will receive prompt and efficient attention. All of Michigan are in great debt to all of you.

I have decided to visit with you this evening for a little while about education—the one subject with which I can pretend to have any real familiarity, and the one subject about which I can presume to have any ideas of interest to you. Education is a proper subject to discuss with Michigan people because some of the most distinctive contributions of the Wolverine State to the development of this Nation have been in the field of education.

As you probably recall, John D. Pierce and his associates in the early years of our State devised and established a unique system of primary education, one much copied elsewhere, and one for which Horace Mann gets much of the credit. The University of Michigan was the first of the great universities and has long been the model and inspiration for State universities everywhere. It is to the eternal credit of the university that it was the first State university to admit women as students. We of Michigan can be proud of the fact that the State normal college at Ypsilanti was the first teachers' college west of the Alleghenies. We of Michigan can be equally proud of the fact that our legislature established the first agricultural college in the world nearly a century ago. From that modest beginning at what is now Michigan State College grew the great national complex of institutions known as the land-grant college system. It can be claimed with assurance that in general outline, the Michigan system of education has been used as a model for most of the Western States.

Such a remarkable record was not written by accident. You will remember that the Congress wrote into the Ordinance of 1787 which established the Northwest Territory these powerful words of injunction:

"Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged." So impressed were the founders of our State with that philosophy that they copied the enjoinder verbatim, into the first Constitution of Michigan.

Today the importance of education at all levels is recognized by everyone. But we must admire the intelligence and foresight of the pioneers who understood how important education was to be to the young State of Michigan in the years they would not live to see.

Understanding very well the nature of the democratic society that had been established on an experimental basis in this young country, they appreciated the importance of men and women being able to read and write and cipher. They understood perfectly that our system of government, dependent upon the intelligent decisions of its people as expressed by their votes, must for its own sake see to it that the people are sufficiently well educated to be well-informed.

They saw, too, that the State and Nation would benefit if there were opportunities to enhance native skills and aptitudes through education. Even in that distant day it was recognized that a skilled worker contributes more to the general economic well-being than an unskilled worker. For one thing, the skilled worker creates more real wealth because his capacity for production is greater than that of his unskilled brother. For another, in developing his skills and aptitudes, he develops taste and appreciation for things outside the narrow world of his own work. Basically, the wants and needs of the common laborer are easily supplied. Food, shelter, clothing, and simple recreation are his major interests. Not so the lawyer, or the engineer, or the teacher, or the good farmer, or the trained craftsman. He has a wider horizon and a broader vision. In addition to food, shelter, and clothing, he wants travel, and entertainment, and broader social experiences for himself and his family and for each of these he spends some of the extra money his higher skills have earned for him.

Even a hundred years or more ago, it was understood that dollars invested wisely in educational opportunity for able youths at whatever level return great dividends to society.

Succeeding generations of Michigan men and women have adhered to that philosophy. By and large, Michigan has always given strong support to its schools and colleges, in terms of both financial aid and the number of young men and women enrolled in its colleges and universities. Public education has paid the dividends the founders of our State prophesied when the system was established.

No thinking person will question that to a great extent America is what she is today because of our fundamental educational philosophy that makes educational opportunities available to all of our young people. Our preeminence in many fields, particularly industrial and agricultural production, can be attributed in large measure to the training given to our youth by our schools and colleges. We would be sore put to feed a great part of the world if scientific knowledge had not been applied decade after decade to the production of food. We would have been sore put to arm a great part of the world in wartime and support a great part of the world in this prolonged cold war if it were not for the engineers and production men, trained in the majority by the colleges and universities of America.

These are tremendous dividends on our investment in education to date. But I wonder whether our largest dividend has not been paid in a less tangible form—in the stability education has contributed to our democratic social structure.

To answer that question, one must realize that an outstanding feature of the American educational system is its emphasis on equality of opportunity. It was that emphasis which made the American system unique. The educational pioneers were determined that in this country, education was to be available to all, irrespective of economic status. They were determined that not just the sons and daughters of the well to do were to have the advantages of education, but that the sons and daughters of families of the industrial and agricultural classes as well were to have their chances in life, too. We can say with pride that the doors of educational opportunity have been and still are open to the vast majority of our youngsters who have the brains and the courage to take advantage of their opportunity.

I do not believe the importance of that condition can be overestimated. For decade upon decade in this country, youngsters of the poor and the rich alike have been required to attend primary and secondary schools together. For the more gifted, college educations have been available to a

more limited extent. The result has been that most of our young people have grown up with the certain knowledge that they need not remain in the economic classes in which they were born, but could climb upward as far as their intelligence and initiative could carry them. There has been no ceiling on opportunity. The transition from rags to riches is almost commonplace with us. By this means, we have come closer to achieving a classless society than those nations which have sought to create such a society by law and dictatorial decree.

Here we have democracy in action. Here we have examples by the million that our system does make it possible for the able to succeed; here we have examples by the million that caste and class are meaningless terms for those with intelligence and ambition. Here, I believe, we have one of the reasons why we Americans have continued to be so loyal to our unique system of government. Here we have a reason why our people listen to the charges and claims of envious foreign governments with amusement and with scorn, knowing as each of them does from personal experience that our system can and does work for the benefit of the greatest number.

I do not claim that more and more education is the cure for the ills of the world; we have too many crackpots among our intellectuals to enable any such theory to hold water. What I do claim is that by making a conscientious effort to insure equality of opportunity through education, we weave unequaled strength and stability into the fabric of our society.

Unhappily, there now is a serious question whether publicly supported education on the higher levels can continue to render this unique service to our Nation. Throughout the whole country, colleges and universities are face to face with a serious financial crisis not of their own making. There is the real danger that within a very few years, our colleges and universities will have to retrench—slip backward—for sheer lack of sufficient income.

The crisis was developing before World War II. The day of reckoning has been postponed thus far simply because the so-called GI bill of rights came to the rescue in the years immediately following the war. With the aid of income paid by the Federal Government for the education of veterans, colleges and universities have been able to carry on and even to improve their public services, despite the unprecedented burden of students piled upon them since the war. But the number of veterans on the campus is shrinking swiftly, and the colleges' income is shrinking at a corresponding rate. At my own institution, for example, our income from veterans' fees is due to drop by approximately $900,000 next year, while our enrollments promise to be about the same as they were this year. This year, the decrease in revenue from veterans' fees from the prior year is in excess of $770,000. Thus, in 2 years we will lose income at the rate of $1,670,000 per year.
